—One must be fastidious who cannot find something to interest him in the April *Atlantic*. In Mr. Bishop's "Detmold" the foreshadowed and foreseen comes duly to pass, leaving the next instalment to be awaited with rather more than the usual impatience. Mr. James's "Italy Revisited" falls a little short of its purpose to impress the reader with the modernization and materialization of Italy: at least the "Tuscan shrines fed with the Pennsylvanian fluid" (is Mr. James sure that the petroleum was not produced on the peninsula?), the Roman horse-cars, and a picturesque Communist, seem but superficial marks of a change which is really profound. But the descriptive portions of this paper, which show us Turin, Genoa, Spezia, Lerici, are in Mr. James's proper manner, and that is to say enough both by way of explanation and of praise. The copious extracts from Thoreau's journal, for the same month in many years, called "April Days," have a prime value as the field-notes of a naturalist in the latitude of Concord; their poetic value is secondary, but still not insignificant; and their philosophy we shall presume to rate third, though we make our only quotation from it:

"April 4, 1839. The atmosphere of morning gives a healthy hue to our prospects. Disease is a sluggard that overtakes, never encounters us. We have the start each day, and may fairly distance him before the dew is off; but if we recline in the bowers of noon, he will, after all, come up with us. The morning dew breeds no cold. We enjoy a diurnal reprieve in the beginning of each day's creation. In the morning we do not believe in expediency; we will start afresh, and have no patching, no temporary fixtures. In the afternoon man has an interest in the past; his eye is divided, and he sees indifferently well either way."

"Lincoln's Triumph in 1864" is the late Gideon Welles's title to a fresh discourse on the meanness and self-seeking of Chase, the readiness of Grant to appropriate the credit belonging to others (as in the case of the capture of Wilmington—"an Administration rather than a military measure"), and the resignation of Postmaster-General Blair at Lincoln's request, in accounting for which Mr. Stanton's previous character for integrity is assailed. One can imagine a ghostly session of Mr. Lincoln's cabinet, in which Mr. Welles would sigh for the refuge of a monitor. We can barely allude to Mr. Sedgwick's "The Lobby: its Cause and Cure." Its main points are that the lobby is a necessity, that it is now an irresponsible bar, that the occasion for it should be diminished by removing "claims" from Congress to the courts, and that its procedure before committees should be regulated by law.

—Of *Harper's* and *Lippincott's* for April it is to be said that they are both good numbers, without having any very salient articles. In *Harper's* Mr. Barnard leads off with an article on "The American Clyde," which contrasts graphically and instructively the Scottish iron-ship industry with its rival on the Delaware; and with the aid of numerous illustrations succeeds in giving a fair idea of the construction of a great steamship. Another paper on naval architecture, by Mr. W. L. Alden, touches the other end of the scale, for it treats of "The Perfect Canoe," meaning the pleasure-craft invented and made famous by Mr. John MacGregor. Mr. Alden humorously sets forth the merits and defects of the *Rob Roy*, *Nautilus*, and *Herald* varieties, and concludes by introducing a new model, first to take the water this season, and styled the *Shadow*, which he confidently ranks above them all. Views and diagrams make his descriptions clear, and he must be considered a benefactor if he succeeds in making two canoes paddle where one paddled before; for a more independent and healthful mode of recreation and travel has yet to be devised. One may read about Siena in *Harper's*, with the help of excellent designs after photographs, or about the Italian lakes, as Mr. R. A. McLeod describes them in *Lippincott's*, assisted by fewer and inferior cuts. In the latter magazine are also to be found "Recollections of Edward L. Davenport," by Mr. H. P. Goddard, who eulogizes the man as much as the actor, and an essay on "Home Harmonies," by Mr. Austen Pearce, who writes sensibly, as we conceive, if somewhat above the popular comprehension, on the cultivation of parlor music, with special regard to the combination of stringed instruments with the piano.

—The first part of Grove's 'Dictionary of Music and Musicians' has made its appearance (New York: Macmillan & Co.), bringing down the subject from A to Ballad. In 1764 J. J. Rousseau published his 'Dictionnaire de Musique,' which for many years remained the standard work of reference on its subject. Nothing could give one a better idea of the immense progress made in the art and science of music since that date than a comparison of these two works. The last hundred years have in fact formed the most important period in all the history of music, and in consequence Rousseau's 'Dictionnaire,' though in some respects still unsurpassed, is yet on the whole thoroughly antiquated, and of more value to the historian and the critic than to the amateur in search of practical information. Of more recent works Dommer's 'Musikalisches Lexicon' has long held the first place for accuracy and completeness, although it has its faults, consisting chiefly in a want of literary perspective, and a diffuse style common in German works of this kind, a tendency to empty metaphysico-æsthetic talk, and the omission of all biographical notices. The exhaustive 'Biographie Universelle des Musiciens,' by M. Fétis, on the other hand, is incomplete as a work of reference because limited to biographical notices. In the English language the only general musical dictionary we are acquainted with is Moore's 'Encyclopædia of Music,' a poor, uncritical American compilation, which can have been tolerated so long only because nothing better was in the field. About two years ago a Berlin publisher began to issue the parts of Mendel's very comprehensive 'Musikalisches Conversations-Lexicon,' and this admirable work may have suggested to Mr. Grove the idea of issuing a similar dictionary in English, with the aim of giving information on "musical history and biography, on the science and practice of composition, and the nature, construction, and use of musical instruments, explanations of musical terms, and general information on modern music since the fifteenth century." *Abbreviations, Académie de Musique, Accompaniment, Æolian Harp, Aloni, Adagio, Amati, American Organ, Anthem, Auber, Bach, Bachelor* (of music), are a few of the subjects, chosen at random, that will illustrate the scope and variety of this work, which, if the excellence of the first number is sustained throughout, may be safely placed on the same shelf with the new edition of the 'Encyclopædia Britannica.' And we have no doubt that such will be the case, as Mr. Grove has secured the services of the most eminent English, and some foreign, musicians, the list of contributors including such names as Benedict, Dannreuther, F. Hiller, F. Hueffer, John Hullah, Pauer, Prout, Sullivan, etc.; and there seems to be such a division of labor as will ensure each subject the best treatment.

—We have found this first part so interesting, so well written and free from pedantry, that we have read it through from beginning to end, omitting only the notices of the minor executive musicians, to whom altogether too much space is devoted. Very few people nowadays care to know much about the lives of trumpeters and flute-players of former times, and the few that do may go to Fétis for information. By omitting these notices more space might be reserved for the eminent composers. The article on *Bach* is good as far as it goes, but it scarcely points out with sufficient clearness and detail wherein consists that immense influence of his which induced Schumann to assert that to him "music owes almost as great a debt as a religion owes to its founder." Nor are the proportions of space always observed. *Arne* gets three, *Auber* three,

Bagpipe four, and *Bach* only nine columns! There are also some serious omissions. *Acoustics* is passed over, although that word would have been the proper place for giving an account of the important investigations of Helmholtz; and *Æsthetics* should have been introduced, if only for the purpose of giving a list of works on the musical branch of that science. We also miss the familiar name of Adam de la Hale. It is true, the Dictionary only pretends to go back to 1450, but St. Ambrose (600 A.D.) is introduced in his place, and if we are to miss the names of Gregory, Hucbaldus, Franco von Cöln, Marchettus, and others, just because they lived before that date, the Dictionary will lose much in value. The prominent names before Dufay could all be disposed of in half-a-dozen columns, and it would be better, as we have suggested, to leave out instead some of the minor musicians of more recent times. We must finally protest against the use, in a standard book like this, of the barbarous, old-fashioned habit of calling notes crotchets, quavers, semiquavers, etc. Why not say quarter-notes, eighth-notes, etc., which is much more simple and intelligible, and does not lead to such monstrosities of nomenclature as demi-demisemiquaver? In mediæval times there used to be a clef for almost every note of the scale. We have now happily reduced them to three or four, and the aim of all rational musicians ought to be to simplify musical notation and language in all respects as much as possible. The second part of the Dictionary is to appear April 1.

—Three pamphlets on tree-planting may here receive a seasonable notice. The first, reprinted from the Twenty-fifth Report of the Massachusetts Board of Agriculture, is by C. S. Sargent, Director of the Arnold Arboretum of Harvard University, and is supplementary to a former paper on the subject, to which we once called attention. In designating the trees from which planters on the barren soil and under the severe climate of New England must make their selection for profitable sylviculture, the white ash and the European larch were put foremost, and next to these hickories, sugar maple, and white oak. The trees now recommended as worthy of trial, on economical considerations alone, are the red or Norway pine, wild black cherry, American cork elm, and ailanthus. The cherry, to be of any account, would need a deep soil, such as could seldom be spared for it in New England, and Mr. Sargent does not omit to mention the great fondness of the tent caterpillar for its foliage. We may venture to predict that where these trees are plentifully planted apples will be scarce. As to the ailanthus, although in ill odor as an ornamental tree in streets and near dwellings, its growth even in poorest soils is so rapid, and its wood is so valuable for cabinet-work, that it may well be recommended for sylviculture, especially upon sand-dunes. The result of a fifty-seven years' trial in converting worn-out pasture into forest is given in detail at the close of the article. It has yielded within a small fraction of seven per cent. per annum, with the prospect of continuance, as the land is still well covered.

—'Economic Tree-Planting,' by the Hon. B. G. Northrop, from the Report of the Connecticut State Board of Agriculture, 1877-8, is a more general dissertation on the subject—its advantages, methods, influence upon rainfall and summer state of streams, choice of trees to plant, etc. Its best practical point is that which beseeches the New York, New Haven & Hartford Railroad to plant out "the sand-blow" between North Haven and Wallingford, now a literal eye-sore to travellers and an injury to much otherwise valuable land, but which has actually been caused by the destruction of a natural forest between it and the sea. Some accompanying pages on the weeping willow and its planting show that Mr. Northrop is not well up in the history of the tree; for he re-asserts that "there can be little doubt that the trees on which the captives of Israel hung their harps belonged to the species named *Salix Babylonica*," although "it is said now to be commoner in almost every country than in its native habitat near Babylon." Doubtless this is so; for the best of dendrologists, Karl Koch (as the *Nation* has already recorded), has already shown that the weeping willow is indigenous only in Japan or China, and never inhabited the valley of the Euphrates, at least in the days of the Captivity. It was a native poplar, doubtless, which the translators have made into a willow; and the legend that the willow grew with drooping branches after bearing the harps of the weeping Jews was fitted to this weeping Japanese variety, and Linnæus was misled by it. We mention, finally, 'Facts and Information in relation to the Catalpa-Tree, its Value and Importance,' etc.—the long title of a pamphlet by E. E. Barney, of Dayton, Ohio. The capital fact is that fence-posts, set two feet in the ground seventy-five years ago, on being taken up were found to be perfectly sound; that President Harrison's picket-fence of catalpa wood was in good order after forty years' service, and the portions under ground perfectly sound; all which is very wonderful for a fast-growing wood. Hence it is alleged that catalpa wood will be invaluable for railroad ties, and must be largely produced and used for this purpose in the Western States. Certainly it will be if these statements are borne out.

KITCHIN'S HISTORY OF FRANCE.*

"TWO or three thousand years hence, when civilization has passed on its western course, and when Europe is in the state in which we now see Asia Minor and Syria and Egypt, only two of her children will be remembered: one a sober, well-disposed good boy, the other a riotous, unmanageable spoilt child; and I am not sure that posterity will not like the naughty boy the best."

These words of Thiers afford the best text from which an Anglo-Saxon writer can criticise the history of France. Of the solid and rather uninteresting merits of the good boy, it is unnecessary to say much on either side the Atlantic. The constitutions he has made, the laws he has passed, the lands he has conquered, and the wealth he has acquired, are the ample reward and the overpowering evidence of his good sense and general good conduct. Of the faults of the spoilt child neither Englishmen nor Americans need at the present moment say anything. His follies and errors are visible to every man of common sense. They have brought their due punishment and are certain to receive more than their due blame. Our readers would not thank us for a superfluous homily on the political mistakes of the French nation. What is worth doing is to endeavor to see what are really the strong points in the character and career of Europe's bad boy. That any one bred up in the traditions of English history can ever fully sympathize with the real merits of a nation who have proved themselves weak where men of English race excel, and strong exactly where Englishmen are weak, is impossible; but a candid judge who wishes to see the truth may, even from the dry pages of Mr. Kitchin, catch some of those salient features in the history of France which, in the view of M. Thiers, would certainly gain for her the interest and, perhaps, the affection of posterity.

France, it may be urged in the first place, has never failed to display what is after all the greatest of all qualities both in men and in nations—superabundant vitality. The politician who, when asked at the end of the Reign of Terror what he had been doing, answered "J'ai vécu," said indirectly a good deal for his own force of character. To live when others fail in the struggle with death, is in some cases no mean achievement either for men or for nations. *J'ai vécu* might be the motto affixed to a history of France. Again and again the country has seemed at the last gasp, and again and again France has astonished the world by new life. The Hundred Years' War with England was the darkest of all the dark periods of French history, yet the Hundred Years' War laid the foundation for the greatness of the Monarchy. This struggle closed in the middle of the fifteenth century. Before the sixteenth had begun France had appeared in Italy as the greatest military power of the age. The political and religious contests of the Reformation tried the strength of France more severely than that of any other land except Germany. At the death of Henry III. a calm observer might well have believed that the total ruin of the country was at hand, yet under Henry IV. the country stood forth as the arbiter between the Powers of Europe. The contests of the Fronde wasted for a time, but certainly did not permanently damage, the force of the nation, and the brilliant grandeur of the court of Louis XIV. proved how great were the resources of the people who made him their idol. The policy, no doubt, of Louis led to immediate misery and future revolution; still, neither the fatal glories of Louis XIV. nor the equally fatal failures of his successor really ruined the country. The Revolution remains engraved on the memory of the world as a period of horror and bloodshed; but keen observers like Arthur Young perceived at once, what modern historians have gradually learnt, that the Revolution set free the latent forces of the country, and that France, even amidst confusion and civil war, was renewing her strength. The triumphs of Napoleon, though a curse to the world, were not achieved by the sons of a ruined or decrepit nation.

Nor is extraordinary vitality the characteristic only of the material side of the history of France. An exactly similar phenomenon may be traced in her literary annals. It was under Louis XV. that Voltaire made her the intellectual guide of Europe. If, however, we confine our attention to the material strength of France, it is impossible not to conclude that this extraordinary power of revival must itself depend on something strong in the foundations of French social life. A study of authors

* 'A History of France. By G. W. Kitchin, M.A.' Vol. II., 1453-1624; Vol. III., 1624-1793. New York: Macmillan & Co.

who, like Arthur Young in the last century or Mr. Hamerton in modern times, have known French life as it is seen not in Paris but in the country, suggests the conclusion that it is just in that portion of society which tourists never see and sensational novelists rarely describe that the secret of French strength is to be found. While revolutions displace dynasties and change forms of government at Paris, there is something in France which remains unchanged and almost unalterable. This something is the life of the small proprietors who inhabit the country, and the centre of their life is placed in the close bond of family union; for while the conventional notion of a Frenchman derived from novels is that he is a man given up to dissipation, and caring little for wife or children, the testimony of all persons whose evidence is worth noting, and certain features in French institutions, testify to the fact that family life has a strength in France which it has not either in England or America. Englishmen talk of their home and its sweetness, but their greatness as a nation has arisen from their readiness to leave their country for any land which attracts them by its riches. The so-called volatile and restless Frenchmen have never been able as a race to leave their homes in France. Englishmen and Americans, no doubt, make good husbands and fathers of families, but Englishmen and Americans have never felt it impossible to tolerate divorce. The wildest French Republicans would hesitate to introduce into France the divorce law of England or of Massachusetts. We all, again, are supposed at least to love our relations, but no member of the Anglo-Saxon race has ever cared to give to a "family council" the powers conceded to it with universal approval by the law of France. If to cling to your home and love your family be a virtue, the bad boy has, like other prodigals, always possessed this virtue in a higher degree than the respectable Anglo-Saxon youth who sings of sweet home and then leaves it for ever to found republics in the West and empires in the East.

France, again, has always admired intellectual eminence. Her trust in literary men has often been politically unfortunate, but bears witness to a noble trait of national character. Voltaire and Rousseau ruled the intellect and heart of France in the last century. Montesquieu's speculations influenced every member of the States-General. That assembly was filled with all the eminence of France. Books, it is true, had, in the opinion of De Tocqueville, ceased to sway the actions of ordinary Frenchmen; but his own career almost confutes his opinion. Printers' workmen, we are told, were interested in the publication of his 'Democracy in America.' Its appearance made its author an eminent writer, and therefore in France opened to him a political career. Universal suffrage is supposed to be hostile to the influence of intellectual capacity, but in 1848 the populace of France filled the Assembly with every man whose name added to the fame of the country. The parliaments of the Empire were for the most part deficient in men of distinction, but these assemblies represented the will of the Government, and not the wish of the people; and if the glories of French literature did not add lustre to the Imperial Senate or Chamber of Deputies, the cause lies in the absolute refusal of the men who adorned literature and science to support a government which had destroyed freedom. The Empire fell, and French veneration for talent again made itself felt. Thiers had originally gained notoriety as a journalist and his fame as an historian. During the whole of his long life he did not hold office for any length of time. Nevertheless, this representative of French talent and literary greatness was the man to whom France turned for guidance at the most desperate crisis of her fate. Political accident has made conservatism unusually influential in the constitution of the present Senate, yet the Senate numbered Lanfrey among its members and still contains Victor Hugo and Littré.

This admiration for talent, and especially for literary talent, has undoubtedly at times caused misfortunes to France; but a vulgar admiration for riches and contempt for intellect is a more despicable if politically less dangerous failing than an overestimate of the respect due to talent, and impartial observers may fancy that the political life, both of England and America, would gain something if the electors of London or of New York had some slight desire that their representatives were men whose names contributed to the glory of their country. For once in a generation Westminster fancied it would like to be represented by a man of European reputation. Within four years Westminster repented of this temporary deviation from the paths of good sense, and found in a captain and a successful newspaper-agent representatives far better suited to the taste of the constituency than the best-known economist and logician of his day. Mill's election and rejection were not merely local matters. What happened at Westminster might have happened in any other town within the United Kingdom, and might, with a mere change of names, take place any day either in New York or Boston. Of the feeling which, when pushed to an absurd extreme, led France in the last generation to proclaim Bentham and Priestley citizens of the French Republic, and which, when kept within due limits, ensures that a man like Littré shall not be banished from public life, Anglo-Saxons on either side the Atlantic know nothing. Yet this sentiment of veneration for eminence is one of the noblest a nation can cherish, and prevents the love of equality from degenerating into the meanest jealousy of greatness.

This desire for equality is by friends and foes alike admitted to be the predominant sentiment of the French people, and, as long as it is freed from the base feelings with which it is apt in vulgar democracies to be connected, it is a passion in which Frenchmen may rightly glory. It means at its best a conviction that the qualities common to humanity are of far more importance than the accidental or conventional differences which divide mankind into classes, and it implies an assertion of the principle that men should be estimated in accordance with their essential qualities, and not according to their wealth or rank. That a fanatical faith in this principle enabled France at the end of the last century to shatter the feudal institutions of Europe is patent to all men. That a genuine belief in equality in many respects raises the social relations of modern Frenchmen, will probably be admitted by all who have studied modern France either by direct observation or by reflecting on the observations of others. What is less obvious is, that the power of France to amalgamate into one country provinces occupied by people of different races and history, owes its origin to what may be termed the practice of equality. English writers, such as Mr. Freeman, feel and express indignation at the ease with which inhabitants of, for example, Alsace or Savoy come to consider themselves Frenchmen. It were far better if English historians would, instead of deploring a fact nowise specially deplorable, consider how it has happened that while England after centuries has not been able to form a genuine union with Ireland, and found it a work of infinite difficulty to make one country even with Scotland, France has so dealt with the Germans of Alsace that they still turn their eyes with longing to Paris in spite of all the menaces or bribes of Berlin. The solution of this, as of some other problems suggested by French history, is that the peoples joined to France have at once been treated as French citizens, and that France with all her faults has perceived and acted on the principle that the practice of equality conciliates affection more than the practice of legal justice.

The "naughty boy" is full of vivacity. He loves his home. He admires talent. He practises the social virtues suggested by a sense of human equality. His faults, let it be granted, have proved fatal to success in life, but even his sober-minded rivals may, on reflection, confess that the spoilt child has some attractive features.

The Dutch in the Arctic Seas. By S. R. Van Campen. Vol. I. A Dutch Arctic Expedition and Route. 8vo, 263 pp. and map.—*The Barents Relics.* Described and Explained by J. K. H. J. De Jonghe, etc. Translated, with a preface, by S. R. Van Campen. 8vo, illustrations and map. (London: Trübner & Co. 1877.)—In the first of these volumes will be found no new contributions to knowledge of the polar region, but a discussion of the routes by which a new expedition may reasonably hope to penetrate it, and an earnest appeal to the Dutch nation to resume that place among the promoters of arctic discovery to which the exploits of Barents, Vlaming, and Gilies once entitled them. In his enthusiastic desire that the Dutch should do their part in the work of exploration the author will have the sympathy of every investigator. Yet the absence of any reference to the book of Payer, the results of the English expedition under Nares, or the colonizing projects of Weyprecht and Howgate, as well as the line of argument pursued, show the work to be the product of a state of mind on arctic matters which is not in harmony with the most modern ideas on the subject. Experience and observation of late years, as pointed out by Payer, have all tended to establish the conviction that progress towards the Pole is only practicable along a more or less continuous line of land, or at least not in open ocean. It seems tolerably certain that rifts and patches of open water (Polynia) may occur in any part of the arctic region, and may be brought about even in winter by the agency of currents and winds; but not a particle of evidence exists that an open polar ocean may even be hoped for. Here, however, the open polar sea is treated rather as an accepted fact than as an unverified hypothesis, and in only too many instances arguments which investigation of long-known facts would have shown to be doubtful, and which the latest investigations have exploded entirely, are quoted with the confidence with which one accepts a definition from a dictionary. By the Spitz-

bergen and Novaia Zemlia routes, advocated by the author, we might hope for additions to knowledge, and a favorable season might permit of fresh northward progress to some extent; but it is not to be supposed that, in the anticipations of the practical arctic navigator who may make the attempt, "thermometric gateways" leading to a warm and open polar sea will play any important part. Theories, however plausible, count for very little by the side of repeated experience, which in the author's arguments we find too little referred to. The author pays a warm tribute to Gustave Lambert, and calls deserved attention to his plan of exploration via Behring Strait. This, if it does not offer strong hopes of reaching very high latitudes, at least affords a most promising field for extending our geographical knowledge of the polar region, and has been too much neglected. The volume closes with a convenient table of arctic voyages chronologically arranged; it possesses a good index, and is neatly printed.

The second work above mentioned is a translation by Mr. Van Campen of an official document prepared at the Hague by De Jonghe on the relics discovered at Ice Haven, Novaia Zemlia, and which formed part of the articles left by Barents and Heemskerck on quitting their winter quarters, June 13, 1597. It will be remembered that after the crushing of their vessel by the ice these navigators erected a small house on the shore, where they wintered, losing two of their number by death, and that in the attempt to return around the northern end of the island Barents and two of his companions succumbed to sickness and exposure. Two hundred and seventy-four years after, the Norwegian captain, Carlsen, doubled Cape Mauritius, and subsequently discovered Barents's house, bringing away with him a number of relics, which were finally obtained by the Dutch Government from an English purchaser. A visit by another Norwegian skipper occurred in 1875, but he found little. In 1876 an adventurous English yachtsman, Mr. C. L. W. Gardiner, made a final search, with important results. The relics he obtained were presented by him to the Dutch Government, and form the subject of this brochure. The most important "find" was the remains of a writing by the hand of Barents, which he had "placed in a bandoleer and hanged it up in the chimney . . . that if any man chanced to come thither they might know what we had met with," etc. (De Veer's journal). With infinite pains this precious relic was unfolded and deciphered, and its contents, signed by the two navigators, clearly made out. A fac-simile in photolithography is given. The other articles, beside some undecipherable manuscripts, were the ordinary odds and ends of a ship's forecastle in those days, together with some old books containing quaint Dutch sacred poetry, coins, a flute, six pounds of candles, some quill-pens (still good), and other matters, all in a wonderful state of preservation, considering that the storms of nearly three centuries had passed over them. The hut became a total ruin some time since, and the report closes with a suggestion that a permanent monument to these ancient arctic heroes be placed at the locality by the Government of their fatherland.

Home Interiors. By E. C. Gardner, author of 'Homes, and How to Make Them,' 'Illustrated Homes,' etc. With illustrations. (Boston: Houghton, Osgood & Co. 1877. Pp. 268.)—Mr. Gardner's mission to be a mediator between the architect and those who distrust the profession has been shown, we think, to better advantage in his previous works. We have heretofore found his doctrine sounder in regard to general principles of construction and to broad relations than to details. Into his present subject taste, of course, enters largely, and to get down to the "common-sense" level in discussing matters of taste is attended with no little hazard. For instance, shall there be carpets in a house or not? Mr. Gardner pronounces against them, saying (p. 44): "I know it is not a matter of taste merely, but of common-sense and of eternal fitness," and then fortifies himself "from an artistic point of view," only to return in the next sentence to "the first principles of common-sense." The artistic view is that it is incongruous for "walls of hard-wood and plaster, solid wainscot of oak or maple, pilasters and columns, heavy furniture, piano, book-case, and table, marble mantel, busts, and bronzes," to rest, or appear to rest, "on a soft cushion of spun and woven wool." Art, however, which does not disdain to depict solid-looking gods and goddesses resting on clouds or floating in mid-air, is surely here mistakenly appealed to; while common-sense tells us that we are not shut up to the superficies of visible objects, but that we may be mindful at the same time of substance and substratum also. A wainscot resting on a Wilton carpet need not make us forget the inch-plank and twelve-inch joist underneath the carpet; and we shall be as little concerned for the stability of the house as we are for the safety of a weighty friend who sits down upon a chair enveloped in chintz, or of bronzes and vases standing on a mantel hung all over with lambrequins.

Mr. Gardner earnestly insists on the door being an article of furniture, and not a part of the construction. This comes, apparently, from his conviction that the door is a nuisance, and from his therefore usually conceiving of it as standing open, and so being an obstacle to wall-decoration. The result is that he would have young ladies set to work and decorate the door itself—a justifiable treatment, certainly, but a corollary from a doubtful or false theorem.

There are some good remarks on screens on page 123, but we cannot say that we have been impressed by the praise of the Worcester "prophet" and his works.

Genealogical Notes: Concerning the pedigree of the Thomas Family of Maryland, and of the following connected families: Snowden, Buckley, Lawrence, Chew, Ellicott, Hopkins, Johnson, Rutherford, Fairfax, Schieffelin, Tyson, and others. Illustrated by Views and Coats of Arms. By Lawrence Buckley Thomas. (Baltimore: Lawrence B. Thomas. 1877. 4to, pp. 182.)—Notwithstanding our desire to welcome all attempts to record the history of Southern families, and the plea of the author as to the paucity of material, we cannot find it in our heart to say much in praise of this volume. It is well printed, expensively prepared, but badly arranged and defective in its essential authorities. The main stem is, of course, the Thomas family, descended from Philip Thomas of Maryland, a settler there in 1651, and one of some prominence in his generation. His will mentions two houses which he had in Bristol and lands in this country. The author says that this Philip was in the East India Company's service in 1621, and was the son of Evan Thomas of Swansea, whose pedigree was as follows:

Rice ap Griffith, of an illustrious Welsh family, married a daughter of the Duke of Norfolk, and was beheaded as a rebel in 1532. His oldest son was restored in blood and was the ancestor of the present Lord Dynevor. Thomas, younger son of Rice ap Griffith, is said to have been brought back to Wales, and to have married there, having a son, John Philip Thomas, lessee of mills at Kenchurch, County Monmouth, in 1591. This John Philip Thomas was father of Evan Thomas and grandfather of the emigrant.

We have looked in vain for the proof of this distinguished pedigree, though it may lurk in the mass of matter here collected. Until the evidence is given we can pronounce no judgment on the claim, but one page of proofs would be worth the score of pages devoted to irrelevant matters. The same criticism will apply to many of the other minor genealogies annexed to the main family record. Doubtless some of the affiliations are right, but we have no criterion by which to decide. Thus, we have the Buckley arms, and a pedigree from Phineas B. of Philadelphia, "supposed to be a cadet of the Lancashire family"; the Chew arms and the descendants of John Chew, "said to be a cadet of the family of Chew of Chewton." Then the De Zeng arms and pedigree, probably authentic, are followed by the Ellicott arms of no authority. The Fairfaxes are a part of our history, but the Georges and Gilpins are equally favored with coats of arms, on the authority of Burke only. The Lawrence article but reproduces the mistakes of former genealogists, notwithstanding recent corrections in print.

It would be useless to continue the list. The book gives evidence of industry and contains much information in regard to the families here. The author lacks a knowledge of the best methods of arranging his collections, and he has been over-credulous, or careless in estimating the evidence, in regard to the trans-Atlantic connections of the emigrants. We hope he will attend to both points in future works, so that we may receive the results of his meritorious labors with unalloyed satisfaction.

Old Naumkeag: An Historical Sketch of the City of Salem (Mass.) By C. H. Webber and W. S. Nevins. (Boston: Lee & Shepard. 1877. 12mo, pp. 312.)—This sketch could hardly be welcomed if it either pretended or seemed to be a tolerable substitute for the yet unwritten History of Salem—such a history as the place deserves and as so many far less important towns have secured. The authors, however, expressly disclaim this pretension, and can be unreservedly praised for their diligence in antiquarian research, which has produced an excellent guide-book to Salem and the adjoining towns carved out of her original territory. The illustrations consist of antiquated wood-cuts, most of which could have been replaced with heliotypes from nature, and ought to be now. These would do much to relieve the present cheap aspect of the volume.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Dorchester (Rev. D.), Concessions of Liberalists to Orthodoxy	(D. Lothrop & Co.)	$1 25
Maxwell (Prof. J. C.), Matter and Motion, bds	(J. Van Nostrand)	50
My Int mate Enemy: a Tale	(Claxton, Remsen & Haffelfinger)	1 00
Renan (E.), Mélanges d'Histoire et de Voyages, swd	(F. W. Christern)	
Sharswood (G., Jr.), Table of Cases Overruled, etc., in the Reports of the State of Connecticut	(T. & J. W. Johnson & Co.)	3 00
Strong (L. C.), Poke o' Moonshine: a Poem	(G. P. Putnam's Sons)	1 00
Stor (F.), Books I., II. of the Æneid of Virgil	(Rivingtons)	
Scribner's Monthly, Vol. XV	(Scribner & Co.)	
Wlcek (F.), Piano and Song	(Lockwood, Brooks & Co.)	
Twain (Mark), Punch, Brothers, Punch!	(Slote, Woodman & Co.)	

Fine Arts.

WOOD ENGRAVINGS AS WORKS OF ART.

THERE has been in two of the daily papers a curious discussion as to engravers of wood-cuts, and their position in the world of art, and on the propriety of including wood-cuts in collections of fine art. Mr. John La Farge, a very well-known painter, who has himself made many designs for wood-engraving, wrote to the committee who have in charge the gathering of paintings for Paris, and proposed to them to allow some ten feet square, or even less, of wall-space for American wood-engravings of the present day. This the committee declined to do, alleging, as we understand, want of power; their instructions seem to have been to collect and select oil paintings and water-color drawings. Perhaps this reason was not clearly given to Mr. La Farge. At all events he seems to have had still some hope of prevailing with the committee, when, a few days later, he wrote to some of the morning papers. His letters came out in the *World* and in the *Tribune* on the morning of Saturday, March 16, and contain these words:

"Though the number of artists engaged in it is small, we have attained to a very high standard, for the present day, in the matter of engraving on wood, and on this ground we can compete favorably with European nations, most of whom are decidedly our inferiors. . . . To lift a trade into high art in a country of commerce and manufacture is difficult. It is difficult in any part of the world; to have it happen here is a thing of which we should be proud."

This was as far as Mr. La Farge went. He did not say anything by way of depreciation of American fine art in other departments, but merely pleaded for the admission into the fine-art collection of specimens of the best American wood-cuts. The *World*, however, went a little farther, and, in an editorial of the same date, bewailed the "pitiable and vulgar show" which the United States made in Memorial Hall at Philadelphia, and suggested the adoption of Mr. La Farge's plan as a partial compensation for our backwardness in painting.

And certainly the *World* had reason on its side. The wood-cuts which Mr. La Farge had in mind ought to be included in our Paris fine art show, not only on account of their intrinsic excellence, nor only on account of their excellence relatively to what is being done in the same line in Europe, but because we can hardly hope to hold our own in painting, in sculpture, in etching, or other process of engraving, nor in any of the decorative arts whatever. In this one matter of wood-cut illustration to books, thanks to the genius of Henry Marsh and to the powerful aid he has had from one or two designers and one or two engravers, we can afford to meet rivalry. Does this mean that there is nothing good in American painting? By no means; but the whole body of American work in oil and water-color, taken together, is slight and feeble beside that which England or France has to show. Or does it mean that no good wood-cut illustration exists elsewhere? Not so; but there does exist now in America a little school which produces very original, beautiful, and permanently valuable work in that art—work which no other nation can surpass, so far as we know, at this time.

That same evening, however, the *Evening Post* came to the front in defence of the old theory—what might be called the oil-paint theory—that there is no fine art outside of oil-paintings in frames and marble statues on pedestals. We quote:

"The engraver is little, if not an imitator and a plodder. . . . His business is to copy, not to create; to interpret, not to meddle with the text. In a fine-art exhibition the artist's absence cannot be compensated for by the presence of the engraver, who, so far from filling the chair of the former, is scarcely large enough to rattle about in it."

Thus a fresh question was dragged into the discussion. Mr. La Farge and the *World* had been contented to ask for the exhibition of certain beautiful wood-cuts, and had not raised the question whether their beauty was due to a plodding copyist or an "artist." Mr. La Farge certainly, and the *World* probably, were well aware that the beauty of a wood-cut is due to a certain ability on the part of the designer to adapt his design to the proposed material, and to a certain power on the part of the engraver to interpret aright the artist's thought. Many of our readers have seen, in exhibitions or elsewhere, some drawing by Mr. La Farge himself on the wood block; did it ever occur to them to ask how a fresh-taught pupil of some "School of Design" would render that drawing, and, on the other hand, what Marsh would make of it? Two years ago the "Bishop Hatto" was exhibited at the Academy of Design—a most powerful design, charmingly drawn on the whitened surface of the box-wood. This year a proof from the engraved block was shown. Unluckily the two can never be compared. But let any person look at the proof and try to imagine what a merely mechanical wood-engraver would have made of it. Or examine the beautiful pictures which *Scribner's Monthly* and *St. Nicholas* sometimes give their readers. Space does not suffice us here to mention instances, but those finest engravings are sometimes made from drawings far inferior to them in beauty. It may safely be asserted that the power of fine art shown in Marsh's translation of a sketch on gray paper in black and white into a design of hard black lines which can be printed off on paper at steam-press rate of speed, is as original and peculiar, and almost as important, as that shown in the best of the designs he has given him. It cannot be too often repeated that nobody has proposed a general gathering of wood-cuts from magazines and weekly papers, from advertisements and show-bills, but only the admission of a certain small number in which the original design and the engraver's manipulation have worked together to produce a triumphant result. In some of these indeed the engraver has been the only person employed, as in Marsh's marvellous engravings of insects made with the creature lying beside the block.

On Sunday, the 17th, the *World* answered, not altogether as cogently as might have been expected, but still in an article true, sound, and to the purpose. And to this, again, answered the *Evening Post*, on Monday, in a short article of a character simply astounding, considering what the controversy was about. It was a sad attempt at ridicule, with nothing salient enough to quote, nothing more positive than an expression of amazement that the *World* "thinks this country to be behind every other civilized country in the matter of the fine arts, and that our pictures at Philadelphia were 'pitiable and vulgar.'" The *World's* answer to all this was jocose, and chiefly confined to advising somebody to take out to Europe a consignment of American paintings (probably of the *Post's* picking out) with a view of ascertaining the position of America in the world of art. We are not aware that the newspaper discussion went further. But on Thursday Mr. George Inness came out in the columns of the *Post* as a defender and farther expounder of the oil-paint theory. Mr. Inness's view of the case is, briefly, that the production of an engraving does not require the same artistic power as that required for a painting; and, although this looks like a truism, the reasons given are worth citing. The painter does original work; the power of producing rapidly is greater in painting than in engraving, and, therefore, no one would confine himself to engraving if he could paint "equally well"; the painter needs greater resources than the engraver, because he works direct from nature, while the engraver only "produces an imitation, and not a translation, excepting so far as a reproduction in color is a translation" (a statement which seems to us exactly the reverse of truth, in every way); and finally, the painter uses color, "the most difficult thing in the world."

Well, it has never been pretended, to our knowledge, by the lovers of wood-cuts that fine art in black and white is equal in dignity to the art of the colorist. What was thought of that matter in the time of David and "Ingres élève de David" (as reads the signature on a drawing now exhibiting in New York), we do not stop to enquire; but in our day it is generally admitted that no other human art can claim quite equal dignity with the art of the colorist. Yet, as Mr. Inness enquires, "Where are our colorists?" Let the one or two bits of color we have to show go to Paris; who objects? But Mr. Inness must know they will amount to but little, in the world-wide gathering at Paris, even if he agrees with us in thinking that color is not now the strong point of the Continental schools of painting. And if we fail to excel in art of the first rank—say painting for color chiefly, if Mr. Inness likes, and in art of many kinds only just inferior to that—why is it not very important for us to make the best show we can in that one still humbler art in which we do happen to excel? The question is not what fine art is the noblest; all fine arts are noble. The question is not whether all wood-cut engravers are artists; notoriously they are not. Mr. Inness's last sentence is a good text for all our essay: "The presence of the creative power is always acknowledged to be the quality essential to great art." Then let us send to Paris no woodcut in which that presence is not manifest. We will not make so strict a law for the paintings.

The Nation.

NEW YORK, THURSDAY, APRIL 4, 1878.

The Week.

SECRETARY SHERMAN has had another talk—this time with the House Committee on Banking and Currency. We presume by way of defence of his proposal to allow customs duties to be paid in greenbacks, he showed that the requirements of the Sinking-Fund Act had been more than complied with to the extent of $200,000,000; but then the Act did not say that if more of the debt than it calls for has been paid, the provision it makes for the payment of the whole debt may thereafter be disregarded. In reply to Mr. Chittenden the Secretary was more explicit than in his interview with the Senate about the effect of the Silver Bill on his stock of gold. What he now says is that he thinks that as long as not more than $50,000,000 to $100,000,000 silver dollars are issued, they can be maintained at par with gold; but that when they become so abundant and burdensome that people will not take them, they will sink to their bullion value; but that this cannot happen very rapidly, and long before it does happen Congress can repeal the present law; that he has not changed his mind about it, but thinks it must be tried, and if it does not work Congress can change it. This argument would, however, justify the issue of "fiat money," just as an experiment, because, being a savage people just out of the woods, we cannot be supposed to be familiar with the recorded experience of other nations and ages. The Secretary also showed that the banks, in the event of resumption, would be bound to take care of their own bills, and that if they attempted to thwart the policy of the Government the Government would do something dreadful to them, the nature of which he did not explain. He wound up by declaring that resumption was easy, as the Government would only have to take care of $300,000,000 greenbacks, but he virtually admitted that on their reissue they would not be legal tender. At this point Mr. Ewing appeared on the scene with a question worthy of the Sycamore of the Wabash—viz., What the Secretary would do if $50,000,000 greenbacks were presented all at once for resumption? Which ought to have been answered, as it would have been if put by a little boy, by a request that he should not be troublesome but go and play in the garden.

It has been an eventful week in the financial markets. In London, owing to the course of events affecting England's warlike attitude, the market for securities was very much shaken, and at one time something like a panic prevailed. British consols fell from 95⅛ to 94⅝, and then ruled between the latter price and 94¾, with very frequent changes. Russian securities fell heavily, and were feverish at the close. On Thursday, the Bank of England advanced its discount rate to 3 per cent., and the rate outside advanced to 2⅝ to 2¾. The effect in New York was to advance the rate for demand bills on London to 4.89½ to 4.90. The specie-shipping point is 4.89¼. Accordingly gold exports began, and these, by the steamers of Thursday and Saturday, amounted to $1,750,000. Sixty-day bills were depressed by the expectation that the discount rate in London would be still further advanced. Gold advanced to 101¼, but closed at 101⅛, the stock being so large that it is, as the brokers say, very heavy to carry. Moreover, the public-debt statement showed that the Treasury would be obliged to sell gold to replenish its currency balance, which is reduced to less than $1,000,000. United States bonds, with all the fluctuations in London, steadily ruled enough below the New York market to make shipments this way profitable. Silver in London advanced to 54⅛*d.* per oz. on purchases for the account of the United States Treasury. The moment these ceased the market became heavy, and the price closed at 54¼*d.* The gold value of the silver dollar at the close of the week was $0.9261; the gold value of the paper dollar was $0.9883.

The appointment of Mr. Glenni Scofield to the Registrarship of the Treasury has been unanimously confirmed by the Senate, and is generally approved of, although his connection with the Crédit Mobilier when in Congress did not appear by the evidence taken at that period to have been all that could be desired. He is from Pennsylvania, and the Senators and Representatives from that State do not appear to have objected to him. However, two of the Pennsylvania Representatives, Messrs. White and Thompson, wanted the place for some one else, and called to see the President and Mr. Sherman about it, neither of whom mentioned at the interview that it had been already offered to Mr. Scofield, and when they called again they learned that he had accepted. According to one account, they thereupon whirled their canes and swore and flounced out of the room, and became bitter enemies of the Administration. According to another, they received the announcement with Christian fortitude and politeness, and, after some amicable conversation with the Secretary, left him with expressions of interest in his health. The affair has produced cards and counter-cards, and has led some to the conclusion that President Hayes ought to resign or pay more attention to the "mechanism of government," and that "the end is not yet," which may or may not be true.

Fifteen years ago, a Japanese daimio, who was in open revolt against the Tycoon, fired on an American ship and made assaults also on other foreign vessels, until he was brought to reason by his own Government aided by foreign Powers. It was a case in which, considering all the circumstances, it was ungenerous to exact from the Japanese any compensation beyond actual damage done. Nevertheless our Government did join other Powers in claiming an indemnity, amounting in all to $3,000,000, of which our share was $750,000, an enormous and, as the result has shown, unjustifiable sum for an attack on a single merchant vessel. This money has been paid in instalments, and all the recognizable claims arising under it have been settled, leaving a balance with interest of nearly $1,500,000, which has been lying in the Treasury for some years. The return of the amount to the Japanese Government has been recommended by the Committee on Foreign Affairs, or rather a subcommittee, as but fair and honest. This is a very extraordinary recommendation. The money was paid to the United States as a nation; if the damage done to individuals for whom we demanded it was not half or quarter what we said or thought it was (the constructive damages for the *Pembroke* amounted to $10,000), so much the better for us. The times are hard, and a million and a half of money is a big sum. Therefore we say keep every cent of it, and let it go to lighten the expenses of a sorely burdened people. The Japanese may grumble, but they cannot help themselves; and if they do not like the transaction they can go with some of the Alabama claimants, in accordance with President Seelye's recommendation, before the "August Tribunal of History," and howl until they are tired.

There is an addendum to the Fisheries affair. An article of recent date has been discovered in the London *Times* expressing the belief of the writer that the decision, to be binding, would have to be unanimous, which Mr. Blaine produced in the Senate with much satisfaction. But, then, more diplomatic correspondence has also been produced, showing that after the dispute and failure to agree on an umpire within the stipulated three months, in 1873, the matter was allowed to lie dormant until 1877, when Mr. Fish, wishing to finish it before going out of office, informed Sir Edward Thornton that he was willing to take M. Delfosse, and thereupon Count Beust was requested by both parties to appoint him, from this side of the water; whereas, according to Mr. Blaine, who is very penetrating, the choice fell into Count Beust's hands without note or comment, and he, being secretly corrupted by Lord Granville, eagerly appointed Delfosse. Poor M. Delfosse really accepted, it appears, on Mr. Fish's urgent solicitation, and did not foresee the

trouble into which he was getting himself. Some of the Blaine publicists maintain, in reply to Dr. Woolsey, that the British must in this matter be guided by their own common-lawyers, whom Mr. Blaine quoted, and cannot shelter themselves under the authority of the Romans, a dissolute and heathen people, and long since dead. But it is none the less true that the Treaty has turned out very disadvantageous, and that the United States is paying an enormous sum for a privilege which at best will only last five years longer, and that, if the Canadians are wise, they will not accept it, and will negotiate for something permanent and satisfactory to both parties.

Senator Howe's great "effort" having fallen utterly flat in Washington, as well as in the country at large, the week in Congress has been tame enough. The Senate has passed the Consular Appropriations Bill, and the bill for the better advertising of mail-contracts. The House defeated, for the moment, on Monday what we may call a pension-grab bill or a back-pay pension bill, called up by Mr. Cummings, of Iowa, which received a majority vote of 145 to 76, but failed of the two-thirds necessary to make it in order and to pass it on the spot. On Tuesday, it passed a joint resolution authorizing the expenditure of $36,000 to strengthen the foundations of the Washington monument. The chief event, however, in this branch was the seating of a Democratic contestant, Dean, in place of Representative Field, of Massachusetts. It is quite within the province of the House, in determining the qualifications of its own members, to override the electoral regulations of the States, and it did this in the case of Mr. Field, whose title was so clear that nine independent Democrats voted with 114 Republicans to sustain it, and would have succeeded but for Mr. Randall's eager interference as a partisan. Gen. Butler was a good enough Democrat for this occasion to lead the 124 who voted for Dean. There are few Republican precedents for his course, but only too many for that of his allies.

The Boston *Herald* has given an analysis of the vote in the House on Mr. Wood's resolution for making his Tariff Bill a special order for to-day. Allowing for pairs and absences, it makes the vote (which on the division stood 137 to 114) in a full House 159 to 132, showing a majority for the measure of 27. In twenty-eight States the division followed party lines exactly. For instance, in the six New England States, among the yeas we find no Republicans and five Democrats; among the nays, no Democrats and twenty-one Republicans. In the thirteen Southern States, among the yeas there are four Republicans and seventy-one Democrats; while among the nays there are three Republicans and no Democrats. The same is true generally in the other divisions of the country. Altogether the vote shows that the tariff question is to be treated by the House as political, which, of course, gives Mr. Wood's bill a better chance of passing in that body; but this cannot be said of its chances in the Senate. The bill, notwithstanding the hostile criticism to which it has been subjected, ought, from its character, to recommend itself to moderate men of both parties. We have discussed elsewhere its latest modifications.

The last report of the South Carolina Fraud Committee relates to the attempted impeachment of Governor Scott in the Legislature in 1871. Investigations which had been made into the issue of the State bonds had revealed some ugly facts, and shown clearly that the "Financial Board," composed of Scott, Parker, and Chamberlain, had been, to say the least, engaged in some very questionable transactions, and it was determined to impeach the Governor and Treasurer. Accordingly, resolutions were introduced into the House of Representatives for this purpose. This, the committee says, "was Patterson's opportunity." His method of operations appears to have been to work upon Scott's fears, and at the same time to encourage the movers of the impeachment. He played his cards so well that Scott became thoroughly frightened, and put himself in Patterson's hands. To make sure of sufficient votes to kill the impeachment, it was now determined to issue a number of blank warrants to be filled up with the requisite amount, whatever it might prove to be. In 1869 a joint resolution had, it seems, been passed, authorizing the Governor to employ an armed force for the preservation of the peace, to be paid out of funds in the treasury not otherwise appropriated. From this fund the warrants were drawn, three in number, and amounting altogether to $49,645, payable to fictitious persons, but collected undoubtedly by Patterson or his friends.

In the course of these proceedings it became evident that if an adjournment over the Christmas holidays could be effected, and the members allowed to go home and learn their constituents' feelings, the impeachment would probably succeed, as the popular sentiment was all one way; at any rate the expense of buying off the members would be greatly increased, and economy was a thing to be considered. It was, therefore, important to bring the matter to a vote at once. This was difficult, inasmuch as Whipper, who was a reformer at this time, had the floor and intended to speak till the hour of adjournment. There was no way out of this dilemma but to purchase a ruling of the Speaker which would dispose of Whipper, and for this purpose the "Militia Fund" was resorted to. Moses, the Speaker, was paid a large sum of money, and one Lee at the proper moment rose to a "question of privilege," on which the Speaker ruled Whipper out of the way at once. To make legislative action still surer, Scott issued a proclamation convening the Assembly on the day following the day fixed for adjournment, on the ground that it was not decent or proper for the Legislature to be having a holiday while the Governor and Treasurer were lying under charges of "high crimes and misdemeanors." Under all this pressure a vote was taken; the impeachment was defeated by 73 to 27, the Governor withdrew his proclamation, and the Legislature went home; those who had been bribed, to pass a Merry Christmas with their families on the proceeds of the "Armed-Force" and "Militia-Fund" warrants, and those who had been virtuous and defended the interests of the State, to find no money in the treasury to pay their honest certificates. All this creates a good deal of excitement in South Carolina, but from the Senate's toleration of Patterson it may be inferred that that body does not consider the matter of any importance. It appears probable from a recent speech of Hampton's that a requisition would be issued for Chamberlain, but that doubts are felt as to the certainty of a conviction on the evidence now in the hands of the State.

The trial of Insurance Superintendent Smyth by the Senate of this State was concluded on Wednesday week by a vote of acquittal, 19 to 12, the majority being mainly Republicans, who were effectively reinforced by the members known as "Tammany Senators." With the majority, too, voted Senator Harris, one of the witnesses on the trial, who testified that he had professionally advised Mr. Smyth of the unconstitutionality of the Act of 1873, which he was about to violate. Senator Pomeroy, whose argument is said to have carried most weight, took the ground that the Act of 1873 was inoperative because no appropriation had ever been made to meet it, and that the only way to provide for investigation of the companies was to fall back on the law of 1853. It seems a little singular that Mr. Smyth's effort was directed, on taking office, not to securing the necessary appropriation, but to repealing the Act of 1873, which he had accomplished but for the Governor's veto. Still, conceding his right to elect which law he would violate or which use for his own convenience, it has appeared only too plainly from the trial that the real issue was not before the Senate. Mr. Smyth may have deserved a technical acquittal, but have the public reason to believe from the evidence that it will be protected by him against fraudulent, extravagant, or rotten companies? It is clear that, if he is to go on with his examinations as heretofore, the companies may expect to be charged with the costs at his pleasure, whether for his own benefit or for that of country lawyers and politicians, and may fear that if his bills are not paid without demur they will fail to obtain his certificate of soundness. Their influence, therefore, should have been strongly and unanimously exercised in favor of dismissing an official who con-

tended for this tremendous power over their fortunes; but the reverse was true. The companies which he had fleeced most heavily seemed, on their testimony, most content with his charges and his procedure, and the public is left with the unpleasant inference that they submitted to extortion because they dreaded exposure of their own management, and that unscrupulous superintendents will find in the very evils which they are appointed to ferret out and denounce a powerful guarantee against removal for malfeasance. In short, the trial confirms, even more by acquittal than by conviction, the doubts which have long existed as to the security afforded by State supervision, at least nowadays and in New York.

The political and journalistic consequences of the Smyth trial threaten to be little less than horrible. Some of his enemies on the press have been reminding the public of several irrelevant facts. One of these is, that Mr. Smyth is (or recently was) Chairman of the Republican State Committee; and another, that he is a warm friend and supporter of Senator Conkling. A third is, that Tammany Hall is threatened by various schemes of reform in the Legislature, and is very uncomfortable at the distant rumblings of a new, independent Democratic movement, made up of "Anti-Tammany" and seceded Tilden men, and that large, if not thoughtful, body of citizens who are always restive under Tammany, and would probably vote with great cheerfulness for a ticket with a horse or locomotive engine at the head of it, provided its managers promised that the horse or the locomotive should "strike down the one-man power." Putting two and two together, it ought to be clear enough to all but Kellyites and Custom-house Republicans that the result of the Smyth trial was produced by a "bargain" between the Conkling Republicans and the Tammany Democrats, the former agreeing to be "easy" on the latter in the matter of reform during the present session, and the latter agreeing to vote for the acquittal of Conkling's henchman. A *Times* correspondent at Albany has accused Mr. Hamilton Fish, jr., of the Assembly, of being a party to a bargain of this kind; and Mr. Fish has, in his turn, had the matter referred to a committee for investigation; but the committee appears to have some difficulty in finding the man who sent the despatch, and he will probably find an equal difficulty in proving any bargain. The journalistic bearing of all this has been discovered by the Albany *Express*, which says that the malignity of the *Times* on the subject is due to a circular issued by Mr. Smyth last year as Chairman of the State Committee, recommending the *Tribune* to "many prominent Republicans" throughout the State, and advising them to "do what they could to extend its circulation."

The Municipal Society of this city have attacked a crying abuse in the system of administering estates prevailing in the Surrogate's Court, and have appointed a committee to investigate the matter. Some shocking instances were given at the meeting; one, of an estate left by a leather merchant some years ago, whose executors, according to Mr. Jackson S. Schultz's statement, had never been able to get their accounts through the court, although the matter has been in its hands for fifteen years. In another case, an estate of from $200,000 to $300,000 was left in such a way that no one desired to contest the will; yet by some means the estate was involved in litigation, and is in litigation to-day; every dollar of it has been squandered, allowances of $75,000 have been made to lawyers, and the widow and grandchild of the owner of the estate are paupers. The abuses seem to arise from the power of the Surrogate to make allowances out of estates, and it has now come to such a pass that it is said that people of exceptional shrewdness make provision in anticipation of death for dying somewhere outside of New York, so that the Surrogate may not get hold of their property. The only remedy suggested at the meeting was the obvious one of taking away or restricting this power over allowances, and to this there can be no valid objection. It may not be advisable to take it away altogether, but it is clear that the sums allowed for contest or any other legitimate expenses ought to bear a relation to the whole amount involved which would prevent causeless litigation about estates from being in itself an attractive pursuit, offering a remunerative career to "smart" and unprincipled lawyers.

The most important event of the week abroad has been the resignation of Lord Derby and the appointment of the Marquis of Salisbury as his successor. The ostensible cause of the resignation has been the calling out of the reserves, which, though Lord Derby acknowledged it would not necessarily lead to war, he looked on as an unnecessary provocative of war. The effect of his retirement on the Ministry is not nearly as great as it would have been when offered before, in January, as the anti-Russian mania has grown considerably in strength since that period, and his moderate rôle became more and more untenable. His successor promptly issued a circular, addressed to the European Powers, deploring Russia's refusal to submit the treaty as a whole to the Congress, inasmuch as every material stipulation of it involves some departure from the settlement made by the treaty of 1856 and the declaration signed in London in 1871; objecting to the new Bulgarian principality as likely to be wholly under Russian influence, and as merging a considerable Greek population with the Slavs without their consent; pointing out the utter prostration and dependence in which it leaves Turkey, both by the loss of territory and the imposition of an indemnity so large that she cannot pay it, and which may be kept hanging over her head for years as a means of enforcing her subjection to Russian influence. England, therefore, cannot enter a Congress whose powers would be restricted by Prince Gortchakoff's reservations.

We have no statement of the Austrian position so recent as this, but it probably has not varied very much since Count Andrássy addressed the delegations or committees representing Austria and Hungary on all matters of joint or imperial concern, when asking for the vote of 60,000,000 florins, three weeks ago. It is true he had not at that time seen the official text of the treaty, but he knew its contents with sufficient accuracy to comment on them in general terms. He said all they could ask of Russia after her great victories was that their results should be so limited as not to injure Austrian or European interests; that it would be impossible to ratify the destruction of one-half of Turkey without taking into consideration in what manner the other half was going to exist, or to rejoice over the improvement of the condition of the Christians in one part of the Ottoman Empire without considering what their lot would be in the remainder of it. He added very emphatically that the difficulties of these questions were so great that "collective Europe only would be able to cope with them; that a single Power should attempt the task without the assistance and against the will of the others, seemed to be out of the question"; and he added that any settlement that was made must be a durable one which should not contain explosive materials.

It may be inferred from all this that Austria and England stand on substantially the same platform, and the only question remaining is, as we said last week, whether they will both demand the same concessions, or, in other words, whether Russia may not be able to satisfy Austria in ways that will not satisfy England. About this there is still the same swarm of contradictory reports, but the chances are still that Austria will be disposed to take a more favorable view of the rights of victory and possession than England. The Russian position is the perfectly simple one that, having waged a bloody war, she cannot be asked to sit on terms of perfect equality in settling the results of the war with those who never drew the sword, and there is undoubtedly great reasonableness in this. The preparations of war still continue, but the object of the war has not as yet been defined by England, so that it is impossible to foresee its end should it break out, or say where its theatre will be. Sixty thousand British troops cannot drive the Russians out of Bulgaria, and 500,000 Russians could not damage the British fleet. So that it seems as if the final decision must, after all, rest with Austria.

THE SENATORIAL ATTACK ON THE ADMINISTRATION.

THE disagreeable impression produced by Senator Howe's speech last week has been deepened by the long silence on the Republican side which preceded it. Such attacks on the Administration would have, or might have, a good deal of force, or at all events would not seem discreditable, if they came from men whose activity in good works during the past year had been conspicuous. But when people come to review the first year of the Administration and take account of its shortcomings and omissions, and see half a dozen prominent Republican Senators start up to assist them, and even deliver bitter commentaries on its faults, they do not listen to the orator very long before their minds begin to run on his own career, and before they ask what he himself was doing while the President and the Cabinet were engaged in the various crimes and follies he describes. There has been a vigorous effort made during the past winter to spread the notion that this was an impertinent enquiry; that although it was everybody's right to exact of the executive branch of the Government a daily account of its manner of discharging its constitutional duties, it was nobody's business how the Senators passed *their* time, in what way *they* were showing their interest in the public welfare, what steps *they* had taken to meet the dangers now threatening us—what, in short, *they* had done to make up for the President's shortcomings. This effort, however, has not been successful. The public has not taken the Cincinnati platform as a vain form of words. It has taken it as the pledge of the Republican party to follow out a certain line of policy, and it has never forgotten that the support and pursuit of this policy were as much the duty of the Senate as of the President, each, of course, acting in its own sphere. There never has, for instance, been any general acceptance of the theory that the President alone was to reform the civil service, or the currency, or defend the public credit, or pacify the South; it has all along been held that it was also the duty of the majority in the Senate to do whatever the Constitution allowed it to do for the same objects – a duty having precisely the same origin and the same sanctions. Moreover, it has never been admitted that a Senator, any more than the President, could discharge this duty either by sitting still in his official chair, and smiling or sneering, or "looking dark," or by going to a hotel and swearing. The Senate is not a judicial body, except when it is sitting in cases of impeachment. It has not to wait for its opinions and judgments to be evoked by motions from without, except when nominations are submitted to it. It has full legislative powers, except as regards the origination of appropriation bills. Its responsibility for the condition and working of the Government is, in fact, in many respects greater than that of the President, and any Senator who criticises the President or any of the departments must not come before the public as a mere bystander who has been watching them, and does not like their ways; he must come as their colleague, who has been himself trying, and openly and notoriously trying, to bring about what they have neglected or refused to assist in.

When, therefore, any Senator says that Mr. Hayes's policy at the South has been criminal or mischievous, it is perfectly proper to ask him what he himself has done or advised to be done towards pacifying the South, what speeches he has made or votes he has cast towards ending the great contention by which for fifty years the nation has been rent. And when he says the President has not reformed the civil service and has made bad appointments, it is every citizen's right and duty to ask what *he* has himself been doing towards this reform, what speeches he has made or bills he has introduced to promote it, and one must even go so far as to enquire what he has been saying about it in private at his hotel and in his own house, and whether in denouncing the President's conduct he was angered by his failure to make a complete change of system or by his having attempted any change at all.

It must be confessed that truthful answers to these questions put the Republican Senators in rather a sorry plight. If they have shown any more energy or activity in dealing with the problems of the day, or any greater readiness to use for their solution the weapons put into their hands by the Constitution, the public has failed to perceive it. No more momentous questions have ever presented themselves for legislative solution than have presented themselves during the past year: the provision of a better mode of electing the President, the reorganization and improvement of the civil service, the reform of the currency, the revision of the existing system of taxation, the defence of the public credit against alarming assaults on it, the settlement of the war-torn society of the South in some way which would enable the two races which compose it, not to divide offices equally, but to live side by side in peace and amity and refrain from cutting each other's throats. What contributions to these great objects have come from the Republican side of the Senate? Except two or three speeches from Senator Edmunds we know of nothing. In fact, we think we are not wrong in saying that in no winter since the party came into power have the Senators of the party been so silent, so inactive, and apparently so little interested in the real politics of the country. It is, indeed, significant and characteristic that when they held a caucus the other day, it was, according to the best reports, not to consider what course they had better pursue with regard to the burning questions of the day, but what kind of rumpus would be most likely to secure the re-election of the Senators whose term expires next March.

Senator Howe's speech is now generally acknowledged to have been a trial-balloon sent up to see in what quarter the wind lay. The result has proved unsatisfactory, but the malcontent Republican Senators, and especially the illustrious Conkling, are reported to have enjoyed it highly. Now, such a performance, coming from so obscure, silent, and dull a politician as Mr. Howe, is not worth analysis on its own merits, but it well repays perusal as an illustration of the *state of mind* towards public business of that section of the Senate which is most active in its opposition to the President. It will be observed that it deals almost wholly, in so far as it is not mere denunciation, with things past and irrevocable—that is, with things which are the concern of the historian and philosopher, but not of the politician except in so far as they furnish guidance for the future. His concern is not with what might have been, but with what shall be; not with what ought to have been done, but with what must now be done. The policy, for instance, of withdrawing the troops from the South and allowing Hampton and Nicholls to keep possession of their respective State governments, is a proper subject of discussion in a legislature only if it is proposed to send down troops and oust Hampton and Nicholls. If this is impossible, long speeches about it are only appropriate in a debating society, or in a body like the House of Commons, where the administration can be deposed from office by a vote of want of confidence. Even there, however, such speeches would only be tolerated from a recognized leader, who had given proof of legislative activity, and of strong interest in and mastery of the leading questions of the day. From a man like Mr. Howe, who had sat for seventeen years in dull silence, and who had never been known to originate a bill or an idea, they would be coughed or laughed down.

The attack of this gentleman on Senator Schurz deserves attention for the same reason, although it reaches a depth of folly, in the strict sense of the term, with which the rest of the speech is not justly chargeable. For simple fatuity we doubt if many Congressional orations have equalled the passage in which he gave a biographical sketch of Mr. Schurz by way of discrediting him. The first charge—think of this coming as a reproach from an American Senator!—was that Mr. Schurz began his career by taking arms in his hot youth in the great Liberal movement of Germany, which began in 1820 and, after many trials and reverses, triumphed at Sedan—that is, a movement in pursuit of parliamentary institutions and national unity. The next was that, having fled to this country, young, unknown, and ignorant of the language, he was, after a few years, sent as Minister to Spain, made a major-general in the army, elected to the United States Senate, and finally made a cabinet minister, having been unsuccessful as a lawyer and editor. From the Howe version, a stranger might fairly infer that these honors—extraordinary under all these circumstances—were bestowed on Mr.

Schurz in consequence of a career of great rascality and of successful violence exercised against the American people and their Government; and that the failure to succeed at the bar, or in journalism, was in itself proof of moral obliquity, and was rarely heard of among natives of the United States. When one learns or knows, however, that Mr. Schurz's reputation and success, his public honors and rewards, have been due to his having rapidly become, in a foreign language too, one of the greatest orators of our time, and to his having used his eloquence with wonderful effect in the picturesque and noble agitation in defence of freedom which preceded the civil war; that during his one term in the Senate he did more to illustrate that body by his splendid powers of debate than any one who has sat in it during the last thirty years; that the brunt of the battle in defence of the national credit against base and ignorant Republican inflationists was there borne by him, and that since he left the Senate he has twice saved important elections to the Republicans on this most serious question by the use on the stump of the same unrivalled oratorical skill, one is amazed, not at Howe's folly, for he is not well enough known to excite amazement, but at the folly of the backers and confederates who have egged him on. The German voters of this country are apathetic, and are hidden a good deal from the view of American politicians by their language; but if they have a spark of self-respect and political sense they will see that when, as in Mr. Schurz's case, they have given a first-rate man to the politics of their adopted country, his name and fame are properly protected, and that English-speaking demagogues shall show him at least as much deference as they lavish on any sorry blatherskite whom the more active and aggressive Irish choose to make prominent. To the agencies to which men like Mr. Howe owe, and have to owe, their presence and continuance in public life, viz., the wire-pulling, pipe-laying, log-rolling, subsoiling, cozening, and intriguing, Mr. Schurz, happily for himself and his children, is indebted for nothing. His judgment has undoubtedly proved defective in more than one important crisis in his career, but he can nevertheless use, with one or two slight changes, without conceit or self-inflation, to Senator Howe and the Senatorial clique who hate and envy him, the language in which Burke repelled the assaults of other paltry revilers:

"They cannot readily comprehend the career they condemn. What I have obtained was the fruit of no bargain, the production of no intrigue, the result of no compromise, the effect of no solicitation. . . .

"They think I have obtained too much. I answer that my exertions, whatever they have been, were such as no hopes of pecuniary reward could possibly excite; and no pecuniary compensation can possibly reward them. . . .

"'*Nitor in adversum*' is the motto for a man like me. I possessed not one of the qualities nor cultivated one of the arts that recommend men to the favor and protection of the 'manager' and the 'worker.' I was not made for a minion or a tool. As little did I follow the trade of winning the hearts by imposing on the understandings of the people. At every step of my progress in life (for in every step was I traversed and opposed), and at every turnpike I met, I was obliged to show my passport, and again and again to prove my sole title to the honor of being useful to my country, by a proof that I was not wholly unacquainted with its laws and the whole system of its interests both abroad and at home. Otherwise, no rank, no toleration even, for me. I had no arts but manly arts. On them I have stood, and, please God, in spite of the Group, to the last gasp will I stand."

GOVERNMENT SAVINGS-BANKS.

IT seems likely that some one of the bills now before the House and the Senate for the establishment of Government savings-banks in connection with the post-office may pass into law; and if so, it may have a wider influence than its promoters anticipate. It cannot be denied that our savings-banks are in a bad way. Scarcely a week passes without a bank's stopping payment, and many are preparing to do so, while comparatively few new ones are being organized. The trouble began with the badly-managed institutions which had fallen a victim to speculators in the days when to "capture" a savings-bank was the next best thing to capturing a railroad, and soon extended to the honest but over-venturesome companies which had gone beyond their charter restrictions in search of higher interest. Unfortunately it did not stop there, but extended to many conservative and carefully-managed corporations, whose directors had thought them perfectly secure, especially those which had been organized in the flourishing time after the war, and had invested their capital in loans secured by property whose value had been fictitiously enhanced by the buoyant expectations of that period. These banks, of course, when the fall came, felt it very soon, and were forced to take for their debts land or personal security which they could not sell, and the causes which produced this have been so widespread that there is not a savings-bank in the country that is not threatened. The more cautious ones which prepared for the hard times by lowering the rate of interest paid to depositors have seen their deposits largely and constantly diminishing under the discontent with the reduced rates. And, from the nature of the case, the great distrustfulness of the time has specially affected them. A chance word in a newspaper will bring an overwhelming crowd of frightened depositors. From the nature of their business, which consists in borrowing on demand and lending on long time, they are especially exposed to this distrust; for it is impossible that they should keep any large part of their capital in cash, so as to be ready to meet a run, without sacrificing the interest that has attracted depositors. If a certain degree of alarm is excited they must stop payment. The stipulation for sixty days' notice is the only safeguard, and that is a very insufficient one. A considerable number of the Boston banks have given it, but the notices of withdrawal were so numerous that the relief was only temporary, and the Legislature of Massachusetts has passed a law authorizing the Savings-bank Commissioners to require still longer delay, and payment of only a proportionate amount of each depositor's claim. The law is a gross interference with the contract, and, although it may possibly save one or two banks from immediate danger, it can hardly do more than provide better for their ultimate winding-up. Meantime, the effect upon popular opinion and trustfulness by such a high-handed violation of the terms of the loans can hardly be happy. Other more promising plans have been suggested, such as relief, either partial or complete, from the taxation which now presses so heavily upon them, and there is a general feeling that the emergency requires special assistance from the Government. It must be remembered that the mischief done by the stoppage of a large number of savings-banks would be very great at the best. It would be difficult to the last degree to find purchasers at once for their assets, even their best mortgages, at any but ruinous prices. Large numbers of loans would have to be called in, and ruin would ensue to a vast number of deserving borrowers as well as depositors; and if the capital now so well employed were placed in the hands of Government, and sent abroad to pay for called bonds, the evil would not right itself for a long time.

Government aid to savings-banks is no new idea. The first ones started in England at the beginning of this century were distinctly charitable institutions, and were sustained by the organizers at a heavy loss. The Government soon began to assist them, taking charge of their funds and paying a higher rate of interest than it borrowed at in the open market, for the sake of attracting depositors, on the ground that the encouraging of provident habits in the lower classes was a gain so great as to be well worth the expenditure. Now, these reasons apply with special force to us. We are none too inclined to save as a people. Our laboring class, for whom the savings-banks are primarily intended, is not frugal, and we all feel so sanguine, so sure that we shall make more money to-morrow than yesterday, that we are only too apt to be caught by the storm unprepared. Savings-banks are perhaps the best means of counteracting this unfortunate national tendency. They are a safe way, and almost the only safe way, of investing their small earnings that the ignorant can understand, while the opportunity to add constantly to the principal in small sums, and to let the money lie and grow by the accumulation of interest, is offered by no other investment. Moreover, the system of dividing the profits at inter-

vals of several years constantly tempts the depositor to far-sighted economy. It is difficult to overvalue this great influence for good. Until the late severe stress the banks have been almost always wisely managed for the benefit of the depositors, and if they can weather this storm have a still better future before them.

In this state of affairs it might be hoped that the national Government would take the same view as the State of Massachusetts, and, considering this immense value of the banks and their distinctly charitable character, would do its best to strengthen them, or at least to provide an adequate substitute. To do the last is not at all an easy matter, for even if a new mode of investment were provided, more attractive and more secure, the change from the old to the new, just at this time, if conducted on the large scale that might be anticipated, would probably put all the old banks into the hands of receivers, and give a shock to depositors and to the business world from which they would not recover for a very long period. It must be remembered that the good which our savings-banks do is not merely to their depositors. The funds that they receive they invest again at moderate rates and under regulations very favorable to the borrower, so that through the East, where they are most powerful, they keep down the rate of interest to a regular mean, and save many a farmer from the ruin that a more grasping creditor would inflict. It is hardly possible that our manufacturers could have weathered the storm as they have done without the use of the savings-bank capital which has been so freely extended. If the money now held by the savings-banks were put into the hands of the Government and sent abroad to pay called bonds, the effect, not only upon ruined manufacturers but upon the country districts where they are the principal capitalists, would be very unfortunate even with our present superabundant currency; with the return of business prosperity and of higher rates for money at the great business centres this effect would be still worse, for in ordinary times it does not pay to send money out into the country to loan in small sums at six or seven per cent. We must bear in mind that the present rate of interest is exceptionally low, owing to the great difficulty of finding any safe investment for capital. But this state of things cannot indefinitely continue. Business must revive; and even if more conservatively and moderately done at first, money will command its old rates pretty surely, and average in the market about seven per cent again, as it did for so many years. But there could hardly be a more dangerous shock to returning confidence than a general winding up of the savings-banks.

Unfortunately, none of the bills that are now before Congress takes this view of the matter. The advanced thinkers who have so ingeniously contrived to stop the refunding of our foreign debt, see a chance for making something out of the distress of the banks; and, taking advantage of a suggestion of Secretary Sherman's, recommending the English system of post-office savings-banks, they are trying to concoct some ingenious money-making scheme out of it. Not satisfied with debasing the currency, as an avowed attack upon capitalists, they propose to investors to let them take their money and invest it in called bonds at a higher rate of interest than the depositors are to receive (a very profitable thing for the Government, but just the very opposite of the course of the degraded English aristocracy, who actually paid their poor depositors more than current rates); and, to give a real American savor to the plan, our worthy legislators propose to play another game on depositors by paying them off when they want their money, not in gold and silver, but in a new issue of depreciated currency. Fifty millions more of paper are to be thrown on the overloaded market, which it is confidently expected will bring about again the good times of inflation, when paper money was so cheap and so poor and so easy to get that we spent it like water, without going through the trouble of saving it first.

The plan is very ingenious, but it does not contain the precautions which the English Government took to prevent trouble in the transfer of the funds from the private banks to the Government post-office banks. It may, and if it is very successful it pretty certainly will, destroy the private banks, and inflict an enormous injury on both borrowers and lenders. It is not likely to be a very profitable affair for the Government; for, judging from the manner in which its other deposits are managed, a large part of the money which the Government receives and pays interest on will be allowed to remain idle in the hands of the postmasters. There will, too, certainly be large expenses which would be saved by a popular 4½ per cent. loan. The scheme cannot be expected to be a permanent one, for it provides for interest at less than even the present abnormally low rates. 3.65 and 4 per cent., although they might tempt frightened depositors just now in sufficient numbers to stop half the savings-banks in the country, cannot be a permanent attraction. The moment that business really becomes profitable again, and the demand for money increases, interest will rise, and with it the railroad and other investment bonds will begin to pay regularly, and private savings-banks must resume their old rates, and it is unlikely that Government banks, with their lower rates and annoying red-tape formalities, can compete with them for any great length of time. It is not to be expected that a man who sees his neighbor regularly getting 6½ per cent. from a bank whose officers he knows and trusts will keep his money long with his postmaster at 3.65 or 4 per cent. But whatever lease of life the new plan might have, it could not do the good that the old savings-banks did, in redistributing the funds they received. It does not provide for the compounding of interest, or for any distribution of additional interest at five-year intervals; and these were among the most valuable features of the old banks, in constantly tempting the depositors to economy and saving. It is, in short, a mere money-making device for taking advantage of the present distress of the savings-banks to borrow at lower rates than money is really worth. It is as short-sighted as it is threatening.

THE NEW TARIFF BILL.

THE new Tariff Bill was reported to the House on Tuesday of last week, and was made the special order of the day for April 4 and until disposed of. It has left the hands of the Committee of Ways and Means in much better shape than that in which it was received from the sub-committee, and, as far as the correction of errors and the weeding out of crudities go, it speaks well for the industry and good sense of the Committee. In spite of a pretty general reduction of present duties its character remains essentially protective, and it will appear but a short step forward to those who do not believe in the policy of "trying to get rich by taxing each other." It will also fail to satisfy many others whose special interests have been disregarded; but, on the whole, we believe it will be found a decided improvement on the present tariff, and its prompt passage with but few amendments will be the best thing that Congress can do under existing circumstances.

Of the general provisions contained in the original draft the clause admitting foreign-built vessels to the privileges of the American flag has been stricken out, and, we think, not without some reason besides the mere opposition of parties deeming themselves interested in preventing this important innovation. The question is sure to come up again, and deserves to be treated by itself, while the tariff is too pressing a matter to be exposed to the danger of failure by connecting it with a measure not clearly within its scope. The principle of applying only one class of duties, specific or ad valorem, to any single article has been strictly adhered to. The clause substituting an addition of 5 per cent. on first cost in lieu of charges on goods subject to ad-valorem duty has been maintained, as well as the date on which the Act is to go into effect—viz., January 1, 1879. The clause regulating the personal property which passengers may bring in free has been amended so as to extend the amount to wearing apparel of the value of $300, and to other articles, not merchandise, not exceeding $500 in value.

The most important amendment of the original draft undoubtedly consists in the return to the free list of such articles as raw silk, india-rubber, crude argols, cork-bark, cocoa, hides and skins,

horse-hair, hair-cuttings, rags, ivory, cochineal, indigo, madder, alizarine, Peruvian bark, crude camphor, and books twenty years old, which will be a relief to many important interests. The following review of the different schedules will show the position of the most noticeable articles:

Schedule A. *Cotton Goods* remain essentially as fixed in the original bill: duties largely specific, and showing a considerable reduction from most of the present duties, which is, however, not likely to disturb our industry.

Schedule B. *Earthen and Glass-ware.* On earthenware the present duties are somewhat raised, on china slightly reduced; on window-glass the rates proposed in the draft are somewhat modified, more or less reduction of present duties remaining.

Schedule C. *Hemp, Jute, etc.* Present duties somewhat reduced: Manila hemp (now $25), $20; jute (now $15), $12 per ton; jute butts, $6 (unchanged); jute carpeting, 6 cents per square yard; cotton bagging and jute yarns, 25 per cent., other manufactures, 30 per cent. ad valorem.

Schedule D. *Liquors.* Wines are raised considerably over present duties, while champagne, brandy, and ale remain unchanged.

Schedule E. *Metals.* Pig-iron remains at $5 a ton, against the present duty of $7; on bar and other iron the duties are again made mostly specific, with a slight reduction from present rates; steel, 2½ cents per pound against the present rates, varying from 2 cents to 4 cents; steel rails, ¾ cent per pound; other manufactures of steel, 35 per cent. ad valorem. Lead, spelter, and sheet zinc, unchanged; tin, now free, is taxed 10 per cent. ad valorem. Gold and silver leaf very properly reduced to $1 and 50 cents per package.

Schedule F. *Provisions.* The present duties are mostly unchanged.

Schedule G. *Sugars.* The mode of assessment is so changed that refining sugars are made dutiable according to degree of polarization, grocery sugars according to the old standard of color. Rates generally higher than present duties, particularly on centrifugal and grocery sugars. Louisiana ought to be satisfied.

Schedule H. *Silk Goods.* Raw silk remaining free, the duties on silk goods have been reduced 5 per cent. from rates originally proposed; piece goods to 45 per cent. ad valorem, against present rates of 60 per cent. and upwards.

Schedule I. *Spices* remain as proposed in the original bill, the principal change of present rates being the advance of pepper and pimento from 5 cents to 10 cents per pound.

Schedule J. *Tobacco and Cigars.* The present duties are essentially unchanged.

Schedule K. *Wood.* The present duties are somewhat altered in both directions.

Schedule L. *Wool and Woollens.* After a vain effort to harmonize conflicting interests by a reduction of the present specific and combined duties, the Committee, at its final revision of the bill, determined upon a radical and, no doubt, very sensible change by putting a uniform ad-valorem duty of 35 per cent. on raw wools of all classes and conditions. This will effect a considerable reduction of present duties on all fine wool, but will advance the duties on carpet wools, which have, under the present tariff, been favored by specific rates equal, on an average, to about 22 per cent. ad valorem. The principle of ad-valorem duties on raw wool is, beyond doubt, the only just and proper one on which to tax the article, and its adoption will be welcome to all interested. Our consumers may now, for the first time in many years, be enabled to get any kind of wool that may suit them on even terms as to duty. Nevertheless, a great outcry against this valuable change is likely to be raised by manufacturers who fear for their existence when the duties on woollen goods are at the same time reduced, as proposed in the bill, to 50 per cent. ad valorem. Their argument will no doubt be that, the value of wool being well known, the 35 per cent. on the raw material will be fairly collected, but that woollens will be largely consigned here by European manufacturers seeking an outlet for their surplus production, and that the 50 per cent. ad-valorem duty on goods will be largely evaded by undervaluation of invoices. This conflict, we hope, will not result in the abandonment of an ad-valorem duty on wool, but in a reduction of the rate to, at most, 25 per cent., which no doubt would satisfy all reasonable expectations. Possibly the House may be moved towards all woollen manufacturers by the same kind feeling which the Committee has shown towards our wool-hatters. By an amendment to the original bill in Schedule M, we find hatters' wool, solely for hatters' use, admitted at 20 per cent. ad valorem. The intelligence of our appraisers will certainly be overtaxed, if they are to distinguish wool solely for hatters' use from ordinary felting wool; and, if difficulties are to be avoided, the House will have either to retract the favor or extend it to all wool.

Schedule M. *Sundries.* The most noticeable change in this long list consists in the restoration to the free list of the numerous leading articles already mentioned, and in the present duties being reimposed on salt, which had been left out in the original draft of the bill. Our drug interest will be benefited by the reduction of the duty on quinine to 10 per cent., but it will probably lose fully as much, if not more, by the fact that all gums and many chemicals and medicinal preparations are taken from the free list, which but a few years ago was enlarged for the special benefit of that trade.

We find no mention made in the bill of the goods lying in bond when the act goes into effect, but we suppose they will be admitted at the new rates. In conclusion, we see no good reason why the bill, if passed without much delay, should not take effect on July 1 of this year. The changes being mostly in the way of reduction of duties, the importing business will not be injured by an early change, and holders of duty-paid goods would probably take what little loss they may have to suffer in preference to a prolonged state of waiting. The shortening of the intermediate period, no doubt, would also result in benefit to the revenue.

THE HOUSE OF REPRESENTATIVES.

ALTHOUGH the galleries of the House are daily crowded, very few of the American people have a clear idea of the conditions under which work is done there. A vague opinion is prevalent that a member of Congress can take the floor when he pleases, move any resolution or bill he has a mind to, and make an hour's speech on any subject he fancies his constituents in Buncombe County may want discussed. A reading of the *Congressional Record* or the Associated Press despatches is quite as likely to confirm as to weaken this opinion; for in the varied phenomena that are presented it would need a Darwin or a Huxley so to co-ordinate them as to find any governing rule or law, or even to guess at the system on which the phantasmagoria is constructed. Yet there is a system and a law, or rather a code of laws, known as the Rules of the House, complex and voluminous, the long and patient study of which, joined to patient and persevering practice, is absolutely necessary if a Representative has any ambition to become a "good parliamentarian," or would hope to conduct an important measure to a successful conclusion.

Many a new member, with a budget of bills and resolutions which he fondly believes are destined to reveal to the country its future great statesman, has entered the Hall of the House in undoubting faith that he has passed the portals of a brilliant career. He rises in his place and addresses the Chair. He is sure he was up as quickly as any one, but the Speaker seems unaware of his existence. He is a little dazed by the fact that a dozen more are doing the same thing, and that the loud talking, the clapping of hands for the pages, and the total unconsciousness of the body that he is trying to gain an audience, make a combination of untoward circumstances very like trying to address the people in the omnibuses from the curbstone in front of the Astor House, and he takes his seat a little flustered, thinking he will watch the course of things a little and try it again. The next time he determines that he will not be foiled by modesty, and shouts "Mr. Speaker" so loudly that, as much to be rid of him as for anything else, he is recognized by the Chair. "I desire to present a resolution and ask its adoption." "It can only be done at this time by unanimous consent," the Speaker replies, and "I object" is heard from several members at once. Some one else is given the floor, and our friend subsides again to reflect upon the cruel obstacles in his path of glory. By the help of diligent thumbing of the Rules, and by curbing his pride so as to seek some advice of an old member, he learns that the Roll of the States will be called on Monday and then he will be in order. He

plucks up fresh courage and on that day is on the alert, his State is called, he gets the floor, sends his resolution to the clerk and clears his throat for a speech. A sharp rap of the gavel is followed by "No debate is in order; the resolution can only be referred to the proper Committee," and before he can rightly understand what has happened the current has swept by him, and he takes his seat with a waning sense of his own importance. But he will not give it up so. He finds what committee has charge of his precious resolution, and tries to impress its chairman with the importance of his measure. "Bless you," he is told, "there are fifty on the same subject; they will go to a sub-committee, and by and by we may report something. Wait and see." He waits, and a month or more afterward he some morning catches a few words of a report from that committee, which imply that they have introduced a bill which is ordered to be printed and recommitted. He gets a copy of the bill, finds it at war with all his ideas, and burns with the thought of exposing its folly and vindicating the wisdom and policy of his own proposition. Now, at least, he will be in order and shall be heard. Still there are delays, but a day is set for discussion, and he is fully prepared. One speaker after another is recognized, but he fails to get the floor. His shouts to the Speaker are unnoticed; he becomes angry and flurried. Some one asks him if he has any arrangement with the committee or with the Speaker for time to speak. No, he answers; but has he not the right to be heard? No; debate is almost always limited to the members of the committee having the measure in charge and a few whom they may favor with the opportunity to speak. His wish to be heard at last overcomes his pride and wrath, and he is introduced to some member of the committee, who is good-humored enough (exceptionally good humored) to yield the new man a few minutes of his time. And so he gets a tithe of the time he wanted to develop his subject, and under nervous conditions which forbid thought, amid surroundings to the last degree discouraging, he says a few words without pleasure to himself or profit to the House, and resumes his chair full of inward objurgations at a system which seems ingeniously contrived to prevent the satisfactory discussion of public business, and to give exclusive control of what is done to the Speaker and the older members of the majority who are chairmen of the important committees.

His own committee-work is probably quite as disgusting to him. He may have come to the House brimful of revenue reform, and find himself assigned as "end man" to the Committee on Expenditures in the Department of Justice, with nothing to do. He may have been a leading jurist of mature experience, but unless he has the touchstone of long service in the House he may wish in vain for a place on the Judiciary Committee; he is buried in the Committee on Manufactures, which has but one meeting and never a report in a long session. If he is a member of the majority and has had some political prominence outside, his case is a better one, and some chance for important work may be given him; but even this may prove a delusion and a snare, as Mr Ewing found to his cost at the present session, when his lack of knowledge of the rules gave his opponents an instant advantage of him, and put his resumption-repeal "in the nine holes," from which he could not take it till he yielded the terms of debate which were demanded, and surrendered all the expected *éclat* of a prompt passage of his bill under suspension of the rules. His experience only deepened the conviction of all the leading men of the House, that it is folly to trust the floor-management of any important measure to any other than an old hand. Compliments to prominent politicians who are new members must be given in some other way.

The truth is that the rules and customs of the House are the result of a natural selection, which, however we may scold at it, was the best the circumstances permitted. The practice may be modified or pruned a little, but no great change can be made till the circumstances are changed. The things most frequently and most justly complained of are the almost despotic power of the Speaker, the absorption of the lead in business by the older members of a few committees, and the absence of that kind of business debate which should characterize a really deliberating body. Let us look a little at each of these.

The power of the Speaker results from the functions directly committed to him. He appoints the committees. The Senate may elect them, but the House is too large a body for that. The log-rolling combinations that would come of an attempt at election would disgust the nation, and would render the organization of the House an almost endless task. The delay alone would be unendurable. But the appointment of the committees implies the distribution of work to every member. It means the determination of the cast business shall take. It decides for or against all large matters of policy, or may so decide; for, while Speakers will differ from each other greatly in force of character and in the wish to give positive direction to affairs, the weakest man cannot escape from the necessity of arranging the appointments with a view to the probable character of measures which will be agitated. This, however, is far from the measure of the Speaker's power. All rules are more or less flexible. The current of precedents is never consistent or uniform. The bias of the Speaker at a critical point will turn the scale. Mr. Randall as Speaker determined the assent of the House to the action of the Electoral Commission. Had he wished for a revolutionary attempt to prevent the announcement of Hayes's election, no one who has had experience in Congress, at least, will doubt that he could have forced the collision.

The Speaker's power to award the floor to those whom he may choose to recognize is an enormous one. There are general rules which every Speaker will profess to follow, but they are vague and give abundant latitude. The necessity of getting on with business has given birth to the practice of recognizing the chairmen of leading committees, or those in charge of important pending measures, in preference to other members. The nominal rule is that the man first addressing the chair has the right to the floor, but the rule is only nominal. It is so evident that business could not get on in that way that a member would only be laughed at for trying to insist upon it. Again, it is very rarely the case that several persons are not trying to get the floor at once, and no one but the Speaker could decide among them. An appeal from his decision therefore would be futile. The custom has naturally grown out of this to arrange with the Speaker beforehand for recognition. A member will speak to him privately and in advance, saying, I have such and such a measure to introduce, and I want to be recognized when I rise. A fair-minded Speaker will only enquire far enough to see that the matter is legitimate and important; but if he is unscrupulous it is easy to see how far his power may go. Rumor has it that when Mr. Blaine was Speaker it was hard to get the floor unless the thing to be urged pleased him, and it is even hinted that he required amendments to be made to resolutions, etc., before he would permit them to be offered. Whether this is true or not, it is easy to see that a vigorous, domineering man could easily make it true with such power in his hands. The only real check upon the Speaker must be the public sentiment of the House, and the older members are the natural exponents and voices of this. The minority can do little to check him until his acts become so arrogant and partial as to shock the moderate men of the majority. The leading men of the dominant party are always those whom the Speaker has assigned to important chairmanships of committees, and they are prevented by delicacy and a sense of obligation from opposing him if it can be avoided. A disappointed man will be sure to have his hostility to the Chair attributed to his failure to get an important place, and he will get little sympathy. There is, therefore, small chance for controlling the power of the presiding officer until he goes beyond all endurable bounds, and this a man of any prudence and ability will rarely do. The power of the Speaker of the House over legislation may not unfairly be reckoned much larger than that of the President, and scarcely less than that of the Senate. To this we have come by the slow growth of a hundred years, accelerating, however, as the numbers of the members of the House have increased.

The power of the chairmen of committees follows as a sort of corollary from that of the Speaker. Their leading influence elects him, his favor appoints them, and the latter, with the aid of the exigencies of public business, gives them the practical control of the floor. By custom the chairman of a committee appoints, or at least nominates, its clerk, and he has the lion's share of the clerk's labor and assistance. He has, therefore, better facilities for informing himself as to business before them. He distributes the work to sub-committees, and if he be at all able and politic will practically control the reports and the presentation of all business from his committee to the House. He will usually decide who shall speak on a measure, how long the debate shall continue, when the previous question shall be called, and how the hour of debate which follows the ordering of the previous question shall be apportioned. If any one protests, the ready answer is, How else, in such a Babel, can business make progress at all? Some one must be trusted to direct it, and who so fit, under the superior power of the Speaker, as the chairman of the committee which had a measure in charge and is presumed to have matured it?

Out of these conditions it would be hard, at best, to bring satisfactory and business-like debate. In the English House of Commons the Speaker is a professional moderator, non-partisan, judicial, holding his office sometimes during nearly a lifetime, through all changes

of party. The party leaders on the floor control the presentation and debate of measures, and have the rules applied for them by an experienced man acting with a sense of responsibility like that of a judge. Under such a system, aided by a better set of physical surroundings, of which we shall speak presently, it is for the interest of party leaders that they shall bring out the available talent on their side, and in practice the impatience of the House of Commons with a tedious speaker or one talking only "for buncombe" is a sufficient gag-rule. With us, however, impatience rarely takes the active, aggressive form of coughing or scraping a speaker down. If a member of the House of Representatives does not choose to listen, he has his desk, his writing material, his file of letters to answer, his own speech to prepare, and works away careless whether the day is used up in one way or another, until he begins to fear that he shall not get away from the capital before the dog-days. Even then he is more likely to go and scold privately at the chairman of the Committee on Appropriations for not hurrying bills along faster, than to interrupt or try to silence the talker on the floor. It is in this way that the habit of inattention, of noisy aside-talk, of utter disregard to the person having the floor, has grown up. It has naturally led also to the custom of writing out speeches and reading them. A member is determined to be heard by the country, or at least by his constituents, if the House will not hear him, and he reads on amidst utter confusion, consoling himself that his speech will be in the *Congressional Record*, an abstract of it in the press despatches, and pamphlet copies can be sent to his people at home. To prove that this kills debate needs no argument. The dulness of the reading of essays reacts upon the disposition to inattention, and the noise and confusion increase the disposition to write rather than to try to speak, and so the evil perpetuates itself, getting larger as it goes. From it comes, too, the custom of getting leave to print speeches not delivered. Why should the House remain to go through the form of pretending to be addressed by a reader who is not heard? Somebody will exclaim, "O print, print!" and the unhappy essayist will be glad to take the hint and ask the requisite permission. There are times, of course, when this is not improper or objectionable, as when an important measure is passing almost without time for debate, whilst members feel unwilling to let their votes go upon record wholly unexplained, or to be regarded as responsible for the motives or arguments that the press may attribute to them.

Even when a man would fain take part in earnest, businesslike speech, the physical conditions about him are such as are almost insurmountable. First, the hall of the House is itself so large that few men have voice enough to fill it, even if quiet prevailed on the floor. If every member must have his desk, and the hall must be surrounded on all sides by deep galleries, no less a room would answer; and by the same token, as we increase the number of members, the Coliseum itself would soon be none too large. But the noise of the House is simply overpowering. In so large a room the loud conversation of disorderly members does not reach the ear distinctly, but the multiplicity of such sounds, added to the manifold forms of noise which the inattentive habits of the body beget, combine into a loud murmurous roar, which makes one who is beginning to speak feel as if his voice were lost in a tempest or in the noise of surf upon the shore. He instinctively tries to raise his tones above it, and to catch attention by extraordinary effort to be loud. He is shouting before he knows it, and vainly struggling to drown a multitudinous sound for which his lungs are no match. Men of fine intellect and of good ordinary elocution have exclaimed in despair that in the House of Representatives the mere physical effort to be heard uses up all the powers, so that intellectual action becomes impossible. The natural refuge is in the written speeches or in habitual silence which one dreads more and more to break. The exceptions only prove this rule. Passages-at-arms between gladiators of the stump will generally draw around a crowd of amused lookers-on. A special reputation for wit or for ugly hits will secure a hearing. And occasionally the pre-eminent ability of a speech may overcome all obstacles and fasten attention.

Experienced members of Congress commonly agree that the debates in Committee of the Whole under the five-minute rule are the most profitable that occur in the House. The real shaping of measures occurs at this time, and attention is better given, because all members who feel any responsibility for business know that they must watch at such times if they would act intelligently. The short limit of time necessitates an attempt at terseness, the game of "give and take" between speakers is likely to be lively, and something like a real grappling between opponents takes place. This only adds point to what has been said above about the failure of business debate in the House, for the exception does not occur when the House is in regular session, but when it is in committee—that is to say, the Speaker has left the chair, calling some one to act as temporary chairman of the committee; and during this time no vote by yeas and nays can be taken, no business can be considered but the bills in their order on the calendar as they have been referred by the House to the committee, and no final action can be taken except to report to the House when it resumes its regular session the recommendations of the Committee of the Whole.

A suggestion has been made by Mr. Hewitt, of New York, which, if adopted, would remedy most of the physical obstacles to debate which have been described, and would soon improve the style of speaking, making the House a far more attractive field for able men. The plan is to divide the hall of the House in two, arrange one half of it with benches facing each other on the two sides of the House, as is the case in the English House of Commons. This half of the House should be sacred to debate. No business should be done there but the discussion of bills and resolutions and action upon them. Quiet and order should be rigidly enforced. The other half of the hall should be fitted with the present or other similar conveniences for writing, and for conversation and such other business as the members now transact at their desks or in the lobbies. At the doors leading from the one hall to the other should be a gong or bell to notify members when a division was demanded or a vote to be taken. Those who chose to listen would be in the hall with benches; those who had more important work to do could remain in the outer hall. The attractiveness of the speaker who might be up, or the importance of the subject, would determine the audience in the speaking-hall, and the leaders or chairman of the committee in charge of the special measure would, as now, control the length of the debate. With such a change would come ease of speaking, quieter tone, better thinking on the feet, better taste in oratory, better progress in everything that makes profitable business discussion, and better progress also in the public business. We could wish there were hope that men enough in Congress appreciate the great desirability of these things to make a fair trial of the experiment.

THE ROSEBERY-ROTHSCHILD MARRIAGE.

London, March 20, 1878.

NO social event of recent times in England has created so much interest as the marriage of the Earl of Rosebery and Miss Hannah de Rothschild, which took place to-day. The papers of society, and even the more solid journals of events, have devoted much space to the almost daily chronicle of the wedding preliminaries, and people of all classes have not been ashamed to acknowledge a transient interest in the past, present, and future of the young couple. The explanation of this is that Lord Rosebery is one of the most popular men of his class in England, and Miss Hannah de Rothschild's reputation for wealth is only equalled by her reputation for everything that is charming and excellent in woman. The marriage took place to-day, first before the Registrar, in civil form—a custom which is becoming more common in this country every year—and then, to satisfy ecclesiastical scruples, in church, by one of the most popular and most emancipated of the clergy of the Church of England. Both ceremonies were, in a manner, private; but the religious portion was witnessed by many of the best known among the English people. The bride was given away by the Prime Minister in the presence of the Prince of Wales and the leader of the Opposition, and the church register, which may almost be regarded as an historical document, was, according to the evening papers, signed by the following names: Rosebery, H. de Rothschild, Cleveland, Beaconsfield, C. E. Leconfield, Albert Edward, George, E. Primrose, W. Rogers; these signatures representing the Duke of Cleveland, Lord Rosebery's stepfather, Lord Beaconsfield, the Prime Minister, Lady Leconfield, Lord Rosebery's sister, the Prince of Wales, the Duke of Cambridge, the Honorable Everett Primrose, Lord Rosebery's brother, and Mr. Prebendary Rogers, the officiating clergyman.

So much for the ceremony. The wedding presents are reported to be of enormous value, estimated according to one of the papers at £250,000, and for the most part in good taste, and the variety of the donors speaks, if any speaking were wanted, for the interest which the marriage has excited, and for the popularity of the bride and bridegroom. Lord Rosebery, almost since he was a boy, has been viewed with affectionate regard by a considerable section of people. It is seldom that any one of his age has, so to speak, led his private life in public to the same extent. A man of Mr. Gladstone's years and reputation must make up his mind to have his private existence watched and chronicled. He has become a part of the

nation, and has, during nearly half a century, been always before the public. He is a historical institution. So is Lord Beaconsfield. But these are men well on to the threescore years and ten allotted to man. Lord Rosebery was born in 1847, when these two men were past the meridian of their lives, and he is now just thirty years of age, but he has already made his mark in several departments of life. Shortly after he left Oxford, and when he was still a boy, he became the owner of a racing stable, and devoted his attention to improving the breed of English horses. After a few years' experience of the ways and means of the Turf he gave it up. He sold his stud and took to political life. His first public appearance of any importance was at Glasgow, where, as President of the Social Science Association, he delivered an address which filled some half-dozen closely printed columns of the *Times*, and amazed the members of the Association by its ability, versatility, and knowledge, and gave promise of an important future. People wondered how so much varied information and such mature judgment could co-exist with a juvenile appearance and a love of field sports and other frivolities. He was then some twenty-five years of age—an age which in England, in nine cases out of ten, is little more than boyhood. From the time of his presidency of this association his popularity dates. He went over to America, where he became a favorite, and on his return he began to take some part in the proceedings of the House of Lords, and in that assembly he has already secured a high place. He rarely speaks, but when he does, his speech is generally to the point. His manner of speaking is good, and he always sets off his words of wisdom by something light or humorous—a rare phenomenon in that august but dreary assembly. Sidney Smith used to say that the House of Lords would never be bearable until the whole bench of bishops went to heaven. Lord Rosebery seems to take a different view. He regards the bishops and the Lord Chancellor as useful appendages to the solemnity of the House, and not unfrequently amuses himself by poking fun at the right reverend prelates and the noble lord on the woolsack with an air of mock humility and deference that disarms all hostility. He regards these as amiable targets, at which with keen pleasure he discharges batteries of light artillery shotted with good-humored jokes and gentle sarcasms, which please the House and do not very much displease the bishops. His popularity in the House is due to a large extent to the fun which he ventures to infuse into the solemn body which he addresses. The fun, like all fun, sometimes approaches the confines of flippancy, but it never goes across the borders of good taste. He often says what might be regarded as frivolous, but I have never heard a whisper of his having suggested anything that could hurt the feelings of the man against whom his wit was directed, nor of his having made a mistake in taste. It may be that he would have been a stronger debater if he had enjoyed the experience of five or ten years in the House of Commons before he took his seat in the Lords. The rough work of the lower house gives ballast which weights the aspiring politician. But years, experience of life, and native good sense, combined with a dash of shrewdness which he inherits with his Scotch blood, will make up for any imperfection which may be put to the account of want of the discipline of the House of Commons.

It is in Scotland, if I am rightly informed, that he has the strongest hold upon the affections of the people. In that country they love a lord, but all their lords are Tories, and one element in Lord Rosebery's popularity is that, politically, he is a Radical—or as much of a Radical as any member of the hereditary peerage can be. As it is, he is idolized by the people both in Edinburgh, near where he lives, and in Glasgow, where he has made some important appearances. Last autumn, when Lord Hartington was starring it in Scotland, he was Lord Rosebery's guest and attended all the meetings in his company. This was all very well in Edinburgh, where the latter presided. But in Glasgow, where the younger peer was merely an onlooker, his reception was so enthusiastic as almost to threaten to eclipse his chief. An amusing incident has been narrated to me concerning his reception, by one who was present. The platform, it seems, was greatly overcrowded, many more having secured tickets than the platform could hold. There was a scramble for the few chairs that were available, and in the scramble something like a free fight, though of an amicable kind, was observed between a large and corpulent minister of the United Presbyterian Church—a Boanerges in his communion—and a slim, delicate-looking man, almost a boy as it appeared. Boanerges was waxing wroth that his right to the chair should be disputed by a lad, when loud shouts arose from the crowd—some five thousand hard-headed Glasgow citizens and handicraftsmen—shouts for "Rossberry!" "Rossberry!" as they call him. The shouts continued for some time when, to the horror of the minister, his rival claimant for the chair turned from the object of his rivalry and came forward to the front of the platform, whereupon the whole five thousand Glasgow men rose from their seats and cheered him till the old hall echoed back again. My friend told me that the minister fled from the platform and never reappeared. Be this as it may, there is no doubt of Lord Rosebery's popularity in his native country, and he owes it to his own natural ability, geniality, and good sense. He is an admirable off-hand speaker. He seems to know the right things to say and the way to say them. He has before a popular audience a happy knack of mingling the grave and gay, and of bringing in an anecdote or a bit of chaff just at the time that his statistics and his severer matter is beginning to be felt. He plays upon the audience as a man plays upon a piano, and they respond. They like him and he likes them, and likes to please himself and them at the same time. This happy knack of public speaking will stand him in good stead in the future. Popular and respected at the age of thirty, one of the wealthiest men in England, a sound politician of the Liberal school, and wedded to an accomplished and popular lady, Lord Rosebery has all the qualities and chances that lead to success in England. In the future of Liberal politics he is destined to play a part of no small importance.

Correspondence.

PRESIDENT ELIOT ON PRELIMINARY EXAMINATIONS ONCE MORE.

To the Editor of The Nation:

Sir: When I wrote the letter of two weeks ago signed C. K., I did not for a moment suppose that President Eliot had ventured an opinion concerning the preliminary examinations held in Michigan without some knowledge of the manner in which they are conducted and of the results which have ensued. But his letter of last week shows that he has fallen into the somewhat laughable error of mistaking the conditions on which examinations will be held for a description of the examination itself. By a similar fatality he has likewise mistaken the meaning of the sentence which he quotes from one of President Angell's reports. Everybody in Michigan would understand that the expression "without examination by us" means without examination *at the University;* precisely as the English people would understand a similar expression if used by the authorities at Oxford.

The seriousness (as well as the laughableness) of President Eliot's error will be apparent from a moment's examination of two or three sentences of his letter. He says: "The fact is, that the English method bears no resemblance whatever to the Michigan method"; and in proof of this emphatic assertion he describes the English system. But his description not only does not prove that there is "no resemblance whatever" but it *does* prove exactly the opposite—namely, that there is a resemblance, and that the resemblance is very marked. "The English Board," says he, "conducts actual examinations" (so does the Board—*i.e.*, the Committee of the University—in Michigan) "on specific subjects" (the same in Michigan) "through competent examiners of its own choice" (the same in Michigan—*i.e.*, through members of the Faculty of the University appointed for the purpose), "and retains absolute control of these examinations in every respect" (the same in Michigan). "It examines persons, not programmes" (in Michigan, persons *and* programmes), "pupils, not teachers" (in Michigan, pupils and methods of instruction, if not teachers). "The examinations of schools [in England] are held at the schools [so they are in Michigan], upon request of the school desiring to be examined [the same in Michigan], and exclusively for its benefit [the same in Michigan] and at its expense [the same in Michigan]." Thus it appears that President Eliot has pointed out similarities where he supposed he was pointing out differences. After this error it ought not, perhaps, to be considered very strange that he should be willing to venture the erroneous declaration that "the Michigan method is a partial surrender of the authority of the University." Of course, there is a sense in which Harvard or any other university partially surrenders its authority when it allows a committee of its own number to determine whether a boy shall be admitted to its classes. In no other sense can it fairly be asserted that the Michigan method involves a surrender of authority. To the assertion that it "tends to let the University down" I will only say that I know of no officer of the University of Michigan who does not hold precisely the opposite opinion.

President Eliot's letter obliges me to confess that I was in error in supposing that the differences between his two positions were to be ex-

plained on the ground of a change of ideas. I now see no way of explaining the position of his report in regard to the Michigan method and of the defence of it in his last letter, except that frank and famous way in which the omniscient Dr. Johnson explained why he once defined the "pastern" as the "knee-joint of a horse."

Sincerely yours, C. K. Adams.

Ann Arbor, March 30, 1878.

Notes.

D. APPLETON & CO. will shortly publish in one volume, octavo, 'The Armies of Asia and Europe, from Official Reports,' by Emory Upton, Brevet Major-General U. S. A.; a 'Life of Gen. Albert Sidney Johnston,' by William P. Johnston; and 'Studies in the Creative Week,' fourteen lectures recently delivered in Philadelphia by the Rev. George D. Boardman, D.D.——Cassell, Petter & Galpin have nearly ready a South-African book of travels, 'The Great Thirst Land,' by Parker Gilmore.——Mr. H. M. Stanley's account of his Congo adventures will be published in this country by Harper & Bros. simultaneously with its appearance in England.——A second edition of Theo. L. De Vinne's 'Invention of Printing' is issued by Francis Hart & Co.——Houghton, Osgood & Co.'s announcements include a work on 'Political Economy' and a 'Dialogue on Political Economy,' by J. B. Howe, of Indiana, a quarter to which we are not accustomed to look for light on that subject; a 'History of Dartmouth College,' by Baxter P. Smith; a 'Life of Gen. W. F. Bartlett,' by Gen. F. W. Palfrey; and a 'Life of Charlotte Cushman,' by her intimate friend Miss Emma Stebbins.——'Tropical Nature' is the title of a collection of miscellaneous essays by Alfred Russel Wallace, in the press of Macmillan & Co.——The recent unfortunate controversy over a certain chapter in Mr. Frothingham's Life of Gerrit Smith ensures Mr. F. B. Sanborn's 'Memoirs of John Brown' (Albany: Munsell) an eager reception.——Sheldon & Co. will publish 'Our Indian Population,' by Lt.-Col. E. S. Otis, U. S. A.——Lee & Shepard announce 'Voyage of a Paper Canoe from the Gulf of St. Lawrence to the Gulf of Mexico,' by N. H. Bishop.——Roberts Bros. announce 'How to Parse,' by E. A. Abbott: 'Bits of Travel at Home,' by Mrs. Helen Hunt Jackson ("H. H."); and 'Modern Frenchmen,' a series of biographical sketches by Philip Gilbert Hamerton.——Henry Holt & Co. have added to their interesting "Amateur Series" the collection of essays 'On Actors and the Art of Acting,' which we reviewed at length on its first appearance in England (*Nation*, No. 535). The American publishers have greatly increased the usefulness of the book by adding a well-made index, which is lacking in both the original edition and the Tauchnitz reprint. We may repeat here the words in which we formerly summed up the merits of the volume: "It is valuable, first, as the record of the impressions produced upon a mind of singular sensibility by many actors of renown, and lastly, indeed chiefly, because it formulates and reiterates sound opinions upon the little-understood principles of the art of acting."——We had given up *L'Année Géographique* as lost when M. Vivien de Saint-Martin retired from his fourteen years' editorship of it at the close of 1875. But though no one scholar felt competent to succeed him, MM. Hachette have persuaded MM. C. Maunoir and H. Duveyrier to take up his work and carry it on. They have accordingly completed the volume for 1876 that should have appeared a year ago, and it is now procurable of Mr. Christern; that for 1877 they promise about June. The revival of this invaluable annual is truly a matter of congratulation.

—We have received from L. W. Schmidt, 24 Barclay Street, the second volume of Dr. H. von Holst's 'Constitutional History of the United States.' The work appears at once with a new title and a new imprint. The publisher is now Julius Springer, of Berlin, and instead of Part II. of 'Verfassung und Demokratie der Vereinigten Staaten von Amerika,' we have Vol. I. of 'Verfassungsgeschichte der Vereinigten Staaten von Amerika seit der Administration Jackson's.' There is, however, no break in the continuity, and the growth of democracy still claims the author's attention as much as before. We shall reserve our criticism of this volume until the appearance of the English translation by Messrs. Lalor and Mason. Dr. Von Holst tells in his preface, by way of apology for the unexpectedly long interval between Vol. I. and Vol. II., of the difficulties he encountered in collecting the materials for the history of this later period of the United States. The German libraries were almost laughably deficient in them, and but for the timely assistance of the Grand-ducal Government of Baden, by which he was enabled to prolong his sojourn in London, he would have had to rely upon second and third-hand sources. Even the British Museum he found wanting in important particulars, though on the whole it served him beyond his anticipations. What he keenly felt the need of was a second visit to this country, and he contrasts the want of any provision for such scholarly pilgrimages with the Government encouragement of the study of antiquity. He remarks how much more important to Germany a knowledge of the United States is than of England, and yet incompetent newspaper correspondents and tourists are the sole source from which the great majority of cultivated Germans derive their ideas of "the great Republic." The Centennial Exposition was a revelation of our industrial standing, but a political and social revelation has still to be achieved. Dr. Von Holst mentions some signs of a more intelligent interest in American affairs, and hopes for a speedy change for the better. It is only fair to him and to his countrymen, however, to confess that his present work not merely is an aid to their enlightenment, but fills a gap in American history, and is therefore not less welcome to American scholars and publicists than to German.

—The fifty-third exhibition of the Academy of Design was opened on Tuesday. The first impression is that the collection is commonplace, though large, over seven hundred numbers being included in the catalogue. The sculpture-room is this year filled with pictures, the statuary being relegated to the east chamber on the ground floor. Striking works amid the general insipidity are Chase's "Jester," a well-modelled copy of deformity; Shirlaw's life-size picture of a young bather leading a bulldog to the water, the animal turning aside to snuff at the hole of a muskrat—a rather careful and statuesque study of an ephebas, suggesting the bronzes of Falguière and Frémiet; a "Boat-Crew" by J. G. Brown, the most sincere and versatile group of character-faces we have ever seen from his brush. Another group of faces, childish this time, of country youngsters, in the better style of Eastman Johnson; D. R. Knight's "Porteurs d'Eau du Village," from last spring's *Salon*, a very conscientious, patient study of landscape and figures, attractive from its scheme of light and shade and careful drawing rather than from any charm of color or quality; Mr. Homer's young farmer, walking a-field at dawn, and, though very American in character, seemingly listening to an English skylark; a good tree-study by Magrath, and several of his popular Irish subjects; a dog-group by J. H. Beard, hard and incisive as a jest, hard and hideous as a painting, called "Quixote and Sancho Panza"; a head of "Young Italy," an able lesson in pictorial method, by Sartain; a Venetian sunset by Sanford Gifford, one of those old-time falsehoods in tone which so many of the artist's friends have taken with infinite relish for truth; Swain Gifford's "Nonquitt Marshes"; Eakins's "Chess-players"; and C. H. Miller's "Sunset at East Hampton." Among the better efforts of the sculptors, visitors have remarked the ambitious and not unsuccessful "Whirlwind," by Mr. Hartley, and three or four surprisingly forcible portrait-busts of artists by W. R. O'Donovan.

—In the sudden death of Dr. W. R. Dimmock, master of the Adams Academy, at Quincy, Mass., the cause of higher education has sustained a great and, for the time being, an irreparable loss. In his peculiar province—as a teacher of boys preparing to enter college—it may well be questioned whether the equal of Dr. Dimmock was anywhere to be found. He approached very closely to the great ideal, Dr. Arnold, and, when cut off in the midst of his work, he was rapidly building up at Quincy an American Rugby. He was the first master of the school. The endowment came from President John Adams, but only as recently as 1870 had it accumulated to an amount which was deemed sufficient to warrant the forming of a school. In the autumn of 1872 Dr. Dimmock entered upon the duties of master, he himself composing the whole staff of teachers, and his school numbering some twenty boys of various ages. At the end of five years he had increased the number to one hundred and fifty. He died just as the reputation of the academy into which he had infused his whole being was firmly established, when the anxious seed-time was over, and his harvest seemed assured. Dr. Dimmock's peculiar force as a teacher was due in the first place to the genuine sympathy he had with boys. There was nothing of the old-fashioned schoolmaster about him. It was curious to see the deep interest and keen enjoyment with which he watched them at their sports—on the foot-ball ground, the beach, and the skating-pond. He knew every lad in his school individually, and could tell exactly what he was good for; and there were very few indeed who were not good for something. The healthy enjoyment of their boyhood which his scholars got at Quincy was, therefore, in curious contrast with the dreary recollections of the similar period in their own

lives which remains with those who were educated in the city schools of thirty years ago. But it was in the school-room that Dr. Dimmock was strongest. He taught individually, not mechanically. Thoroughly imbued with a love of the classics, he sat in his master's chair imparting a knowledge of something which he loved to boys whom he loved. Never for a moment was his school out of mind. It was his monument, his life's work. It is not often that a teacher of this sort is found, and no one can well measure the extent of the loss involved in his death. A generation of boys which would have passed under his great influence are deprived of it. Who can measure the extent to which Arnold infused himself into the lives of the present race of English gentlemen? Dr. Dimmock at the time of his death was but 43 years old, and consequently in the very prime of his powers. He sank under a violent attack of rheumatic fever, a repetition of one which had severely shaken his system some years before. His place as Master of the Academy will, it is understood, be temporarily supplied by Prof. William Everett, formerly of Harvard College.

—Northern New York may be said to furnish the local color to *Scribner's* for April. There are illustrated articles on "Deer-Hunting on the Ausable," "Among the Thousand Islands," and "How Lead-Pencils are Made," the geographical connection between the last and the first two being the graphite mountain at Ticonderoga. Mr. Julius Wilcox describes faithfully and well the operations of the Dixon Company in Jersey City in their enormous manufacture of crucibles and lead-pencils. What the accompanying pictures do not show, and could not easily have shown, is the nature of the remarkable machinery which has given this young industry such a start in advance of its European rivals; and the economy and cleanliness of the manufacture, though they do not go unmentioned by Mr. Wilcox, need to be seen in order to be appreciated. The timely paper, *par excellence*, in this number is Mr. G. B. Prescott's "The Telephone and the Phonograph." It is written with commendable regard for the understandings of laymen and is also amply illustrated. Neither of these inventions has reached its full development, and it would be premature to predict which is going to be of the greater advantage to mankind. Public interest in the telephone will be satisfied when the word spoken in France is heard by cable in Massachusetts; but scientists as yet see no end to its utility in solving physical problems or as an instrument of precision. The scientific importance of the phonograph, on the other hand, is temporarily obscured by its obvious practical applications, some of which are pointed out by Mr. Prescott, and the rest are now taxing the popular imagination. Of the two discoveries it is the more surprising that the phonograph remained so long undreamt of; in both the American genius has reasserted itself most impressively—in saying which we would not be understood as denying Mr. Graham Bell's title to fame as the inventor of the telephone.

—A correspondent writes us from Philadelphia:

"In connection with Mr. Hart's letter, in your issue of the 21st inst., concerning the probability of a large manufacture of counterfeit silver coins, of full value and weight, in this and other countries, permit me to call your attention to a resolution touching this matter passed at the fourth annual conference of the 'Association for the Reform and Codification of the Law of Nations,' held in Bremen, September, 1876.

"Dr. Bredius proposed, and it was resolved:

"'That, whereas, the great fluctuations and differences in the relative prices of gold and silver may afford the means of making extraordinary profits by coining the silver currency of countries having a double standard and importing the same into such countries; and whereas, it is doubtful whether the coining of such foreign currency, though not under weight or value, constitutes the crime of counterfeiting money or coining false money; and whereas, it is evident that such coining of foreign currency should be prevented, and, if perpetrated, punished by law: a committee be appointed to examine the question, and report upon it to the next Conference.'"

—"He who wastes in the kitchen," said the Grand Vatel, the hierophant of the stew-pan, "is no cook." "The number of inhabitants who may be supported in any country upon its internal produce," wrote Count Rumford, "depends about as much upon the state of the art of cookery as upon that of agriculture; but if cookery be of so much importance, it certainly deserves to be studied with the greatest care. Cookery and agriculture are arts of civilized nations; savages understand neither of them." Both these dicta have evidently been in the mind of R. O. C., the compiler of the English 'Official Hand-book for the National Training-School for Cookery; containing the Lessons on Cookery which constitute the course of instruction in the school, with lists of utensils necessary, and lessons on cleaning utensils,' all which lessons have been tested in the National Training-School. The book is a model of simplicity, clearness, and sufficiency, and yet it is as searching as Brillat-Savarin's 'Physiologie du Goût' The preface tells the aim of R. O. C. very plainly; and it is pleasant to find that these initials belong to the name of Miss Rose Owen Cole, a daughter of Sir Henry Cole, of the South Kensington Museum. This work, Miss Cole premises, has been written to explain in an easy way the first principles of good cookery, and in the form of lessons is especially addressed to those who wish to carry them into practice. She has endeavored to leave no detail, however small, vaguely stated. It is taken for granted that the learner has no knowledge on the subject. The loose expressions, such as "a pinch," "a little," found in all cookery books, are therefore avoided, and precise quantities are given. The work is not to be regarded as an exhaustive cookery book with numerous recipes. It professes to be rather a grammar than a dictionary. The lessons give a sufficient number of examples of cookery illustrating many degrees of cost. The work has been used and tested in the National Training-School for Cookery since 1875, and the instructors now employed in local schools throughout the country have been taught and practised by means of these lessons. It has been found that it is most convenient to practise the lesson with the instructions in sight close at hand. An edition of each lesson has been printed on separate sheets of thick paper, for the use of students and teachers, which may be obtained at the National Training-School for Cookery. Miss Cole may be congratulated upon having produced a really valuable addition to the literature concerned with the supremest branch of domestic economy. The hand-book is published by Chapman & Hall, of Piccadilly, London.

—M. Rameau has replied in the Canadian *Opinion Publique* to our strictures (in No. 652) on his 'Colonie Féodale,' and his reply has more than justified what we said, a part of it being irrelevant and the rest a simple repetition of his own errors. We quoted his assertion that *Massachusetts* "wavered for some years in a ridiculous system of communal labor" and then settled down on a system of feudal grants. To our comments on this absurdity he answers by triumphantly quoting authorities to show that communism once existed in *Virginia*, which has, of course, nothing to do with the matter. He affirms in his book that it was a general practice in the English colonies to grant out land under feudal tenures, divided into regular squares. This, he declares, he knows by the evidence of his own senses, having seen the squares himself. He has no doubt seen whole States laid out in squares, but it is ridiculous in one pretending to write history to refer them to an early period or a feudal origin. They are a recent device of the people he calls Yankees. "Another grievance!" says M. Rameau. "I have confounded *Genesee* (*sic*) with Fort La Tour and Fort Naxouat!" He has done so, and anybody undertaking to write the history of Acadia ought to know better. The mistake is small in itself, but so is the subject, and therefore the former is relatively important. Genesee, by the way, is a misprint for Gemsec or Jemsek. M. Rameau reaffirms the identity of these three places. Nevertheless, Fort La Tour, built at an early date by the adventurer of that name, stood at the mouth of the River St. John; Naxouat, built, in 1691, by the Governor of Acadia, stood high up the stream, opposite the city of Fredericton; and Gemsec, built at an intervening period, stood midway between them at the place which still bears its name. "Fourth grievance! I am accused of confounding *Porsmouth* (Portsmouth) with Pemaquid. Now, I never said a word about Porsmouth." He, however, says several words very incorrectly about Piscataqua, which was the original name of Portsmouth, as he ought to have known. "Fifth grievance! I have dared to say that the French colonies were *agricoles!*" What he did say was that they were "purement agricoles," which is absurdly erroneous. "Sixth grievance! I have confounded the Récollets with the Capucins." M. Rameau, a zealous though evidently not a well-informed Catholic, does in fact pronounce them to be precisely identical. If he will consult any good work on the religious orders, such as that of Helyot, he will discover that the Récollets and the Capucins are two distinct branches of the order of St. Francis. Both of them were in Acadia, the Capucins under the patronage of D'Aulnay and the other at a later period. M. Rameau says that English colonization was feudal in character as well as French colonization. Everybody knows that it had feudal elements at the outset, and that in a few trifling and exceptional cases feudal forms lingered far into the present century. But in most of the colonies the prevailing spirit was anti-feudal; and Massachusetts, which he uses as an illustration of his feudal theory, was, after the transfer of the charter, the most anti-feudal community on earth, both in spirit and in form. He asks why we do not enter the lists against him on his favorite thesis that the French colonists were morally, intellectually, and phy-

sically superior to the English colonists. Our reason is that it would be ridiculous to do so. We stated his proposition, and it would have been idle to refute it in any other way.

RICHTHOFEN'S 'CHINA.'*

I.

WE have before us, in the first volume of Baron Richthofen's magnificent work on 'China,' the beginning of a publication which marks a new era in our knowledge of Asia: embodying as it does the scientific results of four years of travel through nearly all the provinces of China, it promises many most important contributions to physical geography and geology in general. The present volume, which treats chiefly of Central Asia and of the development of knowledge concerning China, will be followed by two on the geology and physical geography, and one on the palæontology of China, and by an atlas; the whole is published under the auspices of the Emperor of Germany.

In defining the limits of Central Asia, Baron Richthofen lays down a law for the subdivision of continents which is both simple and equally important for geology and physical geography. The chapters which he devotes to the explanation of this law and to its application, in Asia and elsewhere, are in themselves an invaluable work, of which we regret that we can give but an imperfect outline. When over a considerable part of a continent the rivers cease to reach the ocean, owing to a deficiency of rainfall below the evaporation, then this undrained territory becomes a "central" area. The rest of the continent in which the streams flow to the sea is the "peripheral" region. The cause of the differentiation generally lies in an increase of continental area, and in the elevation of lofty ranges which act as condensing barriers interposed in the path of the rain-bringing winds. The distinction is physically fundamental, and exists in every department of physical and political geography. The result is a reversal of the usual geological processes. In the peripheral regions, which belong really to the moist borders of the ocean basin, all the products of disintegration and decomposition are carried to the ocean except such as are diverted into the cycles of plant and animal life. In the central area, on the other hand, these products are blown and washed from the hills into the valleys, where, lacking transportation to the ocean, they gradually fill up the inequalities of the surface. Thus, between the gradual degradation of the hills and the filling of the valleys, the tendency is for the country to bury itself in its own dust. To this is to be added the accumulation of material brought down from the summits and inward declivities of the well-watered peripheral mountains, and left, where the rivers sink away, to be blown about by the winds.

Central Asia, as it is most graphically described by our author, may be briefly outlined as a very shallow trough 1,800 miles long and about 400 miles wide. The bottom of this trough is about 1,800 feet above the ocean. The western half is enclosed south, west, and north by the lofty ranges of the Kwen-lun and Tien-shan and the tableland of Pamir, while the borders of the eastern half are reached by a gentle ascent—the southern edge varying here between 4,900 and 10,000 feet. This vast area was the basin of an ancient sea, whose shore-line is apparent to the geologist at points now 3,600 feet above the ocean in the eastern, and 4,500 feet in the western half. Richthofen adopts for this region the Chinese name *Han-hai*—the dry sea. This Asiatic Mediterranean was connected in the west with the ocean by a strait occupying the Djungarian Valley, and had for its worthy *propylæa* members of the mighty ranges of the Altai and Tien-shan. The most important structural fact in this elevated sea-basin is that its skeleton is formed by east and west ridges of older rocks; and that the formerly deep parallel basins thus produced are now almost obliterated by the younger deposits, whose surface, untouched by erosion, rises gently from the central axes of the former valleys to the very crests of the old ridges. The long central depressed zone—the bed of the vanished sea—true to its name of *Sha-mo*, or sea of sand, is a desert, in places covered with shifting sands, in others with gravel or coarse débris. The northern and southern declivities are grass-lands, but unfitted for agriculture by the abundance of salts in the soil. Only at the base of the snow-clad mountains, where irrigation is possible, do we find agriculture practicable.

Crossing the southern watershed into Northern China, we enter the peripheral region. It was in his extensive travels in these northern provinces that Richthofen gathered the materials for his far-reaching and brilliant theory of the origin and geological and geographical significance of the loess. South of the plateau of Central Asia there are vast areas occupied by loess, which fills valleys toa depth of hundreds and even thousands of feet. This material is an almost impalpable calcareous loam, so soft that it is easily crumbled in the hand; it is filled with very fine vertical tubes, branching downwards like the rootlets of a vegetable growth, and a careful study shows that these are lined with carbonate of lime. It is everywhere wholly unstratified, and wherever cut into by erosion, whether to the depth of one foot or hundreds of feet, it presents an absolutely vertical cliff. The vertical internal structure which it owes to its lime-lined vegetation-tubes gives it a cleavage in any vertical plane, so that the cliffs break down only in great perpendicular plates. But they stand intact for years—often, perhaps, for centuries; indeed, in many places, whole villages are excavated entirely in the base of cliffs one or two hundred feet high, suites of rooms being dug out on either side of the door, leaving a thin wall pierced with windows. Millions of people are thus housed in Northern China. Whole river systems, from the main streams to the smallest tributary brooks, are sunk vertically into this formation, which they erode into the most labyrinthine system of gorges. The water falling on the surface is instantly absorbed by the porous material, and the erosion is entirely from below, working backwards, up-stream. The surface of these loess basins rises at first gently, then rapidly, towards the adjoining hills. In the sides of the gorges near the mountains are seen layers of coarse débris, which in going towards the valley become finer and finer, while the layers become thinner and separated by an increasing vertical distance, until they are represented only by mere parting-planes, along which are numerous calcareous concretions—*loess-männchen*—of irregular elongated forms, which stand upright. These planes evidently mark a modification of the physical character of the loess sufficiently pronounced to localize the formation of the concretions. The separate beds thus formed vary from a few feet to generally over fifty and often over two hundred feet in thickness.

The trunk-streams have in many basins carved out a broad valley several hundred or one thousand feet deep, and cutting through many of these beds, the surface of each bed forming a terrace, bordered by the vertical face of the next higher one. The wonderful topography of these basins will be appreciated when we inform the reader that not only are all the tributary streams sunk deep and vertically into the loess, but that often each bed has its independent system of gorges and tributary chasms. The difficulty of engineering roads across such a country is very great. The roads also cut up the material, which is removed by the wind, and they sink deeper and deeper as the years roll on, until they, too, form gorges often one hundred feet deep. This is not in a barren and unpeopled region, but in thickly populated districts, for the loess is the most fertile of soils and inexhaustible, as it is, indeed, wherever it occurs in drained areas the world over. Richthofen shows that the loess is the *Hwang-tu*, or yellow earth—the basis of the prosperity of China and the seat of its principal culture from the earliest times.

The present writer had previously visited and described some of these remarkable loess basins, and had advanced the view that the loess was a lake deposit of silt brought from a distance. This view was adopted by all subsequent observers except our author, and is still held as being the more satisfactory. But Baron Richthofen, extending his observations over a large part of Northern China, found the same deposit at all altitudes up to eight thousand feet, and covering the crests of mountains as well as the valleys; it has everywhere the same character in the minutest details, and contains immense quantities of land shells and the bones of land animals, but no traces of marine or fresh-water life. He concludes, with reason, that the homogeneous and uniform character of the material over vast areas, the total absence of stratification and of marine or fresh-water organic remains, and the condition under which it occurs at all altitudes, preclude the possibility of its having been deposited under water. After a thorough discussion of the question, he advances a theory which is both masterly and remarkable for its completeness, and for the light that it throws upon some important problems in other parts of the world. Substantially, this theory says that the loess is a sub-aerial deposit, and that the loess-basins of China are the drained analogues of the steppe-basins of Central Asia. Both date, according to Richthofen, from a period of even greater dryness than the present, when the Hwang-ho and other local rivers were dried up. The products of disintegration, instead of being carried seaward, were at the mercy of the fierce winds of a treeless continent, and were blown from the hills into the valleys. The grass-covered surface received and permanently arrested the slowly-increasing deposit, which in raising the surface nourished the new vegeta-

* 'China. Ergebnisse eigener Reisen und darauf gegründeter Studien. Von Ferdinand Freiherrn von Richthofen.' Erster Band. Berlin: Verlag von Dietrich Reimer; New York: L. W. Schmidt. 1877.

tion, while the decay of the old produced the capillary tubes which, with their lining of lime, give to this remarkable material its vertical structure and its strength. It was the home and the tomb of countless snails, and of the animals that roam the steppes. The soluble decomposition products, having no outlet to the ocean, remained in the loess, or saturated the water of the isolated, undrained lakes, which often occupied the centres of the basins. A secular increase in the rainfall, exerted especially over Northern China, reversed the conditions; the erosion, working backwards, gradually drained basin after basin, and cut the deep valley and gorge systems which constitute the wonder of the region. The loess was gradually drained of its salts down to the stream levels, and transformed into the finest agricultural land. For, as Richthofen remarks, this soil is self-fertilizing, and land that has been continuously cultivated for more than four thousand years still requires practically no manure. This is partly because its extreme porosity causes it to absorb carbonic acid and ammonia in large quantity from the air; but it is more especially due to the fact that the rain, by establishing a moist communication between the surface and the saline water below the drainage level, causes the elevation of dilute solutions of salts, by diffusion in the capillary tubes, from which the vegetation takes its nutriment. While endowing this, the "transition" zone of Richthofen, with the conditions of a settled culture, nature in sculpturing the deep gorges destroyed the distinctive steppe feature of the region, and gave it the strongest means of defense against the neighboring nomad hordes.

This is a remarkably satisfactory theory, and one to which few objections can be found. No one who has witnessed the fearful dust-storms of Northern China, or the dust-fogs that extend more than 600 miles out to sea, can doubt the ability of the wind to perform the part assigned to it. But it is difficult to perceive a sufficient source of loess-making material solely in the disintegration of the rocks surrounding the basins, for it is evident that in so dry a climate this process must be exceedingly slow, and, also, that as the filling of the basins progresses, and the area to be covered increases, the consequent covering up of the rock must diminish the area of supply. Still, this is largely a question of time, and it ceases to be a difficulty if we suppose that the destruction of vegetation exposed to the action of the winds a great depth of rock disintegrated *in situ*, the legacy of several geological epochs.

But we can conceive a source which should seem to be competent to supply so large an amount of material, and that is the glaciers of High Asia and of the Tien-shan. The streams flowing from these vast *mers-de-glace* have been for ages transporting the products of glacial attrition into Central Asia and Northwestern China. This fine silt, left dry by the rivers as they sink below the surface, should seem to have been an important source to supply the wind with loess-making material. There is one more point of importance of which we think Baron Richthofen has not given as full an explanation as is possible; we mean the parting-planes which his predecessors, the present writer included, have wrongly considered as planes of stratification. These seem to us now, in the new light thrown by our author on the whole problem, to mark periods of arrested growth due to exceptional rainfall. This would account for the marginal layers of débris brought down from the mountains. And the continuous and more abundant growth of grasses *at one plane* would produce a modification of the soil, structurally and chemically, which superincumbent accumulations could never efface. It should seem probable that we have herein also the explanation of the calcareous concretions which abound along these planes; for the greater amount of carbonic acid generated by the slow decay of this vegetation would, by forming a bi-carbonate, give to the lime the mobility necessary to produce the concretions.

Poems in company with Children. By Mrs. S. M. B. Piatt. (Boston: D. Lothrop & Co.)—It is fairest to Mrs. Piatt to construe her title-page literally, and not to suppose that these poems were intended *for* children. It is doubtless for mothers who, like herself, have lost a little one or little ones that she composes and publishes these verses, from which a sighing for the dead is almost never absent. But, then, it seems a very morbid maternal instinct which is moved by the company of children only to poetry of this melancholy and abstracted sort, and we can as little recommend the collection to parents as to children. A few pieces offer exceptions for both classes of readers. The youngest, for instance, can understand and appreciate "Voices of the Night" and "The Little Boy I Dreamed About," marred though the latter is by two obscure and one funereal stanzas. Who would expect the bantering tone of

> "This Little Boy who never takes
> The prettiest orange he can see,
> The reddest apple, all the cakes"—

to be exchanged for this vein?—

> "Dead?—dead? Somehow I do not know.
> The sweetest children die. We may
> Miss some poor foot-print from the snow,
> That was his very own to-day—
> 'God's will,' is what the Christians say."

The following poem shows that Mrs. Piatt's dreary if clever muse not only improves occasions but makes them. It is called "Two Babies in Bed. [Little Guy's Answer]":

> "'Think of the Baby at home,' I said
> '(How pretty he is to kiss!);
> It is white and warm in his little bed,
> It is dark and cold in this.'
>
> "He laughed, and said, with his hand in the dew
> Of the sweet small grave close by,
> Where the grass of the lonesomest summer grew:
> 'This Baby does not cry.'"

A Text-Book of Physiology. By M. Foster, M.A., M.D., F.R.S. With illustrations. Second edition, revised and enlarged. (New York: Macmillan & Co. 1878.)—The second edition of this valuable text-book differs from the first mainly in the introduction of figures explanatory of physiological apparatus and of certain points of physiological anatomy. The additions to the text consist chiefly of references to recent investigations, and of a chapter of twelve pages on the "Phases of Life." To a student already familiar with the rudiments of physiological science, and desiring a more intimate knowlege of the laws of life as at present formulated, the work is invaluable, not only as a presentation of important recent acquisitions, but also on account of its wise suggestions as to the direction in which truth is to be sought in those fields where investigations have as yet yielded only uncertain results.

The Nation.

NEW YORK, THURSDAY, APRIL 11, 1878.

The Week.

SECRETARY SHERMAN'S examination by the House Committee on Banking and Currency was resumed on Thursday last, but nothing very new was elicited. He explained that he thought he could procure $50,000,000 more gold, if needed, by the sale of bonds, though he declined at first to say where he would sell them, but afterwards admitted that it would be "at home." He also explained that by "gold additional" he meant "silver to some extent," because "silver and gold we consider the same under the law." Silver coin he would only part with for the present in exchange for gold coin or silver bullion; but he could not tell when he would begin paying out silver for the ordinary expenses of the Government, for that would depend, he said, on the "equality of the three kinds of currency, gold, silver, and paper," and "he did not know whether he made himself understood, but this was the idea he had in his mind." We confess it does not seem clear. Would he pay out silver if it was on an equality with paper and gold, or if it was not; or if it was on an equality with one of them, or with two, and if with one, which? In a subsequent very cloudy passage he seemed to declare that "the law declared all three equal," and he would so treat them, whatever their market value. He made an explanatory statement about the Sinking Fund, of no great moment, and then told Mr. Ewing how he would meet a run on the Treasury in case, after resuming, the greenbacks fell below par. If it "were necessary to resort to any means he would resort to such as have been adopted in other countries, the temporary suspension of specie payments"—or, in other words, do what broken banks have always done. There is no need to resort to foreign countries for a financial expedient of such great simplicity and efficiency. It would stop a run like magic.

As to the effect of a war in Europe on our supply of gold, he thought our exports of produce would be so large that we should not lose our gold, and that if Congress gave him the reserve he asked for, the Government would be stronger for resumption than the Bank of England. He expected that by December gold and paper would be at par, and then he would be in no danger; if they were not at par, Congress could interfere and relieve him from the operation of the Resumption Act. Here the indefatigable Ewing remarked profoundly that in the meantime the "country would be on the rack and torture of preparation for impracticable resumption"; whereupon the Secretary promptly corrected him by declaring that "the process towards resumption was *not* a harsh process"; that it was inflation which was "harsh." But Ewing confronted him with his mention before the Senate Committee of "the agony of preparation for resumption." Many men would have been disconcerted by this, but the Secretary escaped under a little cloud about "the instincts of human nature." There was a subsequent short discussion between him and Mr. Bell and Mr. Ewing as to the probable effect of the repeal of the Resumption Act, which we reproduce with diffidence because we must admit that we do not quite understand it; but it seemed to indicate that if greenbacks were at a discount, the Secretary would hold greenbacks in the Treasury and pay out gold till they rose to par, and then pay them out till they fell, and then hold them once more, and so on, on the principle of alternations.

The Senate has been almost exclusively occupied with discussing the Pacific Railroads Sinking Fund Bill from the Judiciary Committee. The Railroad Committee's Bill was unexpectedly withdrawn by Mr. Matthews on Thursday, and the railroad interest then devoted itself to the amendment of the measure not inspired by itself. The author of the proposed amendment was naturally Mr. Blaine, and its object was to induce Congress to give up its right to legislate hereafter in regard to the companies by altering, amending, or repealing the several acts affecting them. Mr. Thurman and Mr. Edmunds, however, held the Senate firmly to the bill as it came from their hands, and it was passed on Tuesday by a vote of 40 to 19, after Mr. Blaine's amendment had been rejected by yeas 29, nays 36. Two-thirds of those in opposition on the final vote were Republicans. In the House, Mr. Wood's Tariff Bill, the most important business of the session, was thrown out of turn by the farcical struggle over the Doorkeeper. The late incumbent, a Mr. Polk, of Missouri, the third appointed under Democratic auspices, was proved guilty of hiring a number of subordinates far in excess of that permitted by law, and who were maintained out of the appropriation only by a division of salaries. The fortunate appointees were in the habit of farming out their duties to others at a low figure, and pocketing the difference at their ease. The most amusing as well as the most scandalous feature of the case was the way in which the fourteen places assigned by law to disabled soldiers were filled; and never was the disgusting demagogy of such perversions of the civil-service more strikingly exhibited than in the fraudulent array of constructive "invalids" whom Mr. Frye depicted to the House with so much gusto. Polk was of course dismissed. On Tuesday, the Committee on Banking and Currency was allowed the 23d inst. as the day for considering their newly-reported bill to retire the national-bank note circulation. Mr. Wood succeeded in getting the floor for an exposition of the evils of former tariffs and the merits of his own, and the debate is now in progress.

Nothing is more striking in the proceedings of both Houses than the keenness of the interest with which anything bearing on patronage is discussed, as compared with the languor and indifference with which nearly all other subjects are treated. The great question of the appointment of a Doorkeeper to the House gave rise to a most animated debate on Friday and Monday, the *éclat* of the occasion being heightened by a most ingenious and apparently carefully-planned attempt of General Butler to "make a point on the Democrats" by nominating General Shields for the place, Shields being at once a Democrat and a Union soldier; so that if the Democrats voted against him they would have the air of rejecting him simply because he had been a Union soldier, and thus produce a profound effect on the entire American people, and initiate a period of great national prosperity. The proposal of the Democrats to put up a Mr. Field, a Confederate soldier, seemed to make the success of the Butler combination a certainty; but they did, as a matter of fact, elect Field, and then, by a gigantic effort of pure mind, they passed a bill putting Shields on the retired list of the army, thus giving him a pension of over $4,000 a year and covering Butler with confusion. There were also some profound juridical and historic remarks on both sides, Butler laying it down that by "all laws, human and divine," all West-Point Confederates ought to have been hanged, and Blackburn, of Kentucky, observing that the only person killed or injured by General Butler in his period of active service was Mumford, of New Orleans, whom he caught unarmed and hanged.

The passage of the Judiciary Committee's Pacific Railroad Bill by so large a majority in the Senate is another good sign of the times, for one reason, among many, because no bill has in late years been opposed by a more powerful and unscrupulous lobby. Jay Gould has for months been keeping open house in Washington in order to defeat it, and has rallied all the corrupt influences of the place to his support. Mr. Blaine, as usual, tried, in the slang of the Stock Exchange, to "straddle it" by his amendments, but in the discussion which followed received one or two well-deserved thrusts in the near neighborhood of his vital parts from Mr. Edmunds. Per-

haps, however, the most curious incident of the debate was the appearance on the scene of the Sycamore of the Wabash as the defender of the companies and of vested interests and of the right of contract, showing that he has not as good a memory as a charlatan ought to have, inasmuch as he has within a few months distributed millions of copies of his nefarious attacks on the contract of the nation with its creditors, and, indeed, on the title of every man in the country to his savings.

The appearance of Mr. Fernando Wood on the floor in advocacy of his Tariff Bill is remarkable as the first carefully-prepared attempt at constructive legislation within eighteen years on the part of the Democrats. We discussed last week the leading features of the scheme, and need not recur to them. Mr. Wood's speech in support of it was noteworthy also for its extensive use of the illustrations which the Free-Trade League have been extensively circulating for many years, but which somehow to most people wore until recently the air of pleasantries. His enumeration of taxes paid by the Western farmer on his house and clothing, for the benefit in a large degree of men who do not buy of him in return—for he sells his produce in Europe—begins at last to have a serious sound and to look formidable, owing to the altered economic condition of the country and the diminished hopefulness of the public temper. Even ten years ago, a list of the farmer's taxes—frightful as it now seems—only excited smiles, so deeply seated was the idea that it did a farmer good to be taxed, or that a well-taxed farmer was somehow a noble and touching spectacle. Mr. Wood met the charge that the proposed changes will diminish the revenue by a table showing that, taking present consumption as a basis of calculation, there would be a gain of revenue of $9,633,645 over the yield of last year. The theory that reduction of duties will produce the loss of the exact amount of the reduction is, however, an old and often-exploded fallacy, and now holds in finance the place which the theory of few sales and high profits holds in trade. All, or nearly all, trade is now conducted on the plan of small profits and quick returns, and if the principle has not completely worked its way into the art of taxation, it is because politicians are not as keenly alive to the public interest, or as quick in discovering it, as private individuals in dealing with their own.

The House Judiciary Committee by a majority of one vote has agreed upon a bill to provide for the distribution of the balance of the Geneva Award. It authorizes all persons or corporations claiming a title to any of the money to bring a suit in the Court of Claims at any time within a year, and directs the Court to "render judgment for each claimant who was an actual sufferer by the violation of the laws of neutrality by Great Britain for such amount as in their opinion he shall justly be entitled to recover under said treaty and award according to the principles of justice, equity, and the law of nations," and without regard to the rules introduced into the law creating the Court of Commissioners of Alabama Claims, excluding insurers unless they could show that their losses exceeded their profits. The act further allows interest at the rate of four per cent. from the date of the law, and provides for appeals to the Supreme Court which are to have precedence of all other cases.

The report of the Committee, especially when taken in connection with the report recommending the return of the balance of the Japanese indemnity, cannot but be regarded as a sign, in spite of the Silver Bill, of the declining influence of the sharper element in Congress and of the returning ascendency of sound jurisprudence, which means sound morals. We believe most of the best men in the House, including the best Southern lawyers, favor the reference to the courts. The last statement of the case of the insurance companies consisted in an exceedingly able argument before the committees of both Houses by their counsel, Mr. A. G. Sedgwick, which has been printed, and is worth reading by everybody who is interested in the subject as a very clear and full statement, not only of their case but of the claims of common honesty and common decency in this whole transaction. The argument is in form a plea for the reference to the courts which the Committee recommends, but its incidental applications of the rules of morality to the conduct of the United States in the transaction would be very useful reading for the college president and theologian who recommended our Government to dispose of the money as it pleased, and refer those in whose behalf it sued for it to the "tribunal of history"—perhaps one of the most curious illustrations of the moral disorder of the day we have yet had. In fact, the great difficulty of the discussion for those who have advocated the distribution according to the terms of the award has lain in the fact that the rule of duty has been very plain and simple, and exhortations to follow it have sounded so like the discourses of a jail chaplain to his interesting flock that one has shrunk a little from urging them on the attention of respectable legislators and a church-going public.

The Virginia repudiators have received a severe blow in the decision of the Supreme Court of Appeals of that State reaffirming the constitutionality of the Funding Act. The case simply involved the question whether coupons of State bonds were receivable for fines due the State, or whether such obligations must be discharged in money. The Funding Act of March 30, 1871, made these coupons receivable "for all taxes, debts, dues, and demands due the State"; and this provision has always been a serious source of annoyance to the repudiators. The constitutionality of this act, and its character as a contract between the State and its creditors, had already been declared by the court, so that the only question really before it was whether the "fines" were embraced by the terms "debts, dues, and demands." But owing to the recent attempt to pass the "Barbour Bill" in the Virginia Legislature the whole question was argued, and in the most solemn manner the court again declared that the Funding Act is a contract, the obligations of which the Legislature cannot impair. The manner in which the court meets the arguments against the constitutionality of the act is very gratifying. One of these was that fines and other revenues could not be paid in coupons because they were dedicated to the school fund; in reply to this the court quotes its previous opinion, in the first case in which the question of the constitutionality of the Funding Act came up, as follows: "It would seem to be a sufficient reply to say that if it were impracticable to raise a sufficient amount of revenue for both purposes, the latter did not impose an obligation on the Legislature paramount to the obligation to provide for the payment of the interest on the public debt. That was an obligation antecedent and paramount to the Constitution itself, and could not be repudiated by the Constitution, if it had so provided." And further, the court points out, what everybody but a born sharper must see, that the obligation to pay the interest, being one of *debt*, is necessarily higher than the obligation to provide for objects like public education, however desirable and important they may be. The great practical importance of this decision, besides the fact that it shows the judiciary to be untainted by the poison which has been rapidly spreading through the State during the last year, is that it makes all attempts at legislation like that vetoed by Governor Holliday futile. With the Governor and the Court of Appeals on the side of the public credit, and both taking the broadest possible ground on the subject, it seems now even possible that the Legislature may be driven to raising the money by taxation which it has been trying to get by swindling.

The South Carolina Democrats have reopened the Presidential controversy in the basest and most treacherous way. Mr. Wade Hampton has sent a requisition here for the body of Moses, some time Speaker of the Carpet-bag Legislature and afterwards Governor of that State, on a charge of forging a promissory note. The objections to this are obvious. If Mr. Hayes's title to the Presidency be good, Mr. D. H. Chamberlain is the lawful Governor of South Carolina, and the only person entitled to demand Moses's body on a charge of any kind. But Mr. Hayes's title *is* good; therefore Cham-

berlain is the proper person to seize Moses, or cause him to be seized. Chamberlain has not done so. He is here and Moses is here, and yet he takes no notice of him. Hampton's pursuit of the ex-Governor is, therefore, a piece of mean and malignant persecution. He says he made no pledges to the President when the troops were withdrawn about letting bygones be bygones; but who believes him? Wasn't he a Confederate brigadier? Moreover, Moses's forgery, even if committed, was distinctly a "political offence," because any offence committed by a politician is a political offence, as everybody knows. To crown all, Moses's counsel says the note was a usurious note, and therefore by all laws, human and divine, a legitimate subject of forgery. In fact, in whatever way we look at it, Moses is a victim, and is entitled to a rattling letter of sympathy from at least two "visiting statesmen." We trust the Administration will be up and doing. What does the Attorney-General say? Does not the spectacle of Moses in jail indicate the existence of a serious "gap in our system"? Unless speedy steps are taken for his release we fear the indignation of several editors may lead them into acts of violence. The very calm they now maintain shows the depth of their feeling.

During the week the opinion that England and Russia will not engage in war gained ground in the financial and trade markets, and accordingly the securities of those governments advanced (British consols to 94⅛), and the markets here and in Europe for breadstuffs and provisions declined. What is of perhaps more importance to this country, the rush of United States bonds from London to New York abated to a sufficient degree to cause a stoppage of gold exports from here (the total amount last week was only $300,000), and, late in the week, to depress the rates for sterling bills below the point at which gold coin can be profitably exported. The interesting question now is whether this abatement is temporary only, or whether most of the bonds that are to come have come. There was at the close of the week a margin of profit on importations, but the complaint among the bankers who have done most of this business was, that it was not so easy to buy in London large amounts at current quotations as for several weeks past. The trade exchanges continue to rule largely in favor of this country, and if these remain undisturbed by the bond movement, it will be very fortunate for us so far as coin payments are concerned. During the month of February alone we sold out of the country about $33,000,000 more of our products than we bought foreign goods. The last weekly statement of the New York banks disclosed a fact that has caused some uneasiness in the money market—namely, that the legal-tender note average was down to $26,600,000 against $42,250,000 last year. The banks have not held so few legal-tender notes since the panic of 1873. In the loan market the rate has been 6 to 7 per cent., and time loans also have shown remarkable firmness. Silver in London fell to 54½*d.* per oz., and the bullion value of the new silver dollar closed at $0.9242 gold. The gold value of the United States legal-tender note at the same time was $0.9925; this note is payable in silver as well as gold, but as silver dollars have not appeared in full supply, and as their value is still regulated by the laws that govern token currency, the markets have as yet taken no practical notice of the difference between the two kinds of coin dollars. Secretary Sherman visited New York to confer with banks and bankers on resumption matters.

A summary of Prince Gortchakoff's answer to Lord Salisbury's circular, for which Europe has been anxiously waiting during the past week, has reached this country by telegraph, but not until the article in which we have elsewhere discussed England's position was in type. It is both able and temperate, and indeed on many points does not admit of reply, and has evidently made a deep impression in London. Gortchakoff shows that Lord Salisbury acknowledges that a return to the programme of the Constantinople Conference, pure and simple, has been rendered impossible by the war; declares that it has never been pretended by Russia that the Treaty of San Stefano was a definitive settlement, as it is called a "preliminary treaty"; that the new principality of Bulgaria will be no more under Russian control than that of Rumania, which also owed its existence to Russia, and that she is willing to abridge the term of her occupation as much as possible; that the limits of the new principality were not finally settled, but sketched in general terms, so as to follow as nearly as might be the lines of race distribution, and that in giving it a port on the Mediterranean she simply sought to give it an outlet for the products of its industry, by which England and the other commercial powers of the West would profit more than Russia. That a Russian Minister should have to point this out to an English Minister is a striking illustration of the oddity of England's position in the affair. The Chancellor further says that in suggesting modest reforms for Thessaly and Epirus Russia merely wished to get something for the Greeks without appearing of herself to impose too much on Turkey; but this does not prevent Turkey from doing more for the Greeks, if she pleases, or the other Powers from exacting more. As regards the restoration of Bessarabia, he holds firm, the determination of Rumania not to surrender it notwithstanding.

As regards the indemnity, he maintains that its amount is small, out of all proportion to the extent of the Russian outlay, and is, therefore, not unreasonable, and that the cessions which Russia has asked in Armenia are merely valuable, not as territory, but as giving her fortresses which she has hitherto had to besiege and capture in every war with Turkey. The close of the note is an attack at close quarters, which may be fairly said to render the British position utterly untenable. He shows that Turkey has, by her failure to make the reforms stipulated for by the Treaty of Paris, broken existing treaties, and the Powers have broken them by interference on behalf of the Christians, as England and France in the occupation of Syria in 1860; that all this was fully acknowledged at the Conference, and Lord Salisbury himself now confesses that some changes in the existing treaties are rendered necessary by the active desire of the Powers to improve the condition of the Christians; that it is, therefore, for England now to say what she thinks these alterations should be, and propose the manner in which they are to be adapted to the situation created by Russian sacrifices in the war; in other words, that mere criticism and objections will not now do; that "practical propositions" are also called for. He remarks, also, with great force "that there is no remedy against mere suspicion," and no argument can meet it.

The chances of peace, on the whole, may be said to have improved, and it is remarkable that they have improved after each Russian state paper, showing both the ability of the Russian diplomatists and the fatal illogicality of the position in which the Conference left Great Britain. In fact, the war-fever has been created by rumors, music-hall songs, and blatant newspaper articles, and it has reached such a point of folly that to abuse Mr. Gladstone like a pickpocket has become in London a mark of good breeding and patriotic spirit. The address in reply to the Queen's Message has been carried against but feeble Liberal opposition both in the Lords and Commons. In the Lords, Lord Derby made an interesting speech showing that, in spite of all the declarations to the contrary, his differences with his colleagues began long ago, and that he has disapproved of nearly everything that has been done of a warlike tendency. He declared emphatically that even if the Congress scheme failed there was nothing in the situation to call for armed intervention on the part of England, and nothing to prevent the rational discussion of the Treaty of San Stefano point by point. There is no more positive news from Austria. She is reported to approve of England's position, but there is nothing definite as to the extent to which she would support it, and there are plenty of signs that her action, whichever course she takes, will be somewhat feeble.

THE REPUBLICAN PROGRAMME FOR THE FALL ELECTIONS.

WE are unable at this moment to recall any situation in the history of constitutional government so singular as that which was described in the following passage from Mr. Nordhoff's Washington correspondence in the *Herald* on Monday last. He says:

"The caucus of Republican Senators and Representatives which is to be held, if the party can be got together, early this week, is not only to select a Congressional Committee but also to confer about the platform for the fall elections. . . .

"The Republicans are a little at a loss for principles with which to go before the people. They need a new set, but do not like the idea of adopting them. A good many of them seem to believe that it would be a good thing to concentrate their efforts on abuse of the President, but the cooler heads object that while this would be a proper thing to do it is doubtful how much it would help to carry the elections, because there is a growing suspicion that the people rather like the President. On the currency question there is such a difference of opinion between Eastern and Western Republicans that it is generally admitted that nothing must be said about it. 'Let every one make his own fight in his own district on this subject,' is the word.

"Two or three efforts have been made to unite the party on the tariff and in opposition to all reform or change in this matter, but here it, too, threatens to split open if any attempt is made to tie it up.

"On the great question of internal improvements the party is pretty well united, but the party leaders see that in this period of economy and reform and general poverty this is not a good issue to put prominently forward.

"'The gallant and battle-stained old Republican party' does not seem to most of the politicians here a sufficiently promising watchword to stand alone. In this dilemma the Southern question is the only one which the general Republican mind thinks promising, and there is a disposition to reopen the rebellion and hoist the bloody shirt. Unfortunately there are no outrages nowadays, but there is hope that the Southern claims business, the rebel debt, the doorkeeper scandal, and one or two good harrowing historical outrages will carry the party safely through what is privately acknowledged to be a very tight place."

All other trustworthy advices from Washington confirm this account of the Republican embarrassment, and it is acknowledged also that the Democrats are no better off, so that we have two great parties whose principal object, at a period of great trial and perplexity, is to avoid dealing with any pressing question of the day, or, in other words, avoid the very work for which parties are supposed to exist. The currency question, for instance, is one of the most important which has ever come before the country, and the managers of the Republican party deliberately agree beforehand that in this the party shall have no views of its own, but that each candidate shall deal with it in his own district as best he can; that is, that a Republican may be in one district in favor of unlimited greenbacks, in another of "fiat-money"; in one of a double standard, in another of a quadruple standard, and so on. This plan of disposing of a great subject was adopted by the Greeley Convention at Cincinnati with regard to the tariff, and excited both mirth and disgust in the ranks of the regular Republicans, although the tariff question at that time had no such weight as the currency question has now.

Of course this confusion is, as the same writer points out, the natural result of the failure of the party leaders to organize public opinion by discussion on really serious topics. The Republican party lived for twelve years after the war on "outrages" and war memories, wholly neglecting the issues which, in a world of incessant change, and in one of the most changeful of modern societies, were sure to come to the front. In those twelve years the country passed through a great economic revolution; a large body of emigrants was added to its voting population; and, what was still more important, a whole generation of natives grew up who remembered nothing of the slavery conflict, and next to nothing of the war. They began to exercise the franchise without the benefit of any ventilation, in the press or platform, of the weighty social and political problems over which other countries were laboring fruitfully during the thirty or forty years of our absorption in the slavery conflict and its incidents. The consequence was that when the bubble of fictitious paper prosperity burst in 1873, and the peculiar management of the public service by General Grant and his "Senatorial Group" broke down under the weight of its scandals and abuses, and it became plain that something more than negro suffrage and "troops" was needed for national salvation, there arose the babel of confusion we are now witnessing. The experience of civilized man on knotty points of social practice was treated as of no value. Majority votes were taken in settlement of questions of pure science. Some of the worst abuses which had crept into our administration during the wandering in the wilderness were declared priceless adjuncts of republican government. Swarms of political lepers appeared on the highways, declaring that the old prejudice against leprosy was a monarchical delusion, and that a scaly skin was really a sign of strong vitality, and to the emancipated eye was not without beauty.

If it be asked why this continues; why men of strong political ambition do not come forward and rise to power or keep power by organizing and training public opinion, by rallying voters around great ideas, and by appealing to the instincts of civilization, the passion for both order and progress, the readiness to learn from experience to which all great nations owe their greatness, and none more than this—the answer is not far to seek. It can be more readily given by citing a concrete example than by the statement of any general principle. No State in the Union has been so much interested in the questions which have been occupying the public mind during the past year as the State of New York. The currency, the tariff, and the condition of the civil service are to her matters of transcendent importance. Rational and careful legislation about them, and the enlightenment of the public in other parts of the country about them, are essential to her growth and prosperity. No other State has suffered, and is likely to suffer, to an equal extent from ignorant or mistaken treatment or neglect of them. It therefore was the most natural thing in the world to expect that the past year would have been to her senior Senator one of unusual and, indeed, exhausting activity. Faithful service, one would naturally have said, would require of him incessant and eager preoccupation in aid of legislation intended to settle the standard of value on sure and lasting foundations, to make the tariff and the mode of collecting duties under it such as to render this port attractive to commerce, and to enable it to retain its old supremacy as a centre of distribution. One would have supposed that, under the circumstances, he would make many speeches on economical questions, consult much with business men, orally and by letter, weigh carefully the experience of foreign nations, and make himself a recognized and prominent authority on the knot of ethical, legal, and economical problems known as the Silver Question. One would have thought, too, that he would, even if an indolent or dull man, be driven into this sort of industry by the approaching close of his term, and that in no way would he expect to win a renewal of his senatorship so readily as by conspicuous interest about the commercial interests of the State and of the Union.

The truth is, however, that probably in no year since he entered public life has he been so silent and openly inactive as during the past year. Not only has he not shown any interest in the questions by which the country has been agitated, but he has actually been somewhat ostentatious in his display of indifference to them. He has made no speeches about them, introduced no bills about them, and has rather avoided a position of authority about them. In any other parliamentary country—in England, France, Italy, Germany, Switzerland—such a course at such a time would ruin him politically; it would make his defeat at the next election certain; according to the theory of our Government, and of all popular government, it ought to make his defeat certain here. Why is it, then, that he, shrewd and watchful and fond of public life as he is, is not only not afraid of defeat, but actually expects success through his very neglect of his proper duties? In explaining this we explain why it is the Republican party has no policy, and is now looking about and trying to find out what will be the best cry at the fall elections. Senator Conkling is not really idle or in-

dolent. He is at this moment, and has been all through the winter, one of the busiest men in Washington. There is no indiscretion in saying that nobody works more with his pen in his room or in the Senate. Bismarck is not a more indefatigable toiler, and when his lamp is seen night after night his admirers not unnaturally suppose that he is composing "an effort" on the currency or some other important subject of legislation. They have accordingly several times announced "an effort" from him, but have as frequently been disappointed. The reason is, that what occupies him is the "machine." His great correspondence is about "the machine"; his reading is about "the machine"; his meditations are on "the machine." It is through "the machine" that he expects to be re-elected and not through his opinions on finance or taxation, and, consequently, he does not trouble himself about these things. He is now and has been during the past winter occupied in the process called "subsoiling"—that is, in encouraging his "henchmen" in the various districts in this State, so that they may "control the primaries" which send delegates to the nominating conventions, and that they may control the nominating conventions so as to get as many "Conkling men" as possible into the Legislature which is to elect the next Senator, and control the Legislature now sitting so that no measure shall pass which would offend or trouble sound Conkling men in any doubtful district. He knows or believes that if these arrangements are all properly made, and if their working is not too visible, and if he does or says nothing in Congress that can be "used against him," he will be again returned, and that though large bodies of voters may be disgusted with him and desire his defeat, they will find it impossible to get rid of him. To trouble himself about the currency or the tariff, or to provide the party with a serious platform and to work for it, would to a man like him be, under these circumstances, a waste of time. It would probably be unjust to him, too, to suppose that in doing all this he is running counter to his conscience or neglecting what he believes the best interests of his country. Men of his mental calibre and moral constitution, who begin to work "the machine" at twenty-one or two, as he did, and to receive honors and rewards from it, rapidly reach the sincere conviction that a system by which they themselves thrive is on the whole a good one. No phenomenon is more familiar than this association of ideas. King Bomba really believed himself useful to Naples, and Louis Napoleon undoubtedly thought that he drew his enormous salary for saving French society.

THE EUROPEAN CONGRESS.

THERE is no longer any question that the British Ministry has, to all intents and purposes, the nation at its back in its attitude towards Russia, and that its greatest danger now is not that it will be feebly supported in going to war, but that it will be forced into war prematurely or unnecessarily. The humanitarian view of war which prevailed so strongly in England from 1860 down to last year, and furnished so much curious reading and speaking during the late conflicts in this country and in France, and even in Turkey, has, in fact, completely disappeared from the English press and platform. It appears to be no longer outrageous to go to war for anything but the preservation of national independence; it is no longer shocking to fight for mere power or dominion or empire. The fact that war will cause a vast amount of death and disease, and ruin thousands of homes, does not any longer appear to be a fatal objection to it. It is no longer amazing that "people calling themselves Christians" should be ready to use cannon and rifles against other Christians. In fact, the blind ferocity of the Northern States, and the cold, scientific brutality of the Germans, and the cruel readiness of the Russians to attack "the weaker party," seem to have lost their repulsiveness. Respectable English journals and moralists openly advocate an attack on Russia at this particular juncture *because* she is weak and exhausted, in defiance of that spirit of "fair play" which seemed so precious when Grant was driving Lee to destruction, and when Servia the other day took advantage of Russian victories to launch her battalions once more against the wearied Turk—the murdering, ravishing, impaling Turk, whose bloody hand had so often left its mark on the door-post of Servian cottages. There is, of course, nothing very surprising in all this, or, for that matter, very reprehensible; but the spectacle English opinion now presents is worth studying for the light it throws on the cause of the feebleness of her moral influence, which is a constant surprise to those who are most impressed by the splendor of her achievements in the arts both of war and peace.

There is, too, in the popular statements of the reasons for going to war with Russia an incoherent vehemence which makes the philippics against England with which the illustrious "Zach" Chandler at one time awed the Senate, seem much more rational and respectable than people here used to think them. The London *Spectator* discussed these reasons the other day, exposing their inconsistency and vagueness, in an able article which doubtless had a solemn air in London, but at this distance was somewhat comic reading. Some want to fight Russia because she is a growing power; others because she is tricky and untruthful; others because she is despotic; others because she has behaved so badly to Poland; others because she is weak, and others because she is strong. All seem to agree, however, that the war, when it begins, is to be a war of chastisement. It is to be waged to make Russia feel sorry and to improve her moral tone. According to the *Spectator*, some of the calmest and best people lose all self-control when talking about Russia. No defence of her is permissible in public or private, recalling so sadly the mania of 1863, when an English clergyman at a public meeting denounced the practice of talking of Americans as "brethren" or "cousins," and declared them little better than a lot of wicked and cruel savages, separated by their crimes and enormities from the rest of the English race, and whom it was, in a certain sense, a duty to dislike.

When one leaves the region of sentiment and rhetoric and comes down to the hard facts of the situation, the inconveniences of this state of mind for a community meditating war appear very great. We believe that with the exception of the first offensive war undertaken by the French Republic, and which had for its object the general chastisement of tyrants, every war undertaken by a civilized power within the last century has had a distinct, material aim, capable of definition on paper, and really considered capable of attainment by the use of existing military force; that is to say, it has been a war, in general terms, either for the conquest of territory or the expulsion of an invader, and when begun it was in the power of all the world to name beforehand a contingency on the occurrence of which it would probably, if not certainly, come to an end. An invader expelled, a province annexed, a government overturned, a fort or fleet seized or destroyed, and peace ensued as a matter of course. Take the war of which the object at the outset might have been pronounced most vague—the attack of the Allies on Russia in 1854. Then the first object was the simple one of driving the Russian army from Turkish soil and exacting guarantees for the safety of Turkey from similar attacks. The Russian army was consequently compelled to leave Turkey, and the great Russian fortress and fleet in the Black Sea, which constituted a standing menace to Turkey, were destroyed. This done, peace came as a matter of course. In the present instance, however, nobody seems able to say at the outset for what, militarily speaking, an English attack on Russia is to be made. It is not to restore Turkish independence or integrity, for it is admitted on all hands that these are gone for ever. It is not to drive Russia out of Turkey, for all admit that this withdrawal would saddle England with responsibilities about the evacuated territory which nobody is prepared to assume. It is not for the liberation of the Christian population of European Turkey from Russian rule, for the Christians are delighted with what has happened, and Russia does not propose to rule them. For what, then, is it to be? What achievement of the fleet or army would necessarily bring it to a close? How should we know at any stage in the struggle that it was drawing to a close? No answer to these questions can be obtained either from the English press

or the speeches or papers of the English Ministry. If the war is to be undertaken for the punishment of Russia as a wicked people or government, of course the difficulty would be as great as ever, for she might be brought to sue for peace without any improvement in her moral condition, and while retaining a fixed determination to recommence her evil courses as soon as she had recovered her strength. In that case not only would the war be fruitless, but it would be impossible to distinguish it from the wars of pure hate or religious bigotry by which Europe was disgraced down to the seventeenth century, and the repetition of which by a Power like England in our time would be a shocking spectacle. In fact, it would closely resemble in theory the Butler and Phillips plan of harassing the Southern States with troops and provost-marshals until the whites became "good" and "repentant."

The English demands on Russia have, it is true, been for the first time formulated by Lord Salisbury in his recent circular, and consist simply in the requirement that she shall bring to the proposed Congress the Treaty of San Stefano, and submit it for the approval of the Powers there represented, and abide by their decision. The *Pall Mall Gazette*, commenting on this requirement in an elaborate article, lays it down that she must not only submit all the articles of the Treaty, but the approval of them by a majority of the Congress will not be sufficient: the approval must be unanimous or the Treaty cannot stand, and the Congress alone can decide whether any particular article does or does not affect the interests of other European Powers, "and it is to be deemed to affect those interests unless the Congress unanimously decides that it does not." Russia, too, is to appear before the Congress simply as a suitor before a Court of Chancery, and is to present the Treaty as her "bill," or, as Lord Beaconsfield puts it, her "suggestion," praying that certain alterations in the map of Europe may be made. That this is a careful statement of the position of the war party in England we do not doubt. It is based on the participation of Russia in the Treaty of Paris in 1856, and in the declaration of 1871, when that Treaty was modified, "that no Power can liberate itself from the engagements of a treaty, nor modify the stipulations thereof, unless with the consent of the contracting Powers by means of an amicable arrangement." The argument ignores the fact that every treaty made in Europe since 1815, and including those of 1815, except treaties of commerce, have been treaties recognizing, in whole or in part, a change in the distribution of power *brought about by war*. The separation of Belgium from Holland, of Schleswig-Holstein from Denmark, the expulsion of the Austrians from Italy, the creation of the Kingdom of Italy, the annexation of Alsace-Lorraine to Germany, the creation of the German Empire, have all been profound changes in the constitution of the political society called Europe, and have all been recognized by treaty, and have all, in a greater or less degree, affected the interests of other Powers than those immediately concerned. The Treaty of 1856 was no exception to the rule. France and England, who were the conquerors in the war of 1853–5, and imposed serious penalties on Russia as the consequence of military success, did not appear as plaintiffs by "bill" before the conference in Paris and pray for permission to reap the fruits of their success. They appeared with the results of the war as accomplished facts, and asked the other Powers to take note of them and recognize them, and their representatives would probably have smiled if informed by Prussia that Russia must be permitted to restore Sebastopol and rebuild her fleet in the Black Sea, unless all approved of the Treaty. The period at which the Treaty of Paris was violated, if at all, was when the war began. The invasion of Turkey by Russia alone was proclamation that Russia proposed to set the Treaty aside, in the one way by which treaties are capable of being set aside—a resort to force. By allowing Russia to begin the war, and specifying the interests which must not be touched in the course of it, England acknowledged its lawfulness and her respect for the usage which makes war a court of appeal from treaties, and its results the facts on which all treaties must be based. Her demand now that the war shall be treated as *non-avenue*, and that Russia shall ask for a modification of the Treaty as if she had not fought and conquered—as a suitor and not as a victor—is not simply unreasonable but unprecedented.

RENAN ON THE FUTURE OF FRANCE.

PARIS, March 23, 1878.

MONSIEUR RENAN has just republished in one volume* various essays which appeared at very distant intervals and in many places. I will simply give a list of them : On the part of the Semitic nations in the history of civilization (1862) ; Ancient Egypt (1863) ; Twenty days in Sicily (1875) ; The discovery of Nineveh (1853) ; The Schanameh (1877) ; The Cæsars (1868 and 1870) ; Examination of some facts connected with the Empress Faustina (1867) ; The origin of the French language (1853) ; The Art of the Middle Ages and the causes of its downfall (1862) ; The 'Golden Prairies' of Masudi (1873) ; Mussulman Spain (1853) ; Ibn-Batutah (1853) ; The Desert and the Soudan (1854) ; The Berber society (1873) ; History of public instruction in China (1847) ; History of classic philosophy in antiquity (1848) ; Philological congresses in Germany (1848) ; The Greek grammarians (1854) ; The primitive grammar of India (1857 and 1859) ; Joseph Victor Le Clerc (1868) ; Speech delivered at the public sitting of the Academy of Inscriptions and Belles-Lettres (1871) ; Letter on the freedom of the higher education (1875).

I would only call attention to the long preface which M. Renan has written for this collection of essays and speeches, as he has seized the opportunity to tell the public what he thinks of the prospects of France and of democracy. You must remember the 'Réforme intellectuelle et morale de la France,' a book written after our great disasters, full of pathos, of high, delicate, and generous ideas. Renan felt at the time that two ways were opened to France, so he placed a sort of dilemma before her. She could save herself by what he called contrition, by organizing herself as Prussia had done after Jena, by work, sobriety, austerity ; she could try to rebuild an authority, a nobility, a monarchy, a social hierarchy. The monarchical form was not essential to this solution, as it is possible to imagine a hard, stern, austere, and Spartan republic ; but this solution (which we might call the solution of the narrow way in contradiction to the easier solution of the broad way) required puritanic views of life, of social as well as of political life. The easier solution, the broad way, was the continuation of all the social and political habits which had characterized the Second Empire, a sort of universal corruption, the plunder of the national fortune, socialism invading legislation, a demagogy governed by adventurers and sycophants. Renan imagined that the corruption engendered by this second solution would finally spread all over Europe, and that France, in virtue of her superior genius in art, in literature, in social amusements, might reconquer the world as Greece had reconquered Rome. Clearly his preference was for the first solution, for the narrow way. His monkish character, the purity of his own life, the spirituality of his intellect, inclined him towards a general contrition ; he was ready for monarchy, for the reconstitution of a nobility ; to keep together the pieces of France, nothing seemed then too strong in his eyes. At the same time, he had but little hope that France would long remain in the mood in which she was after the loss of Alsace and Lorraine, and after the criminal scenes of the Commune. There is a sort of perverse elasticity in the young man whose blood runs too quick which soon makes him forget his good resolutions. This levity can be forgiven in a young man, as time and the sorrows of life may cure it ; but levity is incurable in an old man, as time only brings him nearer what we call the second childhood. The spirit of national reform, the atavic longing for order, for a stern rule, the ardent desire for falling in the ranks and reorganizing, which were so visible a few years ago, have been dissolved, so to speak, in the acid of politics and in the strife of parties. The struggle for power has become the moving power in the nation.

France has not obeyed the voice of men like Renan ; she has obeyed the words of such men as Emile de Girardin, who seriously proposed a few years ago not to teach French history in our colleges—men who wish France to forget all her past, to disarm, to make money by all means ; men who believe that bi-metallism, vivisection, sanitation, phonographs, photographs, theatres, orchestras with two thousand musicians, universal exhibitions, are the only subjects worthy of the attention of the mind. Renan is himself out of the strife of politics. Such men as he are not and cannot be the favorites of parties ; he is a witness, not an actor. He

* 'Mélanges d'Histoire et de Voyage. Par E. Renan.' New York : F. W. Christern. 1878.

hardly tries to produce an effect on public opinion ; he observes, and this is what he says now in 1878 :

"To the mode of penitence and to a return to the past France preferred the continuation of the democratic programme, according to which the state, constituted by the totality of the individuals, has no other object than the happiness of the individuals, and understands it as they do themselves, and has no other object than what is felt and conceived by this totality of individuals. The consequence of such a state of things is the pursuit of comfort and of liberty, the destruction of whatever remains of privilege and of class feeling, the weakening of the principle of the state. The individual and the groups subordinate to the state, such as the department and the commune, will find themselves well off under this régime ; but it is to be feared that the nation, the country—France, in one word—will lose every day something of its authority and of its strong cohesion."

What Renan called in 1870 the Prussian solution was the initiation of a system of difficult reforms, the sacrifice of the individual to the ideal state, a political constitution which gave to the executive a great power and the right to carry on national designs outside of the dust of parliamentary life; an organization which supposes classes apparently privileged, but in reality simply placed apart for the service of the country. Events have decided otherwise. France did not clearly see the necessity of such thorough reforms and of such a reaction against the spirit of the French Revolution. Could Europe have helped such a reaction ? It is doubtful. At any rate, it did not. The press of England, a country which has a monarchy, privileged classes, aristocratic institutions of every sort, has not ceased for a single day in the past ten years to support the democratic solution for France. Gambetta would probably be received by the proudest aristocracy in the world with as much enthusiasm as Garibaldi. And what shall we say of Germany ? "It is not," says Renan, "for the interest of Germany that France should reform in the way she herself did from 1808. The interest of Germany would rather be (so she thinks, at least) that France should remain in that state of political and military weakness which in some senses is the consequence of democratic and republican government."

The reforms which Renan asked for in 1870 can only be accomplished with the aid of the old national dynasty. If France wished to renounce "the world, the flesh, and the devil," she would have proved it to herself by a return to the past. She was, I believe, at one moment ready for this act of contrition ; but, says Renan, "the conduct of the Comte de Chambord settled the question. From the month of November, 1873, the position of France has been what the position of Prussia would have been if Frederic Wilhelm III. and his dynasty had abdicated after the battle of Jena." M. Renan does not despair of the future of France, but on some points he dispels many illusions:

"What we shall have may be most agreeable, most brilliant, most amiable, provided we do not pretend to join to the delights of the *laissez-aller* the advantages of a strong government. . . . What is in reserve for us is not violence, it is weakness. For the individual initiative the era which seems to open may be an excellent time ; for the great political direction it will be almost null. If external events let us alone we may give the example of the richest and most varied production which can be imagined ; but there will be no mastership exercised by any authority. A sort of universal indulgence will allow everything ; in the end a general solvent will destroy every magistral influence coming from an aristocratic class or from groups of élite."

In short, Renan sees in democracy the reign of a comfortable mediocrity ; he views the prospect with philosophy, and he believes that all countries will by and by arrive at the state in which we are ourselves. Is it true, as he says, that our children will see in all Europe the national passion expire? Will internationalism, which thus far has only appeared to our eyes under the red rag of the Commune, assume a decent form? Will glory even become a burden ? Renan believes that Germany herself will become sick and tired of it : "She will find, as France did in 1813, that military domination is bought at too high a price ; under the weight of an intolerable burden she will envy those whom she has conquered. She will demonstrate once more this truth, established by the reigns of Louis XIV. and of Napoleon I., that the greatness of nations is oftentimes in inverse ratio to the happiness of the people." It may be, as Renan thinks, that the progress of influence in the people, that the exercise of political rights, will teach the individual a certain sort of egotism which is almost in contradiction with patriotism. But I doubt if the example will be so soon followed by all the nations of Europe. France may become as inconvenient in peace as she has in old times been in war to the kings and emperors of Europe. It has hitherto suited the three emperors to make the bed of Gambetta, to use a French expression; Gambetta may himself, after having played Danton during the war, now be content to play Barras. The French Republic may become very polite, very pacific, very amiable. The mere fact that it is possible in the midst of Europe to carry on a republican government, with universal suffrage, without a king or an emperor, is an ominous fact for all the dynasties of Europe, and the longer it lasts the more it will become so.

Renan has a sort of elasticity which allows him to find consolation and compensation for everything. He wished the monarchy, and he is contented with the Republic. He desired the Prussian solution, he finds some relief in the democratic solution, because the remains of our aristocracies seem to him very mediocre. Thought, at any rate, will be free. "Let us recall," he says, "those lugubrious years of 1849, 1850, 1851, when the human mind was domineered over by its enemies, and the first ten years of the Empire, when all that was not mediocre or frivolous seemed dangerous. We will never be the flatterers of democracy ; but let us confess that it will not be difficult for democracy to equal the aristocracies of those times ; now, at any rate, we are free." And a minute afterwards Renan, with a sort of curious irony, dissects this new freedom :

"Galileo, in our days, would have no god to fear. He would assist at the triumph of M. Raspail [a quack chemist who cured every malady with camphor and who was one of the deputies of the Extreme Left]. Surely he would be enough of a philosopher to be very little affected by it, and he would even see that this triumph is, in some measure, legitimate. Let us profit by the present hour, let us enjoy it ; it is good and sweet. Let us try to surpass ourselves. Do not let us turn away from our country, even when she does not take our opinion. She is perhaps in the right. Poor France ! *malo tecum errare quam cum ceteris recte sapere.*"

Such a preface speaks volumes ; under its irony and its optimism it is impossible not to feel a certain sort of discouragement and of lassitude. Renan is not the dupe of his own words. He knows well enough that the triumph of Raspail is not enough for Galileo ; and even that the quiet enjoyment of free thought is not enough for a country, especially when free thought can find no more hearers. A society, be it democratic or not, must find its support in a certain ideal, in a set of traditional notions. When you speak of New England, for instance, as it was thirty or even twenty years ago, you know what you speak of, you have a definite notion. Democracy, as it was then understood, was a force and a living power. When democracy becomes a mere word, which covers a process of endless disorganization, it is something quite different. You have a right to ask of a government what you ask of an individual. What can you do ? What are you fit for ? Our present constitution, imperfect as it was, had originally some good points ; it has already lost most of its power—the presidential power has annulled itself ; the senatorial power is losing its force every day ; the real power is in a chamber elected by universal suffrage. Has this chamber any great national aim ? So far, it has only shown its activity in questions which affect individual interests and personal passions.

Correspondence.

THE HOUSE OF REPRESENTATIVES.

To the Editor of The Nation :

Sir : I wish that your readers would peruse carefully the striking letter from your Washington correspondent with the above caption, and see if it does not lead directly to the conclusion that the Cabinet officers ought to and must have seats on the floor of the House. I will confine myself to the points therein touched upon. The second paragraph shows conclusively that the business brought before the House depends not upon its relative importance to the country, but upon parliamentary tricks in collusion with the Speaker, and is therefore guided by personal and party ends. Next it appears that individual energy and zeal for reform are stifled by being thrust into unimportant committees.

Then follows a clear description of the almost despotic power of the Speaker. Considering the outcry which is so easily raised by the spectre of "one-man power," it is simply amazing that the country will endure the concentration of such enormous and perfectly irresponsible power in the hands of this official. It does not come from the Constitution, but has grown up from the necessity that *somebody* should have the control of business. In the British Parliament the Speaker merely guides the forms of business, and that should be his function here. But he has come to add to it nearly all the powers in one direction of the executive ministry. The chairmen of the committees are merely his lieutenants. See the vicious circle : The House elects the Speaker, and the latter appoints the committees. He must satisfy the claims of his supporters, utterly regard-

less, it may be, of the national welfare. As your correspondent says, the power of the Speaker over legislation may not unfairly be reckoned much larger than that of the President, and he might have included the heads of departments, and scarcely less than that of the Senate. The wonder is, not that things are no better, but that they are not ten times worse than they are.

Is it not the natural and logical remedy to remand the Speaker to his proper functions, and to place the guidance of business in the hands of those who are responsible for carrying on the Government? The two powers would be a check upon each other. The Speaker would hold the Secretary tightly to the forms of business, and the latter would fight off any illegitimate encroachment on the subject of it. Even if much of the business remained with the standing committees, the Secretary would constantly be urging the consideration of a few topics of national importance, and that in definite shape. Is it not pitiable to see Mr. Sherman running from one committee to another, each in turn squeezing him dry merely to gain the requisite data for defeating what plans he has—in other words, getting a chance to see his hand without showing their own! Can any effective responsibility come from such work?

The reason that independent members can get no hearing now is, that each wants to take a separate direction. Then these members would show their strength in supporting their party leaders. The ranks on both sides would fall into some kind of discipline, and, as debate would then have some meaning, the House would soon signify what speakers it wished to hear. The plan attributed to Mr. Hewitt of diminishing the size of the hall, and substituting benches for desks, would then be very appropriate, but is of no use while the general object is *not* to have any effective debate.

The obstacle lies in the jealousy which is common to all assemblies of men. The interest of the country is in organization and leadership; that of members of Congress, at least in its present condition, is in the distribution of little bits of power to all, with responsibility for none. If any reforms are to be effected the issue must be taken directly to the people. G. B.

Boston, April 6, 1878.

THE DUTY ON INDIGO.

To the Editor of The Nation:

Sir: In your article on the "New Tariff Bill," April 4, you say that the most important amendment to the original draft consists in the return to the free list of various articles, among which you mention indigo. As there is no list of articles free from duty in the bill as printed, I presume you base your remark upon the striking out of the clause in the bill as originally submitted to the Committee, in which a duty of ten (10) per cent. was placed on indigo. I have no doubt it was the intention of the Committee to strike off the duty on indigo; let us see if they have done so.

The new Tariff Bill proposes (lines 980 to 994) duties on paints and dyes, and concludes: "All other . . . dyes . . . by whatever name known, except madder, munjeet, and alizarine, twenty (20) per centum ad valorem."

Should indigo be decided to be a dye, and it probably comes within that description, the duty imposed upon it by the amended bill will be *twice* that proposed by the original draft. I think the bill contains other similar cases—inadvertences, no doubt, arising from want of time to perfect its details and language. I cite indigo because I am a very large consumer. Yours respectfully,

R. S. Fay (of Boston).

Washington, D. C., April 6, 1878.

THE MISSOURI BOND AGENCY.

To the Editor of The Nation:

Sir: In No. 662 of your paper I notice a communication from a Boston correspondent, in which I am spoken of as "a regularly-appointed official swindler," and the law of Missouri under which I was appointed General County, City, and Municipal Agent characterized as "a barefaced invitation from the State to the cities and towns to cheat their creditors." If before writing his letter your correspondent had consulted Nathaniel Thayer, John W. Brooks, R. S. Watson, Charles Merriam, Sidney Bartlett, and other distinguished men of Boston, with whom I have had business relations for more than twenty years, he would not have called me a "swindler"; and a plain statement of facts in reference to this subject will convince any candid mind that the State of Missouri, whose financial standing is second to no State in the Union, is not inviting or assisting its local municipalities in repudiation. What are the facts?

There are outstanding about thirty millions of bonds issued by Missouri municipalities to aid in railroad construction and other public improvements. A few communities are thus bonded to an amount exceeding the value of their entire real estate, their municipal organizations have been abandoned and their property is wasting away; others are thus indebted to the amount of one-half and one-third of their taxable property, and many to an amount sufficient to destroy all hopes of future prosperity. Business experience teaches that oftentimes indebtedness is contracted beyond the ability of payment; and in the mad rivalry of young Western municipalities, stimulated by the ever-present speculator, very many counties, cities, and towns find themselves hopelessly bankrupt, and many honest and innocent investors discover themselves the owners of securities daily decreasing in value, with no reliable channel of communication between debtor and creditor, and no effort being made to accomplish the only possible relief, an adjustment upon fair and honorable terms. It is admitted that there are in the West efforts being made to repudiate or force a compromise by a few municipalities amply able to meet all debts. These efforts are condemned alike by all honest men, East or West, are seldom successful, and properly result in loss of character and credit at home and abroad. But I defy your correspondent to point out a single instance in which the Legislature of Missouri, or any judge or court of respectable standing within this State, have ever invited or aided any municipality to "cheat their creditors." On the contrary, their enactments and decisions have uniformly been upon the side of honesty and the enforcement of contracts.

The infirmities of our outstanding municipal bonds, and the causes of defaults generally, are about as follows:

1st. Being based upon taxation, the bonds were issued either without a vote or other assent of the people, or, if by vote, the submission was had at a time when a large proportion of the taxpayers were disfranchised. This rendered these securities unpopular, and the people were easily led to resist payment.

2d. The tax to pay the interest and maturing principal can only be levied and collected by the municipality itself. This frequently placed it in the power of a few noisy citizens to manufacture an *apparent public sentiment of repudiation*, in accordance with which, in some instances, the proper officers declined to levy the tax.

3d. When the annual tax was levied and collected to pay semi-annual interest, the first coupon of the year was promptly paid, but that part which should have been reserved to meet the next coupon frequently has been used for other municipal purposes, and default followed.

4th. About the only method known to the law of the judicial enforcement of judgments against municipalities is by mandamus, directing the proper officers to levy and collect a tax for its payment. The Supreme Court of the United States indicated that if there were no such officers, then the powers of the courts ceased. This suggestion was followed by wholesale resignations of municipal officers, many of whose places still remain vacant, and the process of the courts is thus practically defeated.

By recent constitutional enactment *all bond-issuing power to aid in public improvements* has been taken from our municipalities except in payment of existing debts; in other words, the highest law of our State commands that our counties, cities, and towns shall not weaken their capacity to pay what they now owe by contracting new debts. Recent statutes authorize funding bonds to be issued in payment of municipal debts, and require all bonds so issued to be registered in the office of the State Auditor. They also authorize the special tax to pay interest to be levied and collected by the State with its own revenues, and on judgments being rendered, if the municipal authorities fail to levy and collect the tax to pay the same, the court may appoint an assessor and collector who shall have all the rights, powers, and privileges conferred on the assessors and collectors or other proper officers by the laws of the State.

The law also creates a new office, "General County, City, and Municipal Agent," the duties of which I am endeavoring to discharge. I am required to possess myself of full and reliable information as to the actual financial condition of each bonded municipality, and place myself in communication with the holders of their securities and to assist in making compromises between parties when mutually desired. It would seem that the intention of the State, in the creation of this office and the enactments referred to, could hardly be misapprehended; it was simply to afford our insolvent counties, cities, and towns to become acquainted with their creditors, and, if possible, to make an honest compromise by paying all they are able to pay, and to furnish to the creditor such accurate in-

formation as will enable him intelligently to accept or decline the compromise offered. To the municipality abundantly able but stubbornly unwilling to pay its honest debts, or to the exasperated and indignant bondholder who, like Mr. Seaver, your correspondent, thinks the Legislature, the Governor (himself a New-Englander by birth and education), and the State Agent are all trying to assist the "cities and towns to cheat their creditors," I can render no service ; but it may be that I can be of service to some of the holders of these securities by furnishing accurate information of the capacity and resources of their debtors. I hope also to be of much service to those of our unfortunate municipalities whose ambition or folly has brought them to actual insolvency.

It will be seen that the State by this new law authorizes the issue of a very superior class of funding bonds, and has provided for the prompt and certain payment of principal and interest. It is my intention to have such funding bonds as are exchanged through this office uniform in the rate of interest and embracing all the attractive features authorized by law, which will add to their marketable value and make them standard and desirable securities. The power to create new debts of this character being destroyed, I feel confident that in emerging from their present embarrassments the financial history of the State will repeat itself in her municipalities. I will add that I am in communication with several hundred holders of municipal bonds, and that Mr. Seaver is the only person who seems to have entirely misconstrued the object, scope, and administration of the compromise funding laws of Missouri.

In the hope that the foregoing may disabuse the minds of some of your readers who are holders of Missouri bonds, I request its insertion in the *Nation*. Very respectfully, James Craig,

General County, City, and Municipal Bond Agent for Missouri.

Jefferson City, Mo., March 27, 1878.

Notes.

MR. SERENO WATSON'S 'Bibliographical Index to North American Botany (Part I. Polypetalæ),' an octavo volume of little short of 500 pages—a large instalment of a formidable work—is, indeed, a boon to the botanical world. Not simply clerical labor but critical investigation has been lavished upon it, and its faithfulness and thoroughness are beyond praise. It is a tremendous undertaking. The Smithsonian Institution has assumed the expense of printing it, which has been executed in the best manner, and it forms No. 258 of the miscellaneous collections. We may do some service by mentioning that the volume (in paper covers) may be supplied through the mail to any who will forward the price fixed by the Smithsonian, $2, to the curator of the Harvard University Herbarium, Cambridge, Mass., and that for an additional quarter of a dollar a moderate number of copies can be supplied in cloth binding.——The fourth session of the Summer School of Geology of Harvard University will be held, as in the beginning, in connection with the field work of the Kentucky Geological Survey, affording practice on the various problems of physical geography accessible between the Mississippi River and the Appalachian Mountains. The term will be six weeks in duration, from June 15, and the fee (exclusive of moderate weekly expenses) fifty dollars. Further information may be had of Prof. N. S. Shaler, Cambridge, Mass.——A summer school will be opened in connection with the well-equipped Illinois State Laboratory of Natural History at Normal during the vacation, from June 26 to July 24. The tuition fee will be ten dollars. Anatomy, botany, chemistry, and other branches will be taught. The director is Mr. S. A. Forbes.——The Butler University "Scientific Expedition and Summer Tramp" will leave Indianapolis, June 20, for Kentucky, Tennessee, and Georgia, with "natural history, health, and scenery" for its objects. Particulars may be had of Prof. D. S. Jordan, Irvington, Ind.——A Marine Zoölogical Laboratory will be opened June 1, at Salem Neck, Mass., by Mr. J. H. Emerson, of Salem, and Mr. C. S. Minot, of Boston.——The loan of letters from the late Charles Dickens is requested by his executrix, Miss Georgina Hogarth, at 11 Strathmore Gardens, Kensington W., London, who intends to edit a collection of the novelist's letters in conjunction with his eldest daughter. ——Macmillan & Co. have in press a work on 'Free Trade and Protection' by Prof. Fawcett, who undertakes to show what has hindered England's example from being followed ; and a translation of Turgeneff's 'Nov,' by Mr. Ashton W. Dilke.——D. Appleton & Co. announce 'Political Economy,' by Prof. W. S. Jevons ; and André Theuriet's 'Godson of a Marquis.'——Dr. Geo. M. Beard, 41 West Twenty-ninth Street, New York, is prosecuting an enquiry into "writer's cramp," and has prepared a circular with blanks which he will send to those disposed to furnish him with information on this subject and on kindred kinds of cramp. ——Legal digests are generally such poor specimens of book-making in this country that it produces an agreeable sensation to meet with one prepared with thoroughness. This appears to be the prominent trait of a Digest of New Jersey decisions, in two volumes, by John H. Stewart, issued from the press of John L. Murphy. It embraces the reported decisions of the courts of law and equity of the State from 1790 to 1876, and those of United States courts for the district as well. The courts of New Jersey have always had a high reputation, and it is interesting to see that the good traditions of the State are kept up, even in such *minutiæ* (or rather in what to many persons would appear such) as the method of selecting those charged with the duty of preparing digests. Mr. Stewart was selected, not by the Legislature nor by popular vote, but by the Supreme Court.——We heartily commend the action of President Porter, ex-President Woolsey, Dr. Leonard Bacon, Prof. Walker, and other prominent citizens of New Haven, in sending broadcast among editors a reprint of Prof. Sumner's article, "What Our Boys are Reading," which appeared in the March *Scribner's*. We called attention to it at the time, and we repeat that no parent can afford to be indifferent to the matter of which it treats.

—The *Portfolio* for March (J. W. Bouton) continues Mr. Hamerton's life of Turner, in which the biographer so thoroughly suppresses the slightest tendency to hero-worship. He produces an instructive, but not alluring, study of a great man quite capable of extending the hand yet warm from an inspired masterpiece for the proceeds of some thrifty and exacting bargain. Among the illustrations of the number is a fac-simile by Durand of Rembrandt's etching of the Jewish physician, Ephraim Bonus, a famous plate, and the only known instance where the great etcher copies one of his own paintings.——At the sale, a fortnight ago, of the pictures belonging to Mr. Milton S. Latham, of California, Gérôme's "Un Circassien à l'abreuvoir," bought in Paris by the owner in 1872 for 40,000 francs, was obtained by the representative of Goupil for $5,500. It was immediately encased and sent to Paris for the Exposition. At the same sale "La Cigale," by Lefebvre, who, since the death of M. Pils, has become a fellow-professor with Gérôme at the Beaux-Arts School, was bought on speculation by Knoedler & Co. for $2,950.

—J. B. Lippincott & Co. are publishing, out of order, but Group by Group, as separate pamphlets, the official 'Reports and Awards' of the Centennial Exhibition, edited by Prof. F. A. Walker, Chief of the Bureau of Awards. They are thick or thin, and of corresponding price, according as the detailed reports for each Group are preceded or not by a general essay or essays. Some of these are very brief and perfunctory ; others are of considerable and permanent value. Among the latter we select for mention General Q. A. Gillmore's reports on cements and brick-making machines (Group II.) ; the report on fish (V.) ; Prof. W. H. Brewer's on timber and forestry (VI.) ; Mr. Edward Atkinson's on American cotton and cotton manufactures (VIII.) ; the reports on wool-growing and wool and silk fabrics (IX.) ; the leather reports (XII.) ; those on paper (XIII.) ; military and sporting arms and ordnance (XVI.) ; and on sewing and knitting-machines and watch-making machinery (XXII.) Mr. Atkinson tells of the rigid selection made from the exhibit of American cotton, in which every bale was of the highest grade. After successive rejections but three remained, "among which the judges could make no discrimination, and for which they made three awards."

"When the key was opened that disclosed the name and status of the contributors, it was found, to the equal satisfaction of all the judges, whether from the North or South or from abroad, that one of the diplomas had been gained by a freedman—one whose farm, formerly known as the Joe Davis Plantation, in Mississippi, now proves that the production of cotton no longer depends on slavery for its abundance or its quality ; while another was gained by a Vermont farmer who moved to Louisiana since the war ended."

These reports are admirably printed, and are sold at such a reasonable rate as to ensure, we should hope, a very wide distribution.

—"Uncle Tom's Cabin," as produced at the Fifth Avenue Theatre, is a very different play from what it was some years ago, though Mrs. Howard still plays *Topsy* and Mr. Howard *St. Clair*. Great parts of the play seem to have been cut out to make room for negro dances and songs, so that it is now rather a spectacular opera than a drama in the strict sense of the word. With regard to what is left of the latter, it must be said that the thrilling story of *Uncle Tom's* sufferings has now acquired a sort of historical character. To a great part of the audience which goes to see

it slavery and all the feelings and relations growing out of its existence belong to the past, and already time has begun to throw the halo so needed for dramatic success around the story. *Uncle Tom, Eva, Topsy,* and *Legree* are already the creatures of legend; the society that produced them has passed away, and we look at the slave-girl hunted across the Ohio on the floating ice and the slave-market in New Orleans as scenes in a world that has disappeared and will never return. All this ought to make the play, as a play, just as attractive as it once was morally and politically; and that it has lost none of its hold upon the popular fancy and esteem may be inferred from the fact, of which the playbill informs us, that Mrs. Howard has sung one of the worst songs in it some thousands of times. Of the acting, however, we cannot speak with profound admiration. Mrs. Howard herself plays her part with a good deal of spirit, but there is always a haunting suspicion left in our mind that she is not *Topsy* after all. For one thing (a small matter apparently, yet one which produces a disagreeable effect) she does not dance the real negro "break-down." The peculiarity of this dance is the use that is made of the heels and the flat of the foot. But Mrs. Howard insists on making *Topsy* dance as she would in a ballet, with pointed toes and heels kept always in the air. The acting of the villains—*Simon Legree* and the rest—was awful enough to blanch the cheek of the most hardened spectator, and the mock ferocity of the philanthropist who assists in the escape of *George Harris* and his family was well done, though the actor who took the part contrived to give his bluster a nautical air which seemed out of keeping with the life and pursuits attributed to the character. *Eva* was very well represented, and the effect of her early death on the audience proved that acting of this sort is not thrown away. The negro songs and dances, performed by real negroes (secured we will not enquire too critically from what institutions of learning), were the great feature of the play, and were in some instances remarkably excellent.

—"Diplomacy"—the English version of Sardou's "Dora"—has been brought out at Wallack's with a success which has in it the promise of a long "run." There are, to be sure, peculiaritics in the play which impair its value as an acting drama. It is, in the first place, too long, if we may so say, for its depth. The interest of the plot alone, unless sustained by acting above the level even of Mr. Wallack's company, is not sufficient to carry the audience through an evening of three hours and a half. The story is that of the innocent daughter of an adventuress, a Continental "campaigner," who on her wedding day becomes the victim of a rival's plot. By the strongest chain of circumstantial evidence she is made to appear in her husband's eyes guilty of stealing from his despatch-box a map of the lines near Constantinople (the time is the present, and he is in the English diplomatic service), and conveying it to a Russian spy. This leads to a counterplot by the husband's brother, who succeeds by a clever stratagem in extracting a full confession from the real thief. Now, it is quite clear that nothing but the most excellent acting could atone for stretching this plot over four long acts. If it were a tragedy, if it ended, as it might be made to end, wretchedly, the interest might be sustained; but "Diplomacy" is so palpably a comedy from the first line that the agonizing scene between the wife and husband (Miss Maud Granger and Mr. Montague) in the fourth act is almost ludicrous. The only tragic character in the play is the rival, the Countess Zicka. This part was taken by Miss Rose Coghlan, whose great beauty does not make up for her incapacity as an actress. However, these difficulties might to a great extent be surmounted by shortening the play, and we should strongly advise that the part shortened should, as much as possible, be that of Mr. Montague's, whose efforts to work his feelings to the sticking-point are painful to witness.

—Unless we are mistaken, the English version of the play has been got up with special reference to acting in London, and we can well imagine that its success there has been due in no small measure to its extremely "contemporaneous" interest as regards Europe. But in this country, where the interest in the Eastern question is almost entirely a commercial one, it is at least an open question whether the map of the Constantinople lines and Mr. Montague's bellicose reference to the threatened conflict affect an American audience more than would any other map, or the prospect of Mr. Montague's fighting in any other part of the world. Moreover, "diplomacy" is with us not a word full of suggestions of intrigue, chicane, and espionage, but rather of state-dinners, place-hunting, speech-making, "slates," and idiotic despatch-writing; and hence the moral which an English audience may be supposed to extract with huge delight from the title in connection with the plot, that diplomacy in general, but more particularly Russian diplomacy, is a sink of iniquity, is in New York of no particular consequence. For these reasons we think that the original French version, which we infer from the title turned simply on the human situation of the *dramatis personæ*, and not on the political condition of Europe at the present moment, would be better suited to American audiences than the English adaptation. As to the acting, it presented some weak and some very strong points. Madame Ponisi's *Marquise* was a very good piece of comic acting, and *Lady Henry Fairfax* (Miss Sara Stevens) was admirably done. So was the *Count Orloff* of Mr. Robinson, an actor who shows a steady improvement. Miss Granger acts the innocent and unjustly accused wife with a good deal of force; her horror at the accusation was very true to nature. We must protest against one feature of the dialogue, introduced, we suppose, by the translator—who has otherwise done his work well—and that is the way in which French phrases are put into the mouths of the characters precisely at the times when French phrases are least appropriate. For example, in the exciting scene between *Orloff* and *Beauclerc*, when the former's feelings are wrought to the highest pitch of excitement and he is torn with conflicting emotions, he expresses his agony by saying "*Mon Dieu*"; *Baron Stein*, casting about for words to express a state of mental torture, goes off the stage crying "*C'est agaçant.*" Now we will not for a moment question that it is the habit of Russians to drop into French "in a friendly way" when they are most moved; but it is not the habit of the members of any theatrical audience in this city. When strongly moved they always cry out or curse in their own language, and use foreign phrases, if at all, in their lighter moments. Consequently in a dramatic crisis French idioms fall upon their ears strangely, and produce a sense of incongruity that is ludicrous. Having said as much as this in the way of criticism, we may add that "Diplomacy" is a capital play, which we strongly recommend to the theatre-going public.

—The improvement in education, both general and technical, in the officers of the Navy has been marked of late years. The education given to the line officers at the Naval Academy, with its years of training and study, has not, however, been one of unmixed good. One of the evils that has presented itself has been the diversity of feeling and associations engendered between officers and the seamen placed under their command. In former years, officers entering the service at a very early age were at once placed on board ship and grew up with the men, with like associations, with a fellow-feeling, with similar virtues, and, in many cases, even with like faults and vices. Now, officers graduating from the Naval Academy and entering active service afloat are placed on board ship at a matured age, after a student's life of some years, with ideas and sympathies vastly differing from those of the forecastle. The want of unity that follows from this affects in a measure the efficiency of the service. The men are too often regarded simply as mechanical agents, and this being shown, the better class of men are discouraged from entering or remaining in the naval service. The morale of the men has not improved of late years, and even the apprentices from training-ships, or a large proportion of them, leave the service. While the officers have advanced, the men have retrograded. Earnest endeavors are necessary to improve the morale of the men, and, by a general elevation of the sailor before the mast, bring him nearer to his commanding officers in general attainments and respectability. The two great evils of the service affecting the men, morally and physically, are intemperance and contagious diseases resulting from a vicious life. A great loss of time and money to the Government has been caused by the invaliding and discharge of men from these causes. These evils seem forced upon the men in a measure by the fact that on leaving ship-board to go on shore for liberty and recreation there is almost absolutely nothing open to them but drinking-saloons and places of the lowest resort. These places represent everything afforded to them for social intercourse, for recreation, or for mental improvement. Drink being the general requisite for admission to these places, it is not surprising that habits of intemperance are formed or confirmed. As a correction of these particular evils, it is proposed to establish club-houses and places of rendezvous for seamen on shore, somewhat similar to the workingmen's clubs of England, which, by furnishing seamen, either mercantile or naval, with respectable places of meeting and recreation, will lead to further means of improvement and elevation. It is hoped that a generous interest on the part of the officers of the Navy will lead to the establishment of these club-houses in every Naval port of the United States.

—The last two numbers of Herrig's *Archiv* contain several articles of in-

terest to English and American readers. Tiessen continues his contributions to the determination and elucidation of doubtful passages in the text of Shakspere. Palm's essay on Shakspere's "Julius Cæsar" and Kruse's "Brutus" is not only well written and interesting, but is especially worthy of note by reason of its tone of freedom. The author does not hesitate to expose freely what he considers the grave defects in the Shakesperean piece, and to assign the preference to Kruse for his clearer conception of action, characters, and motives. Those who are interested in German humoristic writings will find a very readable essay, by Dr. Küsel, upon the popular poetry inspired by the late French war. Some of the extracts exhibit the German comic muse in a tolerable light. The best are in *Platt* and in the dialect of Berlin. Dr. David Asher's critique of Swinburne evinces sympathy and careful study. Nicolai's essay upon "Ossian" contains a large accumulation of materials relating to the Ossianic controversy. We do not judge, however, that the author is fully abreast with the latest stage of Celtic scholarship; and furthermore, his treatment is not infrequently confusing. We even find a passage of nine lines, given page 143, repeated page 153, word for word, probably through sheer inadvertence.

—Dr. Fitzedward Hall sends us a note, which we regret we cannot publish in full, proposing *heteroepy* for *heterophemy* in the sense of 'false pronunciation'—the sense attached to it, he says, by the only person who, to his knowledge, has used it. He has, therefore, apparently overlooked Mr. Grant White's famous use of it in the sense of 'saying one thing where another was meant,' or a simple *lapsus pennæ*. After showing that *hetero-*, with the signification of 'wrong,' is a justifiable opposite of *ortho-*, meaning 'right,' Dr. Hall continues:

"But the term required is not *heterophemy*; for *ἑτεροφημία*, if it existed, and did not denote 'other report,' would differ but little from *κακοφημία*, 'evil fame,' or from *δυόφημία*, 'defamation.' *Εὐφημία* is 'employment of words of good omen,' 'euphemism,' etc. And there is *βλασφημία*. In *-φημια* there is reference to sense, not to sound; in *-επεια*, reference generally to sound, not to sense. . . . As a fit companion for the established *orthoepy*, I have repeatedly printed *heteroepy*, with regard to venturing which, however, I have, very likely, often been anticipated."

Dr. Hall's postscript we give entire. We did not, in our review of Bartlett, object to the use of "record" in the American signification, but remarked that it required to be explained to Englishmen:

"Pray, under what pretence can Mr. Bartlett introduce the phrase *skin of his teeth* into a work on Americanisms? It is common enough in England, though, perhaps, not so often heard here in conversation as in America. Every one knows, of course, that 'the skin of my teeth' is in the book of Job. One word on 'He has a bad *record*.' All are familiar with the Biblical use of *record* for 'testimony.' This suggests *testimonial*, and a *testimonial* always relates to *character* or *reputation*. These premises considered, it does not strike me as a particularly outrageous deviation from propriety that Americans speak of a man as having a good, bad, or indifferent record."

—Dante scholars will be glad to learn that after a lapse of six years another volume of the *Jahrbuch der deutschen Dante Gesellschaft* has recently appeared (Brockhaus, 1877). The society does not seem to be very active, and this volume does not display the life and variety of the former ones. Only nine writers are represented, who, however, fill a larger space than their predecessors, the present volume containing two hundred and sixty-six pages more than the first, and one hundred and thirty-one more than the third. Some of the articles are exhaustive monographs, and might well form separate books. The first article, by Nicolaus Delius on Dante's Comedy and Brunetto Latini's Tesoretto, endeavors to show that where Latini, Inferno xv., 119, recommends his 'Tesoro' to Dante, he means his poem the "Tesoretto," and not his encyclopædiac work the 'Tresor.' The writer cites many passages from the former work which have parallels in the Divine Comedy, but, however valuable it may have been to Dante, it does not seem to us that its author could say of it, *nel quale io vivo ancora*. The 'Tresor' was the work of his life, the monument he raised to his own learning, and we prefer to think that it was to this he alluded. Hugo Delff, in a valuable article, shows that Dante was a mystic and not a schoolman in his philosophy. An interesting fact is that the allegories and general conduct of the poem may be found foreshadowed in St. Bonaventura's works. Dino Compagni finds, at this late day, a defender in Theodor Paur, who reviews Grion's work, 'La Cronica Dino Campagni opera di Anton Francesco Doni' (Verona, 1871), and shows the insufficiency of the arguments against the authenticity of a work so precious for the history of Dante's times. The results of Paur's review are purely negative but very interesting. Rudolf Pfleiderer has two papers, one on the *Gesammtidee* of the Divine Comedy, and the other on the question, Is Dante heterodox? In the former he refutes perfectly, we think, Ruth's view that Dante himself counted for nothing in the poem. In the second, Dante's orthodoxy is shown to be higher and broader than the narrow dogmatism of the Romish Church. The editor, Dr. Scartazzini, furnishes three extensive monographs, one on Dante's inner history, apropos of the interview between the poet and Beatrice in the Earthly Paradise (Purg. xxx.), in which he makes it very clear that Beatrice reproves Dante for intellectual and not for sensual sins. The second paper is devoted to showing that the Matilda referred to in Purg. xxviii. and elsewhere cannot be the famous Countess of Tuscany, but must be some fair young woman previously known to the poet. This person the writer discovers in the lady mentioned in the 'Vita Nuova,' cap. v., technically known as the *donna dello schermo*. The third article is on the agreement of sins and punishments in the Inferno. The veteran Dante scholar, K. Witte, contributes a similar article, extending his examination, however, to the penances in Purgatory, and incidentally discussing the question of the place and mode of punishment of the sins not expressly mentioned in the poem. The other articles are: Dante explained by Dante, the episode of Count Ugolino, by Giuliani; miscellaneous criticisms by Delff; a comparison of Paradise xi., 49–51, and xii., 49–51, by Giovanni della Valle, and a letter by L. Paquelin on the Matilda question. The editor contributes a valuable bibliography of works relating to Dante from 1870–1877, which will be found a necessary supplement to Petzholdt and Ferrazzi. On the whole the present volume is a worthy successor of the first three (which appeared in 1867, '69, '71), and we trust may be followed by others at a more reasonable interval.

RICHTHOFEN'S 'CHINA.'*

II.

IF Baron Richthofen's theory is true for the loess of Central Asia and China it is true for the loess of Europe and America. We need not be surprised, then, to find that three of the most original and attractive chapters of this volume are devoted to an analysis of all the physical processes, meteorological and geological, that have been active in forming and transforming the steppes, and to an extension of this discussion to the geographical condition of Europe and America in quaternary times. The classical investigations of Braun showed that of 211,968 shells from the European loess, all were land-snails except 33 individuals, which were fresh-water snails. Moreover, they were almost exclusively species that now live only at elevations between 4,000 and 7,000 feet in the Alps, or in more northern latitudes.

Baron Richthofen assumes that when the loess was formed in Europe the continent was higher than now, and the coast-line was about the present 100-fathom line in the Atlantic. It was the period of the hairy mammoth, the woolly rhinoceros, and the *Cervus megaceros*, whose bones occur in the deposit. It was the ice period, too, and the ice-covered Alps (and, our author might have added, the glaciers of the Vosges and of Great Britain, and the immense Scandinavian glacier whose foot spread over Northern Germany) were condensers that cut off from Central Europe the moisture of its winds and converted it into a true central or undrained region. Only thus can we account for the occurrence of the loess at such varied altitudes with everywhere the same terrestrial characteristics. In extending his argument to America, Baron Richthofen divides the northern continent into two comparatively narrow peripheral regions and a central or undrained area, with an immense transition area in the Mississippi valley. He designates both of the latter as loess territory. In the Southern continent he identifies the pampas formation with the loess.

Not the least of the many fruitful generalizations put forward by Richthofen are those concerning the direct and reactionary influence of the climate on the surface configuration of Central Asia and of the mountains of High Asia, and thus on the historical and ethnographical development of the Europe-Asiatic continent. The rain-bearing winds, after passing the condensers of the Himalaya, are exhausted of the remaining moisture on the high crests of the Kwen-lun. The amount received by the Kwen-lun is not sufficient, when taken in connection with the comparatively gentle slope from the crests to the trunk-valleys, to produce the precipitous and serrated outlines which result from extensive erosion. On the contrary, the Kwen-lun and Tien-shan are remarkable for their rounded forms and long and gentle approaches. And here, as in the central region, the sub-aerial (loess) formation, the offspring of the

* 'China. Ergebnisse eigener Reisen und darauf gegründeter Studien. Von Ferdinand Freiherrn von Richthofen.' Erster Band. Berlin: Verlag von Dietrich Reimer; New York: L. W. Schmidt. 1877.

dry climate, having full play during long ages, has exerted its steppe-building action in smoothing over the inequalities of the loftiest regions of the globe, forming grassy plains in Tibet and Pamir, and grading to them easy routes for the nomad population of the great central region.

Our author gives a graphic description of the relation these things bear to man past and present. The earliest records of the past show from time to time the sudden gathering in Eastern Mongolia of waves of nomad horsemen, which, sweeping westward unhindered by nature, and gaining momentum as they advanced, forced the opposing peoples to migrate before them. Those who could escape through the Djungarian plain emerged into the fertile Turanian countries, crowding out the settled agricultural population, and continuing the movement in the migrations that have peopled and repeopled the countries of Western Asia and Europe. But the inhabitants of the fertile oases of the Western Han-hai—south of the Tien-shan—occupied a *cul-de-sac*, whence almost the only routes of escape were into the mountain steppes of Pamir and the Tibetan highlands. Consequently we find that to-day the inhospitable valleys of these lofty regions are filled with fragments of the most diverse races—wrecks stranded on this great highway of humanity. It is, as Richthofen points out, a remarkable fact that the nomad horsemen settled quickly down to the agricultural civilization of the countries they conquered. There is no part of our globe to which attaches so much of that profound interest which belongs to the veiled past as the region which includes Western Central Asia, Turan, and the mountains that separate them. This region has often been called the cradle-land of our race. It would be more properly termed the transition territory of races. It was ever the portal between the hopeless monotony of nomad existence and the realization of the bright possibilities of life in fertile lands, where nature necessitated a many-sided development.

Baron Richthofen remarks that in Central Asia the great mountains usually face the plains with their long flanks, offering only small lateral valleys and a narrow belt of irrigable land along their bases. But the eastern border of Turan is more favored; here, the great river-feeding mountain mass between the Karatau and the Hindu-kush is composed of east and west ranges of very varying lengths; some reach far out to the west into the Turanian lowland, while others, ending abruptly in the east, produce the great and well-watered valley systems of the Oxus and the Jaxartes. No greater contrast exists, of its kind, than that between the conditions and possibilities of life here and on the steppes of Central Asia. Here were the garden-lands of Ferghana, Maracanda, and Bactriana, which Alexander the Great thought worthy to be the seat of his Eastern Empire. As the waves of the ocean once rolled through the Djungarian Straits, so repeatedly in later times the human flood of barbarism poured through the same portal; its hordes, spreading over the fertile lands, displaced the inhabitants and became themselves moulded, each according to its stock, by the influences of the varied surroundings. What was true of this region was true also of the oases of Western Central Asia. The period when our Aryan ancestors spread from this land is lost in the obscurity of the past; but as we find that they lived also in the oases of Western Central Asia, it is not improbable that they, too, emerged here from a nomadic infancy.

There is much probability that the great arm of the ocean, of which the Aral and the Caspian are only remnants, covered much that is now desert in Turan within the period of prehistoric man. The climatic effect of such a body of water must have been to render fertile the entire region east of the mountains, and, as Richthofen remarks, if it should prove to be the fact that the sea co-existed with the early Aryans, it would supply an explanation of the kind and degree of civilization they had reached before the great migrations. And it would furnish also a reason for these migrations in the altered natural conditions produced by the rapid retreat of the shallow sea, when its connection with the main ocean was once broken. What vestiges of a civilization far older than those of India, Troy, and Mesopotamia may there not be awaiting excavation in the ruins of Old Ariana?

Two chapters are devoted to undoubtedly the clearest and most comprehensive exhibition of what is now known of the configuration and geological structure of High Asia and the Tien-shan. Among the points brought into prominence is the extreme regularity and great age of the Kwen-lun, which, according to Stoliczka's observations in Tibet and Richthofen's in China, contain nothing younger than Silurian. Another result, principally, of Stoliczka's investigations, is the discovery that the elevated region between the Kwen-lun and the plains of India has grown by successive foldings and elevations; Carboniferous and Triassic rocks occurring north of the Himalaya, while this range has a gneiss axis and a great development of Palæozoic and Triassic strata, forming great peaks, with Jurassic and Cretaceous beds entering intimately into its structure, and Eocene deposits bordering its southern edge and appearing on the northern side at altitudes equal to that of Mont Blanc. Of equal interest is the announcement of the existence in Eastern Tibet of a gigantic range of mountains, vying with the Himalaya in height, and belonging to the S.W.-N.E. or Sinian system, a name proposed by the present writer, and adopted by Richthofen, for the extensive system of folds which predominate in Eastern Asia and correspond to the Appalachians of North America.

The second part of the volume is an extremely elaborate and valuable history of the development of knowledge relating to China. In one chapter Baron Richthofen analyzes the Yükung—which relates to the geography of the twenty-third century B.C.—from the standpoint of one familiar with the country, and accepts the book, but not all the commentaries, as trustworthy. Another chapter is an exhaustive and exceedingly interesting discussion of everything that is known concerning the analogies between the lunar zodiacs and certain other points in the primitive astronomy and culture of the Chinese, Hindoos, and Arabians. Richthofen arrives at the conclusion that, at a remote period, the ancestors of the Chinese lived in Western Central Asia, in more or less intimate communication with the early Aryans of the Oxus and Jaxartes countries, and that the resemblances between these now widely separated civilizations are traditionary remnants of the common culture of that place and time. The reasoning by which this highly important conclusion is reached seems to us unassailable.

The work is written in a clear style, which holds closely the attention of the reader, and we look forward with impatience, not only to the publication of the remaining volumes, but also to the promised personal narrative. It will probably be long before another traveller will explore China who combines to so great an extent as Baron Richthofen the ability to observe broadly and deeply in so many directions, with the power of putting his mind into the closest relation with scientific and general readers.

WALKER ON MONEY.*

THE most noticeable feature of Professor Walker's work is the tone of judicial impartiality with which it treats a subject in which every man who knows, or thinks he knows, anything about it feels it almost a duty to be in some sense a partisan. Owing to the great mass of error he finds to combat, the rapid reader might gain the impression that the author had few strong personal opinions upon any branch of his subject, so much more prominence does he give to the exposition of the conflicting opinions of others than to the establishment of correct theories of his own. One distinguishing feature of the work is calculated to foster this impression: we mean the unusual space which he devotes to extracts from the writings of others, for the purpose of letting writers of all kinds explain their ideas in their own language. Should we estimate that one-third the text of the book is thus made up, we are not sure but that we should fall short of the truth, while, should we include the copious foot-notes, we might estimate one-half, and still fall within the truth. That the literary perfection and unity of the work are impaired by this feature will, we think, be the opinion of most qualified judges. Such constantly-recurring extracts, first from one side and then from another, are clearly incompatible with that unity and consecutiveness of thought which is the most desirable quality in a work on a subject so important, and yet so abstract in most of its bearings. Granting the desirableness of presenting the most fair and exact statement of opposing views, which we freely admit, we fail to see why a clear and concise summary by a master of the subject should not be as good as a collection of illustrations from various writers. In treating the subject of money, such a summary is rendered easy by the fact that notwithstanding the immense diversity of detail the fundamental points on which all differences turn are neither so numerous nor so complex as they appear to the casual reader. Since it is in these points that all the fallacies with which the subject is surrounded have their origin, it is of primary importance that they should be unearthed from the mass of discussion in which they are usually buried, and shown to the reader in the plainest possible light.

Although the feature of the work to which we allude is not one which we find commendable, we are inclined to suspect that the large majority of readers will be better pleased with the wealth of illustration to which it gives rise than they would be with the more abstract discussion of first

* 'Money. By Francis A. Walker.' New York: Henry Holt & Co. 1878.

principles. The turn of mind of our country, influenced as it is by the leader of the daily newspaper, is much more favorable to the study of the concrete and actual than to that of the abstract and hypothetical, and leads the average American to value a single historic fact higher than a dozen parables, a single page of statistics higher than a chapter of general principles. To this turn of mind Professor Walker's mode of treatment is admirably adapted. If we place him at one extreme of the scale of treatment, we shall find Bastiat at the other. That the mode of thought of the latter is, from a literary or a philosophic point of view, much the better, will, we think, be obvious to any one who really penetrates to the bottom of the subject. And yet we question whether the reading of Bastiat makes the slightest impression on the average victim of the fallacies which it is the great object of that writer to expose. When the protectionist reads how the manufacturers of oils and candles argued the advantages of excluding sunlight from all dwellings in order that the demand for their products might be increased, he scorns the imputation that there is any analogy between these arguments and those which he adduces in support of his favorite policy. The comparison of the two arguments requires a course of logical analysis of which he is entirely incapable. When the Crispin reads the allegory of John breaking the window that employment might be given in mending it again, and is shown how the supposed advantage in this direction is more than set off by the loss in another, the whole story has an air of unreality. He feels that he never proposed to break any man's window, and that the train of consequences which followed the supposed breakage was a mere fairy-tale, without any application to his circumstances. We therefore freely concede that our author's mode of treatment—in which the reader's attention is mainly diverted to the historic side of the subject, and the establishment of general principles is, in some degree, left to unconscious cerebration—is well adapted to the ordinary adult reader, and will really impart more instruction than would a more scientific treatise. Indeed, we are ready to go a step further, and admit that the logical acumen necessary to understand a purely scientific treatise is such that its possessor is not likely to be the victim of the fallacies which surround the subject, and that, as a consequence, the less perfect mode of treatment is nearly the only one to guard the general reader against those fallacies.

The work before us is evidently not designed for a text-book; it is therefore no criticism of its plan to say that this is not the way in which political economy should be taught to pupils. In education, modes of thought should, so far as possible, go before facts, if the learner is capable of thinking at all, and the first object should be to give him the clearest view of the elementary principles of the subject, facts and arguments being used exclusively to throw light on those principles. Then he has in his mind a few central points around which he can group, and by the aid of which he can explain, all the facts which may come to his notice in after-life. Without these points of grouping all that he ever learns will be apt to assume a half-digested form, and he will never be able to appreciate fully the true bearing of the facts of history.

To enter into a more detailed analysis of the work, and to select special passages as illustrations of its merits, is rendered difficult by the near approach to uniformity of tone and method in every part. The judicial reserve which makes so strong a contrast to the work of Professor Bonamy Price on currency, is preserved nearly unbroken. The author does not use the club until he comes to the closing chapters on American paper-money, and even then he does not lay about him with anything like the freedom we should expect from an ardent writer having before him such a history of human folly, fraud, and chicanery. The review of the operations of the Bank of England since the suspension of specie payment in 1797, as well as that of American banking, is particularly good. We cannot but wish that Prof. Walker had given a little more than two and a half pages to the New German Reichs-Bank, which, having a capital of a hundred and twenty million marks, must rank as one of the three great banking institutions of the world, but of which very little is known in this country. A good deal of the little he does say about it is either not strictly accurate or is misleading. The statements that the bank can issue only 250,000,000 marks beyond the coin held for redemption; that the penalty for over-issue is five per centum, pure and simple (not one-tenth per cent. for every eight days that the excess is out); that the shareholders neither reign nor govern, having neither the form nor the essence of power; and that all discounted paper *must* have three signatures, are incorrect. The reserve required is one-third of the circulation, and may consist of either bullion or exchequer bills without limitation; the remaining two-thirds may be represented by discounts for not more than three months. Such bills must ordinarily (*in der Regel*) have three solvent names, but never less than two. Prof. Walker has evidently confounded the penalty imposed on private banks for over-issue—five per cent., pure and simple—with the penalty imposed on the Reichs-Bank, which is five per cent. as long as the over-issue lasts, and is intended to check inflation in ordinary times by destroying the profit, while permitting it in periods of stringency. The bank is administered by a "Directorium" and controlled by a "Curatorium," both appointed by the Government; but there is also a committee of fifteen elected by and from the shareholders, and of this a sub-committee of three, both of which have a consultative voice in the administration and a vote on certain matters of importance, such as dividends and salaries; but the management is mainly in the Directorium.

The book shows due appreciation of the wants of the general reader in the index, which is very copious. Another convenience is, however, overlooked, though it might have been easily supplied: we mean a complete list of the titles, with dates and places of publication, of all the books from which extracts have been taken. Such lists are annually becoming more necessary in all works pretending to erudition, and we expect to see them gradually increasing in number.

BALAAM.*

THERE are two personages in the Pentateuch who have cost the commentators endless labor and profitless expenditure of ingenuity—Melchizedek and Balaam. That Gentiles should be Yahveh-worshippers and should be specially favored by the true God, was so hopelessly at variance with the exclusive theory of Judaism that no conjectures have been too wild to be entertained by those who found it necessary to reconcile the irreconcilable. With our present knowledge of the Chaldean faith it is easy to imagine that the wandering nomads who subsequently became fixed in Canaan as the Hebrew nation, worshipped the same gods as their fellow-tribes, each sept perhaps assigning a doubtful supremacy to some one member of the pantheon, and that there was no absolute antagonism of faith between the kindred bands. Tradition, then, may be correct when it relates that Abimelech recognized the God of Abraham, and that Abraham acknowledged Melchizedek to be the priest of the Most High God, and as such entitled to tithes. Tradition also may not be far astray in representing, at the time of the Exodus, Balaam, a dweller by the Euphrates, as a veridical prophet of Yahveh—a seer who spoke by the inspiration of Elohim. But when the lofty genius of the Hebrew prophets had conceived the idea of monotheism, and had succeeded, after long and painful struggles, lasting until the time of the Captivity, in causing it to be universally adopted, the ancient beliefs were obliterated from the history of the nation, and the surviving traditions connected with them, which had been perfectly plain and simple, became incomprehensible problems requiring incomprehensible solutions.

Thus, with regard to Melchizedek, the later Targums assure us that he was Shem bar Noah, the last survivor of the Deluge, and of course an orthodox priest of the Most High—a belief which has prevailed extensively, not only among Jews, but also among some of the most learned Christian commentators. The Kabbalists held him to be the type of the Messiah, and that this belief also prevailed among the early Christians is shown by the well-known passages in the Epistle to the Hebrews. He was even regarded as the Holy Spirit, and a sect of Melchizedekians worshipped him as a god. Others again relate that Shem opened a school of theology on Mount Tabor, where Melchizedek, as one of his disciples, learned the true faith and taught it to Abraham; while Mahometan tradition assumes that he was the son of Shem and that he built the sacred city of Jerusalem.

Balaam offered a more knotty problem, for his story represented him as, at the same time, an enemy of the chosen people and a prophet enjoying intercourse with Yahveh as direct and personal as the exceptional favors bestowed on Moses—a prophet, moreover, whose submission to the will of God was proof against all temptations. To reconcile these facts with the exclusive Yahveism of the Hebrews has taxed to the utmost the perverse ingenuity of learned critics of all ages, both Jewish and Christian; and their variously conflicting suggestions, as industriously collected by Dr. Kalisch in the volume before us, afford a melancholy but edifying exhibition of the vagaries of a false system of exegesis, which aims not at discovering the truth, but at inventing some colorable hypothesis to establish a foregone conclusion.

* 'Bible Studies. By M. M. Kalisch, Ph.D., M.A. Part I. The Prophecies of Balaam (Numbers xxii. to xxiv.); or, the Hebrew and the Heathen.' 1 vol. 8vo. London: Longmans, Green & Co. 1877.

While tradition yet was free, the rabbis gave unbridled rein to their fancies in constructing around Balaam the most incongruous stories, wherewith at once to justify his favor with Yahveh, and to excuse the measureless odium which they delighted to heap upon him; and the zeal with which they labored shows how profound an impression was made on the Hebrew mind by the matchless rhetoric of the prophecies which bear his name. According to the Mishna, among the ten things which God fashioned, in the twilight of Friday evening, after the labor of Creation was performed, were three mouths—the mouth of the chasm in which Korah and his companions were engulfed, the mouth of the well which accompanied the children of Israel through the desert, and the speaking mouth of Balaam's ass. This would seem to relieve the prophet from responsibility, since all his adventures were preordained from the beginning, and therefore is not incompatible with the traditions that classed him with the most distinguished favorites of God. Thus, he is included among the fourteen elect who, by being born circumcised, were admitted by Yahveh himself into his covenant, the others being Adam, Seth, Noah, Shem, Melchizedek, Jacob, Joseph, Job, Samuel, Moses, David, Jeremiah, and Zerubbabel. The Yalkut enumerates him among the pre-Mosaic prophets, and the Siphra and Vayikra Rabba consider him to be the greatest and last of the prophets of the Gentiles, the others being Job, Eliphaz, Bildad, Zophar, Elihu, and Beor. These would seem to be remnants of tradition from a time when Yahveh was not the exclusive possession of Israel, and the allusion to Balaam by the prophet Micah, in the eighth century B.C., apparently shows that even down to that period his name had not become a synonym for all that is loathsome and detestable, nor his coming at Balak's summons a crime of the deepest dye. Very remarkable, indeed, is the Talmudical assertion that the wicked and idolatrous king of Moab gained so much merit by the forty-two holocausts which, under Balaam's superintendence, he offered to Yahveh, although the sacrifices were made for the purpose of cursing the Jews, that he earned thereby the priceless fortune of being the great-grandfather of Ruth the Moabitess, and through her the progenitor of the house of David and of the future Messiah.

As Yahveism hardened and crystallized under the influences which find their expression in Deuteronomy, and an almost impassable boundary was established between the inheritors of the Covenant on the one side and the Goim or Gentiles on the other, it became necessary either to reject the Book of Balaam altogether, or to modify it so that it should not be too flagrantly at variance with the new ideas. The former alternative cost too much, in the sacrifice of the sublime beauty of the prophecies, so flattering and so consoling to the distracted monarchy of Judah, and the latter resource was adopted without calling into play much critical insight. There are few impartial Biblical students, we imagine, who will disagree with Dr. Kalisch in regarding as a somewhat clumsy interpolation the episode of the ass, which is so flagrantly at variance with what precedes and follows it that the Targum of Palestine is obliged to explain the discrepancy by injecting an assertion that Balaam went to Moab with the rebellious intention of cursing the children of Israel, and the Samaritan Chronicle asserts that he started on his journey without awaiting the Divine command. In the same spirit are conceived the passages in Deuteronomy and Joshua, which represent Balaam as endeavoring to curse, but forced by Yahveh to bless against his will, and the subsequent assertion in Numbers that his disappointed enmity led him to give to Balak the cunning counsel whereby the Israelites at Shittim were seduced to the whoredom and idolatry which caused the wrath of Yahveh to menace them with destruction.

When these passages were once adopted in the sacred text, Balaam, in place of a self-abnegating prophet of the Lord, became a worshipper of false gods and a sorcerer eager to exercise his evil arts and gratify his evil passions on the chosen people. The writer of the Book of Joshua stigmatizes him as a *kosem*, or vulgar soothsayer. It is thus that Philo regards him, and though Josephus still assumes him to be a prophet of Yahveh whose covetousness led him to prostitute his gifts, the almost universal testimony of the rabbis proclaims him to be a mere magician. In the Mishna, Balaam and Abraham are taken as antitheses—types of evil and good—and the followers of the former are pitilessly consigned to Gehenna. There grew up around him a wealth of legendary lore; and though the Targum of Palestine, with a truly rabbinical disregard of chronology, assumes him to be Laban, the father-in-law of Jacob, whose boundless learning had crazed him, the most generally received story represents him as one of the magician-counsellors of Pharaoh, the others being Jethro and Job; and it is curious to observe how Job, whom we have seen above classed with Balaam as a Gentile prophet and special favorite of Yahveh, shares with him in these stories the stigma of wicked opposition to the designs of the Lord. It was Balaam who suggested the slaying of the Jewish male children, for which he subsequently met his fate in Midian; Job held his peace, and for his cowardly consenting to the wrong he was punished as related in his history; Jethro fled to avoid being concerned in it, wherefore he merited to become the father-in-law of Moses. A variant of this tradition relates that a dream revealed to Pharaoh the birth of Moses and the destruction which he would work in Egypt. Balaam interpreted the dream, and when Job counselled the slaying of the males, Balaam pointed out that they must be drowned. He continued to urge his master to cruel measures, and when Moses, in the royal palace, was two years old, Balaam sought to have him put to death. Thus began the enmity which lasted throughout their lives, explaining the readiness with which Balaam accepted Balak's call to curse the followers of Moses. During the interval they had had other conflicts, for Balaam had usurped the throne of Kikanes, king of Ethiopia, and after a struggle of many years had been ousted by Moses, who had taken refuge with Kikanes when obliged to fly from Egypt; whereupon Balaam returned to Pharaoh, and was one of the magicians who attempted to cope with the Hebrew prophet at the time of the Exodus.

Extravagant as are these tales, they have their interest and importance as showing the devices to which the Jewish doctors were forced in their endeavor to reconcile the Balaam of the oldest traditions with the exclusive Yahveism of orthodoxy. Islam inherited the beliefs of Judaism, and sought to explain the mystery by representing Balaam as one of the Anakim who had succeeded in learning the Shem-hamphorash, or mystic and ineffable name of Adonai, whereby he was able to predict the future and to obtain from Allah all that he demanded; but when, seduced by presents, he sought the destruction of the chosen people, Allah deprived him of the memory of the thaumaturgic name, and he could do naught. Scarcely more reasonable than these are the arguments and assumptions with which Christian divines, from the time of Origen, have sought to construct a connected and reasonable story out of the divergent and antagonistic material which the varying phases of Jewish belief had grouped together around the name of the Prophet of Pethor.

Dr. Kalisch, we think, has missed the true significance of his subject, which lies in the evidence which it affords of the primal unity of belief of the Semitic tribes from Mesopotamia to the Great Sea. Engrossed with the desire to rehabilitate the fame of the much-maligned seer, and to set forth the manifold beauties of the narrative, he devotes himself exclusively to accomplishing this with much critical acumen and endless resources of learning. He recognizes, indeed, the change in Yahveism from the liberality of earlier times to the exclusiveness of the prophetic and Sadducee dogma, but he so utterly fails in tracing back his high argument to its origin that he does not hesitate to say that "whether the Biblical Balaam is an historical personage or not, appears to be of very subordinate moment" (p. 53). He assumes to solve all the problems, whose analysis he is so well fitted to attempt, with the careless assertion that "Balaam knows and worships Yahveh simply because the high-minded author of this wonderful narrative attributes to him that knowledge and worship" (p. 104); and he discourages further investigation with the reproof: "It is vain to ask how Balaam gained the knowledge of this God. The strange answers which this question has called forth ought alone to have shown the impropriety of the question" (p. 103). It is to be regretted that a broader enquiry did not come within the scope which he allotted to his work, for he possesses the independent self-reliance and the varied and accurate knowledge which would render him specially able to throw light on a question underlying all Semitic theology. Apart from its direct object, however, the book has no little value as a collection of materials by which the curious student can trace the mode in which popular beliefs grow up and become firmly established through the well-meaning, though mistaken, labors of the learned and pious.

PHYTOGAMY.*

IF this name has not been coined already it ought to be. For "the loves of the plants," so mellifluously sung by Dr. Erasmus Darwin in the days of our grandfathers, have been in our time, through a felicitous ata-

* 'The Different Forms of Flowers on Plants of the Same Species.'—'The Various Contrivances by which Orchids are Fertilized by Insects.' Second Edition, revised.—'The Effects of Cross and Self-Fertilization in the Vegetable Kingdom. By Charles Darwin, M.A., F.R.S.' London: John Murray; New York: D. Appleton & Co. 1876-77. 3 vols. 12mo.

vism, more scientifically if prosaically expounded by his grandson, in a series of articles and volumes of which the subjoined are the principal titles. If we have too long delayed our notice of these books, we make amends by calling attention to them at the season which invites and amply rewards the observations in field and garden which they suggest. Mainly in consequence of these writings, the subject which our new word connotes—namely, the connubial relations of plants—has become a popular and fruitful branch of biological science, which has its own laws and rules and technical terms, its distinction of legitimate and illegitimate unions, and tables of forbidden degrees. For example, it is not lawful, at least it is not *en règle* nor beneficial, for "thrum-eyed" primroses to interbreed, nor for "pin-eyed" primroses to interbreed. Such are illegitimate unions, seldom blessed with progeny. To the uncurious observer in Wordsworth's poem,

> "A primrose by a river's brim
> A yellow primrose was to him,
> And it was nothing more."

But as concerns the primrose, where seed-bearing is in question, if it be of the thrum-eyed stock, the pollen brought to it must come from the pin-eyed, and vice versa, in order to full fertility. Tiny blue-eyed Houstonias, enamelling our meadows in early spring, and fragrant Mitchellas, carpeting pine-woods at midsummer, are in similar case. It is this kind of arrangement for cross-breeding to which the larger part of Darwin's latest volume on 'The Different Forms of Flowers on Plants of the Same Species' is devoted. In such flowers—and they are rather numerous and of many families—the advantage of cross-breeding between different individuals of the same species is unquestionable, for it is essential to full fertility. The differences in structure, which consist of relative and reciprocal lengths of stamens and style in blossoms otherwise alike, have long been known; the meaning of it was one of Darwin's happy thoughts, and the confirmation is due to his labors. He demonstrated that the structure was correlated to the transport by insects of the pollen of the one sort to the stigma of the other, and that each pollen was inert, or nearly so, upon the stigma of the flower it belonged to, but potent upon the stigma of the other sort, upon which, in passing from blossom to blossom among the plants (of about equal number as to sort), the visiting insects are pretty sure to deposit it.

It is noteworthy that this significant dimorphism belongs to certain species of a considerable number of natural families, while others, sometimes even of the same genus, and in most of their species, show no trace of it; as if certain favored species had acquired a peculiarity in which their brethren have not shared. We ourselves call to mind some species in which this acquisition is either incipient or the correlations imperfect. But in his earliest work of the present series, on 'The Various Contrivances by which Orchids are Fertilized by Insects'—a fascinating volume, which has recently been brought out in a second edition—the "contrivances," as they may well be termed, are the common property of the whole order, although each genus seems to have patented a modification of its own. Here there is no dimorphism, but (with rare exceptions) all the flowers are alike, and all agree in having the pollen placed tantalizingly near the stigma, but prevented from reaching it, as well as in having some arrangement for the pollen's being transported by insects from one flower to another, and ultimately from one plant to another. Wonderful arrangements, indeed, they are, which it requires a volume to describe, and of which we can here offer no details. Suffice it to say that, in this great order, cross-fertilization must be all but universal as between different flowers of the same plant, and commonly between different individual plants.

In both these kinds of hermaphrodite flowers the practical separation of the sexes is hardly less than in oaks, willows, and other trees and herbs in which the stamens and pistils occupy distinct plants or different blossoms. To these three classes, then, Mr. Charles Darwin's aphorism, "Nature abhors perpetual self-fertilization," undoubtedly applies. But there remains an equal number of plants with hermaphrodite blossoms, all alike, with no obvious obstacle to fertilization with their own pollen, while in many the adaptations are such as must apparently ensure it, and indeed does very commonly ensure it. Wherefore it is nowise surprising that self-fertilization was the orthodox doctrine—that there was thought to be a general adaptation for the falling of the pollen upon the stigmas of the same blossom. It is true that Christian Conrad Sprengel taught the contrary, in his work entitled 'The Secret of Nature Discovered,' published eighty-five years ago, and that he—mainly upon good observations—in a measure anticipated Mr. Darwin's aphorism; but he was accounted whimsical and untrustworthy by his own generation, and was forgotten by the next. Not so the contemporary 'Loves of the Plants'—the hymnal of the old orthodox cult—which sings the

> "Gay hopes and amorous sorrows of the mead"

in verse which our fathers were fond of, but from which we will not further quote. Had Dr. Erasmus Darwin known Sprengel's book, and brought to it the insight of the grandson, how different and how much richer the poem might have been. What curious facts and teeming fancies have been left unsung!

To H. Müller and to Hildebrand, two of Sprengel's countrymen, in our own day, may be credited the confirmation of the latter's thesis as respects the general run of hermaphrodite flowers; and this by showing what a large proportion even of these are functionally unisexual, either by the shedding of their pollen before the stigma of that blossom is ready to receive it, or by the development and subsequent shrivelling of the stigma before the pollen matures, or by various other arrangements of like effect. And here, too, comes in the significant fact for the evolutionist that these arrangements belong to widely different families, but only to certain of their species or groups of species, and not to their near relatives; also that they are more pronounced in some species than in others.

Yet, withal, there is much close-fertilization, and no one has demonstrated this better than Mr. Darwin, nor so well illustrated its meaning. The more particular and special the adaptations for cross-fertilization—depending, as they mainly do, upon insect-transportation, consequent upon visits for nectar or other floral products—the greater the chances of no fertilization through the failure of the proper insect visitation. So nature, not scorning a succedaneum, arranges for self-fertilization also as the next best thing, indicating her preference, however, by endowing the pollen with greater potency upon other stigma than its own; the principle throughout being to place the pollen where it will do the most good, all things considered. But Mr. Darwin insists, apparently with reason, that cross-breeding is the general plan and close-breeding the subsidiary proceeding, or at least that no species of flowering plants is deprived of its chance of wide-breeding, or fails to receive the benefit of it for any long number of generations.

This assumes that wide-breeding is beneficial. The assumption is one which a teleologist like Darwin is bound to make, and which an investigator like Darwin is bound to verify, if possible. The assumption is that ends elaborately brought to pass in a large number of species, in a variety of ways, and by great nicety and exactness of adaptation, cannot be meaningless or useless—must somehow conduce to the well-being of the species. Happily, this inference holds equally good whether, with the old-fashioned teleologist, the word *end* denotes a result aimed at, or, as in Darwinian teleology, a result attained. The two senses are not contradictory, and, as concerns the validity of the inference, it matters not which sense is adopted, or whether the two are combined. Darwin's investigation, undertaken to determine by experiments whether such crossing is beneficial, is published in the remaining volume of the series under consideration—that on 'The Effects of Cross and Self-Fertilization in the Vegetable Kingdom.' It does not fall within the scope and limits of this notice to set forth the nature and the extent of these experiments. Readers interested will go to the book, and probably have done so already. As to the results, we may only say that, on the whole, they corroborate the inference—in some cases unequivocally and strongly, in others feebly, while in a very few the result was simply negative. While the crossing in many cases showed astonishing reinvigoration, and self-fertilization evident injury, the maximum good was obtained at the first or second crossing, and some close-fertilized plants soon became tolerant of that condition, and retained their fertility for several close-bred generations. If the Darwinian thesis was on the whole maintained, yet it was also shown that plants have many inexplicable idiosyncrasies, and that many unknown or obscure factors enter into the results of experiment. On looking over the series we are reminded of the late Jeffries Wyman's aphorism: "No single experiment in physiology is worth anything."

It seems reasonably made out that the benefit of a cross is, *cæteris paribus*, in direct relation to a certain difference in constitution between the two parents, or to some difference in their surroundings or antecedents, from which diversity of constitution may be inferred. The benefit is more decided when the parents come together from a distance than when grown side by side for several generations, and "a cross between two flowers on the same plant does no good, or very little good." The qualification is a proper one. It would be hasty to infer that it does absolutely no good, even though the advantage be inappreciable in any single instance. Still,

however just and fairly well sustained the principle of Darwin's aphorism may be, it is confronted by the immense and seemingly endless vitality of long-propagated varieties which do not seed at all.

If we were writing a popular review of this volume on cross and self-fertilization, we should make much of the tenth and eleventh chapters, on the means of fertilization, and especially of cross-fertilization; on the plants which are sterile, or more than half-sterile, without insect aid; and, above all, on the habits of insects in relation to the fertilization of flowers. A closing chapter in the volume, on the Forms of Flowers, should also receive attention—that in which *cleistogamous* blossoms are discussed, viz., small and inconspicuous ones which never open, but are far more fertile than the showy ordinary blossoms of the same plants; for capital converse testimony, to the effect that all ordinary flowers are in primary reference to cross-fertilization, may be derived from the structure and behavior of these blossoms, in which the contrary intent is unmistakable. When nature means close-fertilization she makes her purpose manifest. Also, we should note that this cleistogamy is sporadic, affects certain families only, and certain members only of families not otherwise particularly related; so that this peculiarity also seems to be of special and apparently late acquisition. When we gather into one line the several threads of evidence of this sort, to which we have barely alluded, we find that they lead in the same direction with the clews furnished by the study of abortive organs: slender, indeed, each thread may be, but they are manifold, and together they bind us firmly to the doctrine of the derivation of species.

The Life of Edgar Allan Poe. By William F. Gill. Illustrated. Fourth edition, revised and enlarged. (New York: W. J. Widdleton.)—The disappointed reader may at least recognize the truth of one sentence in this most unsatisfactory book—the passage, namely, in which it is asserted that "the relentless fate that pursued the unhappy poet [Poe] during his lifetime followed him after death" (p. 268). It is quite true up to this moment, and Mr. Gill's biography is simply Fate's latest instrument. The "phenomenal catastrophe" which, it is stated, prevented the erection of a slab over the poet's grave, has been followed by the severer catastrophe involved in the production of this memoir. Yet, after all, Mr. Gill is simply the last and worst of those relentless friends of Poe who persist in seeing in every criticism upon his sad career only a new proof that "his temperament was totally at variance with the spirit of the age in which he lived" (p. 241). If these deluded people could only recognize the fact that the cloud which rests over the poet's fame is not of Mr. Griswold's creating; that Mr. Griswold himself is almost forgotten; that nobody is fighting for him; and that the world would only be too thankful to anybody who should prove that Griswold was wrong and Poe right! Yet they do not prove it—they do not even attempt proof; they only rain down epithets with a virulence worthy of Poe himself, and end by conceding, and even reaffirming, almost every charge that ever was made against the unhappy poet.

Here comes Mr. Gill, for instance, and issues an angry controversial pamphlet of more than three hundred pages. Yet he adds not one fact of importance to our knowledge of Poe, and the only real value of the book is in its concessions. He frankly admits that Poe quarrelled with his adopted father for refusing to pay the gambling debts of his unworthy protégé (p. 40); that he made his child-wife very unhappy in the early days of their marriage (p. 140); that his word was utterly worthless when speaking of his own life and writings (p. 136); that he insulted one of his most intimate female friends, Mrs. Ellet, in a way which he afterwards owned to be "a dishonor," though he never seems to have apologized for it. As to the poet's fits of drunkenness, Mr. Gill admits them again and again, and abundantly confirms what he calls a statement of "ferocious cruelty" when Griswold makes it, that "his [Poe's] habits of frequent intoxication and his inattention to the means of support had reduced him to much more than common destitution" (p. 185). Nay, the new biographer goes so far as to print a fac-simile of a letter of the poet's, during his disastrous visit to Washington, and this for no apparent purpose but to show by the handwriting the "unfortunate condition of the author" (p. 120). If it is desirable to cover up the infirmities of genius, Mr. Gill has thus hit upon a refinement of cruelty that never would have occurred to the duller hostility of Griswold.

As if finally to refute his own theory of the malice of the previous biographer, Mr. Gill prints at the end of his book a review by Poe of Griswold's 'Poets of America,' alleging that this was what stung that prosaic compiler into blackening the memory of the poet. Now, not only is the criticism itself in the very worst style of that crude and abusive early period of American literature; not only does it show us Poe as introducing puffs of himself, over and over again, as thus: "Edgar A. Poe, who has spent more time in analyzing the construction of our language than any living grammarian, critic, or essayist" (p. 334), but it specifically refutes the precise argument for whose sake it is introduced. This review by Poe was aimed at the third edition of Griswold's tedious book; whereas any one who will refer to the first edition will find that the author had already implied there, very distinctly, the same low moral estimate of Poe which he later showed. In short, it was Poe, not Griswold, who wrote under a grudge.

The conclusion of the whole matter is, that Mr. Gill adds little if anything to our knowledge of Poe; and that little tells against the cause which the biographer so vehemently maintains. This leaves it in doubt why the book was written until we reach the appendix, and there learn that, at the dedication of the Poe monument in Baltimore, Mr. Gill recited the "Raven" publicly; that "the large audience was absolutely spell-bound by his perfect elocution" (p. 270); and that he "was made the recipient of an ovation at its close" (p. 308). We fear that he will not win a similar tribute from his readers.

Frithjof's Saga: A Legend of Ancient Norway. By Esaias Tegnér. Translated from the original Swedish by L. A. Sherman. With illustrations. (Boston: James R. Osgood & Co.)—Bishop Tegnér, of Wexiö, Sweden, who died on the 2d of November, 1846, is better known outside of his native country than any other Scandinavian poet. His great popularity is mainly due to his justly celebrated poem entitled 'Frithjof's (or perhaps more properly Fridthjof's) Saga,' a poem, or rather a combination of twenty-four cantos or ballads, based on two old Norse Sagas; that of Thorstein Viking's son and that of Fridthjof the Bold. These two Sagas furnished the plot of the story; but Tegnér found many of the finest passages of the poem in the 'Elder Edda' and in other Old-Norse lays. The poem was published complete by the author in 1822, and in 1871 the twentieth Swedish edition appeared. Sweden has had greater poets, but none whose influence upon the Swedish people has been so decisive. Numerous editions of 'Fridthjof's Saga' have appeared in Denmark and Norway, and in Icelandic there is an excellent translation by Matthias Jochumsson. Translations have appeared in nearly all modern languages including Russian, Polish, and Greek. Sixteen versions have appeared in Germany, and of the best one of these (Mohnike's) the ninth edition was published in 1863.

The English language boasts just twenty translations, eighteen of which have been made in England and two in America. 'Fridthjof's Saga' was first made known to Americans by Longfellow, who about the year 1837 spent some time in Sweden, where he made the personal acquaintance of Tegnér, and on his return to the United States published a complete translation of Tegnér's 'Children of the Lord's Supper,' and an exhaustive, enthusiastic, and critical review of 'Fridthjof's Saga,' interspersed with copious translations. In 1867 Bayard Taylor published the first complete American edition of the poem, selecting for this purpose the translation by William Lewery Blackley, one of the eighteen English versions referred to above. Mr. Taylor supplemented the Blackley translation with an original introduction and notes. In 1877 Professor R. B. Anderson published in his 'Viking Tales of the North' the two Old-Norse Sagas upon which Tegnér based the poem, and added by way of appendix George Stephen's version of the poem. 'Viking Tales' also contains an introduction, a biography of Tegnér, copious notes, a mythological vocabulary, etc., and is the only edition in any language containing the Old-Norse Sagas complete.

The first American translation of the whole poem was made by Mr. and Mrs. Thos. A. E. Holcomb, and was published in Chicago about a year ago, and now we have Mr. Sherman's. A peculiar feature of both is that every canto is rendered in precisely the same metre as the Swedish original, that the feminine rhymes are everywhere preserved, and that the alliteration in imitation of the scaldic lays is reproduced in canto xxi. The new feature in Mr. Sherman's book is the illustrations from plates purchased in Sweden, being wood engravings from Malmström's celebrated pencil sketches. It is safe to say that both these versions are very creditable to the translators and cannot fail to become popular. Mr. Sherman seems to have taken great pains with the hexameters, as there are but few lines that will not "read themselves." This is, however, a point to which English readers are not apt to pay much attention, from the fact that we have scarcely any perfect hexameter verse in the English

language. Mr. Sherman's hexameters are sometimes imperfect in reference to the cæsural pause as compared with the original. It is the rule in Swedish (of which any one can convince himself by reading Tegnér and Runeberg) that feminine cæsuras should be avoided, and they are rare in Longfellow's "Miles Standish." Still, we prefer feminine cæsuras to emasculated verses. In comparing the Holcomb and Sherman versions we should say the latter has throughout obeyed more completely the laws of metre, while the former, with its awkward hexameters and occasional false rhymes, has gained in freedom, and has rendered the spirit of the original better. We repeat, however, that both are very good and deserve to be widely read. We still think Prof. Longfellow should give us the translation of Fridthjof's Saga that he promised many years ago.

Historical Biographies. Edited by Rev. M. Creighton, M.A., late Fellow and Tutor of Merton College, Oxford. 'Life of Sir Walter Ralegh,' by Louise Creighton. With portrait and maps. (London: Rivingtons; New York: E. P. Dutton & Co.)—This work is the best of the series to which it belongs—partly, no doubt, because the character of the series has now become more definitely shaped and established; chiefly, however, we think, from the character of the subject. It is not always remembered how different in aim and style a biography is from a history. A biography should properly have to do with the personality and private life of a man; his public actions belong to history. "Historical biographies"—the lives, that is, of persons of historical importance—are, no doubt, generally the most instructive, because their characters interest us from a two-fold point of view; nevertheless, even in historical biographies, the individual man and his private actions should be the starting point, rather than the public events in which he took part. No better example of the class of men whose lives are suited to be the subject of biography can be found than Sir Walter Ralegh. He was so near the court, and so constantly in contact with public affairs, that his life touches history in every event; and yet his life was essentially private. In the history of the day he was a secondary character; and, on the other hand, in his life the great historical events of the day were but of secondary moment. Moreover he has left such ample and impressive memorials of his character and actions that it is easy to form a clear and vivid idea of his personality.

Neither of the other books of this series answers so well to the requirements of historical biography. In the first place, it is not easy, in the Middle Ages or in antiquity, to find a person—like Cicero, the younger Pliny, Grostête, and Petrarch—who has left a personal record of his inner life, or even the materials for a detailed knowledge of his private actions. Simon de Montfort, for example, is first and last a public character; we know next to nothing of his *biography*—it is all *history;* and the same is true, in a less degree, with Edward the Black Prince. Having an admirable subject to her hand, Mrs. Creighton has done full justice to it, and has produced a brief biography of the highest merit. We are not willing to close without calling attention to the excellent portrait of her hero.

Essai sur le Rôle politique et social des Ducs de Bourgogne dans les Pays-Bas. Par Paul Fredericq, Ancien élève de l'École Normale des Humanités, etc. (Ghent. 8vo, pp. 230.)—The countrymen of Motley and Kirk will take especial satisfaction in a book which makes clear many points in the history and institutions of the Netherlands which these historians must necessarily take for granted. This brief treatise consists of an introduction containing a sketch of the reigns of the four dukes, and nine chapters treating of the various aspects of their government—their relation to the clergy, nobility, and communes, their system of administration, and their military, financial, judicial, and political reforms. The judgment of the author is in the highest degree unfavorable. All four dukes are depicted as arbitrary, false, and unscrupulous, and it is impossible not to suspect a certain covert satire in the frequency with which the most selfish and harmful acts are assigned to the long and brilliant reign of "Philip the Good." The "reforms," too, are shown to consist mainly in the enforcement of a centralized despotism. Only in one case is any real and lasting benefit ascribed to their policy—in the establishment of the states-general for the group of provinces which they ruled. The territorial unity, which was the chief aim of their policy, was in itself a great gain; but, attained by the system of centralized administration, borrowed from France, it was at the sacrifice of local institutions and liberties. A common parliament for what was in truth a new nation was the only means of combining the new system with what was good in the old; but even this salutary institution was carried out by the dukes capriciously and without good faith.

In connection with this we have (p. 210) an account of an anonymous writing addressed to Philip the Good by one of his counsellors, containing sound and sagacious advice as to the government of his states. M. Fredericq calls this anonymous writer "the greatest political theorist of his time"—a praise which may be deserved in a period singularly devoid of thinkers of every class. We are surprised, however, in his criticisms and suggestions, that he makes no allusion to the English constitution as affording a model which the dukes might have easily found to their hands if they had chosen. France is justly indicated as having afforded the pernicious model which they followed; they were, indeed, French princes of the blood. England, equally near, and connected with the country by even closer ties, presented the type which the provinces themselves would have chosen.

We hesitate to undertake to correct a Netherland historian upon the genealogy of his own country; but M. Fredericq appears to be in error as to the relation of the Free County to the Duchy of Burgundy. He says twice (pp. 8 and 215) that the grant of King John of France to his son Philip the Bold was the Duchy and the Free County (Franche Comté) of Burgundy. We had always supposed that the Franche Comté came to Philip by his wife, "Flemish Margaret," and that she inherited it, along with Artois, from her grandmother Margaret, wife of Louis II. of Flanders; and that this Margaret, again, had it from her mother Jane, wife of Philip V. the Long, who inherited it from her father, Otto IV., Count of Burgundy. At any rate, there is no doubt that the County was an imperial and female fief, while the Duchy was a French and male fief; so that, while the Duchy escheated to King John in 1361, at the death of Duke Philip of Rouvroux, the County, had it been in the hands of this Philip, would not have followed the same course, but would have passed to Philip's female heirs or have fallen to the empire. Indeed, the only fault we have to find with this excellent treatise is that the exceedingly complicated relation of the Netherland provinces to one another—which neither Mr. Kirk nor Mr. Motley has made entirely clear—does not receive a distinct and adequate treatment.

Geschichte der englischen Litteratur. Von Bernhard ten Brink. Erster Band; bis zu Wiclif's Auftreten. (Berlin: Oppenheim; New York: Westermann & Co. 1877.)—We have had occasion more than once of late to call attention to the vigor with which the study of Early English is pursued in Germany. We have noted the almost simultaneous appearance of two quarterlies devoted exclusively to this subject, namely, the *Anglia* and the *Englische Studien*. The older philological reviews, such as Steinmeyer's *Zeitschrift*, the *Germania*, Herrig's *Archiv*, are giving to it more and more space, and Paul and Braune, in their *Beiträge*, have already published a number of essays betokening the rise of a new school of criticism. All this independent of detached works, such as Sievers' investigation of the relations between the 'Heliand' and the Anglo-Saxon Genesis. The efficient cause underlying the phenomena is this: the present school of Germanic philology is seeking for itself new fields, new roads of research. Old German, to speak comparatively, is exhausted. Not but that very much remains to be done, even here, in the way of explaining linguistic processes and connecting them with the general rules of Indo-European grammar. But the field has been so thoroughly mapped out, the apparatus for research is in such good order and so accessible, that the work of the future will consist chiefly in details.

It is not our purpose to enter into a detailed examination of Professor Ten Brink's history step by step. To undertake this satisfactorily one must have the amplest allowance of space at his disposal. We can only indicate its distinguishing features and commend it most heartily to the earnest study of every lover of English literature. In the first place, the author's style leaves nothing to be desired. It is simple, manly, direct, free alike from pedantry and from the desire to shine. The perusal of a single chapter will convince the most careless reader that the writer is a master of his subject and holds all the details in a firm grasp. The chapters upon Beowulf and the other remains of Anglo-Saxon epic poetry, upon the so-called Cædmon Genesis, upon Cynevulf, Aelfred, and Aelfric, are in every respect models of style. They could have come only from a spirit that is a happy blending of sound, patient scholarship with delicate poetic sympathy. Moreover, within the compass of four hundred and sixty pages we are treated to a full and continuous history of English literature from Beowulf down to and including Piers Plowman. None

but such as have themselves struggled painfully over the rough and thorny ground can know fully what this means; yet every reader can admire the work and the way in which it has been done. Nothing worthy of note has been omitted, everything receives its due and no more than its due share of attention, and the general movement of the narrative is easy and sustained. The author has not suffered himself to be misled by his individual preferences into treating one subject or person at the expense of another. His criticisms are to the point and just, and are always temperate. His comparisons between the substance and the form of English literature and the literatures of the Continent are carefully drawn and no less carefully husbanded. They are not introduced oftener than need be, and serve to elucidate the English without becoming wearisome. In short, we obtain from Professor Ten Brink's account not only a clearer but a far juster idea of our early literature than has hitherto been at all possible.

Finally, the history is not only well proportioned and ably told, but rests upon a basis of solid learning. Professor Ten Brink nowhere makes parade of his erudition. In a separate work, a *Grundriss*, as the preface informs us, he purposes giving a full bibliography of Anglo-Saxon and Early English, and establishing or developing more fully certain points which are still to be regarded as in controversy. The present work is of a rather popular nature, designed, as the author expresses it, for "weitere Kreise." Nevertheless, evidences of the most painstaking research are to be found on every page. Here, again, one must be a professed student of English to estimate the author's accuracy fully. The field is immense and the questions at issue are at times extremely complicated. The student's opinion will depend not infrequently upon the views he may hold upon certain fundamental points in comparative philology, mythology, and folk-lore, points which lie wholly outside of English, as English, and which can be settled only with reference to these sciences in general. There being in such cases a necessary divergence of opinion, we can demand no more of an author than that he deliver his own views with moderation, consistency, and after careful consideration of all that may have been said on both sides. Whoever looks to Professor Ten Brink for this will not be disappointed. He is equally at home in Germanic mythology and in mediæval folk-lore, in Anglo-Saxon and Old French, in alliterative verse and in the late Latin and Romance metres. He has brought all his acquisitions to bear upon a subject which is of great interest, but which is extremely obscure, and which has been shamefully neglected. To him is due the credit of being the first to bring order out of the chaos of our earliest literature. For the first time since we have had a literature we are able to read its primal history in a coherent and intelligible shape. We are prepared in every respect for the bright coming of Wyclif and Chaucer, when—to requote the author's motto from Dante—we hope with him *correr migliori acque.*

Lehrbuch der alten Geographie. Von H. Kiepert. Erste Hälfte. Einleitung, Asien, und Africa. (Berlin: Dietrich Reimer. 1877. 8vo, pp. 224.)—But for the circumstance that Heinrich Kiepert is known as one of the most eminent geographers of the age, and as the author of an 'Atlas Antiquus,' a 'Historico-Geographical Atlas of the Ancient World,' a 'Topographico-Historical Atlas of Hellas and the Hellenic Colonies,' a 'Bible Atlas,' etc.; of extensive special maps of Greece, Italy, Asia Minor, Palestine, and Egypt; and of critical writings on various topics of ancient geography and ethnology—not to speak of his cartographical and geographical productions on modern countries—the mass of varied and exact knowledge condensed in the unassuming book before us would surprise us as almost prodigious. We have no hesitation in saying that we consider it a treasury of information on the ancient world, equally valuable for its fulness, correctness, and freshness. By the last qualification we refer to the care and thoroughness with which the latest results of Assyriology, Egyptology, and kindred research have been made to complete and often essentially modify the knowledge derived from classical and Scriptural materials.

To illustrate the way in which the information generally given in similar works is here supplemented from Eastern sources, we cite the paragraph (29) devoted to the Mediterranean, in which we are not only told how that sea was variously designated by the Greek and Roman writers, from the early poets down to Solinus, but also that it was called by the Egyptians *vat(vaz)-ur*, "mare magnum," in contradistinction to *she-n-pun*, sea of Pun (Arabia), or the Arabian Gulf; by the Assyrians, *tihamti rabiti*, great sea, *tihamti sa mat a'harri*, rearward or western sea, and at a later period, *tihamti yaunai*, Greek sea; and by the Hebrews, *hayyām*, the sea κατ' ἐξοχήν, *hayyām haggadōl*, the great sea, or *hayyām haa'harōn*, the rearward or western sea, in contradistinction to the little salt sea (Dead Sea) in the east of their country.

The uncompromising decision with which results of modern criticism are accepted by the author as disposing of ethnological notions founded on an orthodox acceptation of old texts and traditions is best illustrated by the paragraph (158) on the names of Palestine, its main divisions, and its inhabitants. *'Ibrī* (Hebrew) "must have designated, in the tongue of the older Canaanitish inhabitants, not only the Israelites before their immigration, but also the neighboring tribes, as dwelling 'beyond' (*'eber*) the Jordan"—not the Euphrates. 'Ibri nomad tribes, probably of Arabic race, invaded Canaan from the southeast—both Mesopotamia and Egypt are here ignored—in the fourteenth or thirteenth century B.C., and "subsequently assumed the national name Israel." The invasion of the tribes was not simultaneous, but successive. The group represented in the Old Testament legends as descendants of the older mother of tribes, Leah, came first—Reuben, Simeon, Judah, Issachar, and Zebulun; Levi was not an original tribal division. The sons of the younger mother, Rachel, came next—Benjamin, Ephraim, Manasseh—occupying the fertile central region of the country, and dividing and pressing back their predecessors. Last of all, we see established the small tribes marked as people mixed with Gentile elements, the sons of the concubines—Gad, Dan, Asher, and Naphtali. "Gad and Asher—names of heathen divinities, one Babylonian and one Phœnician—are evidently borrowed." The kinship to Edom is one of the oldest recollections of the people; the story of the migrations under the patriarchs grew out of legends of other and earlier Semitic inhabitants of Canaan.

Semitic philology plays a considerable and often very interesting part in the book, as, for instance, in the portions referring to Caria, Lycia, and Cilicia. The derivation of the name of Patara, the seat of the famous oracle of Apollo in Lycia, from the Hebrew (and undoubtedly also Phœnician) word *pathar*, to interpret (dreams)—a derivation which may be old, though it is new to us—is surely very striking, especially if we remember that the town of the oracle-deliverer Balaam was called Pethor ("dream-interpreters' place," Gesenius). We are glad to find that our author is free from that hyper-Hellenism which infects some recent publications treating of ancient Asia Minor and the neighboring islands, such as Lenormant's 'Antiquités de la Troade,' etc. On the other hand, we find it surprising that he entirely ignores the identification of the names Teucrians and Dardanians with the corresponding names found on Egyptian monuments, while he accepts the similar identifications of the hieroglyphic "Shakalisha, Shardana, Turisha, Danau, Pulushta" with the Siculi, Sardinians, Tyrseni, Danai, and Pelasgians. Of the many derivations of the name *Ægyptus* and its Hebrew equivalent *Mitzraim* attempted by scholars, he mentions only Brugsch's for the former and Reinisch's for the latter, and neither as a definitive solution. The juxtaposition of various opinions is avoided throughout, which naturally renders some of the opinions adopted too positive. Few modern authorities are referred to, and views rejected are ignored. The identification of the Assyrian *Caldi* and the Greek *Chaldæa* with the Hebrew *Casdim* is admitted even on grounds of linguistic analogy, while that of *Sumir* with *Shinar* is rejected on account of the want of such analogy; while Professor Sayce, in his 'Lectures on the Assyrian Languages'—just published—unhesitatingly accepts the latter identification, and declares the former to be linguistically unjustifiable.

Our readers must, however, not be misled by our quotations and references into believing that this 'Manual of Ancient Geography' is chiefly devoted to philological research. Far from it. It is a geography in the strictest sense of the word, and amply descriptive of the natural characteristics of the various countries, in spite of its limitation to ancient conditions. The style is excellent, though for an English reader there is far too much involution in the construction of the sentences, which will render a translation into English—a thing much to be desired—a rather difficult task. The names are generally given in their purest original forms, as far as plausibly ascertained. Even in modern names a striking purism is observed, "Nigir" being used for *Niger*, "Baghdâd" for *Bagdad*, and "Scotland" as in English, instead of the German *Schottland*. The transliteration is generally strict, though not always consistent. Thus, we find "Mĕnasche," "Schekem," and "Grizim"—not *Schĕkem*, or properly *Schĕchem*, and *Gĕrizim*. Misprints, even in Oriental words, are exceedingly rare; among the few are "châròn" for *schâròn*, p. 151; פספס for פספס, p. 162; and probably לכקי for לכמי, p. 213.

A preface is to appear with the second part, as well as an index, which, if complete, will greatly enhance the value of the work.

Fine Arts.

THE LESSONS OF A LATE EXHIBITION.

THE first venture of the Society of American Artists at opening an exhibition was terminated by the closing of the Kurtz Gallery on March 30, although the announcements promised that the collection would be on view until April 4. The premature shutting of the doors was dictated not by want of success, for the exhibition was a paying one, but by motives of delicacy, the members declining to hold a display during the week opened with the Academy's annual show. We believe that everybody has forgiven the young men for their retiring modesty, and that every citizen who wanted to see, or could have been made to want to see the pictures, has seen them. The enterprise, in fact, has been very nearly compromised by the kindness of its friends, numbers of gazers having been sent to the little gallery on a promise that they would find the ordinary attractions of picture exhibitions, to be blankly disappointed by the academic studies and strictly professional successes there included. To win any such attention another year the Society must prepare what are known to the trade as gallery paintings, and be less addicted to dragging their "impressions" and their bust-portraits of models by the head and shoulders into bronzed frames, and so constituting them "pictures" perforce. As arranged in the gallery, the exhibition included two classes of canvases, the works of American pupils in Munich and the works of American pupils at Paris. With inconsiderable exceptions, the Kurtz Gallery was a field of tournament for these two rival camps alone. The pupils of Piloty and Lindenschmidt showed the fling and impulse, the ambitious dash at pictorial composition while imperfectly furnished forth with knowledge of anatomy and the antique, which have made the public flock to their work, whenever exhibited, with allurement and distrust. The French disciples displayed the want of charm, the profundity of preparation, the austere method applied to the most trivial subjects, characteristic of that school of teaching. To those visitors who were sufficiently professional to enjoy the scaffolding, the plans, and the foundation-work of an architecture still in the preparatory state, the little exhibition was full of interest. The ideas just now current in the principal art-centres of Europe could be better studied in these college exercises, so full of conviction and partisanship, than in the works of more experienced craftsmen, with more motives for concealing the source of their inspiration. If Franz Hals, for instance, has lately been taken up as a fashionable model, by advocates of the lightning method, both in Germany and France, there was work to be seen, by the pupil of Carolus Duran—who bases his instruction principally on that master—showing what is the French interpretation of Hals's crispness; on the other hand, there was the work of Currier, a Bostonian educated in Antwerp and Munich, giving Franz Hals in abject Dutch counterfeit, in the clever pasticcio called a "Bohemian Beggar," a veritable sister of the "Hille Bobbe." Weir in his boy-portrait (26), conceived in the spirit of generalization, desirous of conferring upon bone and muscle an ideal softness, approached his task in the French taste, and reached only the pulpy vagueness of Hamon. Just above hung Shirlaw's study of "Feeding the Geese," or "Good Morning," in which the countenances were generalized too, but this time in the German way, which consists in painting a disc of earthy flesh-color, on which the apertures of the face are sketchily hollowed out, so as to dissimulate the absolute flatness of the cranium.* The picture last alluded to, by the by, showed how the heroic poses promulgated by Kaulbach and his successors have become such a common baggage in the school that they can be spared for the most ordinary actions of life; nothing could give a greater start to the sensitive eye than to come upon this country *Frau* feeding poultry in the attitude of Titian's Assumption. The Munich works, in fact, as we freely concede their greater attractiveness, their better show of maturedness, seem to us the more dangerous on that account; we fear the Greeks and the gifts they bring. These Bavarian canvases are so even in merit, so self-possessed and successful in an inferior aim, that they are to be dreaded among our young painters. The pupils who have gone to Munich paint alike, and the one as well as the other; there seems to be a recipe for arranging a tableau of emotion, a tableau of *genre*, a tableau of still-life; nobody ever fails, and no success worth attaining is ever achieved. If the detection of a false ring in Macaulay's Roman ballads has been made the test of an ear for poetry, so we think an eye for the false gloss of the Munich picture might be a test for sensitiveness to art. Mr. Dyer, of Chicago, a pupil of Niel, sent to the display a piece of still-life in which the wood of the large mandolin was a more illusive piece of texture than any wood-grainer's work in the world; but the picture was a piece of pompous arrangement, with a spot for the bright object and a spot for the dark drapery, contrasting unfortunately with the perfect sincerity and real daylight of Mr. Armstrong's "Corner of my Studio," a similar composition conceived under franker auspices.

The exhibition, besides incidentally revealing this battle-ardor between the French devotees and the Bavarians, contained a few canvases of the kind that are good "drawing" attractions when in sufficient number. Mr. Pearce's "Death of the First-born" was pathetic, noble, and thorough; Mr. Bridgman's "Court of Rameses II.," brownish in color and trivial in incident though it was, betrayed diligent study and accurate archæology; Mr. Lowe's "Emma Albani," a regular "exhibition picture," isolated by a broad waste of pale background and emphasized by a cataract of rich white silk that the artist had painted exactly as he painted the sky in his "All Saints' Day," was a centre-piece that you could no more easily overlook than the épergne on a dinner-table, and was on the whole creditable to a youth who a few months back was a worker on the staff, and not the most promising worker, at Harper & Brothers'. We say creditable to the young artist, but we partly mean creditable to the system of instruction that can so soon evoke striking merit out of plodding commonplace. Portraits of exceeding care, and showing a conscience and a fidelity that will lead to still higher results if pushed in the right direction, were those of Thomas Winans and his son, by Lathrop; overhardness and the biting intensity of Burne Jones are the dangers that Mr. Lathrop will do well to steer away from. A hapless red face, intended for Mr. Bryant, puffed and exaggerated with the youthful student's besetting addiction to enlarging the forms, served as a target for universal gaiety; the hair and beard were represented with the devices by which artists express motion, as in the flow of cascades, flames, or fountains, and the public looked with wonder at these reverend locks diligently moving towards the frame from a face that seemed to swell gigantically on the sight like the Neptune beclouded in a fount. "Fishing for Oysters at Cancale," by Sargent, was one of the best studies of flashing daylight ever made by an American artist, and the remarkable heads by Sartain were examples of pure quality, needing only subject-interest.

It was to be observed that, except in landscape, nearly every work exhibited was prepared on foreign soil. The apparatus of hiring properties, arranging incidents, and employing models, by which conscientious works of art are elaborated, seemed to have been used only with two works produced in this country—Mr. Eakins's "Rush Carving the Fountain" and Roberts's "Lot's Wife," a statue. Both of these, though not above discussion in regard to the selection of subject, were thoroughly studied and artistically satisfactory. The painter of the fountain seemed to have a lesson to deliver—the moral, namely, that good sculpture, even decorative sculpture, can only be produced by the most uncompromising, unconventional study and analysis from life, and to be pleased that he could prove his meaning by an American instance of the rococo age of 1820. Mr. Roberts's statue was a nightmare theme treated with perfect self-command, originality, and knowledge. Works of this sort of thoroughness—and of higher interest and beauty if possible—are what will be needed to make an exhibition "go" next year.

WALFORD'S PAULINE.

HENRY HOLT & CO., NEW YORK.

TURNER'S ETCHINGS of the designs of the "Liber Studiorum" are of excessive rarity; very few impressions having been taken from the plates in this early condition.

Mr. Ruskin had a few of them reproduced, some time since, in England. The reproductions were not satisfactory; and he has lately sent to me the etchings from his collection, that, together with those in my own possession, they may be reproduced under my direction here.

I propose to have thirty or thirty-five of these etchings reproduced by the Heliotype process, as nearly as possible in *facsimile*, of the same size as the original. Special care will be taken to secure the most exact reproduction. The work will be done under supervision; and no copy of any plate will be issued without careful inspection.

These plates will be issued to subscribers only; and the number of copies printed will be limited to the number of subscribers.

The plates will be issued in a portfolio, and will be probably ready for delivery in June next.

The price of a set will be ten dollars.

I request any one who may wish for a copy of these reproductions to give me early notice.

CHARLES ELIOT NORTON.

CATALOGUE of a Valuable Collection of RECENTLY IMPORTED Standard Books in all Departments of Literature, including many Old and Rare Editions; OFFERED AT VERY MODERATE PRICES. Will be mailed on application.

JANSEN, McCLURG & CO., Chicago.

IN ANY FAMILY,

Whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address PUBLISHER OF THE NATION.

THE BIBLE FOR LEARNERS. From the Dutch of Drs. Oort and Hookyaas. By Rev. Philip H. Wicksteed.

This volume—Patriarchs, Moses, Judges—"begins with a rapid sketch of the history of Israel as a people, following with the narratives of the Creation, Paradise Lost, and the Flood. The story of Joseph is related at length, and the account of Moses and the Children of Israel in Egypt occupies a large space. The volume ends with the early history of David and the death of Saul. The relating of the stories and the review accompanying them is really fascinating. It will let in a flood of light upon the subject to many minds, and the reverent and candid spirit that pervades the work will relieve it from what many will doubtless conceive to be its too great freedom in the attempt to combat accepted ideas. It cannot fail, as it seems to us, to attract general attention, and to many minds it will appear almost like a new revelation."—*Saturday Gazette.*

Illinois Farm Loans.

Money wanted in sums of $500 and upwards to loan on improved farms in the vicinity of Elgin, Illinois, at 8 per cent. net, for three or five years. Security at least three times the amount loaned. Correspondence solicited. References given. Ten years in business. JOHN W. RANSTEAD, Att'y at Law, Elgin, Ill.

THE APRIL NUMBER
OF THE
Plumber and Sanitary Engineer

Contains a detailed specification for plumbing a first-class private house, such as may be taken as a model by every architect.

PATENT PREPARED

Gasolene.

The attention of owners of Gas Machines is invited to the superior quality of Gasolene that we are making.

Manufactured by a process that is patented by ourselves, it is peculiarly free from all the impurities and heavy properties commonly found in other Gasolenes.

We manufacture these goods more largely than any other house in the world, and are prepared to furnish any gravity from 80° to 90° Beaume, by the single barrel or car-load.

Orders solicited from gentlemen owning private country residences.

Hotels, Mills, and Manufactories supplied on the most favorable terms.

KNOWING that our Cigarettes are second to none, and learning that the red label has led many fastidious persons to suppose cigarettes put up in so attractive a style to be but an ordinary article, has induced the manufacturers to prepare an elegant new and less showy label, hoping thereby to induce some of the many cigarette smokers who are prejudiced against Vanity Fair Cigarettes to give them a trial, which will convince them of their superior excellence. The old label is not abandoned by this change. Connoisseurs may always depend on finding both Vanity Fair Cigarettes and Tobacco fully up to standard.

WM. S. KIMBALL & CO.

The Nation.

NEW YORK, THURSDAY, APRIL 18, 1878.

The Week.

THE most important event of the week was the contract made by the Treasury with the old Syndicate for the sale of $50,000,000 4½ per cent. bonds at 101¼ gold and accrued interest. The first instalment, which was taken "firm," was $10,000,000; the remaining $40,000,000 are to be taken at the rate of $5,000,000 per month, the bankers being bound to take them unless such unexpected events occur as would make the bonds unsalable. By both parties to the contract it is regarded as a transaction for $50,000,000. Secretary Sherman came to New York to obtain $50,000,000 of gold, the amount he deemed necessary to be obtained by bond sales, in addition to his other coin resources, before the Treasury attempts resumption. He first endeavored to sell 4 per cent. bonds, and invited proposals from the banks; they expressed a wish to aid in Treasury resumption, but refused to take 4 per cent. bonds; the best bid the banks would make for the 4½ per cents was 101¼ gold and accrued interest, and they made this offer only on condition that they should be protected from loss, which they declared a fair offset to their offer to sell the bonds free of charge to the Treasury. The old Syndicate then offered to pay 101½ gold and accrued interest for the bonds, and engaged to take all risk on $10,000,000. That even this could be done was a pleasant surprise to the advocates of resumption. It seems tolerably clear that all the bonds will be sold by the Syndicate, nearly one-half of the first instalment having been disposed of at 102 gold and accrued interest on the first two days that the bonds were offered. The Treasury intends to continue the sale of 4 per cents to the public, and to the extent that they are sold to call in 5-20's 6 per cent. bonds for redemption.

The effect of the 4½ per cent. negotiation in London was to strengthen the market for United States bonds, and to reduce, if not wholly check, the shipments to New York. Here the price of gold fell from 100¾ to 100⅝, and later advanced to 100⅞. Sterling bills fell one-half of a cent and ruled below the point at which gold coin can be exported, although at the close the market for bills was firm. At the Stock Exchange the negotiation was construed as a guaranty of specie payment resumption, and a consequent expansion of the currency. Accordingly, there was a vigorous buying of stocks by speculators and more buying by the public than there has been for many months. The advance in prices since Friday has been 1 to 8 per cent. In the trade markets the improvement was notable in the tone or feeling rather than in prices, since these markets are not in a condition to respond immediately to any favorable change. Silver in London fell during the week to 53⅛*d.* and closed at 54*d.* The gold value of the United States legal-tender note for one dollar was as high as $0.99875 and closed at $0.99625, while the bullion value of the silver dollar was as low as 0.9126 gold, and at the close was $0.9160 gold.

Senator Conkling has been interviewed by an evidently able correspondent of the *World*, and the result fills a page of that paper. It is the most picturesque and forcible description of the Senator's own prudence and sagacity and perspicacity we have yet seen. He shows that he was the originator and chief engineer of the Electoral Commission scheme, thereby saving the country from bloodshed and anarchy; that while he was engaged in this beneficent work "the man Hayes" was engaged in making a bargain with "the friends of Nicholls," "Stanley Matthews and Sherman being privy to it." The substance of it, he says, though thus far successfully concealed, will be sure to come out in the end. "People say that Hayes is a good man, and means well, but they do not know what they are talking about." He added that when everything was known, "people would be appalled by the dishonor of the Administration." He was satisfied before the count that there was rottenness in Louisiana, and though he was accidentally absent when the vote of this State came up, he was glad he was absent. Hayes, he thinks, is now wholly "in the hands of the Southern Democrats," and is altogether a most despicable person.

Mr. Conkling's picture of his colleagues was not a pleasing one either. Gordon is "arrogant and domineering, and by no means brilliant"; Lamar is "the Jesuit of the Senate," and played with poor Stewart L. Woodford as a cat with a mouse. Both Gordon and Lamar were reported to be threatening his (Conkling's) life, one with "a revolver" and the other a "pair of Derringers," but he despised their threats. Stanley Matthews is "not a bad fellow," and Mr. Conkling "often feels sorry for him," but he is "marvellously innocent." Mr. Christiancy supports the President because he has been promised Judge Swayne's place when he dies. It looks as if Messrs. Dawes and Hoar were supporting him under an agreement that they were to have the division of the spoils in Massachusetts. General Burnside is "as weak a man in civil life as in the army, and amounts to nothing in the Senate." Patterson is justifiably "guarded in his action," considering "the political persecution" with which Hampton's government threatens him. The Senator also gave some further account of his Utica troubles about offices and back-pay with "little Roberts"; accused Hayes of intending to start a newspaper, and gave some illustrations of his civil-service reform. Finally, he explained why he had made no speech on the Silver Bill, and nobody would ever have guessed the reason. It was that the New York papers had made the silver-men so mad by their abuse that there was no use in talking to them. In fact, the statesman's conversation was about as instructive and dignified as a budget of Brooklyn gossip on the Scandal.

Another Republican caucus has been held in Washington to decide on some line of action with regard to the fall elections. Only one positive suggestion was made—by Mr. Sargent, of California—that the President should rescind his celebrated civil-service order, so as to leave "the ninety thousand office-holders" free to help the party in the election. It was pointed out, however, that the Attorney-General's gloss deprived the order of its injurious features, and that the ninety thousand could "work" fruitfully under it, and on Mr. Edmunds's suggestion the whole subject was referred to a committee. In fact, the only thing remarkable about the caucus was that no attack was made in it on the Administration, a piece of self-restraint due, doubtless, to the failure of the Howe speech. We would suggest that the "grand old party" should go before the people this fall, if it takes no interest in the more stirring questions of the day, with one great and impregnable truth inscribed on its banner, truth as impregnable as the existence of the universe—viz., that the "Secretary of the Interior was born in Prussia." No Democrat, however debased, will venture to deny this, and how it will rouse the people! A member of the Republican Campaign Committee appointed at the caucus informs the *Tribune* that the leadership of the party will be "cordially tendered" to the President, if he will take it. The meaning of "tendering the leadership" was not explained, but it probably signifies that if he will give certain offices to certain persons they will speak respectfully of him.

Two Democratic conventions have been held during the week. The Illinois platform is very long and minute, and declares for a revenue tariff only; an income-tax on "the surplus profits of the wealthy, who escape their just proportion of taxation"; the taxing of U. S. bonds and greenbacks; the discharge of national obligations in "lawful money" unless otherwise provided; the issue of silver-bullion certificates and the receipt of greenbacks for customs dues; the issue of greenbacks in place of national-bank notes, the

unconditional repeal of the Resumption Act, and the repeal of the Bankrupt Law; and making the wages of employees a first lien on the property and earnings of corporations. It declares against repudiation, against reduction of the national debt, against further contraction of the greenbacks, against the appointment of receivers by Federal courts in the case of "corporations who resist payment of taxes, disregard the rights of citizens, and turn the savings of corporations into foreign channels"; and against the system of leasing convict labor. It pronounces the election of Hayes a "monster political crime." The Oregon Democratic platform takes the same position as regards greenbacks and silver and the fraudulent election, but distinctly approves the proposed new tariff, and calls for a law to prohibit Chinese immigration. The party cue appears still to be to underbid the lowest demagogue, and its rival is now no longer simply the Republican party, but the mushroom organization of greenback and labor politicians known as the National Party. This secret organization has made its most effective stroke in Michigan, in the town elections, but it has also gained unexpected headway in New York, and has for the moment so disturbed the relations of the two older parties as to make speculation about the fall elections hazardous. Its success is symptomatic of party decay, but still more of the loosening of public morality and the spread of communistic doctrines. Its cohesiveness is doubtless of the feeblest.

The Senate, by a vote of 37 to 6, passed on Monday the bill to repeal the Bankrupt Law. On Thursday it received and referred to the Judiciary Committee the resolution of the Maryland Legislature devised by Mr. Blair to reopen the Presidential controversy. It asks Congress to provide a way for the State to bring an action in the Supreme Court of the United States, on the ground that "due effect was not given to the electoral vote of this State" at the last election, "by reason of the fraudulent returns made from other States," and to secure a revision of the returns from Louisiana and Florida in behalf of Mr. Tilden. The resolution was presented by Senator Dennis, of Maryland, who took occasion, in very fit terms, to announce his entire lack of sympathy with the object of its promoters, and his intention to vote against it if it should come before the Senate. The same memorial made its appearance in the House on Monday after a bill to carry it into effect had already been introduced. Mr. Garfield, more or less wisely, moved that it be neither printed nor referred, as is customary in the case of bills, but disposed of at once by rejection. This gave rise to a great controversy over rules and precedents, the Democrats calling to their aid the sacred memory of John Quincy Adams's defence of the right of petition, and the Republicans taking the ground that when a petition had been read its "right" had been fully satisfied. We believe this is the correct view, and that a reference to the debates which led up to and followed the adoption of the famous Atherton "gag" rule in Adams's time will show it to be so. The House had another lively debate on the question of compensating William and Mary College for damage from Federal occupation during the war. Mr. Townsend, of New York, made some frank remarks, in good humor but execrable taste, against it, and it was clear that the college was not well advised in presenting a "claim," however just. An outright gift, in consideration not only of the loss sustained but of the probable utility of the college to the South just now, would have found more favor.

Mr. Potter, of New York, has introduced a bill in Congress "Providing for the judicial ascertainment of claims against the United States," which adds some impetus to the movement of which we spoke last week. As the title indicates, this bill does not provide for the judicial "determination" of claims but for their "ascertainment." The distinction is founded upon the fact that nearly if not quite all of the claims pending in Congress are either outside of the jurisdiction of the Court of Claims or have attached to them some technical defect or bar which makes the relief sought a matter of legislative discretion and not one of judicial right. In such cases the facts are now ascertained by committees of Congress on such *ex-parte* proofs as the claimants choose to produce; no one appears for the Government to cross-examine witnesses and hunt up rebutting evidence, and the most convincing arguments are made while "buttonholing" individual members of the committee. Mr. Potter, who is both an experienced and intelligent member of the House, evidently recognizes the dangerous and demoralizing tendencies of the present system, for his bill provides on the one hand that any person having a claim "founded upon equity and justice" of which the court has not now jurisdiction, may file his bill in court asking for such relief as he believes himself entitled to; and on the other hand that "Congress shall not consider nor allow nor authorize the payment of any private claim" "until the same has been heard and reported to Congress by said Court of Claims, as herein provided." In this class of cases the Attorney-General is to appear and defend as in others, but the court, instead of rendering a final judgment, is merely to find the facts and report them to Congress. On this "judicial ascertainment" of the facts, Congress may then exercise legislative discretion. The bill, to be effectively obligatory upon Congress, should absolutely prohibit committees from investigating the facts of a private claim unless especially authorized by a vote of the House or Senate, and should attach to the finding of the court the finality which generally attaches to the verdict of a jury. If the court, in a judicial way, can ascertain one set of facts, and a Congressional committee, in a legislative way, another, it is tolerably certain that the *ex-parte* affidavit mill will continue to run in Congress.

Mr. M. H. Throop, the chief author of the "new Code," has issued a pamphlet in reply to Governor Robinson's criticisms contained in his recent veto message. His reply is substantially a general denial of all that the Governor says on the subject, and as no human being can possibly form an independent opinion on the subject without a minute examination of several dozens if not hundreds of statutes, it is safe to say that no one at present knows which is right. That the Legislature is in the same condition of ignorance is equally certain. Under ordinary circumstances the bar might be looked to for advice; but the bar is divided, many lawyers whose opinions are entitled to weight taking one side, and many of equal standing taking the other. The dispute has now been running on so long, and has enlisted so much interest on one side or the other, that the lawyers concerned in it are in danger of losing sight of the fact that it is the existence of the dispute which is most deplorable, and that it is having a seriously bad effect in impairing confidence (already taxed pretty severely by an elective system and the exposures of a few years ago) in the legal system under which we live. Mr. Throop's Code may be an improvement on the "old Code," or it may not; but a dispute in which the Governor vetoes a revision of the laws on the ground that the revisers have surreptitiously "upheaved" our entire system of rights and remedies, while the revisers reply that the Governor is grossly ignorant both of the nature of their duties and of the manner of their execution, and half the revision goes into effect with the other half vetoed, cannot fail to arouse a suspicion in the minds of the laity generally that there is something wrong with a system which, in the name of legal reform, produces such queer results. The first requisite of codification is an absolute confidence in the competence and faithfulness of the codifiers. No legislative body can codify by the usual methods of legislation (as Sir James Stephen has very truly pointed out in his excellent digest of the English law of evidence) any more than it can paint a picture. The work must be entrusted to somebody with final discretion.

Mrs. Tilton has made another confession of her guilt in the Beecher affair. It had been heralded for a week or two by rumors in the newspapers that something serious was going to happen. The confession is in the usual rhetoric of her tribe, and contains nothing that she has not already often affirmed and denied before God and man. The morning papers all deplore deeply the reopening of the matter, and are especially troubled by its probable effect on the youth of the country. This has not, however, prevented their

making the most of it. Every one of them makes it the most prominent piece of news of the day, and gives from three to five columns to it. Reporters were despatched at the double-quick to everybody who has been prominently connected with the case to learn his or her view of it. Of course, all the views might have been known beforehand with perfect accuracy. Mr. Beecher's friends, beginning with himself, deny the confession stoutly, and pity the poor woman; his enemies raise up their hands in horror and say that the truth is out at last. Not one particle of new light has been cast on the matter. Nothing has been, or is in the least likely to be, revealed about it that has not been revealed. The only visible effect of the confession will be to deepen the degradation of the unhappy person who has made it, and draw larger crowds to the Beecher and Tilton lectures. Nobody's opinion will be changed or modified by it. We would accordingly respectfully enquire of the editors of the daily papers whether, if they are really troubled about the influence of all this filth on the youthful mind, they would not do well to call home the reporters and let the thing alone. At present they constitute the sole channel by which the filth reaches the youthful mind. As long as they give pages of their space to it they may rely on it that the brethren over in Brooklyn will keep confessing, accusing, and praying for each other. An attempt will probably now be made to "discipline" Mrs. Tilton in the church; and the mere prospect makes one ask whether the police have no duties in the matter? Where is Anthony Comstock?

The London *Economist* gives a sorry welcome to the proposal for an International Conference on the silver question. It opens by expressing the hope that Senator John P. Jones will not be one of the three commissioners selected by the United States, and intimates pretty plainly that no competent and self-respecting Europeans would be willing to meet this personage in any financial negotiation; which, indeed, is not surprising, and yet he is the great head of the silver movement in this country. He was the principal author of the report of the Silver Commission which drove so many Western editors crazy, and we believe was the originator of the great hoax about "the fraudulent conspiracy" to pass the Coinage Act. In 1875 he was a vehement hard-money man; he now, we believe, is an advocate of "fiat money." What he will be in 1880, of course, neither he nor anybody else knows. The *Economist* quotes as a specimen of him some of what it calls his "vehement nonsense," from one of his silver speeches, which is bad enough, and doubtless sounds to English, French, or German financiers like a passage from a theatrical burlesque, but we could readily cite worse passages from his orations. Taking counsel with such a man about the standard of value, of course, seems like debating it with *Colonel Sellers*.

The Paris *Moniteur* has also an article on "The Remonetization of Silver in America," which the *Economist* translates, and which ascribes the burst of enthusiasm for the silver standard within the last two years to the desire of the silver-miners for a market for the product of their newly-discovered veins. It also pokes mild fun at M. Cernuschi, who has, it says, been christened in America "the Bi-metallic Pope," and then goes on to predict the probable course of the negotiation as far as France is concerned. It says that the Americans will demand 16 to 1 as the ratio; the French 15½ to 1, and if the Americans hold firm the negotiation will break down, because the "idea of striking five-franc or gold pieces differing from their value in francs of the present weight will never be brought before a French legislature." If, on the other hand, the Americans yielded to a counter-proposition from France, and abandoned the ratio of 1834, they would be driven back on a single standard of silver, and all hope of gold would be taken away from their creditors. But even then it would be "the marriage of two shadows," for the Americans only dare to coin silver in small doses, and France has forbidden it to be coined at all. The *Moniteur* winds up by doubting whether the negotiations will have any result, and says they are "meant to serve as a humanitarian passport to a measure important and disagreeable to many creditors of the Union." It is reported that Switzerland has accepted the invitation to participate in the conference.

The despatches from Europe about the Anglo-Russian trouble are very numerous and voluminous, but it may be safely said that there is nothing in them of any importance. There has been no change in the situation. The two principal disputants are eyeing each other suspiciously. Germany is trying to mediate, but Bismarck pleads that his position is so delicate that he is afraid to make suggestions lest Russia should look on them as threats. Austria, after much humming and hawing, appears to have made up her mind that it would be a good thing for her to occupy Bosnia as the only means of restoring order there, and enabling the Christian refugees, large numbers of whom are living on her bounty, to return to their homes with confidence and security; and Russia is willing, but Turkey objects. Russia in the meantime shows herself more and more conciliatory in tone, and is evidently determined not to fight for a trifle or a formality, but the Government seems to be embarrassed by the popular feeling that England is seeking Russian humiliation. On the whole, war seems to grow less and less likely. The public mind in England is much calmer, and now that the reserves are called out and Lord Beaconsfield has his own way in the Cabinet, his martial ardor will probably decline. He has always been a theatrical soldier: that is, he likes the pomp and pride and circumstance of preparing to fight, but does not like the heavy responsibility—crushingly heavy for a valetudinarian of seventy—of actual fighting.

Colonel Baker has come home and is receiving, it is said, with the Queen's sanction, a kind of social rehabilitation—another curious illustration of the depth and strength of the anti-Russian mania. The Turks were assailed for cruelty and misgovernment, and because they fought well the Turcophiles maintained that they ought to be let alone in their cruelty and misgovernment. So, also, Baker, having been dismissed from the army and punished criminally for a gross outrage on a lady, is held to have atoned for it by showing in the Turkish service, what no one ever doubted, that he was a good cavalry officer. The sympathies of society, however, followed him into his exile, and the pro-Turk newspapers did everything in their power to embellish his exploits. The only one he had an opportunity of performing outdoes, as reported by them, the great feat of Roland at Roncesvalles: with 2,800 Turks he held 40,000 Russians, commanded by Gourko, in check for a whole day on open ground, and retired in good order with the loss of only half his force. With 5,600 men, therefore, he would probably have turned Gourko, and flung him back into the Balkans.

The Pope's first allocution to the Cardinals in Consistory has appeared, and has been read with a good deal of interest as shadowing forth, however faintly, the policy of his administration. The rhetoric is not very different from that of his predecessor, and we presume belongs to a fixed official type. He describes himself as alarmed by the immensity of the burden of responsibility imposed on him by his election; eulogizes his predecessor; takes the old ground with regard to the loss of the temporal power; draws a very dark picture of the actual condition of the Church, and of the violence of which she has been the victim. The rest of the paper is devoted to the establishment of the Scotch episcopates. Nevertheless, the general opinion seems to be that the new régime will be much more liberal than the old one. M. de Molinari has hunted up an episcopal pastoral of Cardinal Pecci, issued last year to the clergy and people of his diocese, in which he discusses the relations of the Church to science and modern civilization, and it certainly seems to have the seeds of improvement in it. His statements in it of the nature of civilization and progress, of the leading doctrines of political economy, and of the connection between scientific and religious thought, contain nothing that would not pass current in any convention of political economists. But it must be admitted that at that portion of the argument which seeks to make the Syllabus appear friendly to science and civilization, the machinery creaks and groans terribly.

SECRETARY SHERMAN'S RESUMPTION.

MR. SHERMAN'S success in selling fifty millions of four-and-a-half per cent. bonds in this city makes it all but certain that greenbacks will either be at par or sufficiently near par between now and January, 1879, to make it possible for him at and after that date to pay in gold all of them which are likely to be presented. Whether he will be able to continue to do so during the ensuing two years, while silver is gradually making its way into use as a cheap legal tender, is of course still doubtful; but the uncertainty on this point does not trouble him, as he has the right under the law to pay in silver should gold be scarce, and he informed the House Committee the other day that should he find himself short of both metals he would resort to an expedient which he mentioned as something he had heard of as having been used in foreign countries—viz., a suspension of specie payments. Against this contingency, however, he will be protected both by his supply of gold, his supply of silver, and the power which he claims and which he declares his intention to exercise, of reissuing the greenbacks reserved by him in exchange for gold, and by the power which he asks Congress to give him of receiving greenbacks in payment of customs duties after July. This prospect is naturally giving the public a great deal of satisfaction. Some are pleased because it promises to relieve the Government from the discredit of having its notes circulating at a discount; others, because it seems likely to disconcert or quiet the silver-men in Congress, and also the advocates of the repeal of the Resumption Act, their main objection to which was that it could not possibly be executed, and that the preparation for its execution was inflicting great loss and suffering on debtors. To these two classes, however, the most attractive feature in Mr. Sherman's scheme is its inflation feature. If carried out in the way he proposes, the gold he pays out for greenbacks will be a clear addition to the circulation, as long as the exchanges do not turn against us and silver has not become too plentiful, for he will reissue the greenbacks as soon as he takes them. Consequently it is thought we may look forward to a year or two of rising prices, during which we shall all be able to "unload" our unsalable stocks and real estate. This to the sufferers of the last five years is naturally a most agreeable outlook. But after this year or two—what?

The answer which the Secretary himself, and that large and growing portion of the public which does not like remote views, would make to this question would probably be this: That the return of confidence and hopefulness produced by the resumption of specie payments by the Government, in conjunction with inflation, would doubtless put an end to the financial vagaries bred by the long-continued depression, and bring Congress and the country into a rational and moderate frame of mind with regard to finance, and abate the growing desire to despoil the public creditor; that, therefore, by the time the silver legislation began to make itself felt and work mischief, it would be possible to procure from Congress a repeal or modification of the law, and to reconcile the country to the total disappearance from circulation of the Government notes; that, in short, we should get back gradually to our old and sound financial status not by any systematic or carefully-planned process, but in the plunging, floundering fashion which seems to be more and more accepted as the only fashion in which a genuine democracy can escape from difficulties. As this is prophecy, it is, of course, impossible to refute it. The most one can do is to disbelieve it; but it must be admitted that it is by no means improbable prophecy, and that it would not be surprising if we did reach dry land in some such way. In any event, it is a great gain to have the Government notes made at last payable in gold at par. If the process of paying them is once begun, too, so many interests will be enlisted in support of its continuance that it will not be abandoned again without a severe struggle or the occurrence of some great public calamity.

On the other hand, no finance, whether public or private, can be called sound in which the consequences of things not turning out as you expect them to turn out have not been considered, and as far as possible provided for. It is not likely that any prosperity brought about by a sudden inflation of the currency, no matter of what the currency consists, will be lasting or healthy. All experience forbids us to expect it. Moreover, it is not likely that any effect of inflation during the next two years will make the burden of debt at the West, whether private or municipal, seem much lighter. The payment of any debt in gold, or its equivalent, is something which the West will hardly become reconciled to within that period, and yet the success of the Secretary's plan depends on the three legal tenders continuing equal in value. Should they cease to be so through any contingency, he would have to abandon gold payments, and the attention of "the debtor class" would be again turned to the Government paper which he proposes to keep afloat as the true instrument of its deliverance; and this time it would undoubtedly be made to work its deliverance. His plan of resumption, in short, though it may ease matters for the moment, and may prepare the way for real resumption, is not the resumption which was intended when the notes were issued; is not the resumption which the defenders of the public credit have been working for; and is not the resumption provided for by the Resumption Act. When these notes were first issued they were regarded as a forced loan, and the legal-tender character was bestowed on them not because the Government had determined to take up the business of a bank of issue, but in order to sustain their value as currency. The notion that they would, could, or should be made to constitute part of the permanent circulation of the country was due to the discovery by the Democrats of the fact that they could probably be made the instrument of fraud both on public and private creditors. Since that period all the thoughtless and dishonest classes in the country have adopted the theory that they were true money, the best kind of money, and that we could not have too many of them. There are, too, hundreds of thousands East and West who, while repudiating the idea that they are fit to be the permanent money of the country, nevertheless hold that they are "good enough money to pay debts with"; and nobody who does not make it a business to watch the manifestations of popular opinion on this subject, can form an adequate conception of the strength of the hold which has been obtained, both in Congress and at the West, by the notion that the burden of debt under which the country is now laboring cannot be got rid of by the ordinary process, but must be disposed of by an issue of Government paper made for the purpose, so that we can all make "a fresh start" without liabilities of any kind.

There is only one mode of salvation from this craze, and that is the one provided by the Resumption Act, which directs the Secretary of the Treasury "to redeem in coin the United States legal-tender notes then outstanding on presentation," etc. Redeeming a note in coin means paying it; and when it is paid it has no longer any function or value in law or morals. The sole duty of the Treasury with regard to it is to cancel or destroy it. To put it afloat again is to issue it afresh, or, in other words, to do a thing which the Supreme Court has denied the right of the United States to do in time of peace. Secretary Sherman put this construction on the Resumption Act in 1875, when he procured its passage. He now, however, claims the power of reissuing the redeemed notes under the old statute, which gives the Secretary the power of reissuing notes "returned to the Treasury" in payment of taxes and in the purchase of bonds. That this is a quibble is, of course, plain, and it is impossible to characterize it, considering who the author is, in language that would seem moderate. The result of acting on it will probably be the following:

1. The assumption by the Government, without any clear or definite warrant of law, or any proper checks and restraints, of the functions of a bank, managed by one man, armed with enormous and irresponsible power over the money market.

2. The confirmation and further diffusion of the growing and dangerous popular delusion that whatever the Government stamps as money is good money, and may be of indefinite amount, and that Congress is the proper judge of the amount needed at any particular time.

3. The encouragement of that other and more dangerous delusion which has been born in this country mainly of the issue of irredeemable paper—that the Government is responsible for the condition of industry and the prosperity of the people in other ways than through the provision of security, and, as an inexhaustible fountain of wealth, may be fairly called on to provide remunerative employment for all who seek it.

That Secretary Sherman's plan, and, above all, his shifty, evasive, and changeful utterances on all financial problems, will but strengthen all the alarming tendencies of the day, seems at this moment highly probable, and it would be a great misfortune if his proposed attempt to disregard the law, whatever one may think of his motives, passed without the protest both of honest and far-seeing men. If he means to reissue the greenbacks, he ought in decency to ask Congress that they may be deprived of their legal-tender character and allowed to circulate for what they are worth as Government promissory notes. It is exceedingly doubtful in any case whether his reissues would be accepted as anything more than this, and whether the courts would hold them to be a legal tender.

THE MORAL OF TWEED'S CAREER.

THE death of Tweed, the late Boss of this city, has drawn forth the usual number of funeral discourses, both from the press and the pulpit, and by most of them he has been made to serve as a warning of extraordinary solemnity against dishonest practices and sensual indulgence. We cannot help thinking that this is great waste of a fine and conspicuous example. The only preacher, within our observation, who has turned it to proper account is the New York *Times*, in pointing out that what Tweed's career most effectively illustrated was not the inexpediency of individual wickedness, but the badness of the social conditions in which such wickedness could be so successful. There is no city in the civilized world which does not contain plenty of men capable of doing all that Tweed did and more, if they got a chance. London, Paris, Vienna, Berlin, Boston, and Philadelphia, all have them in abundance; men, we venture to say, with full as much ability and audacity, with as huge a greed for money and as capacious stomachs. In every one of these cities there are scores of "mute inglorious" Tweeds, waiting for an opportunity to play his part. If we never hear of them the reason will be, not that *he* was a man of matchless powers of mischief, but that the community they live in will not give them a chance of imitating him. He was undoubtedly an eminent man in his field, but he was not an eminently bad man. With similar culture and manure dozens like him could be raised in a year in any great capital, and by going to any State prison much more valuable illustrations of the consequences of knavery might be produced for the use of the Sunday-school teacher.

To say that he was produced by certain social conditions is, however, not strictly accurate. He was produced by certain political conditions which grew into existence almost without the knowledge of the American public, and to which their eyes were only fairly opened by his rise and fall. American political theories and traditions had made absolutely no provision and provided no place for the community which raised him. According to these theories and traditions, when a number of capitalists, owning or controlling vast amounts of property, collect for the transaction of business at the mouth of a great river and draw around them hundreds of thousands of poor, ignorant, or shiftless persons to work for them in their warehouses and factories and docks, these hundreds of thousands become animated by an eager desire for efficient, orderly, and economical municipal government, and unite with the property-owners for its creation and maintenance; they become, in short, the personage known in American jurisprudence as "the people," inheriting the supposed attributes of the sovereign of the Old World—that is, a perspicacious, vigilant, upright master, keeping a watchful eye over the public interests, and careful in the selection of public servants. In fact, however, the growth of American cities has followed no such lines. The population by which they have been rapidly built up during the past twenty-five years has had many of the characteristics of a plebs, and rapidly began to ask for leaders which should put it in the way of living off the rich without violating the law. Tweed succeeded because he was the first to perceive the work which this class wished to have done, and the first to discover the way of doing it. Having once secured, through the ignorant, greedy vote, the control of the local taxation, he introduced Americans to another startling novelty—the wholesale corruptibility of legislatures composed of country farmers and lawyers of small means, by the use of sums which far exceeded with most of them the possible savings of a frugal and successful life. With the instruments in his hands, his work, as we all know, was perfectly easy. He met with no check from the very first until the exposure came. And let us remember that he fell without loss of reputation among the bulk of his supporters. The bulk of the poorer voters of this city to-day revere his memory, and look on him as the victim of rich men's malice; as, in short, a friend of the needy who applied the public funds, with as little waste as was possible under the circumstances, to the purposes to which they ought to be applied—and that is to the making of work for the workingman. The odium heaped on him in the pulpits last Sunday does not exist in the lower stratum of New York society. We can appeal for the truth of this to any one who has during the past six years taken the trouble to test the opinion of this stratum on Tweed's life and fate.

The intelligent and wealthy classes, of course, do not like to believe these things, and men with political ambition, if they believe them, do not dare to utter them; but they are none the less true and important. They constitute "the great-city problem," which is perhaps now the most pressing one of American politics, but which politicians and primitive Americans (with the New England town governments still fresh in their minds, however) either refuse to see or shrink from dealing with. It is the problem, too, by which the seeds of that communistic spirit which is now assailing the nation's finances was sown and is being steadily fostered. The power lodged in the hands of the penniless municipal voter over large masses of property furnishes either a constant lesson in spoliation or a temptation to spoliation, and is keeping alive or stimulating all over the Union the schemes for getting a living out of the Government by hook or by crook which are now showing themselves in the arena of national politics, and even becoming the foundation of a party. In this new field—new in America—Tweed was simply the earliest worker, but he was not a particularly skilful worker. He lost his head very early in the day, and thus precipitated his downfall. Had he gone more slowly and carried on his operations on a smaller scale, and been simpler in his habits and less ostentatious in his pleasures, he could have retained his power until now, and might have strengthened it and made his overthrow far more difficult. A villain of more brains would have had a modest dwelling and would have guzzled in secret. He found, however, the seizure of the government and the malversation of its funds so easy at the outset that he was thrown off his guard. His successors here and elsewhere will not imitate him in this, but that he will have successors there is no doubt. The resolute refusal of the community which he spoiled and corrupted to make any essential change in the system by which he rose, or even to acknowledge the desirableness of a change, is a kind of standing invitation to all the demagogues of the world to come here and try their hands on us again, and the taxing system of nearly every city in the Union offers them a ready instrument for the attempt.

THE AMERICAN COLONY IN FRANCE.

PARIS, March 20, 1878.

NO one can have resided long abroad without noticing that Americans as a people are neither liked nor respected by the French, in spite of their purchasing power and of the pretty speeches made at the Grand Hôtel dinners about Lafayette, Rochambeau & Co. Frenchmen are not prejudiced against us by the stories of our barbarous customs and financial irregularities at home. They only shrug their shoulders when they hear them. "Que voulez-vous! chaque pays a ses usages," as one of them said to a lady who complained that African cannibals had eaten her

husband. They judge us by what they see here. Some thoroughly good Americans get to Paris even during life, but what are they compared with the crowd which quick travel and low fares impel every season over Europe? The United States has become the *officina viatorum*. Our citizens, male and female, manage to beg, borrow, or steal at least one trip to Europe; and as misfortunes never come single, they bring their children with them—numerous, noisy, and uncontrolled. French and English children are left at home when their parents travel. They also bring with them a wonderful ignorance of the habits, behavior, and feelings of Europeans. Indeed there are many whose untutored minds expect to find here a repetition of the ways and manners of their native town. Everything is compared with home, and nothing that differs seems as good. "Paris is a' very weel, but Peebles for pleasure." The Boulevard is not like Lake Avenue, and at the cafés you cannot get pork and beans or fried ham. We except the Bon-Marché shop in the Rue de Bac; that is the Caaba of the pilgrimage of American women.

Plato says that a certain brisk pertness and self-assertion is the result of democratic government. For other reasons America is not a good training-school of manners for the multitude. Not that Americans wish to be offensive—on the contrary, they are very good-natured; but they seem not to know the kind of treatment or attention (*égards* is the French word) a civilized being has the right to expect from a stranger. They simply do as they are willing to be done by. But here the standard of out-door manners is very different, and American shortcomings in this respect cause many uncomplimentary remarks. We overheard an exasperated Frenchman assert that no people were so ill-mannered as the Americans, except the Germans. Another difficulty for the American traveller is that he does not know his place in this complex society. In his ignorance of custom and etiquette he will thrust himself even upon royalty, utterly unconscious of the disgust he is producing; or, if ignorant of all languages but his own, he will bestow his company upon hotel servants who speak English, confiding to them his troubles and consulting them about his little wants and purchases. A distinguished New York politician, who missed, no doubt, in Paris his home constituency of ragamuffins, used to address the servants of his hotel, urging them to go to America, where all men were equal and labor respected. Our lucky countrymen who have struck oil or bonanzas have more pretension. They hire a courier, to whom they bow down—an accomplished creature, who speaks six languages unintelligibly, and who knows the best hotels and the best shops all over the Continent. He tells them what to do, what to eat, how to dress; drives with them inside of their landau, pats them on the back when he is good-humored and condescending, smokes in their faces, makes love to the maid, and pockets his ten per cent. on everything they buy.

In October, when the summer flood ebbs homeward, numerous stragglers are left stranded, who give various reasons for stopping. Health, education of children, economy, study of science or art. Some of the students follow the apostolic rule of travel, take neither scrip nor purse, and find it difficult to pay their bills without borrowing, and some are mere adventurers, "gentlemen of independent morals and ladies unattached." One meets single ladies who have come to study for prima donnas or for "general culture," with no visible means of support; married ladies without their husbands (many American families, like their mercantile houses, having branches on this side); widows of the class called *vedova pericolante* in Italy, sometimes alone, sometimes with a daughter pretty, dressy, not bashful, *qui s'habille et babille;* and young girls travelling together without chaperonage or duennage, *sans peur* and all, of course, *sans reproche;* but no amount of conscious rectitude will get them the respect of people who are accustomed to draw certain inferences from certain appearances. Above and beyond these waifs and strays is the "Colonie Américaine," a collection of families who inhabit the Champs Elysées and the quarter about the Arc de Triomphe. Some of them reside abroad to save money, and others because they wish to spend it, and their sudden fortunes have given them no positions at home. The general theory is that they can lead an easier life and get more comfort and luxury from their incomes than they could in the United States, which is probably true. The colonists, in spite of repeated attacks on French society, see very little of it, except, indeed, a few young men attracted by dinners, dances, and daughters with "*dots.*" They lead an idle, aimless existence, enlivened for the men by daily visits to Drexel's or Cuvillier's; and for the women, by tea-drinkings and gossip like that of a small New England village in the winter season—a life not without its attractions for the ladies, especially when they turn Catholic, which is rather the swell thing to do; but, one would think, insufferably dull to a man of energy and character. The Colonie has its little gradations of rank and its *grandes dames*. All unite in sneering at those they call "low Americans." Foreigners do not perceive this distinction, but look upon all Americans as occupying the same social plane, differing only in spending more or less money. Of their own country the Colonie speaks with mild contempt: "Better fifty years of Paris than a cycle of Broadway." New York is provincial; the streets are unswept; men chew tobacco; the servants are not respectful and get very high wages. "It is not fit for a gentleman to live in." All the uses of that new world seem weary, stale, flat, and unprofitable. The Colonie washes its hands of it and addresses new-comers as "You Americans." And yet, in spite of these excellent sentiments, very good apartments, correct servants, strict adherence to the fashions of the natives and prompt payment, the Colonie is not respected. No educated Frenchman or Englishman can understand why a man who is soundly constituted, mentally, morally, and financially, should permanently reside out of his own country, unless as a merchant or a diplomat or an exile for cause.

The critical foreigner is also amused by the love of orders and titles displayed even by the sturdiest American democrats. A red ribbon, or ribbon of any color, is ostentatiously worn, whether derived from a jury position in some International Exposition, or given by the late Emperor as a reward for inventing a clothes-wringer or a new method of making artificial teeth. *Décoré comme un dentiste américain* has become a French proverb. It is said that one of our officials on this side, keenly feeling that this outward and visible sign was wanting to complete the get-up of a great ex-military traveller, invented an order composed of the badges of the different army corps during the war, which was worn both by the great man and himself about their necks on suitable occasions. American girls can marry titles, but they are manifestly unattainable by American men. They try to meet this difficulty by the use of Honorable. A man who has held any office, from President to constable, thinks himself entitled to put this word before his name; or if he has been a volunteer officer, or even honorary aid-de-camp to the governor of his State, he puts Major or Colonel on his visiting cards and conspicuously on his luggage. This particular weakness obtains as much in the aristocratic class of Americans as in the "lower" varieties of the race. There *is* an aristocracy in the United States, although it may be difficult to note in what it consists. Perhaps a rough but tolerable definition is that the father of the American aristocrat kept the shop and bequeathed the fortune. As a consequence, the descendant of the rich family has a better education in the amenities and accomplishments of social life than the fellow-citizen whose head has just appeared above the surface. Indeed, in my opinion there is no nicer person to be found on the planet than a well-bred American of education and sense. But when established here their good sense deserts them on this point. Their sympathy with European manners and social distinctions "o'erleaps itself and falls on the other side." Laboulaye hit the mark when he said: "*Tout Américain à Paris se croit gentilhomme.*" Although they only see society abroad as the Mussulman women do Paradise, through the boundary railings, they wish to live near the upper class and to live like it. They have no other way of asserting their position. Hence many spend more than they can afford; more, certainly, than foreigners of the same fortune would think themselves justified in spending. By some mysterious process of reasoning they consider it necessary to live up to an imaginary social dignity at home. All that the "right people" do they carefully imitate, struggling to avoid sinning against the conventionalities in equipage, dress, and habits. Thinking always what foreigners will think of them begets an uncomfortable self-consciousness, a want of confidence in themselves. They are not genuine; only imitations. The "low" American has here the advantage. He may have little taste or appreciation of art, he may be too ready to assert himself and to boast of his country, but he really believes in himself and in his country. The better-bred man, who looks down upon him, is in his inmost heart ashamed of his country. He will resent any open attack upon it with vigor; he may talk of its wealth, prosperity, ingenuity, and enterprise, but secretly he wishes he had been born elsewhere. If you care to make him your friend for life, tell him he has been taken for an Englishman. It is the greatest compliment you can pay him. Give him time, and ten to one he will tell you himself how often this "odd mistake" has occurred. To England he turns his face when he worships. English opinion decides all social questions for him without appeal. He wears only English clothes, and tries hard to catch the accent. He is familiar with Burke and the history of English families, and does not forget to mention his English friends. If his name is Smith Brown he connects these two aris-

tocratic patronymics with a hyphen, or if it be only Smith, he will spell it with a *y*, trace his descent from the noble family of that name, and adopt their crest on his note-paper and his harness. We are the only powerful nation whose sons and daughters display this lack of moral fibre. Englishmen and Frenchmen are proud of being English and French, and generally proclaim their nationality. The Anglo-American has no confidence in his ability to command respect as an American; he tacitly admits himself to be an inferior creature.

Herein lies a double foolishness. The world, like Alfieri, prefers *originale, anche tristo, a ottima copia*. A certain flavor of the soil is never disagreeable in a well-bred person; rather, it is attractive, as a slight foreign accent is pleasing in a stranger who speaks English well. It is much better form to be American and to have a national individuality of one's own than to offer to foreign eyes a pale imitation of European models.

> "That man's the best cosmopolite
> Who loves his native country best."

In the second place, imitations are always failures. As false teeth and hair-dye deceive nobody, and he who runs may read the age of the person who uses them, so no American, dress, talk, and live as he may, can shake off the land of his birth. The Yankee will show through the London clothes, the carefully studied accent, and the foreign habits. It is impossible long to conceal the melancholy reality.

I. M.

Notes.

PORTER & COATES, Philadelphia, will republish in this country 'A Trip up the Volga to the Fair of Nishni-Novgorod,' by H. A. Munro-Butler-Johnstone, M.P.——Lee & Shepard, Boston, have published 'Music and Some Musical People,' by James M. Trotter, a work curious for its "sketches of the lives of remarkable musicians of the colored race, with portraits," and its "appendix containing copies of music composed by colored men." The author served in one of the Massachusetts colored regiments during the war as a non-commissioned officer.——Prof. C. E. Norton, Cambridge, Mass., proposes to issue a set of thirty or thirty-five heliotype reproductions of Turner's rare and costly etchings of the designs of the 'Liber Studiorum.' They will be made under Prof. Norton's scrupulous supervision from the etchings loaned for the purpose by Mr. Ruskin, and will be issued to subscribers only at ten dollars a set.——The important article in No. 5 of the *Pennsylvania Magazine of History and Biography* is Mr. Townsend's painstaking account of Charles Armand Tufin, Marquis de la Rouerie, one of the foreign officers in our Revolutionary service whose names have been almost forgotten, and who are not always fortunate in finding a Kapp to restore them to their rightful place in history and in the gratitude of the nation.——Among the amenities of the religious press we have lately been struck by the following announcement: "Marriage notices, not exceeding three lines in length, except when sent by an officiating minister who promotes the circulation of this journal, fifty cents."——*Nature* celebrates the three-hundredth anniversary of the birth of William Harvey by publishing a characteristic biographical sketch of him from the pen of Professor Huxley. The steel portrait (in the "Scientific Worthies" series) which was to have accompanied the sketch has been delayed, but will be supplied next month.——*Cocagne*, the Cornell equivalent of the Harvard *Lampoon*, contains in its first number some decidedly clever drawing, some that is crude enough, and letter-press of a grade which we hope represents the low-water mark of the literary capacity of the University.——*La Patria* is a monthly magazine edited at Bogotá, Colombia, by Adriano Paez, and issued in two separate parts—literary, and political and educational. The "Revista Politica y de Instruccion Publica" for February is noticeable from its references to the United States, having articles on "The Great Men of America (Washington)" "Great Philanthropists (Peabody)," "Public Instruction in the United States," "Methods of Instruction in the United States" by J. P. Wickersham), "The Street Arabs of New York," "The Cotton Industry of the United States," etc., etc.——Not long since we called attention to the treatment of the Franco-German war in the German "Volksliteratur." Now the Germans, who make monographs on everything, have prepared one on the French war-poetry. Dr. Jos. Schlüter, in his 'Die französische Kriegs- und Revanchedichtung' (Heilbronn, 1878), has prepared a full and in some aspects rather amusing history and anthology of the poetical insults heaped upon his countrymen by their mortified foes since the war—amusing because the French eagerness to abuse and the German indignation at being abused seem equally childish to an outsider; and yet not altogether amusing, because all this sound and fury does signify something, and one cannot help remembering what an amount of misery national hate may lead to.——A poetic rendering of Longfellow's "Pandora" into German by Isabella Schuchardt has just been published at Hamburg.——No. 72 of the Berlin Geographical Society's *Zeitschrift* contains the usual summary by Dr. Koner of the geographical publications of the past year. In No. 73 Dr. Klunzinger contributes a systematic account of his observations of the vertebrate fauna in and about the Red Sea during his stay at Koseir, and A. Bastian describes the pictured rocks of Colombia, which are also figured in plates.——Recent German works of importance are A. Springer's 'Raphael and Michael Angelo: Book I., to the death of Julius II.'; H. Brugsch-Bey's 'Journey to the Great Oasis, El Khargeh, in the Libyan Desert,' with 27 plates; Calvary's new edition of Becker's 'Charikles,' by H. Göll, nearly completed; A. Goebel's first volume of a 'Lexilogus to Homer and the Homeridæ'; and Vámbéry's 'Etymological Dictionary of the Turko-Tataric Languages,' published by Brockhaus.

—Mr. William Minturn, on behalf of the Société des Gens de Lettres, calls the attention of our public to the International Literary Congress to be held at Paris during the Exposition. "The chief object of this Congress, to which all foreign writers are invited, will be the discussion of the questions relating to international copyright, and the recognition of this right, which heretofore diplomatic conventions have been powerless to protect." Victor Hugo is expected to deliver the opening address.

—Mr. Daniel Cottier's collection of pictures, now for the first time seen side by side in the gallery No. 817 Broadway, is a peculiar demonstration of a certain phase of art-belief. The keynote, struck by the grand Corot, the "Orpheus" from the Demidoff collection, is harmoniously prolonged through the half a score other whispering Corots, the sombre and brooding Millets, the rich but still dreamy utterances of Rousseau and Diaz—which acknowledge a certain enjoyment of life—and the exalted color-raptures of Monticelli. Monticelli and Matthew Maris, artists whose works have been almost exclusively bought by artists, and whose lives have been squalid epics of romantic poverty, have been brought out by Mr. Cottier into broad daylight and in considerable numbers, though the intimate and personal appeal they both make to the artistic sense gives them a shrinking air when a Philister brings his creaking boots into the gallery. The first-named used to sell his fancies at starving prices to Diaz and Daubigny and Théodore Rousseau; they seem like Turner's dreams and schemes of color-melody applied to figure-subjects; the other, the youngest of three brothers Maris, a plotter of intricate themes while they have been working for fame, exhibits a cool and mystical water-scene in a privacy of willows, and a Norman girl apprised of the coming of her lover by the quick ears of her goats. Three studies by Vollon, each of fine quality, still-life subjects by Philippe Rousseau, a Velasquez-like hunting-group by Roybet, a *Chouan* by Ribot, and a positive figure of a housewife by Bonvin, painted in the most realistic of the many manners of Jan Steen, give the accent of literalness here and there. The general impression, however, is as unlike that of a dealer's gallery as possible, and reminds us of the secrets of the deep dragged into the daylight of a public aquarium. Such a collection of art for artists, such a singular gage of defiance thrown down to the opinions of the market and the loves of the picture-dealers, has not been known, we think, to London or Paris or any other capital.

—The "Exiles," as given at Booth's Theatre, is described in the playbills as a "drama in five acts and nine tableaux." The *dramatis personæ* are so numerous as to bring out the "entire strength of the company." The stage effects are good, and the acting is not sufficiently marked, either for goodness or badness, to interfere with one's appreciation of the play, as such. It is, we believe, founded on a novel, which, by a series of adaptations and other metamorphoses, has at length become a highly sensational melodrama. The scene is laid in St. Petersburg and Siberia, and the "Exiles" are the unfortunate and innocent victims of the plot of *Schelm*, "Chief of the Fifth Bureau of Imperial Police." He loves the beautiful *Nadege Lanine*, but his advances are repelled, for she is the betrothed bride of *Max de Lussières*, a Frenchman (very well acted by Mr. D. H. Harkins). *Schelm*, whose villany knows no bounds, has the lovers, as well as *Nadege's* brother and her brother's wife (*Count Vladimir Lanine* and the *Countess Tatiana*), all sent off to Siberia, on a false accu-

sation of participation in a Nihilist conspiracy. They now go through much privation and wretchedness, but in the nick of time, disguised as a priest, the faithful servant of the Frenchman comes to their rescue, and on the reappearance of the hated *Schelm* the men escape, to take part in a rising for their liberty. The women fall into his clutches, however, and he forces a promise of marriage from *Nadege* as the price of his assistance in saving the life of her sister-in-law, who has swooned in the snow and lies exhausted and dying. This brings us to the end of act third, and precisely what takes place afterwards we are unable to state definitely, inasmuch as the extraordinary length of the performance on the evening when we saw it precluded the possibility of staying it out. The plot is undoubtedly interesting, and with better acting might have a long run. Who Prince Lubomirsky, one of the persons jointly concerned in the authorship of the play, may be, we do not know, but from his name take him to be a member of a state which is not over fond of the Russians. The play is certainly strongly anti-Russian, exhibiting as it does the official rascality and tyranny of that people at their worst. By changing the Frenchman to an Englishman, and introducing a few pointed allusions to passing events, the "Exiles" might be converted into a play which would have a great success in England. Here it depends for its interest upon purely human appeals to our sympathies. It is melodramatic in the use the authors make of situations, as distinguished from the dramatic development of character; but there is in *Schelm*, in *Max*, as well as the *Countess Tatiana* and *Nadege*, room for acting of a higher order than plays in "five acts and nine tableaus" usually provide. The tableaus were generally very good—though in one of them we noticed a curious illustration of the difficulty of reconciling art with morality; the miscellaneous teams of animals harnessed to the sledges in the third act having to be helped with their somewhat excessive burden by active "supes" in the rear—a compromise between the professional passion for theatrical effect and the modern spirit of humanity, which does great credit to the heart, if not the head, of the manager.

—Miss Elizabeth Hoar, who died in Cambridge on the 7th instant, was a sister of the well-known Senator and Judge of that name, and had the intellectual stamp of the family in a marked degree. Her scholarly acquirements were akin to those of her life-long friend Mrs. Ripley, of Concord, whose biography she prepared for the Centennial volume called "Worthy Women of Our First Century"—the only monument of her literary skill which survives in print. In 1844 she accompanied her father, the late Samuel Hoar, on his memorable mission to South Carolina on behalf of the colored seamen of Massachusetts, whose liberties were endangered at that port, and suffered expulsion with him. Her maternal grandfather was Roger Sherman. Miss Hoar was in the sixty-fourth year of her age. Another recent death which should not pass unnoticed is that of Dr. Charles Pickering, naturalist of the Wilkes Expedition, and author of 'The Races of Men and their Geographical Distribution' (1848), 'The Geographical Distribution of Animals and Plants' (1854), and 'The Chronological History of Plants,' now passing through the press. Dr. Pickering was a grandson of Colonel Timothy Pickering, and a graduate of Harvard in 1823. He died March 17.

—Our readers have doubtless had enough of the controversy, transferred to these columns, over the Philadelphia Harvard examinations for women, so far as courses and catalogues are concerned. The discussion had, however, drifted away from the main points—the main points not only in Philadelphia but wherever the Harvard examinations are set up—and it has just been incisively recalled to them by Prof. Charles F. Dunbar, of the Harvard Faculty. In the April number of the *Penn Monthly* he undertakes to show how gratuitous Provost Stillé's opposition was, not only on such trivial and unworthy grounds as that Harvard was an intruder and trespasser, and that the innovations in her curriculum were regarded by the other New-England colleges as "heresy," but on these three, viz., (1) that there was no need of the examinations in Philadelphia, (2) that as they were probably committed to the charge of the younger instructors, the certificate of proficiency carried no weight, and (3) that they were pernicious as cultivating the memory at the expense of the other faculties, and as encouraging the idea that thorough scholarship could be acquired privately without the aid of schools or teachers. We shall not try to summarize Professor Dunbar's temperate but crushing rejoinders on all these issues; but we think it will be clear to most unprejudiced readers that Provost Stillé had not prepared himself for this encounter by mastering the facts involved, and that his public protest against examinations which his own University had declined to furnish, was prompted by wounded *amour propre;* in other words, that he himself is in the category of "the average school-teacher," whom "nothing irritates more," to use his own words, than the demand for exceptional instruction and the consequent derangement of his general system of teaching.

—The reviews of Mr. Cook's 'Biology' and 'Transcendentalism' in the April number of the *Bibliotheca Sacra* belong to the class of apologetics, and are rather good specimens of the class. But the "scholar" who apologizes for the 'Transcendentalism' intimates that carefulness and propriety, however desirable in an essay on grave topics, are somewhat needless in an oration, as tending to be wearisome. The "scientist" who reviews the 'Biology'—which bristles from head to tail with dogmatic proof and positive demonstration—has discovered that "the argument of the work, although not prominently so stated, is precisely the argument of Butler's 'Analogy,' modernized, popularized, and brought down to the last discoveries in the domain of organic nature." This likening of the 'Biology' to the 'Analogy,' whether for matter or tone, is most original. Of all the Butlers it is not in the tribe of Joseph that a parallel to "the Lecturer" would ordinarily be sought.

—A correspondent writes us from London, under date of March 22:

"There has for a long time been no more interesting exhibition in London than the little collection of drawings by Turner, the property of Mr. Ruskin, which is now to be seen in Bond Street. I call it a 'little' collection because, although the result of many years of ardent activity on Mr. Ruskin's part, it has been much curtailed by his liberality in parting with some of its most valuable features, many of which he has given away to the two Universities. In its decimated condition, however, it contains many treasures. The interest of the exhibition is increased, moreover, by the fact that Mr. Ruskin is just now lying very ill, and that telegrams and bulletins relating to his condition are suspended in the room, and also by the fact that the catalogue consisted of a collection of notes made by the owner of the drawings. This catalogue is extremely characteristic, containing, as it does, amid much exquisite criticism and much that is a genuine help to enjoyment, many of those incongruous utterances of which the illustrious art-teacher has of late been so prolific. I may add that a portion of it appears to have been dictated at the moment when Mr. Ruskin felt the approach of his illness, and that these pages bear the marks of this condition to a degree which makes it seem almost a cruelty—an irony—to have published them. A drawback, on the other hand, is that the drawings are hung quite without method and without any reference to their chronological order. The room, which is small, is also densely crowded with (apparently most appreciative) visitors. But in spite of drawbacks it is possible to obtain an abiding impression of the genius of this mightiest of all painters of landscape. I have not space to enumerate these drawings, which are chiefly in water-colors. They are divided in the catalogue into groups which correspond to decades in the painter's life, and to which Mr. Ruskin has affixed characteristic headings: '2d Group—The Rock-Foundations; Switzerland, 1800–1810. 3d Group—Dreamland; Italy, 1810–1820. 4th Group—Reality; England at Rest. 5th Group—Reality; England Disquieted. 6th Group—Meditation; England Passing Away. 8th Group—Morning; By the Riversides.' The English series in this list is decidedly the richest and finest, though the most valuable drawing in the collection is undoubtedly the splendid little 'Rouen' from the 'Rivers of France.' Turner rarely surpassed what he achieved within the few inches' space of this small sheet, rarely rendered more wonderfully the immensity and the impressiveness of nature than in the diminutive brush-work of this crimson western sky or the onward flow of this almost microscopic Seine. In the English drawings the subjects are usually of extreme loveliness, and worthy of Turner's transfiguring vision. That imaginative quality with which he invests his work is often such as to make the reader of the catalogue admit those ultra-metaphysical intentions which Mr. Ruskin attributes to him. From what Mr. Ruskin says about the beauty and delicacy of the work, as simple work, he at any rate rarely ventures to differ. And this is the lesson of these admirable drawings—the feeling they impart, that idealism like Turner's has for its main condition of beauty the fact that it rests upon a solidity of execution which almost defies ultimate analysis. In these water-colors of his healthiest time everything is equally light, clear, and unerring. There is never (save occasionally in the figures) a touch of violence. At the moment at which I write Mr. Ruskin continues seriously ill; but the crisis of his malady—which his almost violent activity during the last few years appears to have rendered inevitable—has, I believe, been passed. There are few persons who will not be interested in hearing of the recovery of a writer whose eccentricities of judgment have been numerous, but for whom, at least, it can be claimed that he is the author of some of the most splendid pages in our language, and that he has spent his life, his large capacity for emotion, and his fortune in a passionate—a too passionate—endeavor to avert, in many different lines, what he believed to be the wrong and to establish his rigid conception of the right."

—The American public is not ignorant of the division of sentiment in the Royal Geographical Society in regard to the proposed unreserved welcome to the explorer Stanley on his return from Africa—a welcome which was ultimately extended, in spite of all efforts to the contrary. Colonel Henry Yule, the learned geographer, whose name is indelibly associated with that of Marco Polo, retired from the Council of the Society in

consequence of its decision; and he, in conjunction with Mr. H. M. Hyndman, a fellow of the Society, whose endeavor to obtain a resolution of disapproval of certain acts of Stanley's was seconded by Colonel Yule but suppressed by the Society, has published a pamphlet which they call the 'Record of a Protest.' The acts in question were described by Mr. Stanley himself in his letters to the *Daily Telegraph*, and were committed on the way to, or on the shores and waters of, the Victoria Nyanza. They consisted of engagements with the natives in which attacks were repelled with unnecessary destruction of life and property, including the burning of villages; or in which Stanley was wantonly the aggressor in revenge for treachery already amply punished, and no longer of any consequence as affecting his freedom to pursue his explorations. The story is a long one and we cannot even summarize it here. Colonel Yule rehearses it with the greatest fairness, and Mr. Stanley's explanation at Willis's Rooms, based upon his diary, is reproduced with the other proceedings, articles in newspapers, speeches, letters, etc. We believe that no moralist can read this pamphlet without accepting Colonel Yule's conclusion as to the character of the deeds confessed (and explained) by Stanley. The duty of the Royal Society was, perhaps, not so clear, especially considering its lukewarmness towards Stanley after his return from Livingstone. There may also be some difference of opinion as to how much the British flag was stained by these proceedings under it. But the protest was right in spirit, and should have been frankly met by Stanley, who could have fallen back on his loyalty to his employers and to his followers as, next after his formidable armament, the chief cause of his excesses. We acquit him of bloodthirsty intentions or disposition, and believe he has shown as much tact as any explorer who had not to rely on "the unresistible might of weakness." And we believe he exculpates himself sincerely if not altogether logically in the outburst following the reading of his diary, and which will be found on page 38 of Colonel Yule's pamphlet.

LECKY'S HISTORY OF ENGLAND IN THE EIGHTEENTH CENTURY.*

I.

MR. LECKY'S book ought to have been entitled 'Essays on the Growth of the British Empire during the Eighteenth Century.' Such a title would have saved his work from the one serious criticism to which it is open, for it would have warned the public not to look for that complete, consecutive, and well-arranged narrative which they have a right to expect from an historian. Such a title would also have brought clearly into relief a feature in Mr. Lecky's work which is of pre-eminent importance and yet might easily escape notice. He has seized more clearly than most writers the fruitful idea that the importance of the eighteenth century in English history lies in the transformation of England into the British Empire, and further, that no part of British history can be understood unless the development of the Empire be regarded as a whole. The statesmen of the eighteenth century, for example, if judged by their triumphs, might rank among the greatest politicians the world has seen. They pacified the spirit of faction which seemed to be tearing England in pieces. They "closed," to use a modern expression, "the era of revolution." They united Scotland to England by a union which has now become so close that the term union hardly expresses the complete identity of what not two centuries ago were disunited and hostile nations. They decided the struggle for colonial empire between France and England, and, if human foresight be not utterly deceived, determined that the civilization of the new world shall bear for ever the stamp of English and not of French influence. While securing the Western continent for the Anglo-Saxon race they gained for England herself the empire of the East. Looked at, therefore, from its favorable side, the annals of England during the eighteenth century may be well described, in the words of Mr. Lecky, as the "broad" and "majestic stream of events bearing the fortunes of England to the first place among the empires of the world." But if the same statesmen be judged by their failures, they might be placed amongst the most incompetent leaders who have wasted the resources of a great people. Their misgovernment of Ireland, whether judged of by the damaging narrative of Mr. Lecky or by the damning apologies by Mr. Froude, exhibits in strange combination the opposite evils of anarchy and of tyranny. Their management of America forced a peaceful population to take up arms and drove loyal subjects into rebellion, whilst the object for which the mother country lavished her treasures and lost her colonies was one which, could it have been attained, would not after the lapse of a century have repaid to England one-tenth of the sums lost in the attempt to maintain a supremacy which, under proper management, would never have been challenged. Common sense, however, suggests that the history of a great people is never really a paradox, and that national triumphs and national calamities can never be explained by a series of antitheses. With nations as with men there is always a close connection between their weakness and their strength, and to examine the annals of the British Empire as a whole is to advance half way towards understanding both the strength and the weakness of what may be called the imperial policy. That Mr. Lecky has done this, and has seen that the dealings, for instance, of English statesmen with Scotland throw light on their dealings with Ireland, is his peculiar merit, and the best service we can render our readers is to show by a few examples gathered from his pages how the history of one part of the Empire illustrates and is in turn illuminated by the history of another.

The condition of Scotland, for example, before the union casts a very curious light on the state of Ireland. Mr. Lecky has himself pointed out that the lawlessness of the Highlands bears a strong similarity to the lawlessness which, according to Mr. Froude, has its source in some special depravity of Irish nature. He might have pushed the comparison further with advantage. The tragedy of the Darien Scheme remains a permanent memorial of the bitterness of feeling which may grow up between nations whom nature meant to form one people. The judicial murder of Captain Green is proof enough that, under the influence of popular excitement, "Scotch ideas" may deviate at least as far from justice as any of the "Irish ideas" recorded with cynical complacency by Mr. Froude. If any one supposes that what has been termed the "worship of inequality" did not make Englishmen in the last century as slow to admit that Scotchmen were really fellow-citizens as Englishmen of the present century have been slow to admit that Irish Catholics have a claim to something more than mere legal equality, he can do nothing better than study the history of the fifty years which followed the Scotch union. Bute was hated much more because he was a Scotchman than because he was a Tory, and Junius was not more truly the representative of popular sentiment when he attacked the most contemptible of George the Third's contemptible ministers, than when he assailed with ignorant invective the greatest judge who has sat on the English Bench. "It will be observed," again, as Mr. Lecky points out, "that the conduct of England in destroying the trade and the most important manufacture of Ireland was a much less exceptional proceeding than Irish writers are disposed to maintain. England did to Ireland little more than she had done to America and to Scotland, and she acted in accordance with commercial principles that then governed all Colonial policy. It was a fundamental maxim that the commercial interests of a dependency should be wholly subordinated to those of the mother country, and to an English mind there was no reason why this maxim should not be rigidly applied to Ireland." In other words, a mistaken and selfish theory, carried out to its full logical results, ruined Ireland, and (what is the point here worth observation) adherence to exactly the same theory lost England her American colonies. Her failure in America, that is to say, both illustrates and is in turn explained by her failure in Ireland.

If we turn from the outlying parts of the Empire to its centre we shall again find the same marked connection between the condition of each portion of the imperial fabric. Mr. Lecky dwells at considerable length on the disgraceful disorderliness of the streets of London, and readers who like historical gossip may find ample amusement in reading his account of the achievements of the Mohawks and other pretty gentlemen who playfully crushed the noses, poked out the eyes, and slashed the bodies of peaceable men and women who had the misfortune to be out in London streets of an evening; but students who wish for instruction will reflect that the traits of London life have a serious importance. They exhibit in a concrete form that weakness of the central government which in England, and, to a certain extent, even on the Continent, characterized the eighteenth century. In England no body of police, except the small corps of Bow-street runners, were in existence. The army was generally not much larger than the force kept up in ordinary times in this country. Hence, if large popular demonstrations took place the Government became helpless. An Edinburgh mob hung Porteus. A London mob, in 1780, held for three days possession of the town, opened Newgate, and burnt every Roman Catholic chapel within their reach. Over large parts of the coast bodies of smugglers held their own against revenue officers, and, if Mr. Lecky has not been deceived into taking exceptional cases for examples of the ordinary state of things, highwaymen were a terror to travellers even within the metropolitan counties. When

* 'A History of England in the Eighteenth Century. By William Edward Hartpole Lecky.' 2 vols. London: Longmans, Green & Co.; New York: D. Appleton & Co. 1878

the fact is realized that the organization of the state fell far short of that completeness which it has attained in modern England, some of the strangest features of Irish history become at least intelligible. Mr. Froude's pages record a state of lawlessness which, even if exaggerated by his rhetoric and prejudice, had undoubtedly a real existence; but when the state of the Empire is studied as a whole, the fact becomes apparent that utter lawlessness in Galway is the result of the same causes which produced nightly disorder in London.

It also becomes clear that, paradoxical though the assertion sounds, there was a close connection between the weakness and the strength of the Empire. The weak points of the political system were that the old social organization derived from feudalism had been suffered gradually to die away, whilst no pains had been taken to replace it by an improved system of administration; that, from Walpole downwards, ministers of the Crown were content as far as possible to leave things alone; and, lastly, that the whole national policy was influenced by commercial ideas, and by the real or supposed interests of the mercantile classes. Now, in Great Britain, where society rested on the whole on a sound basis, this policy of practical *laissez faire* had considerable merits. It soothed the bitterness of party spirit, and gave time for the nation to right itself after the disturbance of a revolutionary period. It enabled Puritans to turn into Whigs, and Jacobites into Tories. It allowed full play to the natural resources of the country. In spite of pauperism and drink, the poorer classes flourished. Abuses, no doubt, grew up, but national prosperity outgrew them. If the clergy were indolent and self-indulgent, they became practically tolerant, and were on the whole popular. The mercantile energy of the nation gained for England the Indian Empire, checked the power of France, and supplied the force which carried the policy of Pitt to its triumphant success. Where, as in Ireland, there was need of bold remedies applied to inveterate social diseases, the English statesmen of the eighteenth century failed. Where, as in England and Scotland, the main need of the country was to be at peace and to be left alone, the same statesmen succeeded. Their work was, at the end of the century, tested by the severest test which any work of statesmanship has ever stood. If the Whigs, who governed England for half a century, need, as they certainly do, an apology for many shortcomings, they may find it in the fact that their policy turned a country distracted by factions nearly as fierce and far more corrupt than the parties which distract modern France, into a state so firmly knit together that it braved unmoved the storms of the great Revolution and the power of the great Napoleon.

MUHAMMADANISM.*

AS, alike for their matter and for their manner, we have to commend Major Osborn for his two volumes, the fruit of long years of research and reflection, so we may congratulate him on the opportuneness of their appearance. Our readers will not soon have forgotten the tepidity of aversion to slavery and its horrors which, at the time of our temporary disruption, all at once stole over the British conscience. In its twofold function of exponent of the English sentiment of the hour and of creator of that sentiment, the London *Times*, as many must remember, even went so far, one memorable day, as to venture an essay in the theological line, with "bonds" as its pious text. We of the North had already been demonstrated to be hardly better than an illiterate rabble of rapacious and puritanic shopkeepers, much given withal to the unpardonable sins of undisguised expectoration and a nasal twang. Our odious career was to be endured no longer; and, finally, a new rendering of the passage about Saint Paul and Onesimus was delivered by way of an *ictus gratiosus*, for which we were to premise due thanks and then give up the ghost. To the same spirit that moved the *Times* to turn Biblical expositor may be traced the free handling of sundry old-fashioned ideas which has been observed across the ocean since the embroilment between Russia and the Turk. To the British aristocracy and its ready tools Russia is Gog and Magog rolled into one, a mysterious monster at whom any quantity and any variety of vague vituperation may be hurled quite appropriately. On the other hand, the noble, fearless, cavalier-like Turk, even though he does torture and kill his prisoners, and though he entertains notions of the fair sex which are unfamiliar and abhorrent to uncultured and narrow-minded Philistines, yet is not he a follower of the faith of Muhammad? And Muhammad, is not he one of the great exemplars prescribed by an eminent Scotch philosopher as a fit object for hero-worship? And so it has come to pass that the English book-market is flooded with new and cheap editions of Sale's Koran; and beardless ensigns, who spell much as they pronounce, have discovered, after dawdling over the portentous rubbish, that the Arabian impostor was "a fine fellaw"; and Lord Beaconsfield, with his lieutenants and wirepullers, have all but succeeded in working up the nation to embark in a semi-crescentade against the interests of civilization, not to speak of commonsense. Looking to these facts, we hail the publication of Major Osborn's eloquent volumes as being especially seasonable, calculated as they are to counteract the unreason which threatens to precipitate our English friends into the perpetration of an enormous blunder and crime combined.

What Major Osborn has to offer us is a series of treatises, each consisting of several chapters, on Islam, the Fatimides, and the Khalifs of the House of Ommaya, in his first volume; and on the Church of Islam, the Rule of the Persians, and the Decline of the Khalifate, in his second volume. His references evince a wide range of reading; and since, besides being at home in Persian, he is acquainted with both French and German, it is unlikely that any noteworthy materials, available for his purpose, have escaped his scrutiny. His subject is, to be sure, one which appeals but slightly to general curiosity. Indeed, it is not far removed from being intrinsically repulsive. The rare grace, picturesqueness, and vigor of his style, however, are such that whatever topic he might choose to discourse on, he could not but make a most fascinating book. But the contents of his volumes are much too multifarious for us to think of conveying a conception of them by analysis or abridgment. Instead of attempting what is impracticable, we shall, therefore, content ourselves with quoting some of his general conclusions touching Muhammad, his religion, and the followers of that religion.

Of Muhammad he writes:

"To achieve worldly dominion, he has recourse to assassination; he perpetrates massacre; he makes a heathen superstition the keystone of his faith; and delivers to his followers, as a revelation from God, a mandate of universal war." "The Arab gloried in the traditional practices and customs of the desert—murder, predatory war, slavery, polygamy, concubinage. Muhammad impressed upon all these usages the seal of a divine sanction."

Regarding one of his main dogmas, we further read:

"Because Muhammad taught the doctrine of the unity of God, it has been too hastily concluded that he was a great moral and social reformer as well. But there is no charm in the abstract doctrine of the unity of God to elevate humanity. The essential point is the character attributed to this one God." . . . "Muhammad conceived of God as separated, by an impassable gulf, from the creatures He had made, and finding *His* ideal of human existence in the customs of the desert Arabs. To the end of time men were to venerate the black stone; to the end of time they were to practise slavery and polygamy, and believe in the doctrine of fatalism." "Sin, he taught, was a material pollution adhering to the body; and the Muhammadan jurisconsults, following out this notion, have reduced righteousness to a state of ceremonial purity, and sin to a state of ceremonial impurity. Thus, prayer is absolutely useless if any matter legally considered impure adheres to the person of the worshipper, even though he be unconscious of its presence. Prayer, also, is null and void unless the men and women praying are attired in a certain prescribed manner."

The traditions rank, in point of authority, but little below the Koran itself. Throughout these sin "is regarded as an external pollution, which can at once be rectified by the payment of a fine of some kind. Even murder demands no inward repentance, nor requires a heavier external punishment than the payment of a certain number of camels." Again:

"When one remembers that these traditions, thus implicitly believed in for many centuries, are a gigantic collection of false morality ridiculous legends about angels, demons, the origin of the world and of all created beings, absurd and often contradictory rules respecting ceremonial observances, the wonder is, not that Moslems should be steeped in ignorance, vice, and superstition, but that their moral and intellectual capacities have not been more completely crushed beneath this weight of rubbish."

As to Muhammadan law, an educt from the Koran: "The system, as a whole, rejects experience as a guide to deeper insight or a wider knowledge; tramples upon the teaching of the past; pays no heed to differences of climate, character, or history; but regards itself as a body of absolute truth, no jot or tittle of which can be rejected without incurring the everlasting wrath of God." And what is the upshot?

"Since the death of the Prophet, Islam has not been a religion so much as a barbarous code of laws, which consigns those who reject them to hopeless political servitude, and scornfully rejects all thought of improvement from within. Wherever the Muhammadan conqueror pene-

* 'Islam under the Arabs. By Robert Durie Osborn, Major in the Bengal Staff Corps.' London: Longmans, Green & Co. 1876. 'Islam under the Khalifs of Baghdad.' By the same. London: Seeley, Jackson & Halliday. 1877.

trates he enforces this code in all its unmitigated barbarism." . . . "There is a dismal identity in the decrepitude and corruption existing in all Moslem lands which points unmistakably to a common parentage." . . . "Sunk in an ever-deepening barbarism, a prey to almost every evil, social and political, which can descend upon much-enduring humanity, the Muhammadan still conceives himself to be the elect of God." "The further and the faster men progress elsewhere, the more hopeless becomes the position of the Moslem. He can only hate the knowledge which would gently lead him to the light." "No religion can rise higher than its source. Christendom will never ascend to a higher spiritual level than that manifested in the life of Christ; and the Muhammadan world, at its best, can never be more than an image of the gross vices and imperfect virtues which made up the character of Muhammad."

An excellent account of the puerile and fantastic science which every Muhammadan must accept as revealed truth will be found in 'Islam under the Arabs,' beginning at page 171. An Arab also firmly believes that his mother-tongue, in its antique form, is spoken in Heaven. As a parallel to this, it occurs to us that the patriotic and learned Goropius Becanus contended that Flemish was the language of Adam and Eve before their expulsion from Eden.

Having spent a good part of his life in India, and in constant intercourse with Muhammadans and Hindus, Major Osborn, naturally enough, allows himself here and there to glance, for the sake of illustration, at the country which, with its various religionists, he knows so well. In his view, "the rule of the Arabs in Asia was marked by all the defects of British rule in India, aggravated tenfold, and possessed none of its compensations." And how does he characterize the latter?

"The experience of British rule in India shows that where the subtle and persuasive power of sympathy is wanting, where social equality does not or cannot exist, there the gulf which divides the conqueror from the conquered remains unfilled. Within the boundaries of Hindostan we have established peace, and placed within the reach of her people the intellectual treasures which the happier West has accumulated; but we are further than ever from winning their affections. Never, perhaps, did the people of India regard the Englishman with a profounder dislike than at the present day." "What we have done for India is to convert it into a gigantic model prison. The discipline we have established is admirable; but the people know they are prisoners, and they hate us as their jailers." . . . "If we estimate the effects of British rule, not by trade statistics, but by its results on the spirit of man, we shall find that the races of India have declined in courage, and manliness, and all those qualities which produce a vigorous nation, in proportion to the period they have been subjected to the blighting influence of an alien despotism."

Further extracts of a kindred tenor we would fain give if we had space for them. The author's luminous and masterly article on the siege of Delhi, published some years ago in the *North American Review*, led us at the time to hope that we should hear from him again as a contributor to Indian history. And this hope, we are gratified to find, is likely to be realized. He now promises us, conditionally, a work on 'Islam in India.' The subject is one on which Major Osborn will all but absolutely be the first to break ground. Printed and manuscript, there exists a whole mine of records and dissertations in Persian and Urdû, which, towards the exhaustive treatment of it, he would be under the necessity of exploring. However, what with his learning, industry, constructiveness, philosophic stamp of mind, and evident facility in composition, there is hardly room for question that if he were to take it in hand the result would leave nothing to be desired.

RECENT NOVELS.*

WE have seldom met with a novel calculated to inspire the reader with a more lively curiosity as to its authorship than the 'Wreck of the *Grosvenor*.' From the first line to the last it is marked by power of so rare an order, managed with such an uncommon degree of skill, as to convince one that it must be the work of some writer of fiction of acknowledged standing. Yet there is nothing in the style to indicate the hand of any one with whose writings we are familiar on either side of the Atlantic. Some pains, apparently, have been taken to conceal the authorship, inasmuch as the whole story is told dramatically by the leading character. His style of narration still further confuses the matter, for it is that of a man well educated but not a gentleman by birth, whose vocabulary allows him great range of expression, and behind whom the author is completely concealed. Again, the scene of the story is entirely laid on board ship, and the description of the working of the vessel in fair weather or foul is technical and minute to the last degree. The sea-language employed is always correctly used, and some of the descriptions of the atmospheric effect at sea show that the writer is thoroughly familiar with the ocean. In fact, the book is the book of a thorough seaman. There is no living novelist of distinction within our knowledge who knows the sea well enough to write about it in this minute way except Charles Reade, and the idea that Charles Reade could be the author is preposterous. His impatience, his exaggeration, his fondness for theatrical effects, and his many little peculiarities of expression reveal themselves in every one of his stories. If it were a fact, as we have sometimes been inclined to imagine, that George Eliot receives illegitimate assistance in the composition of her stories from some superhuman source, we could conceive of the purely literary part of the book being produced by her, and the nautical part being furnished her from a quarter we will not name; but this is simply a confession of utter perplexity. Instead of trying to guess who the author is, let us give in a few words a hint as to the character of his powerful story.

It is, in the first place, a tale of the wildest adventure, and hence must be enjoyed by any one who enjoys reading thrilling stories of terrible dangers, heroic acts of bravery, hand-to-hand fights, and marvellous rescues. The adventures in this case, however, have the advantage of being astonishingly real. Antecedently we should venture without much hesitation to predict that any one undertaking to recount the history of the ill-fated *Grosvenor* would make himself thoroughly ridiculous before he came to the end of it; and, to justify this assertion, let us mention the incidents one after another in cold blood. The voyage of this vessel, bound to Valparaiso, begins with a mutiny in the English Channel, caused by the rotten food provided by the owners for the crew. The captain and first mate (a pair of brutes, who care nothing for the crew, and are rather pleased than otherwise at the prospect of maltreatment and cruelty this beginning holds out) ship a new crew, and get clear of England. The teller of the story, the second mate, Mr. Royle, a humane man, sympathizes with the crew, and soon finds himself in a hard position, as he feels that the food provided is a natural cause of discontent, and at the same time his advancement is dependent upon his pleasing his employers. A wreck is sighted, and on it a woman making signals for help. Mr. Royle insists on taking the vessel slightly out of her course to save whatever living beings there may be on the wreck. The crew side with him; the heroine of the story and her father, a wealthy shipowner, are rescued from the wreck, and Mr. Royle, on his return to the *Grosvenor*, is thrown into irons by the orders of the captain and mate for his mutinous conduct. The crew now rise, kill the two villains in command of the ship, and rescue the second mate, whom they put in command. He is the only man on board who can navigate the ship, and they insist that he shall take her to some port on the American coast, where they can leave her and escape as shipwrecked mariners, and so avoid all enquiry into the history of the voyage and the mutiny. He finds, however, that this is only part of the plan, the remainder being to scuttle the ship, and leave him behind, with the rescued heroine and her father, to perish miserably. He wins over to his side, however, the boatswain and the steward, and the game for their lives now begins. By deceiving the crew as to the distance and course of the ship, he takes her to within a short distance of the Bermudas, where he knows he shall find a Government station. By another trick the boatswain appears to be lost overboard at night, when in reality he secretes himself in the hold, where (when the critical moment finally comes) he plugs up the holes in the ship's bottom made by the carpenter Stevens, who is at the head of the mutineers. The crew leave the ship, and lie off at a few cables' lengths in the long boat and the quarter-boat to see her sink. Now, of course, comes the tremendous crisis, when the boatswain reappears, the heroine takes the wheel, the three men by a sudden manœuvre get the ship under way, and the smaller boatful of baffled mutineers make an attempt to board her. A terrific hand-to-hand fight ensues, which results in the destruction of all the boat's crew but one, who, with the boat, is captured; the *Grosvenor* stands off, leaving the long-boat far behind. After this there is a terrible southern storm, in which the long-boat reappears for one awful moment, driven on to certain destruction by a mighty sea—a storm in which the brave heroine and her deliverer perform prodigies; a sail is sighted, which proves to be a Russian, who, after coming almost within hailing distance, basely leaves the *Grosvenor* to her fate; and, finally, the ill-fated vessel springs a leak, and the water gradually gains in her hold. At last, after being driven about for days on frightful seas, they take to the boat captured from the mutineers, and, half-dead with suffering and fatigue, they leave the *Grosvenor* to sink. (It should be said that meantime Miss Robertson's father has died, and Miss Robertson herself is betrothed to her deliverer, Mr. Royle.) It is

* 'The Wreck of the *Grosvenor*. An Account of the Mutiny of the Crew and the Loss of the Ship when trying to make the Bermudas.' New York: Harper & Bros. 1878.

unnecessary to add that they do not perish, but are rescued and are happily married. It will be seen that this story borders, to say the least, on the improbable; but we may candidly admit that, after reading it, we have no more doubt of its being true than we have of the actual occurrence of the events connected with the mutiny of the *Bounty*. We will not compare it with 'Robinson Crusoe,' though the comparison is one that naturally suggests itself. In fact, we will not compare it with anything. It stands by itself as a work of fiction, and we can only say that, if its author does not prove to be some writer of established reputation, he will be one by virtue of this story, as soon as his identity is made out.

'The Sarcasm of Destiny' is peculiar in one respect, as being a story of American society written by a person evidently a member of what in America is called society. She—for there can be no doubt of the author's sex—moves easily among the usual conventions; she is not overwhelmed by the fine clothes of her heroine, alludes naturally to some of the current *mots* of society, and forms the title of her book by varying a phrase hardly yet hackneyed—"the irony of life." All this is so unusual that attention is at once attracted to the book, and there is something to repay it. The moral seems a little uncertain (perhaps not the less true to American society on that account), and, as usual, many of the events occur abroad, and some of the personages most essential to the plot are foreigners. This seems inevitable in American novels. Hawthorne is almost the only modern American novelist who detains his characters in America. Mr. James's heroes and heroines gaily join the continuous exodus to Europe, and even Hawthorne's last story adorns itself with the beauty and the charm of Italy. The instinctive seeking of the novelist for picturesque externals and strongly-marked types turns eastward even those who, according to Mr. Pogram, have "their bright homes in the setting sun."

The hero of this book is the son of a Hungarian physician and an English lady of rank. His wooing of Nina, an American lady of French descent and great wealth, is interfered with by the discovery that he has a wife living in the neighborhood; he disappears, and Nina, after some delay, marries her kinsman, Vigée La Fontaine, and goes with him to Paris. She is established in the Faubourg, in the imposing and gloomy hotel of her mother-in-law, and her sister is at the same time an ornament of the American colony. The relations and differences of the two sisters are well described, and all the French part of the book is written with *connaissance du fait*. The plot here grows complicated. Vigée becomes brutal, and the same woman who was the wife of Nina's lover, Dr. Derwent or Wesselenyii, turns up as Vigée's mistress, and dies, leaving a child whom Nina adopts and brings back to America with her. She loses her fortune, endures hardships of many kinds, her husband dies, and finally, of course, she marries her first love, whose career seems to be considered peculiar and unfortunate, but not particularly blameworthy. The old lady, Miss Brown, who is supposed to tell most of the story, is cleverly sketched and quaint, and there is a great deal in the book besides what we have indicated—a description of Washington during the war, a lady traitor, a high-toned lover, a dip into English society, and a subordinate love affair with suppression of letters, etc. Indeed, if we wished to be critical, we might say that the book is a little like a young minister's first sermon, beginning at the Deluge and telling all he knows. On the contrary, we do say that the book has much liveliness and "pace," and we have no doubt the author can write a much better one.

'Renée and Franz' is a translation of 'Le Bluet,' a "moral" tale, which had in Paris last year what may be called *un succès fou d'estime*. The author's name was not given, Gustave Haller being a *nom de plume*, but Madame Sand wrote a laudatory preface for it, and 'Le Bluet' was added to the short list of books accessible to the "jeune fille." King Solomon says: "There be three things which are too wonderful for me, yea, four which I know not." Certainly if he had lived in these days he might have added a fifth mystery—a Frenchman's notions of morality. The whole substance of this book consists of careful, detailed description of relations, abnormal and other, between young men and young women. Intimate friendship between a noble girl and a young farmer, carefully discriminated from love or desire of marriage, is one *motif*; the love of another noble but penniless beauty for the same young farmer, illustrated by passionate scenes, masquerading in a peasant's dress, and a very curious description of the young lady's delight in her own beauty, witnessed by her lover, who has climbed a high tree at night in order to look into his mistress's bedroom—this and the lady's final revolt from marriage with a peasant, and prompt acceptance of the hand and fortune of a Russian prince, with the soliloquies and speculations of the rustic lover, make up the chief part of the book. There are some rural descriptions; a scene where the Count arranges for his wife a private interview with her former lover, and apparently listens to their conversation behind the door; still other scenes between Franz and the husband of his first friend; and these altogether make up as unwholesome a book as we have lately read, but which, from its omission of murder, seduction, or suicide, is considered in Paris a moral and "most refined" tale.

Mrs. Rebecca Harding Davis writes stories which can hardly be called pleasant, and which frequently, as in 'A Law unto Herself,' deal with most unpleasant persons, but there is an undercurrent of recognized rectitude and a capacity for calling a spade a spade which sets her writings in a category far removed from French morality. She is worse than careless often in her language, as when she describes a person coming sidewise towards another as "slying into his vision," or says that "a corpse has gone by"; but though she shows bad taste in various ways, or perhaps because of this, she succeeds in giving a truer impression of American conditions than any writer we know except Mr. Howells, while there is a vast difference between his delicately illuminated preparations of our social absurdities and Mrs. Davis's grim and powerful etchings. Somehow she contrives to get the American atmosphere, its vague excitement, its strife of effort, its varying possibilities. Add to this a certain intensity, a veiled indignation at prosperity, and doubt of the honesty of success, and we get qualities which make Mrs. Davis's books individual and interesting if not agreeable.

'Bourbon Lilies' is written, we suppose, by Elizabeth Champney, though with an affectionate familiarity she writes herself "Lizzie" on her title-page. One gathers from the book that the author has lived at Ecouen and among artists, has seen something of the outside of a part of French life, has read Mérimée's stories, is captivated with the picturesque externals of foreign existence, and writes what used to be called "a tale" but now "a novelette," in which the reader is confused by national characteristics, strange organizations, and complicated circumstances used promiscuously to carry on a not particularly original or powerful story. The worst catastrophe is the destruction of a picture, and the rupture of an engagement with small regret on either side; and one has a dim sense of having seen a great ado made about nothing, and wonders why Charlotte de Montmorency and the first Napoleon, and a Russian with two absolutely different sides to his face, need have been trotted out for no more apparent object. Otherwise it is a readable story, and, we dare say, will be liked by young people who do not object to the intolerable vulgarity of Miss Fanny Fitz-Flirt, the American heroine. If asked to suggest a motto for a future edition, we should offer "In the name of the Prophet, figs!" believing the writer quite capable of depicting the rustic basket and the purple fruit—if she will let alone the Prophet.

'Through the Needle's Eye' is a description of a few lives lived almost entirely in an English seaside village. It tells how love and wrongdoing, temptation and repentance, worked together to shape and to alter the quiet ways of the Squire and his family, and those committed to their charge. A picture, not exactly vivid but careful and finally effective, is drawn of the old house and its inherited acres, that was as a weapon in the father's hands, a stumbling-block and a snare to his successors, and which had so strong a hold on the affection of all three. What the owning of certain land means to English people is strongly though perhaps unintentionally portrayed. Justin, the hero of the story, is tempted to belie his true self in order to possess and manage the land he has loved all his life; and his wrongdoing and his repentance and its consequences make the story (with due accessories), and it is told with truth and delicacy. It is true to the laws of life that though Justin can clear his own soul and restore twofold, his daughter, who is the light of his eyes, should suffer from her knowledge of his frailty, suffer from its consequences falling on herself, and, unable to construct a new life out of the ruins of the old, should fade and die. There is a true and kindly perception throughout the book, and there is a marked absence of melodrama and of snobbishness.

We take 'What a Boy!' to be inspired by what is called an "American sentiment," and it is that which makes it such very depressing reading.

'The Sarcasm of Destiny; or, Nina's Experience. By M. E. W. S.' New York: D. Appleton & Co. 1878.

'A Law unto Herself. By Rebecca Harding Davis.' Philadelphia: J. B. Lippincott & Co. 1878.

'Bourbon Lilies: A Story of Artist Life. By Lizzie W. Champney.' Wayside Series. Boston: Lockwood, Brooks & Co.

'Through a Needle's Eye. By Hesba Stretton.' New York: Dodd, Mead & Co. 1878.

'What a Boy! By Julia A. Willis.' Philadelphia: J. B. Lippincott & Co. 1877.

There is evidently no judge in Israel, and every man does what is good in his own eyes. Rampant children and absurd parents fill the book, and live in a condition of society which we trust is impossible; there is a plentiful lack of common sense, and, we are sorry to say, one or two indecent allusions. Stir this all up with a good deal of animal spirits and some faculty for constructing a plot, and we have a book of which we may say there was small love between us at the beginning and it pleased God to decrease it on further acquaintance.

Deutsch's Letters. A Practical and Grammatical Course for easy and thorough self-instruction in the German Language, prepared with special regard to the close affinity existing between the English and German languages. By Solomon Deutsch, A.M., Ph.D., author of 'A Practical Hebrew Grammar,' etc. Published in semi-monthly parts of one lesson each. (Hartford, Conn., 1878. Numbers 1–5.)—This grammar is equally remarkable for its comprehensive scope and thorough elaborateness. Students who will devote to it a fair measure of energy and diligence will not only become masters of the grammatical rules of the German language, and of most of its lexicographical treasures, but they will have grasped its very marrow and spirit, learned its evolution and development, and acquired a knowledge of its relations to English, Anglo-Saxon, Gothic, and other Aryan tongues. The study is made comparatively easy by strictly methodical progression, by typographical helps to the eye, and chiefly by the aid of English parallels. Thus, in the reading exercises, instead of words picked out at random, we find only such as are cognate to the corresponding words in English: under *I*, for instance, *Bier*, beer, *wild*, wild, *Winter*, winter, *hindern*, to hinder, *Giebel*, gable, *Kiel*, keel, *Knie*, knee, *mild*, mild, *binden*, to bind, *finden*, to find, *blind*, blind, *spinnen*, to spin, *Lilie*, lily, etc.; under *Oe, ö, Flöte*, flute, *strömen*, to stream, *Hölle*, hell, *Föhre*, fir, *fördern*, to further, *König*, king, *rösten*, to roast, *schwören*, to swear, etc. In the portion of the exercises which serves to elucidate Grimm's law of the permutation of consonants and similar changes in the Germanic idioms, the German *p* and English *b* are thus contrasted: *Polster*, bolster, *Stoppel*, stubble, *Rippe*, rib, *Krippe*, crib, *plappern*, to blab, etc.; the German *sch* and English *s* thus: *Schmied*, smith, *Schnauze*, snout, *schlitzen*, to slit, *schmelzen*, to smelt, *schlafen*, to sleep, etc.; rejection in English is illustrated by *Trommel*, drum, *Stempel*, stamp, *Esel*, ass, *als*, as, *solch*, such, *welch*, which, *Wald*, wood, *Dohle*, daw, *Raspel*, rasp, etc.; and insertion by *Nachtigall*, nightingale, *Fledermaus*, flinder-mouse, etc. The pronunciation of the German words is given in every list. The translating exercises are also made easy by the careful choice of cognate words, as far as completeness allows. The philological notes are numerous and concise, but here and there perhaps too learned, at least for the average student, to whom the author addresses himself in his letters. Proverbs are introduced in the exercises; and conversations, as well as valuable quotations from the German classics and progressively arranged reading matter, are to appear in the later numbers.

Fine Arts.

THE FIFTY-THIRD EXHIBITION OF THE ACADEMY OF DESIGN.

As is always and doubtless must always be the case, we find some of the best pictures pushed up to the ceiling, above the broad self-assertions of painters in office. Indeed, although we have often protested, and always incline, against criticising the hanging committees, it has come to this, that an effort is required not to look with too much sympathy at the works of those painters who are skied. One of the most perfect canvases of the season is undoubtedly the invisibly-placed "Turkey Pasture" (481) by George Fuller, an Associate, but a Bostonian. The level gold rays of late afternoon, casting confusion on the sight, amid which confusion the dark blots of the birds make accents in the deep pasture, while a distant group of white turkeys form a light in the middle plane, are felt by the painter with luxury and unction, while every shade of color introduced is completely modified and melted in the general richness. The notion of borrowing Giorgione's brush and palette to paint poultry with is probably not a common one, but Mr. Fuller seems to have found his account in the stratagem. A not dissimilar theme is treated very differently by Bolton Jones, of Baltimore, another exhibitor exalted to the rafters by the committee-men. Mr. Jones shows us, in his "Taking Geese to Market" (275), a blank country path coming down across the bald top of a hill, patched with sprouts of grass, upon which an army of geese dart their white necks here and there, as they pompously explore the strange country with a sense of being discoverers. This is a literal daylight picture, carved rather than painted, with every curve of every fowl heightened in white and gray as a matter of conscience. Florent Heller's "Spadassin" (624), a tiny panel of miniature finish, representing a bravo extending his sword for an assassination as he lies in wait on the secret stair of a Borgia palace, is carefully put out of harm's way over two or three rows of frames; this picture has been warmly commended by the artist's instructor, Gérôme, and was hung on the eye-line when sent to the Paris *Salon*. A portrait by J. J. Henner is exhibited, the painter of the "Susannah Bathing" in the Luxembourg Gallery, and of the "Head of John Baptist," in the last *Salon*—that gymnastic of sweeping manipulation, with the eyelid defined by the cut of a thumb-nail in the shadow, which enthusiasts declared to be one of the finest pieces of quality since Velasquez; and there is a portrait by Bonnat. The Henner is hung in the corridor, and the Bonnat over a door. It is true that the two examples of European portraiture are the worst that could possibly be found. The subjects of both are fine ladies, of the type that would be more satisfactorily taken up by Cabanel or Giacomotti, whereas Henner is best known in serious work, more or less anatomical, while Bonnat has never come nearer to a feminine success than in the man-like features of Mme. Pasca. We are inclined to think that an implacable enemy of French kickshaws has gone through the world seeking the worst possible examples of Messieurs Henner and Bonnat, and are inclined to fasten the selection upon some fanatic disciple of the Munich school, say Mr. Chase, champion of Piloty, or Mr. Shirlaw, an energumen possessed by Lindenschmidt. Still, there is something in the claims of international courtesy, and there is something in the dictates of modesty, when a country without a national art is concerned; and there would have been no harm in taking M. Henner out of the entry, where his black shadows look still blacker in the dark, or in lowering M. Bonnat where his really fine work upon a pair of dimpled elbows and buckskin-gloved hands could be studied by our young artists.

And what are the portraits by which these portraits signed by famous names are hidden? They are the portraits of Mr. Baker, and the portraits of President N. A. Daniel Huntington, whose hand has long since forgotten all the cunning of invention and all the secrets of color for which it was famous in youth. The works of these gentlemen hang upon the eye-line, which is the unkindest of pillories for them. We do not recollect that any of the better portraits of the year hang at the level of the sight, except perhaps that of Mr. Porter (377), certainly a striking piece of characterization in black satin. The bride, in white, and resembling a plaster cast, by Mrs. Loop (416), is assuredly not one of her "advances." Lifting the eye to the second range above the dado, we notice Mr. Alden Weir's magnificent likeness of his father, an energetic and possibly testy old gentleman who turns himself in his chair smartly upon a swivel formed of his right hand placed upon the elbow, and sends a keen glance in the same direction, while his spectacles and handkerchief are held loosely on the other knee. This strong work, of which the strong sketch was lately remarked in the American Artists' Exhibition, might well have been placed in the centre of a room, and before, rather than above, the visitor's eye; it is the more creditable as a piece of style, since the author has completely abandoned and reversed the manner of the artist who taught him, the minute and microscopic painter of the "Pollice Verso." Another able portrait, placed above the level of the eye, and in the little sculpture-room, where a work of life-size never looks well, is that of an elderly lady writing with a gold pen, by Miss Ella A. Moss (690). The work is thorough and well understood, the kind, firm lines of a strong character are rightly laid upon the face, the figure is singularly real, energetic and impressive, while the attention of the spectator is quickly cajoled by the *tour de force* which makes the hand and pen seem to be solidly moulded upon the table on which they rest.

It is extraordinary that we should have to explain that in referring to a portraitist as an artist of the academic kind, we do not mean to use the phrase disrespectfully; yet the term has sunk to just that degree of opprobrium, and we are obliged to protest to Mr. Le Clear that in referring to his works as in the manner of our old academicians we mean to signify not so much a style as a period. He seems to us one of the best of the portraitists who joined the ranks of the Academy fifteen years or more ago. His painting is thinner and more gelatinously glazed than that of the modern advocates of vigor, who mix whites with their shadows; but his modelling, less boisterously expressed than that of his younger contemporaries, is exact, sensitive, and elegant, with a dainty perception of planes and reliefs that reminds one of Stuart. His profile face of Mr. Martin E Green (363) is a tenderly chiselled study, not in

very high relief, it is true, of one of those clear-cut types of physiognomy that seem adapted to medal-work, and have been called numismatic. His portrait of Judge Durrell (406) is capitally posed for the expression of a temperament, and stands up dry, contemptuous, aristocratic, the image of a Bourbon justice supreme in the society of the *ante-bellum* days in Louisiana.

We can allude to but a few of the landscapes this week. One of the best, though small, is certainly Mr. Wyant's "Late Afternoon" (621). In the melting haze of a warm afternoon—a haze that seems to run in tender streams down the precipices of mingling cumulus clouds—stands a solitary hickory tree, that most graceful and stately of American growths, with a respectful court of smaller trees around it at some distance. This proud and sculptural figure, solid and dark, and undercut through its leafage like the tree-work of a Japanese bronze, is as dignified as a celestial apparition; the sense of majesty we derive from the sight of a rare and monumental tree has seldom been better given than in this small picture; and we are apt to think that the country boy placed in front of it feels its control also, and is engaged in some artless rite of sylvan worship, like the farmer mentioned in one of Wordsworth's prefaces. Other landscapes that catch the attention are striking at second hand. The "Long Island Landscape" (375) by Miller is simply a quotation from Constable; here are the tumbling cumulus clouds intersected by blades of straight and keen cirrus, the ditch-water turning up the rough edge of its ripple to meet the sharp radiance of the refulgent palette-knife, the willows tossing and pushing—the whole apparatus of the Suffolk painter, in fact. Mr. T. Moran, in his "Dream of the Orient," gives us Turner so illusively that it seems like a jest; the most perfect counterfeiter of Turner living, when he chooses—having once completely deceived keeper Wornum with one of his clever imitations—this chameleon of the arts only need acquire a style of his own to be a capital painter. Last spring he exhibited a perfect Jacques; this year, for the American Artists, he showed an illusive Diaz. Owen Meredith is not more accomplished in forging the style of a poet than Mr. Moran in catching the peculiarities of a painter. His powers are his greatest misfortune, and, while they tend to cheapen uncomfortably the magic trick of the master he imitates, they leave him in an unpleasant predicament himself, as a man of mere clothes, an artist without conviction, a painter who can see nature through everybody's eye but his own. Mr. Quartley, again, who has formerly shown real originality in extracting artistic motives from the most sordid parts of New York, is going in an unfortunate direction when he puts the water which Ziem paints in Venice in front of the rocks of the Coast of Maine, in his "Afternoon in August" (380).

READY SATURDAY:

AUERBACH'S

NEW NOVEL,

Landolin.

16mo (Leisure Hour Series), $1.

HENRY HOLT & CO., New York.

Standard British Poets,

Comprising in all 16 Volumes Large 16mo, printed on fine Tinted Paper, attractively bound in Gilt and Black, uniform style. The list is as follows:

BURNS: 1 vol., 522 pp.
BYRON: 1 vol., 408 pp.
CAMPBELL: 1 vol., 386 pp.
COWPER: 1 vol., 504 pp.
COLERIDGE: 1 vol., 468 pp.
CRABBE: 1 vol., 540 pp.
GOLDSMITH: 1 vol., 552 pp.
MRS. HEMANS: 1 vol., 394 pp.
THOMAS HOOD: 1 vol., 474 pp.
MILTON: 1 vol., 552 pp.
MOORE; 1 vol., 420 pp.
OSSIAN: 1 vol., 462 pp.
POPE: 1 vol., 512 pp.
SCOTT: 1 vol., 560 pp.
WORDSWORTH: 1 vol., 530 pp.
TENNYSON: 1 vol., 744 pp.

Cloth, plain edges, $1; gilt edges, $1 25. Or put up in sets in a neat box, 16 vols., plain, $16; gilt edge, $20.

The extremely low price of this edition and the popular style of binding render them suitable for School, College, and private libraries, prizes, etc., and present an opportunity to obtain a choice collection of Standard Poets in durable form at a very small outlay. For sale by all booksellers, or sent free upon receipt of price.

JUST PUBLISHED.

Favorite Poems.

16mo, tinted paper, gilt and black stamp, 456 pages. Plain edge, $1; gilt edge, $1 25. In uniform style with our series of British Poets.

This collection comprises a large number of the Favorite Poems of the English language, giving choice selections from the writings of Chaucer, Spenser, and others of earlier times, as well as most of the popular writers of the present day, including also a few translations from the French and German, and will be found a valuable addition to our series of the British Poets.

Also, in Preparation.

"*SHAKSPEARE*" 1 vol. 16mo.

TERMS: 35 cents a number; $4 a year. The *Atlantic* portraits of Whittier, Bryant, and Longfellow, $1 each additional.

HOUGHTON, OSGOOD & CO., BOSTON.

TURNER'S ETCHINGS of the designs of the "Liber Studiorum" are of excessive rarity; very few impressions having been taken from the plates in this early condition.

Mr. Ruskin had a few of them reproduced, some time since, in England. The reproductions were not satisfactory; and he has lately sent to me the etchings from his collection, that, together with those in my own possession, they may be reproduced under my direction here.

I propose to have thirty or thirty-five of these etchings reproduced by the Heliotype process, as nearly as possible in *facsimile*, of the same size as the original. Special care will be taken to secure the most exact reproduction. The work will be done under supervision; and no copy of any plate will be issued without careful inspection.

These plates will be issued to subscribers only; and the number of copies printed will be limited to the number of subscribers.

The plates will be issued in a portfolio, and will be probably ready for delivery in June next.

The price of a set will be ten dollars.

I request any one who may wish for a copy of these reproductions to give me early notice.

Now ready. The Second Edition of

THE INVENTION OF PRINTING: A collection of Facts and Opinions descriptive of Early Prints and Playing Cards, the Block-Books of the Fifteenth Century, the Legend of Lourens Janszoon Coster of Haarlem, and the work of John Gutenberg and his Associates. Illustrated with 140 facsimiles, chiefly photo-engravings, of Early Types and Wood-cuts. By Theo. L. De Vinne. A broad octavo of 566 pages, suitably printed on old-style laid paper. In cloth, $6; half-morocco, $8. Commended by the *London Bookseller* as "a handsome and interesting volume . . . valuable from its conciseness, its practical common sense, and its general accuracy of statement"; the *Saturday Review* as "well executed and thoughtfully written, . . . by far the most important and interesting of the American works which have reached us during the month"; by the *Paper and Printing Trades Journal* as "the most rational and readable account that has yet appeared of the invention of printing." A descriptive circular, showing specimens of cuts and paper, will be mailed to any address by the publishers,

FRANCIS HART & CO.,
63 and 65 Murray St., New York.

CATALOGUE of a Valuable Collection of RECENTLY IMPORTED Standard Books in all Departments of Literature, including many Old and Rare Editions; OFFERED AT VERY MODERATE PRICES. Will be mailed on application. JANSEN, McCLURG & CO., Chicago.

IN ANY FAMILY,

Whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address PUBLISHER OF THE NATION.

The Nation.

NEW YORK, THURSDAY, APRIL 25, 1878.

The Week.

THE *Herald* has "interviewed" all the members of both Houses *seriatim* with the view of ascertaining their opinions with regard to the Blair scheme of reopening the Presidential question, and found that all but an insignificant minority treat it with utter contempt. Only fifteen were found willing to favor it. This is what might have been expected, and, in fact, it has been so near being well known that the amount of space given to the subject in the newspapers has been singular. Apropos of this, the chairman of the Florida Returning Board and some other members have, it is said, confessed to frauds in the count of the vote in various counties. Whether the confession be true or false, it is of little consequence now except as showing the character of the men whose performances the country watched with breathless interest in the winter of 1876–7 and nearly went to war over, and as showing, too, the enormous importance of arranging some plain mode of deciding disputes at the count in Washington before another election. We are in the second year of Mr. Hayes's term and Congress is near adjournment, and nothing has yet been done, although it is certain the country will be in a most inflammable condition on this subject in 1880.

The interview with Mr. Conkling published in the *World* proves to be the production of a Mr. Mines, a former editor of a Conkling paper in Utica, who recently met the Senator at dinner in that city. Mr. Conkling was, of course, promptly waited on by the reporters to see what he had to say about it; but his denial or repudiation only went to the complete accuracy or fulness of the report. In fact, the conversation seems to have been in the main correctly rendered. According to some, the interviewer is a base person who has betrayed the confidence of a private dinner-party; according to others, the whole affair was, like the interview published some time ago in the *Herald*, arranged beforehand, including the partial disavowal of the interviewer, and is simply a mode by which Mr. Conkling likes to get certain opinions and stories before the public without assuming too much responsibility for them. The sentiments ascribed to him are generally recognized by his friends as his, and are highly approved of. He has, it appears, decided not to bring the matter up in the Senate. It will be observed that in neither interview does he display the smallest interest in any subject of legislation. His talk runs, as his thoughts doubtless run, on "the mechanism of government"—or, in other words, on offices, the persons who got them, and those who ought to have got them and didn't, the knavery by which some were cheated out of them, and the folly with which they were bestowed on others. Of real politics there is no mention, and, in fact, it seems as if it did not matter much to him what bills passed or did not pass, provided they did not interfere with his personal fortunes.

The interview is a curious picture of political manners, and of the type of statesmen who are succeeding the old pro-slavery and anti-slavery men. These at least believed and felt strongly about subjects. Even the vain men among them, Mr. Sumner for instance, went out of themselves and were easily roused into passionate advocacy of measures which in no way concerned them personally. The new men appear incapable of anything of the kind. They are ready to vote for a measure, or vote against it, or keep silent about it, or "straddle" it, with sole reference to their own fortunes. The vanity, too, of the old school, as in Mr. Sumner's case, was based on the possession, real or supposed, of certain intellectual powers or accomplishments, on knowledge or eloquence, or great achievements; the vanity of the Conkling type, on the other hand, is simply what Daudet in the *Nabab* happily calls "vanité dindonnière," or turkey-cock vanity—that is, the self-esteem of a male animal *quâ* male animal, without reference to the quality of his powers or the use made of them.

Mr. Blaine "straddled" the tariff question most successfully in a speech at Chester, Pa., on Saturday. After giving a woful and perfectly correct account of the decline of American shipping since 1860, and the transfer of our carrying trade to European bottoms, he said the Government as well as the people had made enormous donations in aid of the construction of railroads for the transportation of our products from the interior to the shores of the ocean; therefore it should not stop at the shores of the ocean, but should help to pay the expense of transporting them to Europe. The fun of this is — for it is funny — that one would suppose from Mr. Blaine's discourse that the goods lay on the beach worthless for want of any means of reaching the European market. The fact is, that our enormous exports, on reaching the beach, find more ships than they can possibly fill waiting to carry them abroad at unprecedentedly cheap rates, so that the owners of the products could not possibly be better served than they are. What Mr. Blaine proposes is, that these owners should now make up a purse, in the shape of taxation, to pay shipowners for carrying their goods at present rates; that is, that besides their ordinary freight they should pay a bonus through the Government. After this, one would have supposed that he would announce his intention of advocating in Congress a Government subsidy to American shipping. Nothing of the kind. Throwing one leg over the subject, he said that he spoke only as "an American citizen," that there was much opposition to subsidies in the public mind, and that what he would advocate in Congress it would be "improper" to mention.

On Wednesday week the Senate indefinitely postponed a bill introduced by General Burnside, of which the design was to enlist colored soldiers on the same footing as whites—*i.e.*, to distribute them through the ranks and not gather them in regiments by themselves. On the same day Mr. Voorhees's famous resolution declaring it "of the highest importance that the financial credit of the Government be maintained," etc., was called up by that gentleman and passed without opposition. On Tuesday, the 23d, the bill to extend the time for the completion of the Northern Pacific Railroad was passed. The Senate has done little else except voting to adjourn on June 10. This resolution was immediately brought up in the House and opposed by Mr. Wood, who, in the interest of his tariff measure, demanded its reference to the Committee of Ways and Means, of which he is Chairman. He was defeated, having against him all those, of both parties, who do not wish the existing tariff disturbed—at least in the way he proposes to disturb it; but on Thursday he recovered control of his party, and on Friday he secured not a reference but a postponement of the resolution till May 15, by a vote of 129 to 113, a few Democrats voting with the minority. On Monday, Butler's bill to provide a convenient currency by the reissue of fractional notes, and of one and two-dollar notes to the amount of one-sixth of the whole legal-tender notes outstanding, came up under his call for a suspension of the rules to put it on its passage, and received only 120 votes against 124. The River and Harbor Appropriations Bill, involving an outlay of upwards of seven millions, was more fortunate, and in spite of much uproar and a vigorous protest on the part of Mr. S. S. Cox and other Democrats, was passed without debate and without consideration in Committee of the Whole, the rules having been suspended for the purpose. The strength of the measure had been carefully calculated in advance by "natural selection," the West and the South being allotted about six millions against less than a million and a half for

the Eastern and Middle States, where, nevertheless, the evidences of *quid pro quo* were also plainly visible.

The vote on this bill was followed for two days by very unusual scenes of disorder, owing to a formal protest entered by Mr. S. S. Cox and signed by himself and twenty-seven others, setting forth the reasons why bills of this character ought to be debated and carefully examined in detail. Some of these were sound, as that there is in them a tendency to combine local interests "for general spoliation upon the Treasury"; while others, as that the House has a sacred right and a traditional privilege to consider appropriations, and that the constitutional authority to "regulate commerce among the several States" does not justify the improvement of rivers whose course lies wholly within a single State, seem open to objection. The majority (whether two-thirds or less) is the House for all practical purposes, and it cannot be said by any action of its own to deprive the House of a right, whatever may be thought of the rights of the minority. On the other hand, a river like the Hudson is, although wholly in New York State, as much a part of the navigable waters of the United States as is the harbor at its mouth. So far as the protest was directed against indecent haste in the appropriation of public moneys, especially for objects that will not bear scrutiny, it ought to command public sympathy, although it seems out of place except in the body of a speech, and was, we think, rightly pronounced by the House not a question of privilege. But Mr. Cox might have remembered his own share in suppressing debate on a measure of infinitely greater moment—the Silver Bill. The time to respect the rights of the minority is when one is in the majority.

The same question will, we apprehend, arise when the Tariff Bill fairly comes upon the scene. There appears to be little expectation that Mr. Wood can save it from its enemies, who are mainly but not wholly on the Republican side, unless by the exercise of the severest party discipline, and for this almost the only instrument at his disposal is the "previous question." There is, from the democratic point of view, a great injustice as well as absurdity in the Committee of Ways and Means forcing such an important measure on the House without any opportunity for discussing it; but it must be said that our experience is rather favorable to such a course. We have already expressed our belief that the House can do little more than mar the present bill, not because we are not conscious of its imperfections, but because from the tussle of private interests in open House there are sure to emerge greater and more serious inconsistencies. Jobbery stands a better chance with a mixed, uncritical assembly which cannot stop to detect the motive that lurks behind innocent phraseology, than with a committee of ordinary integrity and discernment. It would stand no chance whatever with a chancellor of the exchequer whose duty it was to devise tariffs or to modify them, and who would be held responsible to the whole country for changes in the interest of private parties. In this, we believe, lies the solution which would satisfy the spasmodic scruples of Mr. Cox about the right of debating all fiscal measures, and relieve the anxiety felt by all friends of rational legislation whenever Congress undertakes to deal with such complex and scientific questions as the revenue. Mr. Sherman and his budget are a dream of the future, but Mr. Wood's budget has been spread before the country, and has generally been recognized as a substantial advance over anything that has preceded it in this generation, if not in any other. We may think the sugar-refiners would not fare so well in the House as they do in the bill, but we may be pretty sure that if they are cast out there will be found plenty of decaying interests to take their places. As between the abuse of the rules of the House in the employment of the previous question, and the abuse of debate, the country may in this instance profitably choose the former.

Bills on London advanced during the week to 4.89¼ to 4.89½, or, in other words, to the rate which makes the export of gold coin profitable. Accordingly the price of gold advanced to 100⅝ from 100⅛ to 100¼ last week. The rise in sterling was not caused by importations of United States bonds, but by the reduced supply of commercial bills at a time when the receipts of foreign silver were large. The Treasury, with the approval of the Syndicate bankers, has re-established its London agency, and a large amount of 4½ per cent. bonds were sent there during the week. Even with the rise in gold and the hostility shown in Congress to any kind of specie payments, the sales of 4½ per cent. bonds in this country continue, and more than one-half of the first $10,000,000 have been sold. Among bankers there is no doubt that resumption, according to the Treasury plan, will be begun at the appointed time. General business is somewhat better than it was, but the spring trade for 1878 will be remembered as the worst in the history of the country. The reports concerning the growing crops are, however, most encouraging, and there comes from Chicago the astonishing information that harvesting of winter wheat in Illinois will be begun in May. Silver in London ruled at 53⅞*d.* to 54*d.* per oz. At the close of the week the bullion value of the silver dollar was $0.9137 gold. The gold value of the legal-tender note was $0.9950.

Belgium, as a great manufacturer and exporter, and a member of the Latin Union and one of the double-standard nations, has discussed the silver question as much as any other country. Its leading financiers have now for some years been slowly giving up the double standard as a chimera. What Belgium has to say in reply to our invitation to European nations to join us in the great silver experiment is, therefore, of considerable importance. It is to be found in an article from the leading commercial paper, the *Précurseur* of Antwerp, translated in the last *Economist*. It is worth the attentive perusal of the sons of thunder in Cincinnati and Chicago, but we can only give a brief summary of it. It says the international understanding can only be negotiated on the ratio of 15½ to 1; but there could be no guarantee that this, if agreed on, could be kept up without regard to the market value of bullion; that its universal adoption, anyhow, is a utopian idea; that what will probably result from the attempt will be the division of the commercial world into two camps—the gold camp and the double-standard camp; that the latter, no matter what it may say, will be really a silver camp; that from this division great commercial disturbance and great difficulty in adjusting exchanges will result; that if legislators indulge in Utopias commercial men will have to protect themselves as the Californians did against the greenbacks. The poor "gold-bug" concludes as follows, evidently not having heard the convincing yells from the Mississippi valley:

"It is obvious that the solution of the problem proposed by the bi-metallists is not so easy as they imagine. From whatever side it is considered there is nothing but uncertainty and obscurity. What the bi-metallists propose is nothing else than a leap in the dark; and we doubt whether there are be found statesmen worthy of the name who will consent to take the responsibility upon themselves of a realization of so chimerical a project. On the contrary, every doubt and uncertainty would fade away if it were decided to deal summarily with the question by adopting the single standard of gold."

The fresh news about the Anglo-Russian imbroglio is that Bismarck is still trying to mediate, and that opinions about the probability of his success vary from day to day. One of the signs that he is not acting wholly in the Russian interest is the cordial reception given by him to the Rumanian agents presenting the strong protest of the Principality against the annexation of Bessarabia and the stipulation with Turkey, without the sanction or adhesion of Rumania, for the passage of Russian troops through the territory of the latter for two years. The fact is that the defence of the Bessarabian clause in the Treaty of San Stefano was the one weak point in Prince Gortchakoff's reply to the Marquis of Salisbury. Annexation cannot be justified. The territory taken does not belong to Turkey; it belongs to Rumania, which has done nothing to warrant Russia in exacting any sacrifice from her. On the contrary, her aid during the war was invaluable, and gave her a

fair claim to a share in the negotiations, as well as to compensation. Nor is the annexation necessary in any way to the protection of the Christians or the organization of the new Bulgaria. It is, in fact, simply proposed as a sentimental tribute by the Czar to his father's memory; but it is asking too much of the Western powers to ask them to allow an important feature in the Treaty of 1856 to be set aside on this ground.

In England the effect of the Gortchakoff Note appears to have been pacificatory, and its power as an answer is not denied. In France it has had the effect of checking the strong support given hitherto by the press to the English position. The *Temps* acknowledges the absurdity of the claim of Lord Beaconsfield and the *Pall Mall Gazette*, on which we commented last week, that Russia shall bring her treaty to the Congress as a mere "suggestion," or petition, after having sacrificed 100,000 lives in getting the Turk to sign it. It admits that, although it might be desirable that Russia should do this, it is preposterous to expect her to do it. It might go further, and say that as long as England proposes nothing of her own in place of or in amendment of the Treaty, it is almost insulting to ask Russia to submit it for simple approval or disapproval. Gortchakoff, in fact, is at his strongest when he says: If you do not like this, say what you do like, and then we shall both appear on equal terms at the Congress, each with his plan; but do not ask us to appear like a suppliant for the simple acceptance or rejection of our plan only.

There has, however, been since the beginning no more important contribution to the controversy than the great debate in the House of Lords on the 8th instant, when Lord Beaconsfield moved the address in reply to the Queen's message. He went over the situation in a speech lasting more than an hour, following substantially the line of Lord Salisbury's despatch. He commented on the secrecy with which the negotiations with the Turks were conducted in spite of the warning given by England that the Powers would have to be parties to any treaty that might be concluded. When the Congress was proposed by Austria, England asked that there might be an agreement beforehand that all the questions raised by the Treaty of San Stefano should be submitted as "subject to be discussed," to which Prince Gortchakoff replied with "classic ambiguity" that the Treaty would be submitted and each Power "would then have full liberty of criticism and action." Lord Beaconsfield then went over the Treaty article by article, showing that it destroyed Turkey in Europe, created a new Principality wholly under Russian influence, promised reforms in Epirus and Thessaly to be framed by Russian hands, would convert the Black Sea into a Russian lake, put the commercial communications between Turkey and Persia in her power, and would enable her to march down through Syria against the Suez Canal. He wound up by threatening Russia with an army of 74,000 men, which, like a true rhetorician, he did not show to be equal to the job proposed, but said it was double the British force ever commanded by Marlborough or Wellington. In fact, most of the speech reminded one forcibly of the political speculations of 'Coningsby.'

He was followed by Lord Derby in the most powerful speech the latter ever made, and which nothing but national madness can prevent having a great effect out of doors. Some of his opening revelations upon the causes of his resignation showed the kind of comedy in which the Cabinet had been engaged—such, for instance, as that he had determined to resign on account of the proposal to ask the vote of £6,000,000, but had been pacified by the Chancellor of the Exchequer's statement that they needed a vote of confidence, and that only a small part of the money would be spent; so that the demand for the money, in so far as the blame of it was put on Russia, was in great part buncombe. Lord Derby then pointed out that the gravity attributed to the failure of the Congress was largely factitious, inasmuch as the questions it was expected to settle could be settled by negotiation between individual Powers; he showed, with the clearness of a man who knows what he is talking about, that in case of war England could count on no ally but Austria, and that Austria, owing to the peculiar composition of her population and her army, could not be relied on for a long war, and might at any stage in the struggle be compelled to make separate terms with Russia. He then came to the tremendous question—What is to be the object of the war? It cannot be to restore Turkey, for all are agreed that that is impossible. If it is to procure a reduction in the amount of the indemnity, there is no good reason for thinking that this cannot be accomplished by peaceful negotiation. There is, he said, however, behind these excuses a stronger motive than any of them, and that is a desire to restore English prestige, which the public has got into its head has been diminished. He denied that English prestige had been diminished: the existing anxiety about her course all over Europe was proof of the contrary. But if it had been diminished, it was due to the ridiculous course of the English public in refusing passionately eighteen months ago to interfere in behalf of Turkey, and in now proposing just as passionately to go to attack Russia for conquering her, as if nobody supposed that the war could result in her defeat. He closed with a stroke which had the force of a sledge-hammer, by asking what England would do, supposing she now went to war and took from Russia all Russia had won. She could not retain European Turkey, or even substitute in it English influence for Russian influence, because Russian influence had roots which neither the English nor Austrian sword could destroy, namely: community of religion, traditional and historic sympathies, and a common hatred of a common enemy.

The anxiety prevailing in England about the war, and which many people begin to fear the Government is bent on at all hazards, is aggravated by a great strike in Lancashire, throwing between 80,000 and 90,000 persons out of employment, and intended to resist a reduction of wages. There is not much likelihood that the operatives can succeed, but the struggle will of course cause vast suffering and loss, and is likely to last for many weeks. The one remedy for these collisions between labor and capital is, as Mr. Brassey has so well pointed out, the employment by the workingmen of agents or representatives capable of understanding the conditions of the employer's business and the force of his arguments about wages; but no progress in this direction has been made, and there is, of course, the great difficulty that any person competent to fill such a place could do better.

The Berlin correspondent of the London *Times* recently gave an account of the funeral of the noted Socialist Heinsch in that city, and it contained many things which are supplying food for reflection both in Germany and elsewhere. Heinsch's coffin was followed by 10,000 men and women wearing red ribbons and flowers, red being, as in Paris, the Socialist color. To avoid giving the occasion an air of solemnity the men mostly smoked as they went, and also dropped out of the ranks now and then to take a pull of beer. He was buried in the cemetery of the sect, which has inscribed over the gate: "There is no hereafter and no meeting again." The funeral discourse was long, and, besides praise of Heinsch, ridiculed the idea of his being judged by anybody but the people, and advised all true Socialists to follow his example in being good haters. The ostentatious contempt of the party for the Christian religion is ascribed to a recent ill-advised attempt of some of the clergy to start a mission among the Socialists, in which, in order to make religion more attractive, they proposed along with it laws for the regulation of labor and heavy taxation of the rich. The plan met with the fate that might have been expected. At the first meeting the ministers were interrupted with ribald and blasphemous remarks, and the hymns were drowned in obscene songs. Finally a Socialist speaker took possession of the audience and abused the clergy, and ridiculed the idea of a future life, and encouraged his brethren to fix their attention on this and get all they could out of it, and leave Christianity for the Hottentots. The movement has died out, leaving the Socialists more bitter and determined than ever.

OUR POSITION IN CASE OF A WAR.

THE fact that the newspapers on both sides of the Atlantic have already begun to discuss the position which this country will occupy in case of a European war, shows at least that the matter is worth consideration. The despatch published in the *Herald* a week or two since to the effect that in case of war Russia was going to fit out a fleet of "corsairs," with an organization apparently similar to that of a benevolent society, and with one of the Grand Dukes as its chief officer—possibly to give it a good position in the fashionable world—seemed a little improbable; but it has been followed by another to the effect that Russia is already buying American ships (as of course she has now a perfect right to do if she can find them) for use should a war break out; while Sir Samuel Baker has written a letter to the London *Times*, prophesying that in case of war Russia "will issue letters of marque to American adventurers, and a swarm of *Alabamas* may interrupt our commerce." From these and other indications it appears to be the popular impression in Russia, and in certain quarters in England, that privateering instead of being (as it was formerly considered) a belligerent privilege, has ripened into a cardinal neutral right; and that the main business of a neutral nation in time of war is to fit out fleets of armed cruisers to prey upon the commerce of the belligerents. It would appear to be a corollary from this view that the neutral must prey upon both belligerents equally; but some publicists may take the ground that a discrimination may be made, possibly applying Count Bernsdorff's doctrine of "benevolent neutrality" to this new case, or holding (under the decision of the Geneva Tribunal that the "due diligence" required of a neutral must be exercised in proportion to the likelihood of damage to the respective belligerents) that, Russia having no commerce to speak of, we are bound to destroy the English mercantile marine, to make everything even at the start.

It is, we may say at the outset, a creditable proof of the progress made in the United States since the war in sobriety of thought and discussion that the grotesque idea of our repeating England's flagrant breach of her neutral duties, and letting loose a "fleet of *Alabamas*" to prey on the commerce of a friendly nation, appears to be of British or Russian rather than American growth. There are several difficulties in the way of any more "fleets of *Alabamas*." In the first place, at the time of the Declaration of Paris our Government refused to agree to the announcement of the great Powers that privateering "is and remains abolished," not because it approved of privateering, but because it desired to go further and protect even belligerent commerce. Since that time we have learnt to our cost what a "fleet of *Alabamas*" means; we have seen our commerce swept from the seas by one, and we have exacted a heavy fine from the nation which was the cause of our losses. That now, only twenty-two years since the signing of the Declaration, it should be tacitly assumed by anybody that, in case of a war between two nations with whom we are on the most friendly terms, the only thing that will make us, a neutral nation, refrain, not from issuing letters of marque to defend our own interests, but from making use of them to harass one belligerent for the benefit of the other, will be brute force, shows that our position must in certain quarters be much misunderstood. It would, of course, for the United States of all nations be an infamous piece of wickedness to do what England did in our Rebellion. That we should be supposed capable of anything of the sort, particularly after our loud talk about the duties of neutrals at the time of the *Alabama* dispute, is a curious illustration of the survival of foreign conceptions as to American qualities and tendencies long after the facts out of which the conceptions grew have ceased to have any existence. That Russia, in case of war, would only be prevented from resorting to privateering either by the impossibility of getting ships or the difficulty of disposing of her prizes, seems to be taken for granted. The idea that Russia would refrain from privateering as an obsolete and barbarous method of warfare has not suggested itself to any one. But Russia is actually a party to the Declaration of Paris, and therefore is bound, if that Declaration means anything, to refuse to issue letters of marque. In recent discussions, however, in the English Parliament, it has been urged that the Declaration of Paris is of no binding authority, and that in case of a general war it will not be treated as having any. As we have before pointed out in these columns, Europe in 1856, looking forward to a long period of peace, abolished privateering in the interest of commerce; now, armed to the teeth, and every nation regarding its belligerent as of more importance than its commercial rights, it begins to look back at privateering with regret—particularly in the case of governments which contemplate the possibility of war with commercial nations. This change of feeling is perhaps natural in Europe, but an analysis of its causes ought to show the Russians how little reason they have to expect a similar change of feeling in this country. We may look forward to a long period of peace and prosperity; we have no great standing armies and no foreign quarrels. That we should sigh for the good old times when privateers ravaged the high seas, and long to plunge ourselves into a European quarrel by helping one friendly nation to resort to them against another, would be little less than madness.

But as it seems to be fancied abroad that all moral notions on the subject of our conduct in a European war are "played out," and that expediency and interest are alone to govern us, it is worth while to enquire what our legal position as a neutral will be—what will be our rights and duties as established by the law of nations and by treaty. Here, at the outset, we are confronted by a somewhat anomalous state of things, such as, we believe, has hardly ever presented itself before. As to both belligerents, we should of course be neutral; but in addition to our neutral duties as regulated by the ordinary principles of international law, there are also our obligations as defined by the Treaty of Washington. Between these two there is a considerable difference, although at the time of the *Alabama* controversy we maintained that there was none. By the general rules of international law a neutral's duties are defined very aptly by the word "neutrality" itself. The neutral must not in any way become a party to the war, and must not give assistance to either party. Its commerce is not to be interfered with, and it may, therefore, supply either belligerent with food and other products, subject to the right of capture in the case of contraband of war. These rules, accordingly, would govern the conduct of American citizens in their dealings with England in case of a war between that country and Russia.

Our behavior, however, would have to be regulated also by the Treaty of Washington, since that instrument provided that the "three rules" on the subject of neutral duties should be binding as between the Governments of England and the United States not only in the *Alabama* case but in the future as well. The Treaty stipulated, it will be remembered, that Great Britain and the United States should bring these rules to the notice of other governments and urge their general adoption; but, unfortunately, owing to the fact that Mr. Fish and the British Secretary for Foreign Affairs never could agree upon the meaning of the rules, no progress has been made in advancing their general adoption. And this is certainly not singular when we examine their nature. The three rules declare that a neutral government is bound to use "due diligence" to "prevent the fitting out, arming, or equipping within its jurisdiction" of any vessel which it has "reasonable ground to believe" is "intended" for use against a power with which it is at peace; to use "due diligence," also, to prevent a like employment if the vessel has been "specially adapted in whole or in part" to "warlike use"; that it is bound not to permit either belligerent to use its ports or waters as "the base of naval operations" or "for the purpose of the renewal or augmentation of military supplies or arms, or the recruitment of men"; further, that it is bound to use "due diligence" in its own ports and waters, and as to all persons within its jurisdiction, to prevent any violation of these obligations.

It is needless to point out the extreme stringency of these regulations. It was felt by England to be so great that she refused to agree in the Treaty that at the time of the escape of the *Alabama* they

formed any part of international law. Under these rules, taken in connection with the interpretation given them at Geneva by the American "case," and by the arguments of the American counsel, Mr. Evarts and Mr. Cushing, the United States is bound, as regards Great Britain, practically to watch every vessel that there is the slightest reason to suspect is being fitted out in any of our ports for warlike use against England, and to prevent its putting to sea at all hazards. Further than this, if, in order to stop her, new laws are needed, or even new constitutional amendments, the Government is bound to have such laws or constitutional amendments adopted at its peril. If a conflict arises between State and Federal jurisdiction, and our courts decide that the Federal jurisdiction is wanting, so much the worse for us, for under the Treaty of Washington no defence of this sort arising out of the peculiarities of municipal law can be set up. In the eyes of international law as expounded by that Treaty, the duty of neutrality is one of nearly absolute obligation, and cannot be avoided by the fact that the neutral has not provided the legislative or constitutional machinery for enforcing it. We may be of opinion, like Mr. Bumble, that if the law says this "the law is a hass," but that will make no difference; neither international law, nor treaties carrying it into effect, can be changed except by the consent of both parties; and we may be very sure that, in case of a war such as now threatens Europe, it will not be England which will endeavor to have the Treaty of Washington rescinded.

At the first blush, therefore, it would appear that, in case of a war between England and Russia, our duties toward one belligerent would be governed by a different law from that governing our duties to the other; that with regard to Russia our obligations would be those generally recognized as forming a part of the law of nations; that with regard to England our duties would be drawn from the more stringent rules of the Treaty of Washington; that the vessel which we should be obliged to stop if destined to cruise against English commerce, we need not stop at all if it could be made out that she was to be used in any way against Russia. Of course, this particular dilemma would not be likely to arise, because England would not be likely to be in need of American privateers. But it might easily arise with regard to some other obligation covered by the Treaty; as, for example, the recruitment of men in our ports. In this way we should be brought face to face with the question, Can there be a neutrality with different degrees of obligations to the two belligerents? If there can, we should have something like a practical illustration of what Count Bernsdorff called "benevolent neutrality." Our neutrality would (at any rate in its practical results) be extremely "benevolent" as regarded England, and very much the opposite as regarded Russia. But it seems very clear that such a neutrality is out of the question. The very term imports an absolute equality of treatment of both belligerents, and consequently any obligations which we admit to exist in the case of the one must exist in the case of the other. It follows from this that our neutral obligations with regard to Russia will be precisely the same as those with regard to England, and will be defined not only by international law, but by international law as modified by the Treaty of Washington.

It is needless to point out the gravity of the responsibilities which will attach to our Government under the three rules. It is fortunate that we have in Mr. Evarts a Secretary of State whose connection with the Geneva arbitration must have made him fully alive to the magnitude of the responsibility they throw on the country. So far from its being true, as many persons suppose, that in case of a war Russia will be able to furnish a "fleet of *Alabamas*" from our ports and sweep English commerce from the seas, nothing is more unlikely. Our Government will, on the contrary, have to devote a great part of its energies to doing police work for Great Britain, and we think it quite safe to say that not a single privateer equipped "in whole or in part" for "warlike use" will get to sea from an American port. Since the Treaty of Washington we have, for good or evil, abandoned our old position as the champion of neutrality, and under the "three rules" may be considered as the leading protector of belligerent rights. Morally, it cannot but be a cause of satisfaction to reflect that the position we took in order to win the *Alabama* case will now force our Government to prevent its citizens from gratifying their predatory instincts in defiance of law and the good opinion of mankind.

THE ENGLISH LIBERALS AND THEIR LEADERS.

AN article of Mr. Goldwin Smith's in the last number of the *Fortnightly Review*, entitled "Whigs and Liberals," though it may not be an authorized expression of Liberal opinion, gives vent to the growing feeling of discontent in the Radical wing of the Liberal party with the manner in which it is led or represented by its chiefs of the Conservative wing. This discontent has been growing ever since Mr. Gladstone went out of office, but it has been greatly stimulated by the management, or rather mismanagement, of party interests in the House of Commons during the Turco-Russian crisis. The precipitate retreat of Lord Hartington, Mr. Forster, and Lord Granville on the vote of the six millions, under the influence of sham news from Mr. Layard at Constantinople, and the general feebleness and indecision which have characterized their course on the whole question of war or peace, have, even if justified by facts, had naturally a most demoralizing influence on the rank and file of the party out of doors. It has become, too, among the Whigs or "gentlemanly" Liberals the fashion to join the Tories in abuse and repudiation of Mr. Gladstone, and to pretend that the party is well rid of him, and ought to disclaim all responsibility for him, and yet it is none the less true that nobody in the Liberal party has retained the hold he has over the mass of voters, or has been as faithful to the really great party traditions. It was due to his eloquence and activity, and to the strong popular confidence in the purity of his character, that the connection of England with the Turks was finally broken before the beginning of the war, and that all talk of England's fighting for the integrity and independence of the Turkish Empire was made impossible even for Lord Beaconsfield. Mr. Gladstone forced the Conservatives, in fact, into a tacit dropping of the Turks, in spite of their keen sympathy with them, and obliged them to disguise their philo-Turkish schemes in clamor about "British interests" and in abuse of Russia. But with "British interests" and abuse of Russia they have, owing to the half-hearted conduct of the Liberal leaders in Parliament, been able to carry the day, in spite of the opposition, as Mr. S. Laing well says, "of a large proportion of the best intellect and conscience of the country."

This half-heartedness of the Whigs, as Mr. Goldwin Smith would call it, is due to what may be termed their "gentlemanliness," or their sympathy with the large and powerful body of wealthy persons, and the connections of wealthy persons, beginning with the Queen and stopping at the shopkeepers, who form what for political purposes is called "society." It is by no means a homogeneous body, and contains many grades and circles from the court down, who do not mingle freely, the upper one being a kind of Plevna, on which the others make incessant assaults, and such of the assailants as get inside the works incontinently help to man them against their old comrades. But their intestine dissensions about "position" do not prevent substantial unity in political feeling, especially on questions of foreign politics; and to appreciate the force of this unity one has to remember that "society" has increased enormously in numbers and wealth within the last thirty years; that to the old landed aristocracy has been added the great commercial class which made fortunes in trade and industry since the passage of the Reform Bill, and whose fondest desire is to be at one in manners and feeling with the older court circle. The sensitiveness of this body of persons—the like of which no other country has to show—to influences from above is very great and is cultivated in every possible way, so that the gentlemanly view of any current topic of the day travels through its ranks like an electric shock; and when its influence is thrown in one direction it forms a very powerful political force. How near it came, in spite of the strong moral and religious and economical forces which the North

had on its side, to driving England into some kind of physical support of the South during the late war, is fresh in everybody's memory, and this in spite of the fact that the Queen, in so far as her bereavement allowed her to show any interest in the matter, on the whole was on the side of the North. In the present case the Queen is very well understood to be intensely anti-Russian, doubtless largely owing to the fact that Prince Albert was much embittered against the Russians during and after the Crimean War, and it probably now seems to her disrespectful to his memory to revise his opinions, even in view of a great change in the facts of the situation. The publication, from his private papers, of his invectives against Russia written over twenty years ago, in his Memoirs by Mr. Theodore Martin, coupled with the recent royal visit to the bellicose Premier, was well understood to indicate that Russia was considered in court circles a desperate and wicked power.

Society was already fully in the mood to adopt this view owing to the gallantry of the Turkish resistance. It had been a little cowed by the undeniable atrocity of the Turkish modes of repressing insurrection; but when Osman Pasha began to hold his own against the whole Russian army it threw aside all restraint, and made no secret of the feeling, which is always current or latent in the clubs and at dinner-tables in great houses, that a great deal must be pardoned to a landholding class which fights well and has to do with dependents who are cowardly and submissive. The piles of women's and children's heads blackening in the sun at Batak were an ugly fact, but, after all, the defenders of Plevna were "fine fellows" and ought to be let alone. This feeling reached at one time the point of burlesque, after the fall of the place. There is not and never was any reason for supposing that Osman Pasha was in any way different from the other Pashas, except in having a better military eye and a more dogged courage. But the philo-Turk imagination, after working on him for a couple of months, made him a sensitive, high-spirited gentleman of the Bayard and Sidney type, so that when the *Daily Telegraph* published a false report of his having committed suicide after his surrender the *Pall Mall Gazette* swallowed it whole, and then, commenting on it, showed how natural it was that so noble a soul should find the degradation of captivity in the hands of such coarse, vulgar people as the Russians intolerable, and death by his own hand a welcome escape. Osman, however, has lived on comfortably, and is now a warm friend at Constantinople of a Turco-Russian alliance, and must smile at hearing that it was supposed by his English friends that he would sooner die than endure the company or civility of a Grand Duke.

The effect of this separation of the Whig element in the Liberal party from the rank and file is, however, likely in the long run to work considerable mischief, the full extent of which we doubt if the Radical leaders fully perceive. Whig leadership, if timid and slow, and in times like these too gentlemanly for common use, has had the great merit of making Liberal politics both thoughtful and cautious, and of giving the party management to men who got it with so much ease that they had time for the study of questions and for careful legislation. There is a strong disposition now to substitute for this management the caucus system, and in fact the substitution has been begun under the auspices of Mr. Chamberlain and other Radical leaders; and this disposition is, of course, greatly stimulated by the division of the party on the Turco-Russian difficulty. "The formation," Mr. Goldwin Smith says, "of a more distinct party of thoroughgoing Liberals would necessarily be accompanied by a corresponding change in the character and bearing of its members. They would find it necessary to stand more decidedly apart from the court and the aristocracy, and to give their followers the guarantee, and to themselves the moral force, of unquestionable independence. They would also find it necessary in selecting their own leaders to look less to oratoric powers and more to powers of action." We fear, however, that in making this change the Radicals will fall into the error under which this country is now groaning, of creating, in lieu of the leadership of aristocrats or persons closely connected with the court and the aristocracy, an elaborate nominating machinery the management of which will wholly absorb the time of working politicians, and leave them none for their proper business. Such a change as this England could not support as the United States supports it. Her political fabric is too complicated, and too delicate, to permit with impunity the absorption of the most active minds of the country in the business of electioneering. The English Liberals enjoy at this moment the great advantage of knowing whom to blame for what they do not like. With the caucus in good working order, the fixing of responsibility would become increasingly difficult, and the separation between "politics" and public business rapid and wide.

ENGLAND DRIFTING INTO WAR.

London, April 5, 1878.

ON the 29th of February, 1876, or more than two years ago, I hazarded a criticism in one of my letters to the *Nation* upon the dispositions and tendencies of the members of our present Cabinet which I venture to repeat. It was in these words:

"Lord Salisbury and Mr. Disraeli are the men of strong will and dangerous determinations in the Ministry. Lord Derby means well, and would be honest if he could. But he is not a far-seeing man; neither is he courageous. He is like Lord Aberdeen in the Crimean Cabinet, and would follow, protesting and vacillating, where the stronger spirits lead. Mr. Gathorne Hardy is of that impetuous temperament that would make him follow also after what he would be told was the 'Imperial instinct.' Mr. Ward Hunt will probably have to leave them soon. The Duke of Richmond, the Earl of Malmesbury, and Lord John Manners are of no account. There remain but four men in the Cabinet who have wills of their own. Lord Cairns would in all probability incline towards the stronger natures, and Sir Stafford Northcote could be persuaded to move reluctantly where they lead. Mr. Cross, the nominee and friend of Lord Derby, is a man of some character and independence, but he has no knowledge of foreign affairs, and has neither political reputation nor official experience to warrant him in asserting his own opinion against that of his colleagues. There is only one man in the Cabinet who could be trusted to take a decided line apart from Mr. Disraeli and Lord Salisbury, and he is the present Colonial Secretary, Lord Carnarvon. He is a man of strict integrity and good judgment, and one who thinks for himself. So long as he remains in the Cabinet, it is unlikely that any fatal mistake will be made. But he may leave his colleagues, as he did in 1867. If he was gone, and the popularity of the Ministry was waning, I should be sorry to think of the difficulties and troubles into which we might be precipitated by the eccentric vanity of Mr. Disraeli and the arrogant wrong-headedness of Lord Salisbury, acting upon a public opinion which they, with the aid of a portion of the press, had stimulated and excited into a 'longing for action' and a desire for an 'extension' of the empire, whether in India or nearer home."

It is curious to look back now upon these two years and two months and to see how far we have advanced in the direction foreshadowed two years ago. Before this letter reaches you "the difficulties and troubles into which this nation has been precipitated" may be close upon us. The changes in the Cabinet suggested in that extract have taken place. Mr. Ward Hunt has left them, though not in the manner anticipated. Lord Malmesbury has been changed for the Duke of Northumberland. But that is merely the change of a dumb dog for a dog that cannot bark. Lord Carnarvon has resigned and has washed his hands of all responsibility, and has now taken up an attitude of hostility to his late colleagues. Lord Derby, "protesting and vacillating," followed the stronger spirits until they felt themselves powerful enough to do without him, and then they intrigued him out of the Cabinet, and now even such ballast as his caution and his dogged dread of war gave them has been thrown overboard. True they have got his brother, Captain Stanley, on board instead. But though clearer-headed than Lord Derby, and a man perhaps of firmer nerve, he is not old enough or strong enough to hold his own in the Cabinet. He has gone to the War Office, where he simply will become an animated registering machine of the Duke of Cambridge, the Commander-in-Chief, and a subservient instrument of the Prime Minister. Two other names are added to the Cabinet, Sir Michael Beach, the Colonial Secretary, and Mr. Smith, the First Lord of the Admiralty. The former is an amiable baronet with a gracious manner, and very little else. The latter is a bookseller of accurate business habits and a turn for details, but of no sort of personal influence or authority to remove a featherweight out of his own department. We are, therefore, handed over, tied hand and foot, to the two men "of strong will and dangerous determination" in the Cabinet—Mr. Disraeli, now Lord Beaconsfield, and Lord Salisbury. And what makes our position the more anxious is this, that whereas two years ago war, or even warlike preparations, was as remote from the contemplation of the people as it had been at any time during the last quarter of a century, to-day the peace

party is as helpless and impotent to restrain the warlike tendencies of the noisier and more thoughtless sections of the nation as it was in the Crimean War. To the great bulk of the Liberal party throughout the country the idea of war on any pretext that has yet been suggested is hateful. But they cannot move. The "Rule Britannia" spirit has taken possession of the body of the nation, and you may as well argue with a fire raging in a house and explain that it will be much better for it that it should not burn the house, as argue with "Rule Britannia." It has all come upon us so gradually and consistently. We have been educated, first, that it would be unpatriotic to divide the nation, then that it would be uncourageous to submit to Russian supremacy in the East; then, that it would be foolish to be duped any longer by Russian diplomacy; now our emotions have been excited by the publication of the Rumanian protest, and by the hectoring ingratitude of Prince Gortchakoff towards a nation which we believe saved the Russian arms from disgrace at Plevna; and, finally, we have been brought to think that the best chance for peace is to show a united front, and to support the Government when now, at the eleventh hour, they have begun to give some indication of a definite policy—however false we may consider that policy to be. And thus step by step, by indirect appeals, partly to their generosity, partly to their reason, the Liberal party have been induced to abandon their opposition to a war, and both they and the country at large have become habituated to the prospect of our being engaged before long in what may prove the most exhausting and destructive struggle of this century.

The collapse of the Liberal resolve commenced last session when the debate on the Gladstone resolutions broke down. It was strengthened early in this session when the right centre broke away from the more exacting left on the Forster amendment on the vote of credit; and now, on the address to the Crown thanking her Majesty for calling out the reserves, even the ghost of an opposition will have vanished. A rump of some forty or fifty irreconcilables, possibly a few more, may divide upon the question whether the emergency to meet which the reserves are to be called out is or is not sufficiently critical to justify the resolution. But the acknowledged leaders of the party, including Mr. Gladstone and Mr. Bright, have acquiesced in the determination that any organized opposition should cease. They do not see that there is any great emergency, but they throw the responsibility of the situation upon the Cabinet. It is a strange commentary upon popular government to contrast the difference in tone and disposition in this country at the time of the St. James's Hall Conference, eighteen months ago, with what it is to-day. I remember being much struck with a remark made by a political friend of mine on the evening of the Conference. We had both attended it in a critical rather than a sympathetic mood, and my friend said, with something of regret, "It seems to me impossible, after such a demonstration as this, that this country can ever go to war again; no war party could ever excite the industrial classes as the body in St. James's Hall were excited. England will never see another war." I thought the statement bold, but under the temporary influence of the moment I acquiesced in his view. Now I recognize with Burns that

> "The best laid schemes o' mice and men
> Gang aft a-gley,"

and that the difficulty of the moment is not to make war, but to keep the peace. The great Mississippi of philanthropic and pacific emotion which poured over the whole country and penetrated every household from one end of England to the other, eighteen months ago, has dried up and shrunk into the dimensions of the runnel of a private irrigation scheme promoted by Sir Wilfred Lawson and one or two others, whose patriotism is inspired as much by the personal vanity of appearing to be peculiar as by any higher virtue. We are not, it is true, actually in the war; and there are men among us who still cling to the hope that Russia will yield, and that some peaceful solution may be found. Our instinct, they say, tells us that we shall not fight, though our reason may speak the other way. Until the first cannon shot has been fired we will not believe that it has come to this. One can only hope that these optimist views may prove true, and that war may yet be averted. But this can only be brought about by concessions being made by Russia which only the most sanguine among us believe that a proud country will make.

As to the result, if war should unhappily break out, I am bound to say that no one whom I have met shows much apprehension. If England were allied with Austria we feel assured that Russia could not maintain her present position. Instead of "Beati possidentes," the refrain of the song would more likely be "Miseri possidentes." Russia has gone too far for her own safety. The facility with which she brought the Turks to terms would be her destruction. The British fleet could destroy her communications by sea. A hostile army marching upon her flank through Croatia and Servia on the one side of the Danube, and through Transylvania on the other, with a flotilla of gunboats operating on the Danube, combined with a hostile Rumania in her rear, would come near to the practical destruction of the army in Bulgaria and Rumelia. The Russian position would be untenable. But, to speak frankly, we do not count upon the Austrian alliance, and even without it we believe that this country could so far exhaust Russia that she would have to come to terms in time. A protracted war carried on with a view to material exhaustion on one side or the other is almost more painful to contemplate than a short, sharp, and decisive struggle like the Austro-Prussian war. But a war of exhaustion is the only war which this country can undertake against Russia, and of the two countries England is much more capable of standing a prolonged strain upon her resources than Russia. We never were so strong materially as we are at present. The capacity for taxation is practically unlimited. There would be much grumbling, much discomfort, some poverty, even some misery. But the boast that we could undertake three or even four campaigns without feeling seriously the effects is not without foundation. Neither should we be at a loss for men if they were wanted. In India alone the supply of men from among the fighting tribes—men who, led by British officers, would make excellent soldiers—is almost inexhaustible. And there is nothing that these tribes would more enjoy than an energetic struggle with a white race at the cost of another white race. At home, too, there are multitudes of men ready and willing to enlist if they are required—many of them who have already had the advantage of some elementary training. As it is, recruiting has gone on actively for some weeks back, and men are pouring into the ranks more actively than at any time since before the outbreak of the Crimean war. There will be no lack of men. But the difficulty that all of us who are not inclined to rush blindly over the precipice cannot solve is this, For what definite object is the war to be undertaken? We want none of the Turkish territory; we have no more call to share in the partition of Turkey than we had to share in the partition of Poland; we do not want to lay in a stock of military glory; we cannot see that our interests are assailed. It may be true that Russian influence will be greatly extended over the east of Europe and over Asia Minor if the treaty of San Stefano be permitted to stand. There are many among us who regret to see the extension of a scientific despotism such as Russia over countries which ought to flourish under free institutions, and we consider that this has been brought about largely by the almost wilful blindness of our present rulers. But it is not our exclusive affair. Austria and Germany have as much to lose as we shall have. Why, then, should we rush into a quixotic enterprise and engage in an exhausting and perhaps horrible war for the protection of interests which, where they are not imaginary, are the interests of other Powers rather than our own?

JAMES'S 'FRENCH POETS AND NOVELISTS.'

PARIS, April 5, 1878.

IT is said that the judgment of foreigners is the judgment of posterity; it is calm, it is disinterested, it is devoid of all the mixture which personal passions and which fashion are too apt to introduce into criticism. Is it possible for Prince Napoleon to judge Victor Hugo? for the Duc de Broglie to judge Renan? for Bishop Dupanloup to judge Alexandre Dumas? We are apt to feel too subjectively about our contemporaries. It is curious to compare the judgments passed on Henri IV. by such men as D'Aubigné, as Madame de Rohan, as the Duc de Bouillon, with the impartial judgment of history. We ought, therefore, to feel much obliged to those among foreigners who take the trouble to give a studied and elaborate opinion of our writers of the day. I have read with the greatest interest and pleasure the volume just published by Henry James, Jr., on 'French Poets and Novelists.' It is, I believe, the first time that an American writer of distinction has made a profound analysis of our modern French literature. This analysis is still incomplete, as Mr. James speaks only of Alfred de Musset, of Théophile Gautier, of Charles Baudelaire, of Honoré de Balzac, of George Sand, of Charles de Bernard and Gustave Flaubert, of Mérimée. There is no study yet of Victor Hugo, of Lamartine, of Alexandre Dumas the father, of Alexandre Dumas the son, but Mr. James has shown himself extremely competent to accomplish a critical *tableau* of all our contemporary literature. He is himself a novelist, a man of great imagination, and therefore it is quite natural that he should devote himself more especially to

the poets and the novelists. Thus far he has not occupied himself with our great critics, nor even with our dramatists; his partiality to novelists has even induced him to give a place to Ivan Turgeneff among our own writers. We have, it is true, quite adopted Turgeneff in Paris, and in a certain way he has adopted us; his works are no sooner written in Russian than they are translated into French. But he is essentially a Slav; his body is in France, his mind is always dwelling on the great plains of Holy Russia; his imagination is wandering in that chaotic world which is now in commotion, and out of which something yet unknown will come forth that will alter the face of Europe.

As a Frenchman I ought at once to thank Mr. James for a certain tone of sympathy which runs through all his volume. He does not scold France in that harsh manner which has sometimes been adopted by foreigners. He has seen us in our misfortunes, fallen from our ancient glory, and he evidently feels that this is not the hour for adopting towards us the insolent tone of a Carlyle. He cannot, however, help showing at times the puritanic instincts of a well-bred inhabitant of New England. His essay on Alfred de Musset is really admirable. It is, in my opinion, the best of the series; but his severity towards Musset can hardly be restrained by his admiration. He finds the muse of Musset a little too warm, but those of Byron and of Thomas Moore were surely not colder. Musset was extremely young when he wrote the 'Contes d'Espagne et d'Italie,' and Mr. James is a little hard on these "Andalusian passions." "From our modest Anglo-Saxon point of view," he says, "these same 'Andalusian passions,' dealing chiefly with ladies tumbling about on disordered couches, and pairs of lovers who take refuge from an exhausted vocabulary in *biting* each other, are an odd sort of thing for an ingenuous lad." Perhaps I could find my answer to this in some lines of Musset:

> "Celui qui ne sait pas durant les nuits brûlantes
> Qui font pâlir d'amour l'étoile de Vénus," etc., etc.;

but it is needless to insist on such a point, as the criticisms of Mr. James are always light and, so to say, volatile when he speaks of our great poet. He does not walk on flowers.

His appreciation of Madame Sand is excellent; he does full justice to her manly activity, to her descriptive powers, to her style, to her extraordinary spontaneity, to the simplicity of her rich nature, to the frankness of her character. I don't know if Mr. James had occasion to see Madame Sand, for of late years she appeared very seldom in Paris, but he paints her exactly as she was—a very unostentatious, unambitious woman. She was all her life very simple, and what the French call *bon enfant;* she never attempted to be witty, and she was always extremely willing to hear *you* talk and not to talk herself. She must have been, even in her youth, very motherly in all her numerous love affairs; she probably never felt that passion of love to the description of which she devoted the great powers of her mind. But she always hated a complete solitude and wanted a friend, something to study, a speaking insect, a thinking butterfly, a thing in which she could study life and its complicated shades. It could almost be said that everything was good for a time in this respect, and nothing could satisfy the curiosity of her mind. Nature had made an error in giving her the wrong sex; she was intensely masculine in features, in humor, in character, in intellect. Mr. James, in noticing the first novels of Madame Sand—those in which she preaches the sanctity of passion and its legitimacy, superior to the legitimacy instituted by law—might have noticed the connection between these literary efforts and the preaching of the phalansterian school. The Phalanstère is now completely forgotten; nobody reads Fourier, Considérant, etc. The realistic school has given us something very different from the childish idyls of the phalansterians; we have ceased to believe in the "attraction passionnelle" and the "travail attrayant"; but at the time when Madame Sand made her début the Phalanstère and its doctrines were in fashion; it had eloquent and amiable apostles, and Madame Sand knew them well. The new school has left the Eden where Madame Sand liked to dwell for the dry authors of the 'Madame Bovary' school, who, without being conscious moralists, show us the dangerous nature of passion. No Calvinistic preacher could be more convinced than M. Zola of the "total depravity" of men. Madame Sand was nursed in other ideas; her glory is one of the rays of the sun which shone upon France after the Revolution of 1830, when all was hope, when France convinced herself that she had become the leader of all nations, the land of liberty, of progress, of felicity—the Canaan of history.

Mr. James justly remarks the change which age produced in Madame Sand. As he says, hers "was a French mind, and as a French mind it had to theorize; but if the positive side of its criticism of most human institutions was precipitate and ill-balanced, the error was in a great measure atoned for in later years. The last half of Madame Sand's career was a period of assent and acceptance." It was so not only socially, but politically; Madame Sand never had strong political passions; she was too sincere. She became Republican after 1848, and is said to have been the editor of an official *Bulletin de la République*, which made some noise at the time. Her enthusiasm for the Republicans was never very warm; she saw the men under the costume of the tribune, she fathomed Ledru-Rollin, she knew Pierre Leroux, she knew Barbès. Under the second Empire we find her almost intimate with Prince Napoleon, the Republican prince; he paid her visits at Nohant, she enjoyed his versatile and brilliant conversation. She did not hail with any joy the advent of the third Republic, and she profoundly mistrusted Gambetta. It is rather singular that, being such an optimist and so inclined to admire, she spoke very severely after the war of the balloon-born young dictator of Tours and Bordeaux.

We are afraid that posterity will show the truth of these melancholy remarks: "All the world can read George Sand once and not find it in the least hard. But it is not easy to return to her. Putting aside a number of fine descriptive pages, the reader will not be likely to resort to any volume that he has once laid down for a particular chapter, a brilliant passage, an entertaining conversation. George Sand invites reperusal less than any mind of equal eminence." It is true. It is very difficult now to read 'Valentine' and 'Lélia,' and even 'Mauprat.' The life is out of it; we don't feel in harmony with the spirit which inspired these works. But such is the fate of many books. Who will not find it hard now to read the 'Nouvelle Héloise'? Few are the novels which have in them the spring of eternal life.

Full justice has been done to Balzac by Mr. James. He remarks that the correspondence of Balzac, just partly published, has, on the whole, been favorable to the reputation of the great French novelist. Balzac can still be read, and probably will be for some time. It is because he really was a precursor, a prophet. He saw around himself the rudiments of the present society. His characters, his types, are intensely modern. It is clear that Mr. James is perfectly at home in the world of Balzac—in that complex company of the 'Comédie Humaine.' He speaks of all its members as if they were personal acquaintances; and, surely, was there ever anything as real as Rastignac, as Cousine Bette, as the Baron Hulot, as Cousin Pons, as all the saints or monsters of Balzac's invention? It is curious how this new world takes possession of the mind, how true it seems. It has the sort of intense reality which is still the privilege of the gods and the demi-gods of the Greek mythology. Is not Jupiter as real, more real, than so many men of flesh and blood who have passed through life as waves run over the surface of water? What is real—the organism or the passion? Does not Minerva sit at my side and comfort and console me, and look at me with those eyes which Homer has described? We are all like those hard warriors of the Scandinavian poems who went to war with invisible Valkyries over their heads. To describe the world of Balzac's invention is as difficult as to make an analysis of the 'Metamorphoses' of Ovid. Mr. James has, at any rate, drawn from his analysis a very just and very delicate delineation of Balzac. He has shown us the character of this extraordinary genius, so terrestrial and human in parts, so sublime in others; an epicurean ending in a saint—"desinit in piscem mulier formosa superne"; a skeptic and a stoic; a slave of the senses and a Jansenist at the same time; a curious marvel and wonder; the modern Rabelais, but a Rabelais fond of purity, a Christian Rabelais, who delights in nothing so much as in the idea of atonement, martyrdom, and endless sacrifice.

Mr. James has done an unmerited honor, I believe, to our modern French literature in praising, as he has done, the author of 'Madame Bovary.' 'Madame Bovary' has been but a shooting star. If M. Flaubert's novel goes down to posterity it will be because it will be illustrated, as it well deserves to be, with indecent engravings. It will be admired as we admire some poems of Dorat. I have never been able to admire this realistic history of the Fall transported to a vulgar Norman town. I find any number of the *Gazette des Tribunaux* quite as suggestive. Baudelaire has also been kindly treated by Mr. James; but Baudelaire wrote in verse, and half a dozen fine lines cover a multitude of sins. Who sins in prose cannot be pardoned. On the whole, Mr. James has shown in his volume such a comprehension of French literature that he ought to be invited to write something more than a succession of essays, something like the Tableau or History of the French Literature of the Nineteenth Century. He would, in doing so, render a service not only to the English and American, but to the French public.

Correspondence.

ADMISSION ON DIPLOMA TO THE UNIVERSITY OF MICHIGAN.

To the Editor of The Nation:

Sir: Professor C. K. Adams in his second letter, under the heading "President Eliot on Preliminary Examinations," as published in your issue of April 4, alleges, in the first place, that I have "ventured an opinion" concerning the Michigan method of receiving pupils from approved schools on diploma without adequate knowledge of the method; and, in the second place, he reaffirms the assumption on which his first letter was based—namely, that there is a very marked resemblance between the examinations conducted by the Oxford and Cambridge Schools Examination Board and the visitations of high-schools conducted by the University of Michigan. With your permission I respectfully invite your readers to a re-examination of each of these two points.

1. My information concerning the Michigan method of admission on school diplomas was derived from the official publications of the University—the proper source of authentic information. Since the date of my last letter I have received the Calendar for 1877–78, lately issued, and the President's Report for the year ending June 30, 1877. I ask attention to the following extracts from the latest Calendar and the last two Reports of the President, premising that the statement taken from the Calendar for 1877–78 is the same as that contained in the Calendar for 1876–77, from which I quoted in my last letter. The italics in these extracts are mine.

"A Committee of the Faculty will visit once every year any Public High-School in Michigan, on request of its School Board, and *report its condition* to the Faculty. If the Faculty shall be satisfied from such report that the school is taught by competent instructors, and is furnishing a good preparation for any one or more of our regular courses, then the graduates from such preparatory course or courses will be admitted to the Freshman class of the University *without examination*, and permitted to enter on such undergraduate course or courses as the approved preparatory work contemplated. They must present to the President, within three months after their graduation, the diplomas of their School Board, certifying that they have sustained their examinations in all the studies prescribed for admission to one of the three courses, Classic, Scientific, and Engineering, or Latin and Scientific. They will also be required to appear at once in their classes, otherwise they can be admitted only after examination. The privilege of *admission on diploma* is limited to public schools in Michigan, and their School Boards must make the application annually" (Calendar for 1877–78, p. 37).

"The plan of receiving students from certain approved high-schools on diploma and *without examination by us* has worked so satisfactorily that the Faculty have deemed it prudent and wise to offer to receive students *on diploma* from a class of high-schools whose graduates have heretofore been admitted by us *only on examination*. We have, until this year, declined to approve any school which was not so organized and equipped as to be able to prepare students simultaneously for all our undergraduate courses of study. But we now propose *to approve any good high-school which can show that it is thoroughly preparing students for any one of our classes*" (President's Report for the year ending June 30, 1876, *p.* 6).

"This system of receiving students from approved schools continues to justify itself. We take some students, it is true, who ought not to have been sent to us, and who prove incompetent to go on with the class. But we always take some such on examination. And if in any case *a superintendent has been lax in scrutinizing the attainments of a pupil* whom he has recommended to us, the dropping of the pupil from our class with a kind and frank statement of the facts to the superintendent has always proved a sufficient incentive to him to greater caution the next year. . . . The custom of receiving students *without examination* from approved schools is rapidly extending. Not only has it been adopted in some of the State universities of the West, but some of the *Eastern colleges are receiving students without examination from academies of established reputation*" (President's Report for the year ending June 30, 1877, *p.* 6).

These extracts give a complete, trustworthy, and clear account of the method under consideration. Their language could not be made plainer. I have not mistaken its meaning. Nobody could mistake its meaning. The Faculty satisfy themselves by an annual inspection that a given school is, in general, an efficient preparatory school; and then admit the pupils of that school to the Freshman class, without examination by the Faculty, on the certificate of the authorities of the school that such pupils have passed the *school examinations* for graduation in the subjects required for admission to the University.

In the face of these distinct official statements Professor Adams says: "Everybody in Michigan would understand that the expression 'without examination by us' (italicized in the above extract from President Angell's report for 1876) means without examination *at the University*," thereby implying that these certificated pupils are admitted, not on their diplomas, but on some prior examination by the University. I submit that Professor Adams's construction of President Angell's language is manifestly incorrect, and that the implication in his remark—an implication essential to his argument—is utterly misleading. There is no prior examination of these individual pupils by the Faculty, or a committee thereof, in any proper sense of the term. In this connection I invite the special attention of your readers to the following sentence, which occurs near the end of Professor Adams's second letter: "Of course there is a sense in which Harvard, or any other university, partially surrenders its authority when it allows a committee of its own number to determine whether a boy shall be admitted to its classes." In this sentence Professor Adams again conveys by implication to his readers the erroneous impression that the visiting committees of the University of Michigan determine by examination whether certain *persons* shall be admitted to its classes. The committees do no such thing. They visit a school and (in the language of the Calendar) "report its condition to the Faculty." They advise the Faculty whether or not certain schools had better be permitted to pass their pupils into the University without examination on their school diplomas. The gist of the Michigan method is that the Faculty, by vote, annually approve certain schools, after an annual inspection thereof, and then receive the pupils of those schools on their school diplomas. On the extra-official theory of Professor Adams the responsibility of the school superintendent, on which President Angell dwells, would be imaginary, and the "privilege of admission on diploma," of which the Calendar speaks as limited to public schools in Michigan, would be wholly nugatory.

Throughout his letters Professor Adams uses the word examination in a sense very different from that in which I use it, and from that in which it is used by the English universities—in a sense, indeed, so vague and slippery as to give great opportunity for misconception and unintentional misrepresentation. It is obvious that the general efficiency of a school cannot be ascertained without some enquiry into the attainments of the pupils; so that the researches of the committee which visits a school necessarily include some direct observation of the attainments of the scholars, or some examination of the individual scholars in Professor Adams's sense of the word. The scope and method of this enquiry may be more conveniently explained under my second head.

2. Professor Adams maintains that, at these visits of a committee of the Faculty to Michigan schools, examinations are held which are "similar" to the examinations of the Oxford and Cambridge Schools Examination Board. He says "that there is a resemblance, and that the resemblance is very marked." Now, the official publications of the University leave no doubt in the mind of the reader as to the method of procedure at these visits, but still do not supply the means of comparing that method, point by point, with the method of the English Board. On the 5th of April I therefore addressed to President Angell a series of enquiries concerning these visits of inspection, and yesterday received from him a very clear and circumstantial reply. I am thus indebted largely to his courtesy for the means of setting this subject before your readers in its true light.

To clear the ground, I must be permitted to recall the fact that the English Board holds two kinds of examinations: 1, examinations of schools for the benefit of the schools exclusively, and having no effect to admit individuals to the universities, or to exempt them from subsequent examinations, whether at the universities or elsewhere; 2, examinations of individuals for certificates which give exemption from the entrance examinations at Oxford and Cambridge, from the earliest examinations of the University course, and from the preliminary examinations of certain professional bodies. (See the *Nation*, No. 665, p. 211.) It is only the second sort of examinations with which this discussion has any concern. Professor Adams has not observed this distinction—a fact which proves that he has never read with care the documents which describe the proceedings of the Oxford and Cambridge Board. He quotes as follows from my first letter, the bracketed interjections being his: "The examinations of schools [in England] are held at the schools [so they are in Michigan], upon request of the school desiring to be examined [the same in Michigan], and exclusively for its benefit [the same in Michigan] and at its expense [the same in Michigan]." Now, this ingenious assertion of similarity, satisfactory and conclusive as it seems at first sight, has in reality no bearing whatever upon the subject under discussion. The statement is in fact grossly inaccurate; but, accurate or inaccurate, it is wholly irrelevant. In quoting my sentence Professor Adams stopped at a semicolon; if he had quoted the rest of the sentence,

as follows: "and these examinations have, in themselves, no effect whatever to admit pupils of the examined schools to the universities, either with or without testimonials or diplomas given by the school," the reader would have perceived that Professor Adams was not discussing the real question at issue. The present discussion concerns examinations for admission to colleges or universities, and none other.

We are now ready to compare in detail the English examinations for certificates with the Michigan visits to schools, as regards their methods of procedure, bearing it distinctly in mind the while that the objects in view in the two cases are different—the exclusive object of the English examinations being to test the attainments of persons, while the object of the Michigan visits is to test the efficiency of schools. (*a*) The English examinations cover thirty-four different and carefully-specified subjects (no candidate taking the whole), and on the average two hours are allowed for writing answers to the questions in each subject; the examinations last twelve days, and are held three times in the year; and the schedule of days, subjects, and hours for each year is published nearly a year in advance. The Michigan visits occupy from one to two days at each school, and occur once a year at each inspected school. (*b*) In England the decision of the Board is always upon the individual—has he passed a satisfactory examination in a sufficient number of subjects?—and the Board takes no account whatever of the opinions or certificates of school authorities concerning the individual. In Michigan the decision is upon the school—shall the Faculty accept the certificate of the authorities of the school to the attainments of their pupils in lieu of a personal examination? (*c*) In England a printed report is annually made by the Board showing the name of each person who obtained a certificate, the subjects in which he satisfied the examiners, and the school from which he came. In Michigan no record is made by the visiting committee of the standing of individual scholars; the committee makes an oral report to the Faculty upon the condition of the school inspected, and the Faculty then vote *to accept the school or not*. (*d*) The English examinations are conducted in writing for all the subjects, but for a few subjects oral examinations are superadded. The questions are printed; they are the same for every candidate in any given subject; and they are made public when the examinations are over. The Michigan examinations (so-called) are exclusively oral, and are therefore different for every school and for every individual. They have no uniform, exact, or public standard. I should have no occasion to dispute the proposition, should it be made, that oral examinations may be real and useful examinations. The question before us is whether the English methods are similar to the Michigan methods. Now, there is no more important difference of method in examination than this difference between written and oral examinations, for the consequences of this difference are many and grave. Indeed, two examinations, or methods of examination, which differ in this essential respect, cannot properly be called similar at all, particularly when, as in the case under discussion, the objects of the two examinations are different—the one being the examination of individuals, the other of schools. (*e*) In order to secure uniformity of standard at the English examinations, the results obtained at the different places of examination are compared by the Central Board of Examiners, in order that the certificates given by the Board may have a definite value. In Michigan it may be a different committee that visits each different school. (*f*) In England each candidate pays a fee of £2, and from these fees each examiner is liberally paid for every day of service spent in setting questions, attending the examinations, and looking over the answers of candidates. In Michigan the school pays the hotel and travelling expenses of the visiting committee, while the University pays for the committee's time, and the pupils of the schools pay nothing. These pecuniary details strongly mark the different attitudes of the two examining authorities.

There are other significant points of difference between the English and the Michigan methods; but it must be already obvious to your readers that to call these two methods of procedure similar is to abuse language and to mislead the uninformed.

Professor Adams, in his second letter, controverts my opinion that "the Michigan method is a partial surrender of the authority of the University." I respectfully decline to discuss that subject with him. It is a subject on which opinions may reasonably differ, and nothing but experience can determine which opinion is the sounder. The next twenty years may, or may not, supply that experience. At present Professor Adams and I hold different opinions, and doubtless we both value the privilege of changing our opinions for reasons which seem to us good.

Your obedient servant,

CHARLES W. ELIOT.

CAMBRIDGE, MASS., April 18, 1878.

Notes.

WHAT constitutes Bulgaria? was a question often asked at the outbreak of the war in the East, but never satisfactorily answered. The Bulgaria of the "Preliminary Treaty of Peace," however, is a very definite territory, and its boundaries, as laid down in the treaty, are shown in a map which accompanies the *Geographical Magazine* for April (John Wiley & Sons). It includes not only Salonika but the railroad destined to connect that port with Belgrade; not only Philippopolis but a position between the River Tekke and Tchorlu which commands the railroad between Constantinople and Adrianople. Servia is increased by about a fifth, Montenegro by two-thirds; and the two countries are brought so close together that the Turkish highway from Albania to Bosnia can be shut up without difficulty when the time comes. In the same number of this magazine is a map showing the new French explorations for a ship-canal across the isthmus of Darien, as well as the longer, more difficult, and more costly route surveyed by Commander Selfridge, U.S.N., whose labors, however, were of the greatest service to Lieut. Wyse.——No. 70 of the Proceedings of the American Antiquarian Society is valuable for Dr. Charles Deane's discussion of the convention between Gates and Burgoyne as to the shipment of the latter's troops to England on parole; an agreement not fulfilled by Congress, whose acts, in Dr. Deane's judgment, were "not marked by the highest exhibition of good policy or of good faith."——A page of "Rules aiming at uniformity in writing and printing German with Latin letters, together with a few changes in spelling, already generally adopted," to which is added a page of illustrations, has been issued by Prof. H. C. G. Brandt, of Johns Hopkins University, and C. F. Raddatz, of the Baltimore City College.——The Tauchnitz 'New Dictionary of the English and Latin Languages' (Henry Holt & Co.) has the handiness of the well-known series to which it belongs, and is typographically pleasing to the eye and easy of reference. It is, of course, an abridgment, filling only 400 pages, in two parts.——A correspondent of the Milan *Perseveranza* states that General La Marmora's literary remains consist of a few fragments of studies on the passage of Hannibal into Italy, on the origin of the La Marmora family, on the September Convention, etc.; and the second part of the famous 'Un po' più di luce.' This last comprises his three reports in 1869-70 to the Minister of War in defence of his military and diplomatic conduct during the war of 1866. His correspondence with the great men of Italy and of Europe for thirty years has been preserved in part, as well as the letters addressed to him by the late King, Cavour, Massimo d'Azeglio, Rattazzi, etc., etc.——'Keramos, and Other Poems,' is the title of Mr. Longfellow's new volume just issued by Houghton, Osgood & Co. The same firm have nearly ready Gen. F. W. Palfrey's 'Memoirs of William Francis Bartlett,' of which the author's profits will go to General Bartlett's family.——The New England Publishing Co., Boston, announce 'Outlines for the Study of English Classics,' by A. F. Blaisdell.——J. Norman Lockyer's 'Studies in Spectrum Analysis,' with numerous illustrations, forming vol. xxiii. of "The International Scientific Series," will be published in a few days by D. Appleton & Co., New York.——In our financial paragraph last week the offer of the banks to Secretary Sherman was accidentally misstated. It was 100 gold (not 101½) and accrued interest.

—Racinet's 'Costume Historique' is now one-quarter finished, and its union of reasonable cheapness and thoroughness—a thoroughness to be predicted before opening the cover, for the name Firmin-Didot is printed on it—adapts his work to the need of poor artists as well as rich book-collectors. The fourth instalment (just received by J. W. Bouton) contains twenty-five plates, printed in gold and colors with much neatness and accuracy. The emblazonment is never exaggerated nor merely ornamental, but simply explains the tissues. The author has sought out and set in order many documents, conferring on the reader the hidden riches of precious vellums and tapestries and frescos. Particularly interesting is the copy of a complete view of a Roman bathing establishment, from a mural painting found in the Baths of Titus; and there is a mystically-fascinating page giving fifty-six impressions of Roman abraxas or amulets.

—The last number of the *American Law Review* contains an article on the "Nicholas plan" for Presidential elections, which deserves attention as a carefully thought-out scheme of improvement. Most of the plans suggested by the electoral troubles of 1876 have been marked by a great deal of crudity, and have often evinced a total lack of appreciation of the

most fundamental axioms of political science ; they have all proceeded on the supposition that the Tilden-Hayes dispute of that year had its origin in some defects of the electoral machinery, instead, as the fact was, of having been caused by the anarchical condition of a large part of the country, which by its long continuance had rendered fraud, "intimidation," and violent interference with the result of elections part of the ordinary course of political action. No change in machinery could have prevented the condition of affairs then existing in South Carolina and Louisiana, and it was on the chaotic condition of affairs in those States that the election turned. Seeing this to be the case, Judge Nicholas proposes that, instead of making new and cumbrous rules as to "double returns" and "single returns," the attempt shall be made to convert the electoral college into a real electing body, which shall not clerically register the choice of a national party convention, but shall actually elect a President from the leading men of the country. For this purpose he proposes that each State shall choose a certain number of electors, based on population; that these electors shall be divided into a number of classes in alphabetical order ; that from these classes a smaller number shall be elected; that from this smaller number two shall be drawn by lot, the whole college then proceeding to elect one of these President, whereupon the other becomes Vice-President. The great beauty of this plan is, of course, that it prevents combinations and "slates" in advance, and therefore makes national party nominations in convention useless. As the lot is inevitably to be brought in at a certain stage in the contest, it would be idle to form a combination which would have no certainty of coming to anything. On the other hand, the lot would set a premium on excellence in the electoral body, since each State, feeling only sure of a remote chance of electing even one of its men, would make a point of securing a board of electors any one of whom it would be satisfied to see in the Presidential chair. Of course the chief objection to the scheme (apart from the unwillingness to introduce chance into elective machinery, which, from the mere fact that it never has been introduced though often talked about, must be considered serious), is, as the *Review* points out, its impracticability. We fear the plan will have few attractions for those who must in the first instance put the machinery in motion to bring it before the people—the Conklings, Blaines, Thurmans, and Hendrickses. Some of them might be willing to have it introduced in 1884—but not a day sooner.

—In the absence of anything new from George Eliot's hand, the two short tales included in the cheap edition of her works in course of publication by Messrs. Blackwood and now for the first time reprinted, may be accepted as a novelty. They appear at the end of the volume which contains "Silas Marner," and will doubtless procure for this volume an extended circulation. One of them, "The Lifted Veil," was published in *Blackwood's Magazine* in 1859 ; the other, "Brother Jacob," appeared in the *Cornhill* one year later. They are extremely different, but each is interesting, and the reader who turns to them now will doubtless wonder why the author has not oftener attempted to express herself within the limits of that form of fiction which the French call the *nouvelle*. George Eliot will probably always remain the great novelist who has written fewest short stories. As her genius has unfolded she has departed more and more from the "short story" standard, and become, if not absolutely the longest-winded, at least what may be called the most spacious, of romancers. Of the two tales in question, "Brother Jacob," which is wholly of a humorous cast, is much the better. We say it is of a humorous cast, but it is probable that like everything of George Eliot's it may be credited with something of a philosophic import—offered as it is as an example of the many forms, in the author's own words, "in which the great Nemesis hides herself." The great Nemesis here is the idiot brother of a small criminal, who brings the latter to shame and confusion by an obstinate remembrance of the sweet things he has swallowed. The guilty brother, of whose guilt he has been an accidental witness, has bribed him to secrecy by a present of sugar-plums, and when Mr. David Faux is after the lapse of years flourishing, under an assumed name, upon the indirect fruits of his misdemeanors (a petty robbery) the too appreciative Jacob reappears clamoring for more lozenges, and throwing a fatal light upon Mr. Faux's past. The story is extremely clever, but it is a little injured, perhaps, by an air of effort, by too visible an attempt to say good things, to bestrew the reader's path with epigrams. As the incident is related wholly in the ironic, satiric manner, the temptation to be pregnantly witty was, of course, particularly strong. But the figure of the diminutively mean and sneaking young man upon whom the great Nemesis descends is a real portrait ; it is an admirable picture of unromantic malfeasance. Capital, too, is the fatal Jacob, who, after the manner of idiots, leaves us with a sense of his combined vagueness and obstructiveness. The minor touches are very brilliant, and the story is, generally, excellent reading. "The Lifted Veil," which is more metaphysical, is, we think, less successful. It relates the history of a young man who, growing up in morbid physical conditions, acquires a mysterious intellectual foresight of the things that are to happen to him ; together with that of a wicked lady, his wife, whose guilt is brought to light by the experiment of infusing blood into the heart of a person just dead, who revives for an instant and denounces her. The tale is wofully sombre, and there is a want of connection between the clairvoyance of the hero and the incidents we have just related. Each of these things is very wonderful, but in conjunction they are rather violent. "The Lifted Veil," however, is a fine piece of writing ; and if they were interesting for nothing else, these two tales would be interesting as the *jeux d'esprit* of a mind that is not often—perhaps not often enough—found at play.

—It is said that Albert Wagner, the oldest brother of the poet-composer, did not believe in Richard's musical powers, but admitted that he could write poetry ; and H. Dorn, the well-known Berlin critic, who does not especially admire Wagner's music, some years ago asserted that some of his poetic efforts must be ranked with the best that German literature affords. The poem of the new music-drama, "Parsifal," recently published (Mainz : Schott's Söhne), is not likely to weaken this latter opinion. It abounds in beautiful passages, and there is one, on page 20, where the hero is reproached for shooting a sacred swan, which is fully equal to the celebrated passage in "Lohengrin" beginning with "Athmest du nicht mit mir die süssen Düfte" (vol. ii. p. 135). In general, however, the kind of beauty to be sought for in Wagner's poems differs somewhat from that which we look for in poetry not produced with a view to its being wedded to music. Poetic imagery, similes, and metaphors, which are essential features of a purely literary drama, would be superfluous in a music-drama, where the sister art is expected to supply all the emotional color ; and accordingly we find that the attractiveness of Wagner's *libretti* does not consist in elegant diction, but in the ingenious and artistic dramatic structure of the whole, and in the gradual leading up to a climax, in which he has no superior. "Parsifal" is another proof of his skill in building up a good dramatic plot with material which, as used by Wolfram von Eschenbach and other old German and French poets, seems more of an epic than a dramatic nature. Many of the situations in it are, moreover, so intensely musical in structure that an appreciative reader cannot fail to imagine that he is actually hearing the music, just as he does in reading some of the most emotional scenes in Goethe's "Faust"—a circumstance which strongly corroborates the theory of the music-drama. If in these esoteric characteristics "Parsifal" does not differ from the author's other recent dramas, in some of its external features it bears more resemblance to his earlier works. Alliterative verse is abandoned, rhyme is here and there introduced, antiquated words and phrases are not so numerous as elsewhere, and, most important of all, there is no lack of polyphonic vocal music, there being several choruses of knights, youths, and maidens, apart and united. These cases of "reversion," however, must not be regarded as concessions to the critics. They are evidently due to the fact that, as "Parsifal" is the father of "Lohengrin," the first-named drama will, in a certain sense, serve as an introduction to its predecessor. How far this circumstance is likely to influence the form and character of the music, on which the composer is now engaged, it is difficult to predict. One never knows what Wagner is going to do next, any more than one can say what chord he is going to use next at any given point in one of his compositions. The stage-machinists and scene-painters must have been anxiously wondering what new problem would be given them to solve this time ; and "Parsifal" certainly gives them some hard nuts to crack. The demands made on their inventive skill and on the purse of the manager are such as perhaps no one but Wagner would dare to make. The first performance of the new music-drama, which will doubtless prove one of his most popular works, is promised for the summer of 1880 at Bayreuth. There is evidence that the drama was written, or at least revised, with a view to its performance in the Nibelung Theatre. It will be remembered that one of the innovations introduced in that theatre related to the curtain, which did not rise, as elsewhere, but was parted in the middle, "as by invisible hands." Accordingly, at the end of each of the three acts of "Parsifal," the directions are "The curtain *closes*," instead of "falls," and the German feuilletonists are now sarcastically speculating whether it will be necessary in consequence to give up the word *Aufzug*, and coin another to take its place.

—In No. 154 of the *Nation*, for June 11, 1868, mention was made of

the great interest in the American Revolution felt in Russia, as shown by the despatches of that period in the Russian archives. A new instance of this interest, not only in Russia but in Europe in general, is given in the fac-simile number of the *Sankt Peterburgskiya Viedomosti* for January $\frac{2}{13}$, 1778, just published by that newspaper on completing the one hundred and fiftieth year of its existence. The St. Petersburg *Gazette* or the *Gazette of the Academy*, as its name is frequently translated, is one of the oldest newspapers in Europe, if not the oldest, having been started by the Imperial Academy of Sciences in 1728, to replace the *Gazette* originally published by Peter the Great in 1703, the year of the foundation of St. Petersburg. This newspaper is still owned by the Academy, just as the Moscow *Gazette* is owned by the Moscow University, but it is farmed out at a tolerably high rent to private parties, for whose opinions and utterances the Academy is not responsible. The fac-simile of the first number of the *Gazette*, January $\frac{2}{13}$, 1728, contains nothing of interest to us, and is merely curious, but the one first referred to, of 1778, is almost entirely filled with American news, coming from correspondents as far apart as London, Dublin, Paris, Nantes, Franconia, and The Hague. Letters from Germany say that still another corps of troops from Ansbach-Baireuth is to be sent to America, not as before by the Main and the Rhine, but directly *via* Bremer-Lehe. They state also that

"The nobles, burghers, and peasantry of Hesse, seeing that the Landgrave pays no attention to their representations about the losses they have suffered in consequence of troops being sent to America, resolved, as a final resort, to petition the Emperor and the Diet that his Majesty, as the head and defender of the laws and freedom of the States of the Empire, should take the best measure for stopping the exportation of such a great multitude of people to a distant part of the world. It is said that the Emperor and the King of Prussia, in consequence of this petition, have agreed to prevent in future the export of troops to America."

The greatest interest centred, however, in the news of the surrender of Burgoyne, which had, indeed, arrived before, but was then confirmed from every quarter, and evidently made a profound impression throughout Europe—an impression which was increased by the news of the loss of eleven British ships in an attack on the obstructions in the river Delaware, below Philadelphia, and rumors that "the rebel General Putnam" together with General Gates were pursuing the British troops on the Hudson, and threatening them with a fate like Burgoyne's. The results of all this were reports that the English were to "send special plenipotentiaries to treat with the Congress of the Colonies. In the event of these negotiations being unsuccessful, politicians in England were of opinion that General Howe would be forced to evacuate Philadelphia, and that strictly defensive positions would be taken up in Quebec, Halifax, New York, and Florida (*sic*), with 24,000 troops." In a letter from Dublin, it was stated that

"On the $\frac{1}{12}$ December Mr. Edward Nevenham said in the Lower House of Parliament: Although all that I reported to the Government in 1775 has been denied, I now consider it my duty to declare to the members that I have received trustworthy information that the American Envoys in Paris received on the fourth or fifth of November full powers from the Congress to conclude a treaty with France, by which that country, on furnishing a certain number of ships and troops, shall have the right for thirty years of exclusive trade with America."

What this trade was worth we may see from a letter in the same number from Nantes of November 25 and December 6:

"Although the English capture many American ships, which has made the rates of insurance rise to forty-three and forty-four per cent., yet we still send many vessels to America. Besides munitions of war and cloth for uniforms, we send them a great deal of salt, for every pound of which we receive a pound of tobacco, which we sell to the farmers of the revenue at forty kopeks. You can judge from this how profitable this trade is for us."

From this single number one is led to ask whether the history of the American Revolution has been sufficiently studied for European contemporary sources.

THE CRUISE OF THE *CHALLENGER*.*

ALTHOUGH water covers three-quarters of the earth's surface, and its oceans have been traversed from time immemorial in all directions and at all seasons of the year, our knowledge of the physical geography of the sea has been of slow growth. The early navigators, with few exceptions, left but scanty records of such observations as they made. The accounts of their discoveries bequeathed to us by the Norsemen, who evidently knew the northern hemisphere better than their more civilized southern neighbors, are often little more than sagas, wild traditions of the deeds of their ancestors. The Spanish and Portuguese explorers in their search after conquest and power did, indeed, by their rude charts lay the foundation of the later and more accurate maps of the Atlantic, Pacific, and Indian Oceans. But the association of systematic scientific research with distant voyages or with coast surveys belongs to our own times. The last part of the past century was, however, marked by great government exploring expeditions, while during the early decades of this century nearly every country possessing a merchant navy fitted out important circumnavigating voyages. From the few desultory observations made independently by the leaders of these explorations we have accumulated little by little the facts now in our possession concerning the physical geography of the sea.

In the meanwhile not only had the broad outlines of terrestrial physical geography been traced, but our knowledge of terrestrial physics comprised the study of the atmosphere at different heights, theories of winds, the distribution of magnetism, the oscillations of the barometer, the distribution of moisture, the thermometric conditions above and below the surface of the earth, and the range of animal and vegetable life. In fact, all the principal physical phenomena surrounding us and connected with the surface of the earth had been more or less investigated. Our knowledge of the ocean, on the contrary, included little beyond the position and direction of the more prominent oceanic currents. We knew nothing of the depths of the sea or of its temperature, except what could be readily observed along its shores or what a few more adventurous sailors had discovered on fishing and whaling voyages. We remained ignorant even of the causes determining those great currents with which navigators had so long been practically familiar. It is true that little can be done towards the investigation of the physical and biological conditions of the sea by individual enterprise alone. Before 1860 both private and associated means had from time to time been placed at the disposal of naturalists for such researches, but the results obtained seemed to promise no very novel or fruitful field for work. It was only in connection with great national undertakings, and after the first soundings were taken between Ireland and Newfoundland to determine the best path for an Atlantic cable, that the hidden possibilities of deep-sea investigations dawned upon naturalists and physicists.

The difficulties were great. Without experience to guide us, without the mechanical tools needed for the work, we were forced to begin at the A, B, C. Instruments combining strength with the most sensitive tests had to be devised for determining depths, for measuring temperatures accurately, for collecting the deep-sea fauna and flora. The share taken by Americans in the invention as well as in the modifying and perfecting of instruments for this new work, especially those used in determining and recording depths and temperatures, is very creditable to the United States. We owe, for instance, to the ingenuity of Passed-Midshipman Brooke, U.S.N., the means by which we now detect, even at great depths, the instant when the heavily-weighted sounding-rope touches bottom, releasing its load at the same moment. This method was gradually improved and modified, till Sir William Thomson proposed his apparatus for sounding with piano-forte wire, an instrument of such delicacy that after the first experiments he himself despaired of its practical efficiency. Here again the U. S. Navy stepped in, and Captain Belknap, of the *Tuscarora*, succeeded in working it with a certainty of result hardly anticipated even by the inventor.* Indeed, with the modifications this instrument has received at the hands of the U. S. naval officers, its rapidity of action and its accuracy are such that with a slender wire and a fifty-pound shot a sounding can be taken and a specimen of the bottom can be brought up from a depth of 2,000 fathoms, or more than two statute miles, in about twenty-five minutes.

Norwegian and Swedish naturalists living among the fiords and inlets of their picturesque coast became interested in these problems of the deep sea. To them, and especially to Professors Lovén of Stockholm, and Sars of Christiania, we owe the more recent generalizations regarding animal life at great depths, and the probable conditions of existence there. Their lead has been followed, and since 1860 not only Swedes and Norwegians but English and Americans have vied with each other in sending out expeditions to explore the depth of the sea either across the oceans or along their own coasts. Among the latter, the investigations undertaken by the U. S. Coast Survey, begun under the superintendence of the late Professor Bache, and continued by his successors, Prof. Peirce and Captain Patterson, combining the examination of our coasts with

* 'The Cruise of the *Challenger*. "The Atlantic." By Sir Wyville Thomson.' Published by permission of the Lords Commissioners of the Admiralty. Vols. I., II.' London: Macmillan & Co.; New York: Harper & Bros. 1878.

* It seems strange that the *Challenger* did not adopt this admirable apparatus after its success in the hands of officers of the U. S. Navy.

the physical geography of the Gulf Stream, are of prominent importance. It is perhaps the most complete and systematic exploration as yet made of any coast with reference to its hydrography and physical geography. Of the distant exploring voyages sent out during the last twenty years none can compare, however, in valuable results with the great *Challenger* expedition which returned about two years ago from a cruise of three years and a half, the history of which is partly given in the two volumes before us. The *Challenger* was a large steam corvette of twenty-three hundred tons, equipped with everything which the wise forethought of a committee of the Royal Society, aided by Sir Wyville Thomson, Chief of the Civilian Staff, could suggest. The success of the voyage has demonstrated the wisdom of the Royal Society and of the Admiralty in placing Captain Nares in command of the *Challenger*. The expedition itself will long be remembered as a landmark in the history of deep-sea explorations. During the cruise of the *Challenger* no less than three hundred and sixty stations were established. At most of these both the exact depth and the character of the bottom were determined, a fair sample of the fauna was brought up by the trawl or dredge, the temperature of the bottom and of intermediate depths was ascertained, and samples of the water were procured, while the tow-nets in the meantime gathered the surface life in the vicinity. The Atlantic and the Pacific were explored both north and south of the Equator, and the *Challenger* even forced her way far into the Antarctic regions till, fairly driven back by tempests and ice, she made her way to Australia and explored the more genial regions of the East India Islands.

The typography and illustrations of "The Atlantic" are admirable. The volumes are filled with exquisite woodcuts, illustrating the wonderful forms brought up by the dredge and trawl from all depths (in the Atlantic from 3,875 fathoms, or over four statute miles), and varying from the diminutive globigerina to the magnificent silicious sponges, corals, starfishes, sea-urchins, crustaceans, and fishes, which seem to be the most numerous and striking inhabitants of the deeper ocean. Here and there in these volumes the naturalist is forgotten, and we have a vivid description of scenery illustrated by charming sketches. Passing on to the discussion of the serial lines of temperatures, the author shows how the Atlantic and Pacific Gulfs, as he calls them (looking, indeed, upon these oceans as mere branches of the great southern seas), are fed by the slow welling northward of the intensely cold and immensely deep Antarctic waters. With these phenomena he believes the whole system of ocean circulation to be connected, assigning as their primary cause the excess of precipitation upon the southern or water hemisphere over the evaporation in the northern or land hemisphere. This gives us a ready explanation of the nearly uniform temperature pervading the sea bottom below a certain depth in all oceans. The presence of this huge mass of cold water and its influence upon marine life establish the theory first proposed by Dana, that the amount of cold is the true factor regulating the distribution of animals in the sea. It explains also the cropping out of antarctic forms, without reference to latitude, wherever the temperature of the water is low, and their reappearance in deep waters over areas where the temperature of the shallower water along the adjacent shores may be very warm.

Another most interesting line of investigation, previously pointed out by others but systematically pursued by the *Challenger*, concerns the formation of deep-sea deposits out of reach of all detritus brought down by rivers. Especially striking is the formation of red clay in depths below 2,200 fathoms from the gradual decomposition of surface organic forms, while in lesser depths a kind of chalk is formed, consisting chiefly of the tests of globigerinæ. The importance of the latter in building up oceanic deposits was first discovered early in 1853 by Lieutenants Craven and Moffat, of the United States Navy, while investigating some question relating to the Gulf Stream.

These results, taken as a whole, lead to one great generalization. The facts gathered from deep-sea soundings make it probable that continents as we know them now were laid out in their present grand outlines at the time of the Jurassic period, and have remained, with the exception of such shore deposits as we call Cretaceous and Tertiary, practically unchanged ever since. If this be true, there have been since the Cretaceous or the end of the Jurassic period abysses of the sea far below the reach of any effect from the subsidence or elevation of the land—uninfluenced, therefore, by surface cataclysms or changes—where, owing to the continued uniformity of the conditions, the inhabitants must be the lineal descendants of beings belonging to former geological periods. In these abyssal depths brilliant huge-eyed crustacea exist side by side with blind forms like Willemoesia and other crustacea having more or less developed visual organs. Here also are found blind fishes and fishes having very small eyes, together with fishes endowed with sight as those of the ordinary types are. The questions thus opened as to the effect of physical conditions acting upon animal life during periods of time for which the present epoch gives us no measure are certainly of the greatest importance from a biological point of view. This more uniform fauna of the abyssal depths, which probably originated in the southern seas and is independent of geographical distribution, does not extend into the 500-fathom region, where we come upon what naturalists call faunal districts or areas both geographically and zoölogically distinct from each other.

While the *Challenger* found animals living in the greatest depths, we must not be understood to say that they exist everywhere in equally large numbers. On the contrary, the greatest depths, though not fatal to life, are less favorable to its maintenance than more moderate depths, especially where not too far from land. Marine plants are far more limited in their bathymetrical distribution than animals. They are not found below two hundred fathoms, so that we have an immense marine fauna entirely disassociated from plant life and independent of those mutual relations by which the balance of animal and vegetable life is maintained on land. These deep-sea forms must derive either by power of absorption from the water itself or from their animal food the materials necessary for their growth and life.

Much as we owe to the *Challenger* it leaves many of the great problems of the physics and chemistry of the deep sea yet unsolved. His concluding chapters show that Sir Wyville Thomson himself considers his physical and chemical speculations only as approximations awaiting the confirmation of time and further investigation.

LECKY'S HISTORY OF ENGLAND IN THE EIGHTEENTH CENTURY.*

II.

"THE Methodist movement," writes Mr. Lecky, "was a purely religious one. All explanations which ascribe it to the ambition of its leaders, or to merely intellectual causes, are at variance with the facts of the case." These sentences show that Mr. Lecky appreciates the true character of Methodism, and raise the expectation that he will prove a satisfactory critic of a most remarkable religious movement. Nor is this expectation altogether disappointed. No part of Mr. Lecky's work will cause more interest than his chapters on Methodism. They are distinguished by the good sense, the right feeling, and, above all, by the pre-eminent fairness which are the great merits of his book. No author has ever summed up with more equity the good and the bad results of Wesleyanism. He shows what were the circumstances under which the religious revival took place; he points to its wide and salutary influence; he describes the virtues without concealing the defects of Wesley and Whitefield, and does even more than justice to the administrative genius of the one and the oratorical genius of the other. But when ample acknowledgment has been made of Mr. Lecky's merits both as a critic and as an historian of Methodism, it is impossible not also to acknowledge that Mr. Lecky's treatment of a religious phenomenon leaves on the mind a sense of failure. The cause of this feeling lies, not in any fault peculiar to Mr. Lecky, but in defects inherent in the prevailing mode of treating religious questions. The attempt to explain the cause of our dissatisfaction is not intended to detract from the merits of an author entitled in many respects to the highest praise, but is intended to direct attention to characteristic defects of the current criticism and sentiment of the time.

The fundamental ground of dissatisfaction with Mr. Lecky's narrative is that he deals with every feature of Methodism except its most essential feature, namely, the truth of the doctrine which Wesley taught and the truth of the view of life which it was his object to impress upon his disciples. Mr. Lecky, indeed, has too much critical acumen not to perceive that to Wesley his religious convictions were everything, and he describes, in a passage too long to quote, and not perhaps very suitable for quotation in a newspaper, the graphic picture given by the founder of Methodism of his conversion. But Mr. Lecky does not seem to feel, what both Wesley and Wesley's serious opponents would at once have acknowledged, that on the truth or error of Wesley's views as to conversion and a whole number of kindred topics must depend any fair estimate of his career. On no subject except religious subjects do competent critics judge a leader of thought without reference to the intrinsic truth or error of the doctrines which he promulgated. It would be ridiculous to criticise Bacon with-

* 'A History of England in the Eighteenth Century. By William Edward Hartpole Lecky.' 2 vols. London: Longmans, Green & Co.; New York: D. Appleton & Co. 1878.

out considering the truth of his general views of science. It would be absurd to write an essay on Burke and leave out of consideration the value of his political views. It would be futile to narrate the career of De Tocqueville and leave it an open question whether his estimate of democracy embodied important truths or only propagated ingenious fallacies. It is, and in any age but this would have been deemed, equally futile to treat of the growth of Methodism without uttering any opinion on the view of life of which Methodism is or was the representative; for no phrases can hide the fact that men like Wesley and Whitefield looked at human existence from a point of view utterly different from that occupied by most of the men whom we all in our ordinary state of sentiment respect and admire.

Long before the 24th of May, 1738, Wesley had led a life of what to most persons would seem the practice of every virtue, yet till that day he was, in his own belief, to quote Mr. Lecky's words, "in a state of damnation." Grant that in judging himself Wesley was biassed by the excessive exactingness of a morbid conscience. To grant this is to concede a good deal more than the facts warrant; but even this concession does not get rid of the difference, not in degree but in kind, between Wesley's idea of the requirements of religion and the conceptions of a virtuous life formed not only by the ordinary teachers of the eighteenth century but also by ninety-nine out of every hundred Englishmen or Americans of the present day. Let it be carefully noted that the difference between an unconverted and a converted man (to use religious phraseology) must be considered in kind something quite different from the difference recognized by all men between wicked and virtuous persons. The end of the eighteenth-century preachers was, as Mr. Lecky points out, to create "good and happy men." Many of these preachers lived, we need not doubt, up to their ideal. The quarrel between them and Wesley was that their ideal was in his judgment a wrong ideal. The somewhat heathen virtues of Chatham, the manly integrity of such a man, for example, as Sir Walter Scott, would, as far as one can judge, have seemed in the eyes of Wesley or of Whitefield not more akin to what may be termed the true life of the soul than the brutality of Walpole or the coarseness of Swift. We do not, of course, mean for a moment to assert that any men of keen moral sensibility, such as were the founders of Methodism, would not, in fact, have felt the difference between virtues which in theory they might have held hardly to merit that name, and vices which good men of all ages have reprobated, but we do assert that, on Mr. Lecky's own showing, the Methodists propounded doctrines which made the difference between the virtues of Chatham and the vices say of George II. far less serious than the difference between what may be termed the virtues of secular life and the condition of converted sinners.

Now, there are two modes in which the doctrines of Wesleyanism and of other religious teachers may be fairly approached by an historian. He may, if such is his belief, take his stand on the truth of the religious teaching. A man who entirely or in the main shares Wesley's views may rightly represent Methodism as the reformation of the eighteenth century. A writer who honestly takes this view may justly give to Wesley all the admiration which is due to the greatest of reformers. He will feel that the incidental benefits of Methodism in ameliorating the condition of the poor or softening the manners of the rich are absolutely nothing in comparison with its revelation of truth and with its success in saving souls. He must, however, in fairness bear in mind that the voice of Wesley and of Whitefield denounces the spirit of the nineteenth no less than the spirit of the eighteenth century. An historian may, on the other hand, announce (if such be his conviction) that the doctrines of Methodism were wholly or partially erroneous. Entertaining such a view, he will not be blinded by the virtues of Wesley and his disciples to the fact that a view of life in the main erroneous must be a source of evil to those who preach and to those who receive it. What it seems to us a serious writer ought not to do is to fall in with the current feeling of the present generation, who admire Wesley without forming a distinct opinion as to the truth or error of his doctrine, and calmly condemn the worldliness of the eighteenth century, when in fact moulding their lives on essentially the same views as those which Wesley's opponents upheld and Wesley denounced. A critic who assumes such an attitude falls under a twofold disability which fundamentally vitiates the effect of his historical judgment.

He is unable, in the first place, fairly to estimate the position of Wesley's opponents. Society has improved in various particulars since the day when Wesley denounced the religious apathy of his contemporaries; but it is far from the case that every change since his time has been an improvement. We have thrown off some of the vices and we have lost some of the virtues of our fathers, but in the main the ordinary educated world of to-day is not at bottom very different from respectable society in the last generation. If Wesley saw in the respectability of his own age a condition of religious death, are we to suppose that he would think the social life of London or New York to be an existence fit for Christians? In some respects the tone of our age would in his judgment be decidedly worse than that of his own century. If any candid person will consider what Wesley or Whitefield would think of the religious or irreligious articles which fill respectable English magazines, he may form an opinion whether the apostles of Methodism would look with anything but reprobation on the sentiment prevalent in this century. Nor would they find any fervor of religious feeling to compensate for dogmatic error. A fashion has sprung up of talking of the religious coldness of the eighteenth century. Such language was perhaps true when used in comparing the state of public feeling before the Wesleyan movement with the condition of religious sentiment which that movement produced in certain classes; but the fervor generated by the efforts of the Methodists and the Evangelicals who followed them has now in the main died out. To talk of this age as, in England at least, an era of religious enthusiasm, is simply to misapply language. The men of the eighteenth and the men of the nineteenth century are, so to speak, in one boat. If Wesley's denunciations touched his contemporaries, they condemn us also. If the men of to-day can show that they rightly decline to adhere to Wesley's view of life, the same defence will in substance avail the preachers whose rational piety or cold morality opposed the religious enthusiasm of the early Wesleyans. To imply that what called forth the efforts of Whitefield was any exceptional wickedness or corruption among his contemporaries involves a misapprehension both of the character of our forefathers and of the true nature of Wesleyans.

A critic who takes up the attitude of benevolent neutrality can, in the second place, no more pass a fair judgment on the results of Methodism than he can form a just opinion of its opponents. A mere enumeration of the reforms which a religious movement has produced, or of the beneficial measures, such as Catholic emancipation, which it has delayed, hardly touches either its essential merits or its essential evils. To announce the truth, either as regards religion or as regards any other matter in which mankind are interested, is an achievement so admirable in itself that one need not, in judging of its worth, be greatly concerned about its immediate or apparent results. But, on the other hand, a view of religion and of the objects of human life which is untrue is certain to produce fundamental and essential evils out of all proportion to its immediate and palpable results. That the teaching of Wesley must have produced a huge amount of spiritual suffering is clearly apparent; that if his doctrines were in the main not true, this fearful suffering was a needless addition to human misery must also be conceded; but to any one who is not prepared to accept the Wesleyan view of life it must be apparent that Methodism produced an evil which, if more subtle, is of more permanent importance than even the pain caused to sensitive souls racked by the terrors roused by Wesleyan sermons. This evil is the setting up in men's minds of inconsistent ideals. The disciples who fully embraced Methodism gained, at least, all that can be gained by the consistency given to life through enthusiastic belief in a definite creed. The persons, on the other hand, who entirely resisted the influence of the Wesleyan movement may have followed out with consistency their own ideal of life; but in effect great portions of English society half accepted doctrines to which Wesley and his disciples had given life, and half adhered, in practice at least, to what may be termed the secular view of existence. Their whole life became weakened by a half-and-half devotion to each of two fundamentally inconsistent ideals. That this double-mindedness has been and still is the bane of English society seems to us past a doubt. Other causes certainly have contributed to the same result, but the religious revival, of which Wesleyanism was a part, has been in the main responsible for a condition of sentiment opposed at once to the secular enthusiasm which governed the life of such a man as Turgot, and to the religious enthusiasm which ruled the life of Whitefield. If the Wesleyan teachers held to a true view of human nature and human duty, then they are in no way responsible for the fact that their teaching has not commanded the entire acceptance of a perverse generation. If, on the other hand, they upheld an erroneous view of the objects of human life, then, whatever the virtues of the Wesleyan preachers, they have entailed on succeeding generations all the evils resulting from the half-hearted devotion which is all that false ideals can in the long run obtain. A critic who cannot assert whether the teaching of these preachers was

true or false cannot really pronounce on the results of their teaching. You cannot criticise a "purely religious movement" and omit all reference to the truth or falsehood or error of the doctrines held by the teachers who guided the movement.

Current Discussion: A Collection from the Chief English Essays on Questions of the Time. Edited by Edward L. Burlingame. Vol. I. International Politics. (New York: G. P. Putnam's Sons. 1878.)—The plan of this publication is a thoroughly good one, and we have no doubt will meet with success. As appears from the preface, in which Mr. Burlingame gives some editorial account of the undertaking, the intention of the publishers is to reproduce in a permanent form the best of the contemporary magazine articles—those bearing on important political events, or such as otherwise may be of some permanent importance as contributions of weight to current discussion. The present volume is devoted to politics, and in it we have a number of articles by well-known writers on the Eastern question. This is to be followed by another instalment of a religious character, embracing a number of essays on matters of belief. Mr. Burlingame, in his preface, points out, what is perhaps true, that the magazines which have succeeded to the place of the old quarterlies occupy a position as important now as the *Edinburgh* once did; that the *Nineteenth Century*, the *Contemporary*, and the *Fortnightly* number among their contributors the best and weightiest writers of the day. At no time, he thinks, has there been so much and so weighty magazine-writing in England as at present. There is one change, however, which makes a very marked difference between the articles of the present day and their forerunners in the pages of the quarterlies; and that is the fact that the modern practice of publishing the author's name confuses our appreciation of the merits of his performance with our curiosity as to his identity. An article by Gladstone, for instance, has an adventitious importance which gives it an audience at once, no matter whether he writes on some political subject on which he is an authority, or on the 'Iliad,' as to which his critical opinions are of no very great value. In the days of the early successes of the *Edinburgh* the anonymous veil which cloaked the author left his production to stand on its own merits, and we think did so in the interest of good taste and letters. There is a certain indecency in the constant exposure of themselves which well-known public characters are constantly induced, by the solicitation of publishers, to make in the periodical press, and we cannot help thinking that there is a certain analogy between the modern English magazine system and our own lecture system; in other words, that its object in great part is not so much to inform the reader's mind as it is to provide for him a cheap view of living celebrities. This fact cannot but affect the quality of the productions; for the writer who knows that his name will draw a crowd necessarily takes far less pains with his work than one who feels that what he writes must tell by its own weight. We cannot quite agree with Mr. Burlingame in thinking that the present is the halcyon time of English periodical writing. We do not find in the first volume of 'Current Discussion' anything which need make the shades of Macaulay and his colleagues envious, and we cannot help believing that the articles both of Mr. Forbes (the author of 'Russians, Turks, and Bulgarians') and Mr. Freeman (the author of 'The Relation of the English People to the Russo-Turkish War') would have greater permanent value if they had no names appended to them. All this, however, does not detract from the value of the series as a record of current discussion; Mr. Burlingame's selections seem to have been made with good sense, and amply justify his choice as editor.

The Origin of Nations. In two parts: On Early Civilizations; On Ethnic Affinities, etc. By George Rawlinson, M.A. (New York: Scribner, Welford & Co. 12mo, pp. 272.)—This volume, like Professor Rawlinson's 'Historical Illustrations of the Old Testament,' is professedly apologetic. Its avowed purpose is to defend the inspiration of the Scriptures against attacks made on the credibility of the chronology of Genesis, or on the absolute correctness of its ethnology. Canon Rawlinson thinks it "disparaging to the Divine Word" to suppose that there can be an error of any sort, even historical, in the Bible, and it has been to him an "unpleasant duty" to read books which take any historical position inconsistent with "its plain and literal sense." He appears to conceive it to be a pious duty to defend the exact and literal truth of every historical statement of Scripture with which he is concerned. His concern in this volume is to show that no civilization goes back to a period of more than twenty-five hundred years before Christ, and that the ethnology of the tenth chapter of Genesis is correct in every particular.

The fault of the book lies where it might be expected—in the special pleading to which such an avowed object is a temptation. Perhaps the most important chapter is that devoted to a discussion of the age of the Egyptian monarchy, but the discussion is inadequate enough. It consists simply in a balancing of authorities, without reference to their date. Mariette and Lenormant are quoted as putting the beginning of the Egyptian history under Menes at 5000 B.C., while against them are quoted Lepsius (1849), Reginald S. Poole (1860), and Sir Gardiner Wilkinson (1862), as believing that these were contemporaneous dynasties given by Berosus as consecutive. This may be so; but the Canon fails to state that Lepsius, Poole, and Wilkinson had to depend on Manetho, and that Mariette had the advantage of several monuments discovered since Wilkinson's writing which completely confirm Manetho, and represent the dynasties not as contemporaneous, but entirely consecutive. It would have been only fair to mention this fact, of which Canon Rawlinson was aware, having Lenormant's 'Manual' under his eye, and quoting from it all he seems to know of Mariette. What Lepsius believed in 1849 or Bunsen in 1857 or Poole in 1860 is of little account since the discovery of Thothmes's "Hall of Ancestors" and of the two "Tablets of Abydos." It was Canon Rawlinson's business, if he will depend upon authorities, to tell us what Birch and Lepsius and Brugsch believe now on the subject. From Egypt our author turns to a dozen other nations, showing—and his task is easy—that there is in no single case any trustworthy evidence of an antiquity which would overlap Ussher's date for the Flood. Our author's discussion of the ethnology of Genesis is again far from satisfactory. As a consideration showing that Tiras may be identified with Thrace (which is probable enough), notwithstanding the difference in the third consonant, he mentions that "the *k* of *Θαρήκη*, *Θαρῆξ* passes into *ss* in the feminine form, *Θαρῆσσα* or *Θαρᾶσσα*," a fact which has no bearing, as the change is purely euphonic. The Philistines are represented as Hamitic in their language, which is contrary to all evidence and authority. Professor Rawlinson gives a list of four certain and six possibly Philistine proper names, all of which, he says, seem to have Egyptian affinities. But he omits, strangely enough, all five of the names of their chief cities, three of which his favorite authority, R. S. Poole, recognizes as Heb rew, the name of their god Dagon, of pure Hebrew root, and all the Philistine names which reach us through the Assyrian monuments, such as Mitinti, Rukupti, Hanun, Zidqa, and Zilli-bel, and which are pure Hebrew. Such a treatment of this familiar subject is very reprehensible. Even worse is his attempt to make it out that the Canaanites spoke a Hamitic and not a Semitic language. The contrary is notoriously the fact. On the matter of the language of Nimrod and his cities our author implicitly follows his brother, Sir Henry's, opinions of 1858, that the vocabulary of the Accadian is Cushite. But we doubt if even he would now hold to that opinion. Indeed, it is universally agreed among competent scholars that the early Babylonians spoke a Turanian language. To identify the Egyptian sun god Ra with the supreme god of the Babylonians is the height of absurdity, since we now know that there was no such Babylonian god, and that the supposed god Ra is only the termination of the Accadian word for god, *dingira*.

We are surprised at such a hasty and ill-considered treatment of this subject from an Oxford professor of ancient history and a Canon of Canterbury.

HENRY HOLT & CO.,
New York.

Walter Baker & Co.'s CHOCOLATE,

BROMA, AND

COCOA.

These preparations have been the standard of excellence for nearly 100 years, and have gained a world-wide reputation. They are pure, nutritious, and wholesome.

Cocoa contains as much flesh-forming matter as beef.

Broma is an excellent food for invalids, unrivalled in delicacy and aroma.

Breakfast Cocoa is a general favorite.

Baker's No. 1 Chocolate is the very best preparation of plain Chocolate in the market.

Vanilla Chocolate is unsurpassed in flavor and quality.

Awarded the highest premium at the Paris, Vienna, and Philadelphia Expositions.

1841. Diamond Hams. 1878.

S. DAVIS, JR., CINCINNATI.

PARK & TILFORD and ACKER, MERRALL & CONDIT, New York, have sold the DIAMONDS for more than twenty years. Circulars how to keep and how to cook hams.

PATENT PREPARED

Gasolene.

The attention of owners of Gas Machines is invited to the superior quality of Gasolene that we are making.

Manufactured by a process that is patented by ourselves, it is peculiarly free from all the impurities and heavy properties commonly found in other Gasolenes.

We manufacture these goods more largely than any other house in the world, and are prepared to furnish any gravity from 80° to 90° Beaumé, by the single barrel or car-load.

Orders solicited from gentlemen owning private country residences.

Hotels, Mills, and Manufactories supplied on the most favorable terms.

CHARLES PRATT & CO.,
Established 1770. 128 Pearl Street, New York.

Pratt's Astral Oil.

PERFECTLY SAFE.

Especially adapted for use in the St. Germain Student Lamp.

CHAS. PRATT & CO.,
Box 3059. NEW YORK.

KNOWING that our Cigarettes are second to none, and learning that the red label has led many fastidious persons to suppose cigarettes put up in so attractive a style to be but an ordinary article, has induced the manufacturers to prepare an elegant new and less showy label, hoping thereby to induce some of the many cigarette smokers who are prejudiced against Vanity Fair Cigarettes to give them a trial, which will convince them of their superior excellence. The old label is not abandoned by this change. Connoisseurs may always depend on finding both Vanity Fair Cigarettes and Tobacco fully up to standard.

WM. S. KIMBALL & CO.

Atlantic Mutual

INSURANCE CO.

NEW YORK, January 23, 1878.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st December, 1877.

Premiums received on Marine Risks from 1st January, 1877, to 31st December, 1877	$4,710,665 83
Premiums on Policies not marked off 1st January, 1877	2,040,362 61
Total amount of Marine Premiums	$6,751,028 44
No Policies have been issued upon Life Risks, nor upon Fire disconnected with Marine Risks.	
Premiums marked off from 1st January, 1877, to 31st December, 1877	$4,902,331 08
Losses paid during the same period	$2,565,890 27
Returns of Premiums and Expenses	$947,923 86
The Company has the following Assets, viz.:	
United States and State of New York Stock, City, Bank, and other Stocks	$10,565,958 00
Loans, secured by Stocks and otherwise	1,163,200 00
Real Estate and Claims due the Company, estimated at	617,436 01
Premium Notes and Bills receivable	1,764,393 63
Cash in Bank	255,364 02
Total Amount of Assets	$14,366,351 66

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday, the Fifth of February, next.

The outstanding certificates of the issue of 1874 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the Fifth of February, next, from which date all interest thereon will cease. The certificates to be produced at the time of payment and cancelled. Upon certificates which were issued for gold premiums the payment of interest and redemption will be in gold.

A dividend of forty per cent. is declared on the net earned premiums of the Company, for the year ending 31st December, 1877, for which certificates will be issued on and after Tuesday, the Seventh of May, next.

By order of the Board, J. H. CHAPMAN, Secretary.

HAVE FOR SALE SECURITIES FOR SAFE AND PERMANENT INVESTMENT.

S. G. & G. C. WARD,

AGENTS FOR

BARING BROTHERS & COMPANY,
52 Wall Street, New York.
28 State Street, Boston.

WILLIAM T. MEREDITH,

37 WILLIAM STREET, NEW YORK,

DEALER IN INVESTMENT SECURITIES AND COMMERCIAL PAPER.

Iowa Mortgage Loans,

when carefully made, are a safe investment, free from speculative influences, and especially adapted to small investors. Int., 8 and 9 per cent.; security worth from three to five times the loan.

We refer to many who have made loans through us and have had all their interest paid promptly.

THE BANK OF CRESTON, Creston, Iowa.
B. LOMBARD, JR. JAMES L. LOMBARD.

Missouri Farm Loans

Carefully made on Bond and Mortgage. Interest, 8 to 10 per cent. Perfect security. Well acquainted with local lands and valu s. Best references.

HARRY W. GRANTLEY, Attorney-at-Law,
Appleton City, Missouri.

Illinois Farm Loans.

Money wanted in sums of $500 and upwards to loan on improved farms in the vicinity of Elgin, Illinois, at 8 per cent. net, for three or five years. Security at least three times the amount loaned. Correspondence solicited. References given. Ten years in business. JOHN W. RANSTEAD, Att'y at Law, Elgin, Ill.

CUNARD LINE.

ESTABLISHED 1840.

FOR QUEENSTOWN AND LIVERPOOL.

Sailing from New York every Wednesday. From Boston, once a week.

RATES OF PASSAGE:

CABIN—$80, $100, and $130, gold, according to accommodation. Return tickets on favorable terms.

STEERAGE—$28 currency. For freight or passage apply to

C. G. FRANCKLYN,
Bowling Green, New York.

NORTH GERMAN LLOYD STEAMSHIP COMPANY,

FOR SOUTHAMPTON AND BREMEN.

The Steamers of this Company will sail every Saturday from Bremen Pier, foot of Third Street, Hoboken.

RATES OF PASSAGE TO LONDON, HAVRE, AND BREMEN.

First Cabin, $100; Second Cabin, $60 gold. Steerage, $30 currency For Freight or passage apply to

OELRICHS & CO., AGENTS,
2 Bowling Green.

Liverpool & London & Globe Insurance Co.,

45 *William St.*

The Nation.

NEW YORK, THURSDAY, MAY 2, 1878.

The Week.

THE bill passed in the House by a large majority, forbidding the Secretary of the Treasury to cancel or "retire" any greenbacks hereafter, repeals the section of the Resumption Act which directs greenbacks to be withdrawn to the amount of 80 per cent. of all fresh national-bank bills issued, until the amount of Government notes afloat is reduced to $300,000,000. The largeness of the vote shows the folly of supposing that the inflationists have been cowed or appeased by anything that has happened, and should (but will not) prove to Secretary Sherman the folly of trying to be a 'cute politician and skilful financier at the same time. Every admission he makes in the hope of conciliating the paper-men really appears to act as a suggestion to them for further demands and excesses. We trust, however, there is sufficient public spirit left among the friends of a sound currency to bring both him and them before the courts on the question of the meaning of "redemption," and on the question whether a fresh issue of a greenback paid in gold is not an issue of paper legal tender in time of peace, and therefore unconstitutional. Nothing could be more unfortunate than implicit reliance on his promises and preparations. Even after he begins to "resume," his course will probably be determined by recondite political considerations, and it is entirely possible that he may yet end as an advocate of permanent paper money with *occasional* resumption only.

The Syndicate took another $5,000,000 of United States bonds during the week, making $15,000,000 absolutely sold by the Treasury out of the $50,000,000 bargained for on the 11th of April. Although some of the 4½ per cents have been sent to London, the principal sales are in this country, at 102 gold and accrued interest, where also the sales of the 4 per cents are increasing. The 4½ per cents are sold for resumption purposes and the 4 per cents for refunding, and Secretary Sherman has already issued a call for the redemption of $5,000,000 of the 5-20 6 per cents, using the proceeds of the sales of 4 per cents. Gold fell during the week from 100⅝ to 100⅜, and there was a gold export of $1,350,000, chiefly for the payment of silver imported. There has been little done in the way of importing United States bonds from London, where prices have been kept nearly as high as in this market. It was a dull week at the Stock Exchange and in general trade. The prospective repeal of the Bankrupt Law has greatly increased the number of mercantile failures. Silver in London ruled at 53⅞*d.* to 54*d.* per ounce. At the close of the week the silver dollar had a bullion value of $0.9126 gold. The gold value of the United States legal-tender note for one dollar was $0.9962.

Messrs. Dun, Barlow & Co.'s report of the failures of the quarter ending April 1 is instructive reading. As a chronicle of commercial disaster it has not been equalled in the history of the country. The number of failures in this quarter exceeds that of the corresponding quarter of last year by 486; the amount of the liabilities exceeds that of the same period of last year by $27,546,756; and of this increase in number the Western States furnish 249, or more than half—of the increase in liabilities $10,458,683, or thirty-eight per cent.; and this in spite of abundant crops and vast exports. It is to be observed, too, that this great aggravation of the prevailing distress did not occur until, according to the silver-men, relief began to be sure and near at hand. Things improved during the first nine months of last year. As soon as Congress met in October they began to grow worse, and the longer Congress sits the worse they seem to grow, and have never been so bad as since Congressional relief through the silver movement arrived This disgusting obstinacy of business, in not reviving under recent legislative treatment, seems to call for more heroic remedies still, and we would suggest the penitentiary for any business man who does not "revive" after a certain quantity of silver is shown by the Treasury reports to be actually afloat.

The so-called Florida confessions have been the most interesting, not to say exciting, political theme of the week. The chief confessor is Judge Samuel B. McLin, chairman of the late Board of State Canvassers, who has made a sworn deposition before the Clerk of Thomas County. A sense of duty impelled him to let it be known that when the canvass was made he labored under the conviction that it was his "privilege and duty, in a political sense, to give the benefit of every doubt in favor of the Republican party"; that at no time did he feel that he occupied the position of a judge; that he can now look back on a "combination of influences that must have operated most powerfully in blinding his judgment and swaying his action"; that he had great fears for the State and nation in case of the success of the Democratic party; that he was shown numerous telegrams "insisting that the salvation of the country depended upon the vote of Florida being counted for Hayes," and giving "assurance of the forthcoming of money, and troops if necessary, in securing the victory for Mr. Hayes"; and that these were confirmed by the "visiting statesmen" on the spot. Party passion accordingly took the place of cool, impartial judgment, and the board "entered upon the work of the canvass with the conviction that they were invested with large discretionary powers, which were of a mixed character, political and judicial, the political largely predominating." They disregarded the Supreme Court's definition of their powers, and but for this Mr. Tilden must have been declared elected. What follows this long preamble is very disappointing, for the judge can only cite evidences of fraud which have been brought to his notice *since* the canvass.

The other confessor is ex-State Senator L. G. Dennis, also known as Captain Dennis, who was chairman of the Republican Committee in Alachua County, whose affidavit, however, relates to a particular precinct at which frauds are alleged to have taken place. He has assured a *Times* reporter that he still believes that "as a matter of abstract justice the State belongs to Mr. Hayes," but that it can be proved that "the face of the returns shows that the State belongs to Mr. Tilden." He is, therefore, much in the condition of Northern Republicans who held that "as a matter of abstract justice" all negro voters at the South were Republicans, and who based their charges of intimidation on the falling off from this ideal shown at the polls in any given place. More interesting than anything the captain or the judge has to say is the fact that the prompter of their confessions is another "judge," Alfred Morton, formerly of Virginia, more lately of Syracuse, N. Y. This enterprising gentleman, having been made, through Mr. Conkling's influence, a special agent of the Post-Office Department, warmly supported his great friend for the Presidency, and divided the Virginia delegation as between him and Blaine at Cincinnati; and Conkling did not forget to maintain him in his place when Postmaster-General Jewell would have removed him. He went down to Florida with the other statesmen and did more active work than all of them, and thought he had some claim on Mr. Hayes—say, at least as much as McLin and Dennis. Instead of that, he was dismissed a year ago, and has been nursing his wrath ever since. Suddenly he left Syracuse again for Florida, with Mr. Conkling's knowledge and approval, it is said, and the confessions are the result. Like McLin, his "ardor has been cooled and his partisan zeal chilled by the President, who has basely betrayed and mercilessly destroyed the Republican party of the South."

Mr. Mines, the interviewer who has "squealed," as the detectives say, so badly on Senator Conkling, had another letter in the *World* on Saturday, giving further particulars, which certainly show that "political science" is in a very low condition at Utica. It appears, according to his own story, that he was employed to edit the Utica *Republican* "in accordance with the principles of Lincoln and Grant," but was speedily informed by a "worker of the Conkling faction" that he was mistaken, that the paper was started for the more practical purpose of "killing the Utica *Herald* and destroying Ellis H. Roberts's influence." Disregarding this hint, he devoted himself steadily to the mental and moral culture of his subscribers, but was again reminded "that he must take a higher plane; that Roberts must not only be scalped, but killed; and that the friends of Mr. Conkling in the State expected it." The rest of his sad tale is of much the same nature. He was compelled to devote himself to scalping and killing the foes of the great Senator, especially "the President and his supporters." He had "to go light on Fairchild" and "lam it into Hayes," whom he testifies Mr. Conkling believes to be weak and corrupt. The conversations he had with his great chief were like that he reported the other day. That gentleman also disapproves of Mrs. Hayes going about with her husband so much on public occasions. Mines closes by an ominous reference to "epistles" which he may use hereafter. His picture of political society in Utica and of statesmanship in that town and its suburbs is, on the whole, gloomy.

On Wednesday week the House resolutely took up the Pacific Railroads Sinking Fund Bill as it came from the Senate, and, refusing to listen to any delay on the pretext of improving the measure, passed it with remarkable unanimity, by 243 to 2. The next day it took up the Senate's bill to repeal the Bankrupt Law, and, after modifying it so as to include the Act of June 22, 1874, as well as that of March 2, 1867, passed it by 206 to 39. On Friday, it passed the Post-Office Appropriation Bill; on Saturday, the Indian Appropriation. On Monday, it suspended the rules in order to take up and pass the bill to prevent further retirement of the greenbacks, and ordering their reissue by the Treasury as fast as received. This pretty certainly unconstitutional measure obtained 177 yeas against 35 nays. The Senate has been busy chiefly with private measures, but on Thursday assented to the Conference Deficiency Bill. On Tuesday, by a tie vote, it refused to pass the amended bill repealing the Bankrupt Law, but it will doubtless follow the example of the House. It received from the President the nomination of Mr. George L. Smith to be collector at the port of New Orleans, and as Mr. Packard went home on learning of this, it is supposed that the nomination will be confirmed, as from all accounts it ought to be. The Secretary of the Treasury also, on request, furnished some not wholly satisfactory information as to the expenses of placing our national loans, both in his own incumbency and under his predecessors.

After eleven years' trial Congress has determined to repeal the Bankrupt law, and there is already a flood of petitions pouring in from people who wish to take advantage of its provisions during the short time still remaining. There can be little doubt, though the law is far from perfect, that its repeal will be followed by a worse state of things than now exists with regard to insolvent estates. In the absence of a general law applying to the whole country, the only statutes that come into operation are the State insolvent laws. These necessarily differ considerably from each other in detail; and in the light recently thrown upon the divergence of views as to the relation of debtor and creditor existing in different parts of the country, it may be predicted that in the future there will be more radical differences than ever. In lending States the law will be made to favor the creditor; in borrowing States, the debtor. But besides this, insolvent laws have no effect beyond State boundaries, and no such thing as a complete discharge of a bankrupt is possible under them, except after tedious and wasteful proceedings in the courts of every State in which he owes debts. Such a condition of things puts a premium on fraudulent preferences and all sorts of dishonest practices. One naturally asks, therefore, why, in the face of all these objections, the repeal is still insisted on. The answer to this is, we believe, 1st, that unwise amendments made a few years ago destroyed the efficiency of the law; and, 2d, that there is in the United States at large an aversion to a general bankrupt law, which in ordinary times is always strong enough to prevent the retention of any statute on the subject. "Our people," as the Washington politicians say, "do not like bankrupt laws." We fear if this feeling were traced to its source, it would be found to spring from a suspicion that debtors are better off without than with such laws. The present act was passed at the close of the war, and its object was rather to enable debtors to get a complete discharge than to help creditors. Having secured this object the weight of the law begins to be felt, and a movement is set on foot for its repeal. This sort of bankruptcy see-saw has been going on from the very beginning of the Government, bankrupt laws being passed and repealed, not in pursuance of a far-seeing and comprehensive policy, but as a temporary makeshift from time to time, as legislation or the want of it makes itself uncomfortably felt.

The attempt to bring Moses, late Speaker of the Assembly and Governor of South Carolina, back to his native State to be tried for forgery has failed ignominiously. He was properly arrested; the habeas corpus did him no good; but the South Carolina officer charged with his extradition found at this point that no New York jailer would keep him pending the sailing of the steamer. So the officer took him to the St. Denis Hotel; but, finding this expensive, discharged him on parole, allowing him one dollar a day for his support, and directing him to report himself daily. The prisoner obeyed faithfully, and drew his dollar regularly until the day came to sail, when, having gone for his "trunk," he failed utterly to reach the wharf in time to be carried off. So he is now at large, or, as the reporters say, "in our midst." His position is, for a statesman, very disagreeable, for there can be no more unmistakable proof of loss of popularity than inability to find a jail that will shelter him. Kimpton, we believe, though also called for, cannot be found. He desires, we believe, to leave all these South Carolina matters to the "tribunal of history."

The week has been a very trying one among Statesmen in this city. Three of our most noted political personages, Messrs. Fox and Hogan and Dr. Shine, a coroner, all three brothers-in-law, have fought three or four rounds in a bar-room, Fox and Hogan being the principals, and the Coroner pursuing a course of malevolent neutrality by occasionally pummelling each of the others. They are all so high-placed that the police, even when called in, were reluctant to arrest them, and the newspapers gave from one to two columns to accounts of the scrimmage, besides collecting "views" on it. It appears that none of the three has any regular calling or occupation, but all have lived on the taxpayers, just like princes of the blood in the despotisms of the Old World, now filling one little office and now another. The greatest New York publicist, Mr. John Morrissey, is now on his deathbed, and the progress of his malady is watched with great anxiety by an afflicted people, and reported by a faithful press, just as the Prince of Wales's fever was in England. As almost the only reliable reformer in New York, his loss will be very serious, and a trick he had of butting his opponents with his head in the pit of the stomach, and which he retained even in the earlier stages of his illness, will make it almost impossible to supply his place. Another distinguished Statesman and ex-Senator and journalist, Mr. Ben. Wood, has gone into bankruptcy, and we regret to notice that a local jurist of eminence, Mr. William Hastings, alias "Dublin Tricks," who is a liquor-dealer in his leisure hours, is one of his unsecured judgment creditors for $7,000 or thereabouts. Mr. Silas B. Dutcher, the Second Assistant

Statesman of the "Conkling faction," and probably the first Controller of Primaries in the world, has also filed a petition of bankruptcy, and, in fact, it seems as if nearly all our great political leaders and thinkers were plunged in trouble of one sort or another.

There has been some further light thrown on the question of the political activity of office-holders in an interview with Secretary Thompson, in which, if correctly reported, he said that the President saw no reasonable objection to officers in the civil service contributing a portion of their income to campaign purposes, and that he expected to contribute a portion of his own; but that, if any office-holder saw fit to refuse to contribute, he would be supported in his refusal. This looks very well on the surface, but the fact is that as long as office-holders as a class are regarded as peculiarly bound—bound, for instance, more than the plumbers or tailors of the party—to contribute to election expenses, assessments will never be voluntary. Office-holders will be afraid to refuse, and the President's promise of support will not encourage them to refuse. It will simply assure them that they will not be openly dismissed for refusing, but it will not assure them that a black mark will not be put to their names, and that they will not be dropped for something else. Were they completely relieved from this fear, they are so poor a class that nothing could be obtained from them, and indeed, considering how low their pay is, there is something absolutely cruel in pursuing them for money. It is only done on the false and vicious theory that the portion of the revenue used in paying the salaries of officers comes from or belongs to the party in power, and this theory the President ought to discourage in every possible way.

A correspondent writes to ask, apropos of our article of last week, "Where does the Geneva Tribunal's decision leave us as regards the right to send ships abroad for sale? Does it leave them just where it leaves muskets and other munitions of war, leaving us a right to send either to a belligerent for sale without breach of neutrality?" The answer is, we believe, to be found in Dana's summary of the decisions of our courts: "Is the intent one to prepare an article of contraband merchandise, to be sent to the market of a belligerent subject, to the chances of capture and of the market? And, on the other hand, is it to fit out a vessel which shall leave our ports to cruise immediately or ultimately against the commerce of a friendly nation? The latter we are bound to prevent. The former the belligerent must prevent." That is, we might send a vessel suitable for military purposes to Cronstadt, or Odessa, or Liverpool, or London, for sale there, running the risk of capture on the way; but we could not fit one out here as a cruiser on a Russian or British order, to take the sea as a belligerent without entering a Russian or British port. If the *Alabama* could have been delivered in Charleston, Great Britain would have incurred no liability through her subsequent operations. As a matter of fact she sailed from Liverpool as a Confederate cruiser, and began her operations by taking a fighting crew on board at sea. It will be observed that as war has not yet been declared, all this has no application to the case of the German steamer *Cimbria*, now or lately lying at Southwest Harbor, Maine, and having been chartered and manned by Russia probably with the view of using her as a cruiser in the Pacific.

The news from Europe is distinctly more warlike, owing to the apparently implacable temper displayed by England. She at first refused to comply with the request of the other Powers as well as of Russia, to state what the plan was she proposed to substitute for the treaty of San Stefano; but she now lets it be known, it is said, that she proposes to regard the treaties of 1856 and 1871 as still in force, and the treaty of San Stefano as a mere "suggestion," to use Lord Beaconsfield's language, that they should be modified by another Congress. If this be true, war can hardly be avoided, for this would involve humiliation for Russia to which the Government dare not submit. Russia has proposed concessions on several minor but important points, such as the period of the occupation of Bulgaria, the composition of the Commission which is to superintend the organization of the new state, and the amount of territory to be retroceded in Bessarabia, limiting it to a small strip inhabited by Russians. It is hardly possible she can go further than this. It is to be observed, on the other hand, that the chances of England's isolation increase owing to her refusal to produce a programme. If she would put on paper what changes she wished to see made in the East, Austria very probably, and possibly Germany, would aid her in carrying them; but neither of these Powers is likely to go into war for a wholly undefined object, maybe simply "British prestige," which has within the last week or two been substituted for "British interests." In fact, as the negotiations progress, the chances that Austria will keep aloof until the two principals come to blows, and then make the best terms she can for herself, grow stronger.

In the meantime Beaconsfield and Salisbury are raising the war movement to the rank of a first-class *spectacle*, such as the former delights in. It is to be an Imperial war, with India engaged in it, and preparations are being made for the transfer of a considerable body of Indian troops to Europe—the native regiments, Hindu as well as Goorka and Sikh, volunteering with great alacrity and even eagerness. The Goorkas and Sikhs are perhaps as good soldiers as any army in Europe has to show, as far as the quality of the men goes, but they suffer as the Austrians suffer, from being officered by men of a different race and language. The Liberals seem to be recovering some of their courage, as the Ministers throw off the mask, and Mr. Bright has been denouncing the Premier in unmeasured terms. Considering that the war is to be waged in part to punish the Russian diplomatists for falsehood, it is, as Mr. Bright points out, deplorable that Disraeli should have been guilty for many months of persistent mendacity in denying the existence of dissensions in the Cabinet. Little is known about the attitude of the Turks, but that they are picking up courage a little is proved by the fact that they refuse to surrender Shumla and Varna, knowing, doubtless, that if Russia attempted to coerce them by occupying Constantinople it would precipitate hostilities with England. The difficulties of the Russian occupation have been increased by an insurrection of Pomaks, or Bulgarian Mussulmans, composed of the local refugees, and some débris of Suleiman Pasha's army, in northwestern Bulgaria, but, on the other hand, Russia has come to terms with Servia, and will doubtless make friends with Rumania also.

The news of extensive "warlike preparations" in Italy which has recently got afloat has led to more or less speculation as to the possibility of Italian participation in the struggle, but the speech of Count Corti, Minister of Foreign Affairs, a fortnight ago, seems to leave no doubt as to the firmness of Italian neutrality, and the sobriety and good sense of the Italian view of the crisis. His reply to the proposal that Italy, as a participant in the Congress which made the Treaties of 1856 and 1871, should join England in resisting the Treaty of San Stefano, was "that accomplished facts have inexorable corollaries. The events of 1877 cannot be erased from history; the Treaties of 1856 and 1871 must be modified." This is sound law as well as sound sense. According to the Beaconsfield-Salisbury view the war of 1877 simply entitles Russia to apply for a modification. In so far as Italian influence will be exerted in the future settlement, it will be undoubtedly thrown on the side of Rumania and Greece, and against Slavic preponderance, and Count Corti gave a summary snub to the suggestion that this would be a good time to settle with Austria about Triest and the Trentino, dwelling on the importance of cordial relations with Austria and the impropriety of "discussing in the Chamber territorial claims in direct opposition to the treaties we have solemnly contracted with that Empire."

THE FLORIDA FRAUD CONFESSIONS.

THE confession of the Chairman of the Florida Returning Board, that there was fraud in counting the votes at the last Presidential election, which gave the State to Hayes when Tilden was really entitled to it, will not surprise many of those who gave much attention to the subject at the time. We have never doubted, and have never concealed our conviction, that gross cheating took place, both in that State and Louisiana. But we saw, or thought we saw, plainly enough that if Congress was charged with the power of complete enquiry into the regularity of every State vote at the Presidential election, it would speedily convert the election into a farce. The decision of the Electoral Commission, that this enquiry was not lawful, seemed to us a fortunate and wise one. It delivered the country from a great peril, and Mr. Hayes from what was, or ought to have been, a great perplexity. It gave him as good a title to the Presidency as was possible under the circumstances, and a good enough title to satisfy all sensible men who cared more for the stability of the Government and the prosperity of the country than for the triumph of any political party. It not only enabled him to take the place without discredit, but made it impossible to avoid taking it. It was awarded to him by as good authority as if Congress, instead of creating the Electoral Commission, had itself declared him elected in the usual way. The fact that frauds had occurred in any particular State concerned him no more in the one case than it would have concerned him in the other. No honorable man could accept the Presidency if before accepting it he was bound to satisfy himself that in every State in which he had a majority, the vote had been lawfully cast and the count honestly made.

There was, however, one unfortunate feature in Mr. Hayes's position which the Electoral Commission did nothing to remove, and that was the presence of personal friends of his in Florida and Louisiana, in the character of "visiting statesmen," during the count, in intimate and constant intercourse with the Returning Boards when the alleged cheating was committed. There was but one way of remedying this defect after the Electoral Commission had put him in the White House, and that was an absolute refusal to go behind the award of the Commission, or acknowledge in word or act any connection with or obligation to the Returning Boards, or any persons who assisted, superintended, or encouraged them. Mr. Hayes ought in common prudence to have treated himself as the creature of the Commission, and as nothing else. He did not display this prudence. He was very niggardly to the politicians who were most active in his canvass, but he displayed great munificence to those who went down and superintended the count and to those who did the counting. The principal "visiting statesmen" in Florida and Louisiana received high offices. In the latter, three members of the Returning Board got, or were permitted to retain, very comfortable offices. Two of the "visiting statesmen" in Florida received foreign missions. One of those in Louisiana received a seat in the Cabinet, another a foreign mission. The chairman of the Florida Returning Board, McLin, who has just confessed, was nominated for the chief-justiceship of New Mexico; another participant in the count, Dennis, was made a Treasury agent on Mr. Hayes's own warm recommendation. In fact, the connection of the President with the set of men who did or connived at whatever was wrong in the count, or encouraged the counters, in both States was displayed in so many ways as naturally to suggest the idea that he was grateful to them, and felt that they had done more for him than their official duty prescribed. It is not surprising that he failed to satisfy them. McLin failed, through the opposition of the Senate, to get the office he sought, and after much tribulation fell into consumption, and, being now in danger of death, has made a clean breast of it. Dennis, who is or was, it is said, under seven indictments for embezzlement and other offences of a similar character, has made a clean breast of it, too, and what breasts they both had before they cleansed them is now known to every newspaper reader.

There is more or less mystery about the cause of these revelations just at this period, but we do not think it is an unfathomable mystery. It is easy to see why Mr. Tilden should be anxious to extract the confession, for it may give him the air of a martyr in the eyes of the next Democratic convention and strengthen his claim to another nomination; and easy to believe that some of the anti-Administration Republicans should be willing to help in the work out of that spirit of pure malice which of late seems to have been their governing political motive. But the Administration papers make a great mistake if they suppose they can dispose of the confessions and break their effect by showing that the men who made them are unworthy of belief even when they accuse themselves of great crimes. We do not think the public will swallow any more of this sort of equivocation. It will not do to make McLin and his tribe out honest when they are doing Republican work, and rogues when they are doing Democratic work. What plain people see clearly enough is that they were rogues from the beginning. A woman who accuses herself falsely of adultery is rightly held to have been quite capable of committing adultery if the occasion had presented itself, and no one will believe that a man who falsely says he once forged or cheated would not have forged or cheated if there had been any temptation to do so. So that there is now no more use in blackening the Florida and Louisiana scoundrels than there was in whitening them last year, and we would on the whole recommend, as the wisest as well as the most virtuous course, either telling the people the simple truth about the whole matter or letting it alone. The carpet-bag régime in the South had in the year 1876 put the electoral machinery of the doubtful States into the hands of very disreputable adventurers, who woke up within two or three days after the Presidential vote to the tremendous fact that they had it in their power to dispose of the Presidency. Honest men of both parties at the North ought at this juncture to have gone down and seen to it, *by joint action*, in the interest of American peace and liberty, that these persons were guilty of no tricks or frauds of any kind, and that the count was so made that nobody should be able to question the result. But the times were not favorable for the display of any such virtue. The Democrats were demoralized by long exclusion from office and fierce desire for it, and by the feeling that the Republican rule at the South had been so bad that almost any device was allowable that would get rid of it. The temper of the Republicans, on the other hand, was very revolutionary. The traditions and passions of the war were still strong among some, and they saw in a Democratic triumph the triumph of the Rebellion. Intense interest in the enfranchised negro was strong among others, and they saw in Tilden's election the extermination or re-enslavement of the freedmen. The result was a considerable degree of unscrupulousness, which sent agents and emissaries to the South who were by no means in a mood to stick at trifles, or be very careful about their own virtue or that of Southern Republican canvassers.

But it is folly to suppose that there is now any legal remedy for these things which prudent and patriotic men would care to apply. The Supreme Court would almost certainly hold that the decision of Congress, in adopting the conclusions of the Electoral Commission, was final, and the time spent in preparing and arguing the case would be one of great political confusion, and renewed and intensified commercial depression. Moreover, if a confession of fraud in the State canvass was held to be sufficient to unseat a President in the middle of his term, and put his title in doubt, we should have confessions by the dozen in every Presidential term hereafter, and, in fact, Presidential elections would have no end. Half a year would be spent in the campaign, and three years and a half in trying to oust the successful candidate, so that we should rapidly see the Government reach the South American level. For the reasons already given, the peculiar state of the public mind which made the last election so unsatisfactory is not likely to recur, and the one duty which the present situation imposes on practical and sober-minded politicians is the provision of a mode of electing the President which shall be so plain and simple that such practices as have been re-

sorted to in Florida and Louisiana shall either not occur again or shall produce no serious effect. The punishment of the perpetrators and abettors of the late frauds is to be dealt out at the polls, not in the courts.

THE INCOME TAX HERE AND IN ENGLAND.

SOME of the Western papers have undertaken to demonstrate the expediency of the income tax by showing its success as a means of raising revenue in England, which is about on a par with the argument which some of the Senatorial Group use, that General Grant's social success among the European aristocrats proves that he merits a third term. In the first place, the income tax was never suggested or thought of in England as a means of "striking" one class or district in order to spare another class or district. It has always been advocated simply as a fiscal scheme, and not as a means of gratifying social prejudices. The most unfortunate feature in the proposal that it should be revived here just now is, that it is part and parcel of an assault on that portion of the community which is supposed to be in possession of accumulated property, for the purpose of relieving another portion which is supposed to be in debt. It is a sufficient, and indeed fatal, objection to any tax that it has originated in any such way, and there is no doubt that it was to prevent attacks on wealthy localities by poorer and more populous ones that the Constitution provided that "no capitation or other direct tax" should be laid except in proportion to population. An income tax levied in the various States in accordance with this provision would find no favor at the South and West. A good many newspapers favor it, however, which are much troubled by the growth of Communism among the working classes in this country, apparently forgetting that Communistic ideas were started by the Western farmers in the Granger movement, and that nothing is more natural than that the doctrines about property which were promulgated passionately by persons who simply wished to impose on others part of the burden of carrying their goods to market, should have found expression in pillage and arson in two or three years later among suffering operatives. In a country situated as this is, and governed by universal suffrage, it is not possible to keep the plan of making anybody pay more than his share of the public burdens within limits of any kind. It is not a kind of plan which can be resorted to now and then, and for one particular purpose. We have among us a large body of persons who like the broadest possible application of all theories which offer a hope, however slight, of getting money or goods without labor. If the income tax had ever been proposed and taken up in England as a means of making rich men pay a larger part of the public expenses, or of putting on Middlesex a proportionately greater load than on Cumberland, it would never have been enacted.

The purely fiscal origin of the tax there, too, has made its collection efficient, decent, and inoffensive. The commissioners who have charge of it are carefully selected, and are sworn to secrecy. The returns are as secure from public inspection in their hands as if locked in the taxpayer's desk. The argument that secrecy helps fraud does not count, because the vexation, and often the injury, of publicity are so great as to outweigh its advantage to the treasury. The Khedive of Egypt uses the bastinado freely to extract correct returns from the fellaheen, and finds it very effective—in fact, it is doubtful whether he could raise more than half his revenue without it; but civilized governments have generally reached the conclusion that certain modes of collection do more harm to the country than their yield would compensate for. The best preventive of fraud in all tax-collecting, it is now generally acknowledged, is the adaptation of the tax to the habits and prejudices and convenience of the people, and the maintenance of the highest degree of efficiency in the revenue service. We have not as yet tried this plan here, high a place as we hold in civilization. The tariff is framed on the barbarous plan of clapping a duty on everything we can think of; and an income tax imposed so as to fall on the rich, and enforced by a thorough exposure of their private affairs, has a flavor of Turkey and Persia about it.

The strictly fiscal character of the tax in England and the strictly confidential mode of collection make the use of it as an instrument of party gain or political annoyance impossible. But it had not been very long in existence here before a couple of political partisans of the lowest order were sent out by the Treasury to act as itinerant spies to ferret out cases of non-payment or insufficient payment, and they began incontinently, as might have been expected, to levy "blackmail" both on men who had made incorrect returns purposely, and on men who knew they might innocently have made incorrect returns and were frightened by the possible consequences of their neglect or oversight. The Sanborn scandal was, in fact, one of the worst of General Grant's administration, and showed to what base uses a tax of this kind under our political system can be turned. The suit now pending against Mr. Tilden is an illustration of the same thing. It was begun against him by the officers of the Government in the midst of an exciting canvass, notoriously for the purpose of discrediting him as a candidate for the Presidency. It may be that the charges against him on which the proceeding is based are perfectly correct; but the occasion chosen for bringing the suit, and the selection of him as the sole object of the enforcement of a doubtful legal view, made it sufficiently clear that the collection of revenue was not, as it ought to have been, the only purpose of the proceeding—that it was intended to be an electioneering device as well. Any tax which makes such a performance possible is wholly unsuited to our state of society and system of government.

It must be observed, also, that England is, *par excellence*, the country of fixed incomes—that is, of incomes derived from safe investments. The number of persons living on such incomes drawn from the public funds, home or foreign, from rent charges, from mortgages, from farm rents and railroad shares, and varying little if any from year to year, is large in proportion to the number of those who draw their incomes from what we call "active business," or professional gains, to a degree of which Americans have little idea. England is a country of enormous accumulated capital lent out in every direction all over the world, the yield of which supports a vast body of persons in complete or partial leisure. Among us this class is comparatively very small. Nearly every American is in a greater or less degree a trader or speculator, and is "turning over" his capital, if he has any, in some enterprise of varying degrees of profit. The sphere of an income tax in England is accordingly very large, and the making of returns very simple. Variations in a man's income from year to year are comparatively rare, and when they occur are comparatively easy to account for and set forth. Here, on the contrary, the sphere is very small, as is shown by the present expectation of the West and South that they will escape the incidence of the tax altogether, and by the ridiculous fact that when it was levied, and incomes under $2,000 exempted, it was only paid by 150,000 persons out of a population of 40,000,000. The sources from which an American who has more than $2,000 a year draws his income are apt to be various, and the yield of each to change from year to year in a way unknown in older, more cautious, and less enterprising communities; and this not only makes it hard for honest men to make accurate returns, but makes concealment or evasion easy for dishonest men. In fact, to use the argument of a great Western financier, you can no more deduce the suitability of an income tax to Americans from the example of Englishmen than you can make a plaster cast of the surface of England fit the surface of the United States, or deduce the fitness of General Grant for a third term from the number of dinners given him in London, or from the presentation to him of an Arab horse by Abdul-Hamid. The way of both the South and West back to the old American peace and prosperity lies through industry and order, and through the confidence of every man who has saved money that he may safely lend it or invest it, and not through tinkering the currency or legislative attacks on capital; and now that they have had their fling, and shown the Gold-sharps that they do not care a snap for either the Ancient or Modern World, for Ancestors or Posterity, and can pass what bills they please, would it not be well to settle down to business and sober and rational life?

OUR UNAVAILABLE PUBLIC LANDS.

THE special report of Major J. W. Powell, in charge of the United States Geographical and Geological Survey of the Rocky Mountain region, transmitted to the House of Representatives on the 3d instant, presents a view of the climatic and other conditions governing the greater part of the national territory still unsettled, and of the imperfections of the present laws for its disposal, that invites serious attention. The report is upon the great Arid Region of the United States in which irrigation is necessary to agriculture. Its eastern boundary is approximately the 100th meridian, and it extends to the Pacific, excluding the Lower Columbia district, where the rainfall is sufficient; parts of Central and Northern California, where its distribution through the seasons is favorable, though the total is below the minimum (twenty inches) ascertained to be generally required; and a few hills and mesas adjacent to great mountains. A wide belt reaches east of that meridian to near the isohyetal line of twenty-eight inches passing through Minnesota, and embraces nearly one-tenth of the whole area of the United States, in which irrigation is not generally or immediately necessary, but from its advantages will become common. This may be designated as the Sub-humid Region, and the true arid area, with deductions for all favored localities, comprises more than four-tenths of the whole of the United States exclusive of Alaska. This contains by far the largest part of our public domain remaining for sale. If its disposal and settlement are prevented or seriously retarded by our existing laws the evil is obvious.

Title to our public lands may now be acquired by purchase at public sale, by "private entry," and by virtue of pre-emption, homestead, timber-culture, and desert-land laws. It has not been for a number of years the practice to dispose of them by public sale or private entry, and, with small exceptions, lands in the arid region have not been offered for sale in those modes. Any citizen may pre-empt 160 acres, and by settling thereon, erecting a dwelling, making certain improvements, and paying $1 25 in some, and $2 50 in other districts, obtain title. This right can be exercised but once, and by no one who already owns 320 acres. A citizen may under the homestead privilege obtain 160 acres, valued at $1 25 per acre, or 80, valued at $2 50, by payment of $5 or $10, respectively, residing on the land for five years, and making certain improvements. These terms are made more favorable to those who have served in the army or navy. Title may be gained under the timber-culture act, by the head of a family, to 160 acres in the prairie region, after eight years, by cultivating timber thereon in specified quantities. One section of desert land may be obtained by paying twenty-five cents per acre at the time of entry, redeeming it by irrigation within three years, and the payment of one dollar per acre at the end of that time. It is not necessary to dwell upon the land-warrants issued as bounties, upon the agricultural scrip for establishing agricultural schools, or upon grants to railroad and other corporations. By these several methods adequate provision is made for actual settlers on lands irrigable by minor streams, but they are insufficient for the settlement of those depending on the more important water-courses, and also for the pasturage and timber tracts, in which exceptions are included nearly all the lands of the arid region which ever can be settled. The fractions of this immense area that can be utilized under any circumstances require varied modes of disposal, none of which is yet applied by law.

In general, only those parts lying along the water-courses, being the lowest lands of the several districts, can be redeemed by irrigation, and their extent is determined by the amount the few small lower tributaries can serve, and the areas to which the larger streams, which mostly receive their confluents before leaving the mountain gorges and flow much below the general surface, can be taken by engineering skill, often at a great outlay. On a careful estimate, the whole of the irrigable land is but three per cent. of the region above described. The small streams distributable by individual enterprise are sometimes already used, and, where they are not, should generally be reserved as fronts for pasturage farms, to which the lands of medium altitude are chiefly adapted, which are of vastly greater extent than those valuable for agriculture, and which, without such reservation, would be cut off from all reliable water. The diversion of tributaries for the irrigation of lands lying any great distance below them would also interfere with the economic distribution of the rivers which are the main source of supply, but which demand either capital or co-operation before they can be employed at all. In addition to a system of canals, one of reservoirs above or ponds below for the storage of water will be necessary to increase the irrigable area, for which there should be special provision in the general surveys. All our laws leave the individual immigrant wholly unable to farm tracts only to be redeemed by expensive and comprehensive irrigation. They should be disposed of without the present limitations, either in quantities to suit capitalists, and with the condition of actual irrigation before the transfer of title, or, if reserved, in accordance with our beneficent homestead provisions, as homes for poor men, a general law is needed under which a number could settle in irrigable districts, establishing their own regulations for the use of water and subdivision of the lands between themselves.

Throughout the region considered, valuable timber grows spontaneously on the higher plateaus and mountains, where, from climatic conditions, agriculture will never be possible. The districts over which timber has grown, and where the humidity and temperature would permit of its renewal in time—if protected from the fires, which are mainly caused by Indians in driving game less for food than for their peltry trade—form about 23 per cent. of the whole area; those where timber of some kind is yet standing have about half that percentage; while those affording valuable milling timber reach but 5 per cent. This, however, is amply sufficient for all industrial wants, and no limitation in its use is requisite if the fires can be prevented by the removal of Indians tempted by the traders to supply furs, and if the country can be gradually settled, so that the herbage in which fires generally spread may be kept down by summer pasturage, and the dead and fallen trees removed to market. The present laws, however, absolutely prohibit the honest acquirement of any of these timber lands, because they are not agricultural. The fraudulent practice of "dummy" entries under the homestead and pre-emption provisions, without intention to complete the title—the lands being held only long enough to be stripped—is resorted to almost from necessity when timber is required. The laws should be amended to allow of a legitimate timber business by sale of the lands in such quantities as may encourage the construction of mills, erection of flumes, making of roads, and other permanent improvements. An old system, contrived when all tracts were taken as farms and the forests cleared as a hindrance to the main object, is wholly inapplicable where the timber constitutes their sole value, summer frosts rendering agriculture hopeless.

Between the irrigable and timber divisions of the region spreads a vast body of valley, mesa, hill, and low mountain land, usually bearing a scanty growth of nutritious grass, useful both for summer and winter pasturage. This improves in higher latitudes and altitudes, but in the lower becomes so meagre as to show the true deserts found in some southern parts of California, Nevada, Arizona, and New Mexico. There are also districts of incoherent sands and clays, sediments of tertiary lakes or cretaceous seas, in which the streams flow in deep waterways and the steep hills are washed naked. These are the well-named "Bad Lands." Still other tracts lie waste in the form of alcove and cañon lands and lava beds. After all proper deductions, probably thirty per cent. of the whole region remains as useful, and much of it valuable, for pasturage. Having for general advantage relegated the districts along creeks and rivers to the irrigable class, where agriculture is the sole industry, those considered as pastures have their only reliable resource for water in the smaller branches and upper ramifications. So large an area is required for the support of the stock that a quarter section is of no value for the wants of a herd needed by the poorest man for his maintenance. Four square miles, or 2,560 acres, is the minimum unit for a pasturage farm—and it should frequently be larger—for which regular division lines are impracticable. Many a short brook would afford water for a number of pasturage farms; but if the survey is in regular tracts, as square miles and townships, all the water sufficient for the several farms may fall wholly within one division, which alone would be taken up in the first instance, and its owner would either control the remainder or leave them on the hands of Government. In no event can those pasturage districts support any but a sparse population; and that the settlers may enjoy any of the local social organizations of civilization, their home residences should be grouped as near together as possible. For these reasons, divisional surveys should conform to the topography and afford the greatest practicable number of water-fronts. The large areas of the units also preclude fencing, so that for poor men co-operative pasturage or communal regulations for the occupancy of the ground and division of the increase of stock is necessary. No existing law meets these requirements. One should be enacted to provide for the organization of pasturage districts of sufficient size, in which the settlers could make their own regulations for the division of lands, the use of the water for the irrigation of their small home farms and for the watering of their stock, and for pasturage in common or in severalty, but each sub-division of the district, or

pasturage farm, should be owned by one individual acquiring title by the homestead method. This allows of the colony system—not alone for fresh bodies of immigrants, but for the unfortunates already in the country who roam with herds seeking water where they can gain no permanent residence, and will, of course, make no improvements. It is not untried, being the basis of all the mining-district organizations, whose local rules for the division of mining lands and use of water and timber have given better results than would have been accomplished by specific statutes of the United States. Customs are already forming and regulations framed among the people in some of the pasturage districts, but they provide no means for the acquirement of title, no incentive to improvement, and no legal security.

It seems obvious, therefore, that the diverse ranges of territory yet unsold and unsettled should neither be surveyed nor disposed of as if they were on a common plane or under the conditions met in generations past by pioneers of simple agriculture in the lowland forests and more eastern plains. An authorized classification of the several categories of public lands, which, as Major Powell's report shows, differ at once from each other and from any familiar to the framers of our present statutes, is the first necessity. In connection with this, a scientific system of both surveys and disposal should be adapted to each of the classes defined. In time of national poverty even the cessation of purchase-money for public lands is of some moment, but of vastly greater consequence is the fact that by antiquated and inappropriate laws the thousands who, not obtaining the rewards of labor, are becoming a burden and a danger in the East, are practically debarred from the vast body of the national domain, where, under judicious amendments to legislation, they might obtain homes and contribute to renew the general prosperity enjoyed when there was an available and growing West.

TUNIS.

MALTA, April 4, 1878.

THE possession of the regency of Tunis in the approaching dissolution and distribution of the Ottoman Empire is likely to lead to grave complications. Its position, adjoining Algiers and within eighty miles of Sicily and one hundred and fifty miles of Malta, renders it an object of deep interest to France, Italy, and Great Britain. France and Italy are known to covet it—the former to enlarge her African colony ; the latter in order to possess territory where her surplus population may find a congenial climate and suitable occupations, without severing national ties and going beyond the reach of conscription for military service. The arrogance of Great Britain in dictating to Russia the limits which her victorious arms may not overstep has less excuse than would an attempt to maintain the *status quo*, and, failing that, to take possession of Tunis. The northern part of the regency, projecting far beyond the line joining Gibraltar Strait and the Suez Canal, compels the commerce which flows between these two channels to pass close along its coast for a considerable part of the route. The presence of a powerful fleet in Tunisian waters would, therefore, be a standing menace to "the route to India," with which the British are just now so much concerned.

The interest and influence of these nations, no less than the supposed power of the Sultan, has been sufficient to sustain the tottering authority of the Bey, who is conscious of the inevitable occupation of the regency by some European power, and exerts his efforts not so much to prevent it as to defer it. The agents of at least three European nations are constantly engaged in some intrigue in favor of or against his ministers or favorites, with a view to increasing their individual influence or to lessening that of their colleagues. Recent events have added another to the nations especially interested in the regency. The necessity of a German navy capable of successfully contending against that of England, France, or Italy, is appreciated in and out of the German Empire. Its development and maintenance are impossible without a port in the Mediterranean. When the Bey, under British pressure, furnished money and made every effort to furnish men to the Ottoman cause, Russia protested and threatened to retaliate. By virtue of her victory it is believed that Russia intended to propose a partition of the regency between Germany and Italy, for their very evident moral support in opposition to Austria. Circumstances have altered these plans, and it is now believed that the hesitation of France to participate in the Congress was due chiefly to the fear that the question of Tunis and Egypt would be discussed and probably settled contrary to her designs and interests. No compromise would reconcile the interests of England and France in Egypt, nor of Italy and France and Germany in Tunis. When four great nations all covet the same territory, occupied by a race which has grown contemptible, and forming part of an empire that is falling to pieces, the result can hardly fail to be a struggle for its possession.

If ever the partition between Germany and Italy takes place, the Mejerda River will probably be the boundary. It rises in the province of Constantine in Algiers, and, flowing northeastward, empties into the Gulf of Tunis near the western limit. It thus divides the regency into two very unequal parts. Since the object of Germany is the possession of a port and that of Italy an increase of territory, the smaller part might become German. This includes the lakes of Bizerta and Echkeul, extensive forests of oak and other valuable timber, very rich and convenient mines of iron ore, equal in value to that of Elba, mines of copper and lead ore. The total area of the regency is about 50,000 square miles, the total population about 1,500,000. The strip north of the Mejerda is about one-tenth of the whole, and contains about one-fifth of the total population. The western part, adjoining Algiers and generally termed the province of Tabarca, is inhabited by fanatical and savage tribes of Arabs, who have defied the authority of the Bey, refused to pay taxes for several years, and steadfastly resist the development of their territory. These tribes can muster an armed force of about 5,000 men. They possess very large herds of camels and sheep, chiefly stolen from the neighboring or distant tribes in their frequent excursions. These often extend into Algerine territory, and are a constant cause of complaint by the French Government, as the Bey is powerless to prevent them or to punish the raiders. The region is mountainous and thickly wooded, and it would be as difficult to conquer as it is to govern these tribes. A large French steamer and an English brig were recently driven by a severe gale on their inhospitable coast. The survivors were stripped of their clothing, barely escaping with their lives, and the wrecks plundered. This is the best indication that could be given of the character of the inhabitants. The eastern part of the territory is less mountainous and much more cultivated ; it is peopled by a race as mild and industrious as their neighbors are savage and dishonest. The methods of cultivation are very crude, yet the yield of grain and olive oil is abundant. The lakes of Echkeul and Bizerta are the most interesting part of this region, especially to the nations who have an eye on the regency. The former is a *fresh*-water basin covering about twenty-five square miles, and from three to twelve feet in depth. The latter has an area of forty square miles and a depth varying between twenty and fifty feet. A narrow and winding stream flows from the Echkeul to the Bizerta, and the latter communicates through a deep and spacious strait with an artificial canal extending into Bizerta Bay. Through neglect and the construction of fish-weirs across the strait entrance the canal has filled up, and now only boats may pass through ; but an expenditure not exceeding $50,000 would render the strait and lake accessible to the largest vessels, and thus create a natural port unrivalled for naval purposes by any in the Mediterranean. With a mild and temperate climate, an abundance of iron ore and timber near at hand, a fresh-water lake easily converted into a basin for the reception of a reserve force, and a position on the most frequented steam route in the world, is it to be wondered at that a nation seeking a port with just these advantages should be manœuvring to possess Bizerta ?

From what has been said it is easy to understand the recently developed interest in the regency, resulting in a number of publications, chiefly in French, Italian, and German, of greater or less pretensions, which have appeared within a short time. A night's journey is sufficient to pass from the charms of Palermo or the attractions of Malta to the curiosities of Tunis. The frequency of steam communication, with good accommodations, tempts many travellers, and Tunis has become one of the sights of an European tour. The strange contrasts it offers are no less fascinating than instructive. Imagine the change from the opera in Malta to the bazaars of Tunis ; from the magnificent palaces and art treasures of Palermo to the shapeless clusters of buildings with their rude decorations which form the Bey's palaces ; from the matchless Highlanders or the nimble Bersaglieri to the quaintly-costumed Arab troops, squatting about in groups engaged in knitting. These are but the beginning of a hundred contrasts which present themselves to those who leave Malta or Palermo one day and arrive in Tunis the next. And yet, exchange costumes and the Sicilian or Maltese becomes the Tunisian in appearance. They differ only in the nature of their superstitions, for it is an undeniable fact that the deplorable ignorance and fanaticism of the Mohammedan natives of the regency find their parallel in the native Christian populations of either Malta or Sicily. If honesty and industry, docility and generosity were the tests, no candid person having had dealings with

the three peoples could deny that the Mohammedan doctrine has accomplished as much in Tunis as the Christian doctrine as taught by the Romish Church has accomplished in either Sicily or Malta among the masses. A mind divested of prejudice cannot fail to concede to the majority of the Bey's subjects many excellent qualities which are exceptional in their insular neighbors. If the Tunisians had enjoyed the beneficent and enlightened government that the Maltese have had during half a century, the possession of their territory would not now be a question in which their choice could be disregarded with impunity.

The population of the regency has steadily diminished in the last century from five millions to one and a half millions. Forty-five thousand of these are Jews, fifteen thousand Christians, the remainder Mohammedan Arabs and Moors in unknown proportions. The Christians are nine-tenths Sicilians and Maltese, nearly all the remainder being Italians and French. Almost the whole population is engaged in agriculture. Grain and olive oil are the chief productions. Alfa grass, wool, dates, sponges, and wax are the next important items. The total value of native products exported through the custom-houses in 1874, which is considered an average year, was $5,548,684. Of this nearly $2,000,000 was of wheat, $1,300,000 of all other grain, $1,150,000 of olive oil, $150,000 each of Alfa and wool, $100,000 of dates, $50,000 each of wax, sponges, and dried fish, $250,000 out of the remainder being that of red caps (fez) and woollen fabrics—the only two articles of manufacture exported. Almost an equal amount is smuggled out of the regency, chiefly across the Algerine frontier, to escape the payment of an onerous export tax. No duties are collected in Algiers on Tunisian productions. The only article of export that has not steadily diminished is Alfa grass. The latest returns are those for 1876, which give $743,310 as the value of Alfa exported during that year, a remarkable increase in two years. The increased demand for this article has been a great blessing to the regency, for it needs neither cultivation nor care, and its growth is improved by judicious gathering at suitable seasons. The pulp manufactured from it makes the best of paper, and from certain peculiarities is considered the most suitable for the manufacture of papier-maché, an article rapidly growing in favor for the construction of car-wheels and other articles capable of resisting extremes of temperature without liability to fracture. The grass grows in isolated clusters in fields of varying extent in the less arid spots of the southern part of the regency, which is practically a desert. It is gathered by the natives without method, transported in loose bundles on camels or asses to certain points on the coast, often a distance of 60 or 70 miles, there pressed loosely into bales averaging 330 pounds in weight and containing about 50 cubic feet, and then shipped to England chiefly, where it is reduced to pulp and the larger portion sent to the United States. The first purchasers are nearly all native Jews, who, taking advantage of the desperate state of the Arab population in that part of the regency, advance the gatherers sums of money equivalent to about three-fifths the actual value of the loose grass at the point of delivery, and are thus enabled to export it at a price below that for which it could be gathered by regularly employed labor. The condition of the poor creatures who gather it may be appreciated from the fact that a camel-load of grass transported a distance of seventy miles is sold for the paltry sum of two dollars. Certainly the gathering and travel would consume five days' labor for one camel and one man, and thus the value of a day's labor for both is reduced to forty cents. As if to hamper the trade and still further burden the patient Arab, the Bey has consented to the "Financial Commission" imposing a heavy tax on its exportation. The organization and work of this Financial Commission I will explain in a subsequent letter.

Correspondence.

EASTERN *VERSUS* WESTERN MORALS.

To the Editor of The Nation:

Sir: The severe castigations you have seen fit to inflict upon the people in the West since the Granger movement began and the Silver movement closed, form a chapter of lessons to the close and quiet observer, and will also be of benefit to the historian. It has always seemed to me that a certain class of Eastern theorists, encouraged by the clamors and frights of accumulated Eastern capital gained from enterprises successfully launched and carried through in the West, have directed less attention to the means of finding out *why* dishonesty prevails than *where* it predominates. It is admitted that once arrived at a conclusion which is greatly shaped if not entirely influenced by immediate surroundings, your opinions and ideas on matters of morals in every condition of life and circumstances must necessarily reflect what is generally practised as the code in the East. The newspaper, as the chronicle of events and actions by which alone the moralistic standard of the times can be properly established for future reference, I think ought to direct its views over a wider range. Its comparisons should be less biassed; the aim at impartiality more transparent; the subjective less sacrificed to the objective; the principle less obscured to gain ends. It may be the *result* of your efforts, but is not, as I understand them, their positive *aim*, to direct public opinion into the one channel of thought whose fountains spring in the region where the legends and fables of imaginary worlds, wealths, and wisdom found their origin. We have learned to honor and acknowledge your good judgment in most matters, never hastily given, always the result of mature and exhaustive deliberation. I have known whole bodies and localities regard your opinion on various and most important subjects as they would a decision rendered by an honest jury, presided over by such a rarity as an honest judge; therefore your persistent efforts to reduce in the general estimation the standard of honesty among Western people did not at once meet with the rebuke it merited. Not until you had sufficient time and opportunity to prove by the laws of logic, the force of argument, and the convincing proof of fact, that there was not mere assumption where truth was desirable, would we dare to contradict. The time has come to raise the voice in defence of what is of some value to us—honesty—*our* honesty, not as measured by the Eastern standard.

I cannot remember that at any ante-war period, when confidence as to values was not any greater than it has been for the last few years, when losses resulted from natural causes, as they do now, any particular geographical part of the country was especially divided and abused because dishonesty prevailed to a larger extent than in others. The manœuvres of the Indiana and Ohio "wild-cat" banks, and the consequent losses of the communities, did not bring these particular States the opprobrium the "West" has earned from people and press of the "East" simply because the former, or a few of its States, have tried to profit by the examples of the latter in trying to compromise debts in a somewhat questionable manner. That the pupil came very near chastising its mentor is not so extraordinary or seldom an occurrence. But let me state a few generalities which will suffice to prove that cause and effect emanate from the "honest" Eastern source. We are aware that the lion's share of the profits arising from the war were garnered safely by the "East." We all know how this easily-gained and quickly-accumulated capital created that ornament of Eastern society, the shoddy. We also know how fast this viper spread its web "westward," and threatened to transplant the honest frugality of the merchant, laborer, and farmer of the West by a vulgar taste for show and ostentation. We recollect the effects of the Crédit-Mobilier "unpleasantness," in which the Western men were the automatons, the "honest" East manipulating the wires; the great rings, political and otherwise, which at last found ready imitators in all large cities of the West; the cheap-credit system in league with the pernicious Bankrupt Act; the spectacle afforded by the Beecher scandal; the convictions of grey-headed presidents of banks, fire and life insurance companies; the frauds committed by dishonest officials of private and public corporations; and last, but certainly *not* least, the brilliant exhibitions of "honesty" made by your representatives in the national legislature whenever questions of national importance were to be decided by that body—such as the Silver Bill, the Pacific Railroads Funding Bill, etc., etc. You have repeatedly catechised your illustrious senior Senator for his matchless *silence* when the Silver Bill was debated. I say it was *honest* in the Western man to speak, work, and vote as his conviction, though wrongly, taught him, and it was studied *dishonesty* in a great (Eastern) Senator to prevent his influence from being brought to bear upon so momentous a question. In most debates in Congress upon questions of honesty we find the Western voice raised in its defence—silence observed by the cunning Eastern men of *policy*. But lately a movement inaugurated in the West, and having already taken firm ground, inscribes upon its banner "*Honest* money league," whose purpose is "to disseminate sound views on the subjects of money." Please tell me what efforts has the "honest" East ever made to enlighten the people upon questions of such vital importance *other* than to influence Congress through lobbies, ridicule an honest but perverted opinion in the Western citizen, use vituperation as the cheapest but also the lowest argument, and generally establish in the dull (?) comprehension of the honest Northwestern the idea that to become respected

and honored by the Eastern monopolist he must wade through the "code of morals" established by "the East."

HENRY M. MENDEL.

MILWAUKEE, WIS., April, 1878.

[We have made no comparison between Eastern and Western morals, drawn from cases of individual dishonesty. Such comparisons are very liable to be unjust and misleading. What we have commented on is attempts at dishonesty *through legislation*, and approved of and stimulated by the organs of public opinion. We consider the Silver Bill, as explained and defended by the Western press and orators, to be such an attempt. That is to say, we consider the advocacy of a change in the coinage not in order to make the standard of value steadier, but in order to make the payment of debts easier, and accompanied by gross indiscriminate vituperation of those who possess accumulated property and have lent money at interest, to be *prima-facie* evidence of dishonesty on the part of the persons engaged in it. This presumption is not upset or affected by any amount of evidence as to their private worth, because we know well that men are capable of outrageous conduct *en masse* of which each of them would be ashamed individually. The newspapers to which Mr. Mendel should write to complain of the notions current at the East about Western morals are those of Cincinnati, Chicago, Louisville, and St. Louis. The picture they have given of these morals during the last six months, not in mere support of the Silver Bill, but in the arguments they have used in its favor, and in the ridiculous invention about the demonetization "conspiracy" has, we believe, surprised the civilized world east of the Alleghanies; and a very large portion of the civilized world does lie east of that range. In answer to the enquiry with which our correspondent concludes his letter, we have to say that ten years ago the Eastern press began its opposition to the paper-money craze by which the West was then threatened and is now ravaged, and has kept it up ever since, and that an association having its headquarters in Boston devoted itself at the same period to the diffusion of documents by the ten thousand throughout the country in support of honest money and the public credit, and did not cease its efforts until it supposed the victory was won by the passage of the Act of 1869.—ED. NATION.]

Notes.

JANSEN, McCLURG & CO., Chicago, will shortly publish a new and greatly enlarged and improved edition of Prof. Jordan's 'Manual of the Vertebrates of the United States.' The section on fishes has been entirely re-written.——A limited new edition of their 'Monograms and Alphabets' is announced by J. Sabin & Sons.——*Bulletin* No. 45 of the Boston Public Library contains in the bibliographical department Part V. of the "History of Mental Philosophy"; more of the Check List for American History, embracing New York City and State and extending to Philadelphia; and early editions of the English Drama in the Barton Collection.——The General Meeting of the American Social Science Association opens in Cincinnati on May 18, with an address on "The National Importance of Social Science in the United States," by Prof. Benjamin Peirce. Gen. Pope will read a paper on the "Indian Question"; Dr. John A. Warder on "Forestry"; Horace White on "Specie Resumption as affected by Recent Legislation"; Gamaliel Bradford on "Congress and the President"; Rev. J. C. Fletcher on our "Commercial and Social Relations with South America"; Prof. N. S. Shaler on "Intellectual Property," etc., etc. The sessions promise to be of unusual interest and importance.——The Third Summer School of Drawing, for teachers, will be held at the art-rooms of Purdue University, Lafayette, Indiana, under the management of Prof. L. S. Thompson. The term begins July 8, and lasts for four weeks.——The programme of the International Literary Congress, to be held at Paris during the Exposition, has been published. The sessions begin on the 4th of June and end on the 15th.——Mr. T. B. Aldrich's 'Queen of Sheba' is appearing in the *Revue des Deux Mondes* in two numbers.——Recent English announcements include 'The Crimean Campaign with the Connaught Rangers, 1854-56,' by Lieut.-Col. N. Steevens; 'Twenty Years' Residence among the Greeks, Albanians, Turks, Armenians, and Bulgarians,' by a lady; Capt. Forbes's 'Sketches of the Natives of Burmah'; 'From Mozambique to Nyassa, Uchungu, and Usango,' being the journal of the late Capt. Elton, who died on this important journey; 'Anatomy for Artists,' by Prof. John Marshall, with numerous illustrations on wood; and 'Brittany: a Series of Thirty-five Sketches,' by Birket Foster.——The demise of the Washington (Daily) *Nation* is perhaps worth mention.

—In both *Harper's* and *Scribner's* for May the illustrated articles are on the whole more meritorious for their cuts than for their text. Yet we must at once begin to admit exceptions. "Bird Architecture," by Dr. T. M. Brewer, in *Scribner's*, and Mr. Robert Ridgeway's "Song Birds of the West," in *Harper's*, contain a great deal of instruction conveyed with scientific simplicity and directness. Dr. Brewer is the more fortunate in his subject, for he has to tell of the famous Bower-birds of the Australian group, some of whom have been long known through the works of the veteran Gould, but the latest and most wonderful has but just been authentically described by Dr. Beccari, from his observations in New Guinea. This explorer's sketch of the Garden-bird (*Amblyornis inornata*), with his lofty wigwam and mossy lawn or flower-plot, is reproduced among the engravings that accompany the article. Mr. Edward Eggleston, in the same magazine, shows a skilful hand in his account of the New York Post-office, which is admirably illustrated. The views of the ugly building itself (from the south) and of Broadway (looking south from the post-office) are as faithful as the camera could make them, and the portrait of Postmaster James is not only lifelike but artistic in a high degree. Much praise must also be given to the illustrations of dogs and scenery in "Our Pets and Protectors" and "Camps and Tramps about Ktaadn." *Harper's* opens with "Coast Rambles in Essex," in which Mr. Drake begins with Lynn and makes the most of a hard subject, for he contrives to overlook the contrast between the dull and rather sordid life of that city and its incomparable site and surroundings. Mr. Longfellow at Nahant could extract poetry from the "bells of Lynn," but the tone of the place to one living in the midst of it is far from poetical. There is a good popular account of Rubens in the third paper of the series entitled "Old Flemish Masters," with excellent illustrations of his works; and Mr. Arthur Venner's "Along the Havel" is an easy and entertaining description of the haunts of Prussian royalty. The reader can hardly resist sharing the hilarity of the group pictured as "The Emperor's Grenadiers." We may also mention in *Harper's*, brief as it is, Mr. F. H. Morse's "English Civil Service."

—Mr. Bishop's "Detmold," in the May *Atlantic*, having abandoned the easy-going pace of former instalments, now moves rapidly enough, and the pace seems almost a gallop when we learn that the dénouement will be reached in one more number. Thoreau's "May Days" have much the character of his April ones, suggesting even more than these, one would say, the writer's consciousness that the world was already looking over his shoulder when he made his natural-historic and metaphysical entries in his journal. There is a humorous bit of fancy evoked by the "first ring of the toad" (May 1, 1857, 2 P.M.):

"A new reign has commenced. Bufo the first has ascended the throne, the surface of the earth, marshalled into office by the south wind. Bufo, the double-chinned, inflates his throat. Attend to his message. Take off your great coats, swains, and prepare for the summer campaign. Hop a few paces further toward your goals. The measures which I shall advocate are warmth, moisture, and low-flying insects. . . ."

Nothing shows more acutely Thoreau's sensibility to Nature than the remark, "The first shadow is as noticeable and memorable as a flower," and indeed, the whole passage in which it occurs. Here, again, is a social memorandum well worth rescuing from the manuscript:

"A crowd of men seems to generate vermin even of the human kind. . . . There was the Concord muster of last September (1851). I still see a well-dressed man carefully and methodically searching for money on the muster-field far off across the river. I turn my glass upon him and notice how he proceeds. (I saw them searching in the fall till the snow came.) He walks, regularly and slowly, back and forth over the ground where the soldiers had their tents, still marked by the straw, with his head prone, and picking in the straw with a stick; now and then turning back or aside to examine something more closely. He is dressed, methinks, better than the average man whom you meet in the streets. How can he pay for his board thus? He dreams of finding a few coppers, or perchance half a dime, which have fallen from the soldiers' pockets, and no doubt he will find something of the kind, having dreamed of it. . . ."

We omit a good deal more than readers of the *Atlantic* will be justified in doing when we mention besides the above only Prof. Shaler's "The

Silver Question Geologically Considered," and the Furnivall-Lounsbury encounter over Chaucer. Prof. Shaler's account of the way in which gold and silver deposits are created through the agency of the sea, and of the probable accessible gold and silver areas in the world, is extremely interesting, but we do not find ourselves arriving at his conclusion that silver is a better natural standard than gold, or that a double standard is a desideratum. He seems to us to furnish a powerful argument to the contrary. Mr. Furnivall treats Mr. Lounsbury (who had ventured to criticise him) in a style which is perfectly met by the temperate steadfastness of his opponent, and the sincere homage paid to the older services of this dogmatic and irascible English scholar.

—*Lippincott's* for May is an exceptionally interesting number. The opening paper, "A Mountain Holiday," by Henry King, though its style is too clearly borrowed from the newspaper, is nevertheless a graphic and satisfactory sketch of an excursion from Pueblo to Garland, over the first section of the narrow-gauge Denver and Rio Grande railway, crossing the Sangre de Cristo range. The illustrations are striking and apparently new. Mr. Edward King's "In Roumanian Land" is a timely account of a country and people whose fortunes are just now exciting so much natural sympathy. Bucharest is the chief topic of it. Mr. King was puzzled by "the constant playing by the military bands of our old war-tunes, such as 'Tramp, tramp, tramp,' 'John Brown,' 'Mother, I've come home to die,' etc. At first it occurred to me that an American bandmaster might be among the musicians, but I could not discover one." Another singularity was the special color assigned to the police uniforms, letter-boxes, lamp-posts, etc., of each ward, a custom not without its uses and its picturesqueness, one would say. Two of the shorter stories we have enjoyed reading: Mr. William M. Baker's "His Excellency 'Old Ugly,'" and Mr. Henry James, jr.'s, "Théodolinde." Mr. Baker's tale is as usual about the South, and apparently Texas; and Southerners need not be ashamed of the hero. We cannot outline it here. "Théodolinde" describes the passion of an American lover of bric-à-brac for a Parisian hairdresser's wax-model and his efforts to purchase it; and the point of the story lies in his friend's supposing him to be enamored of the hairdresser's wife, and construing all his innocent remarks in a sense conformable to Parisian morals. The *double entente* is of a kind appropriate to the stage, though there would be difficulties in adapting the story for acting. As one reads it, the misunderstanding is too easily penetrated, while the neatness of the narrative hardly atones for the rather violent improbability of the leading incident. The joke seems inferior in point of invention to the lottery announcement (under Louis Philippe) of "a young girl, white as a lily and red as a rose" among the prizes, who turned out to be a Greuze.

—Under the certainly misleading title of "A Predecessor of Tennyson," Mr. H. A. Huntington contributes to this number a study of Colley Cibber, some time poet-laureate. It was a real misfortune for the quick-witted and lively dramatist and actor that he was a predecessor of Wordsworth and Tennyson, for he had hardly any of the qualifications expected in the holder of the poet-laureate's office. It was even a greater misfortune that he incurred the enmity of Pope, who, with an obtuseness and an unwillingness to lose a joke quite characteristic, transferred to him the leaden dulness he had at first, and none too accurately, bestowed on Theobald. It is curious to consider that those who know English poetry and not the English stage think of Cibber as a witless dullard, while those who are more familiar with the theatre than they are with Pope's verses remember Cibber as the author of one of the most delightful and valuable books ever written about the stage—'The Apology of the Life of Colley Cibber.' Mr. Huntington's paper will have served a good end if it send its readers to Cibber's own book, to which it is at once an ample epilogue and a fitting introduction. Mr. Huntington sets before us the mighty vanity of the man, but with no unkindly pen; and this is as it should be, for surely Cibber has need of gentle treatment just now that his long-lived adaptation of 'Richard III.' is at last thrust from the stage with contumely, and the general public finally reminded of the fact of Cibber's authorship of certain phrases—"Now, by St. Paul, the work goes bravely on!" and "Off with his head; so much for Buckingham!" and "Richard's himself again!"—which have for a century and more been masquerading as Shakspere's.

—"The Bells," given at the Fifth Avenue Theatre last week, is a story in dramatic form translated from one of Erckmann-Chatrian's pretty popular tales. The subject is, perhaps, better adapted to literary than to dramatic treatment, though we believe it has proved a great success on the Parisian stage, and on the London boards Mr. Henry Irving has recently made it familiar to English audiences. The title in the original is "Le Juif Polonais." The idea is that of a village burgomaster, rich, respected, and in every worldly way prosperous, yet haunted by the vision of a crime, the murder of a traveller, whom he had killed and robbed fifteen years before the time of the play. The gold of the murdered man has laid the foundation of his fortune; and his pretty daughter, *Annette*, is to be married to *George*, the rising and handsome officer of gendarmes. The father desires this marriage for two reasons: in the first place, the two young people love each other, and it is an excellent match; but besides this, the murderer, always racked by fear of detection, desires to have for his son-in-law the representative of the government, who, he knows, may at any time discover the criminal, and who, he feels, will never be able to deliver up to justice the father of his wife. The pair are betrothed, the marriage takes place, and all ends happily with the single exception that the father dies in a fit during the night immediately after the wedding; he dies respected and beloved; but the art of the story consists in the fact that we know what his family and friends now know, that his fit and death are brought on by his crime; and we see his death, not as his family and friends see it, but as it actually comes on in the crime-haunted visions of his own mind. The theatrical device by which this is effected can hardly be called happy. After the wedding is over he insists on sleeping in a particular room (he is afraid of talking in his sleep, and determined to pass the night where he cannot be overheard), where we see him partly undress and throw himself on the bed, when he is nearly concealed behind the heavy curtains. Thus he falls asleep, when the drop-scene, suddenly rising, discloses what is going on in his mind while asleep. Here we see a court-room, with three judges on the bench, a row of witnesses at the side, and the murderer, *Mathis*, on trial for his life for the murder of the Polish Jew. The trial is all gone through; the accused denies, protests, makes admissions which damage his case, and finally, thrown into a trance by a seer, confesses all, and is condemned to death. In order to have this done it is obviously necessary to have some one substituted for the burgomaster in the bed, where we see him restlessly tossing about, for the real burgomaster must go through his part in the dream. And again, when the dream is over, and his guilty conscience has actually killed him, he must be transported back to his bed again, and a re-substitution must take place, in order that his family, when hurrying to his relief in his final death-struggle, may find him in the room in which they left him. All this is very clumsy, as is also the device by which, in the first act, we are let into the secret of the murder by seeing a representation of a vision of the murder passing through the brain of the murderer himself, who is only twenty feet away from us, in a fit. In a dramatic story it is easy enough—or, at any rate, it is easy enough for masters of fiction like MM. Erckmann and Chatrian—to bring out the curious and striking contrast between the external success and virtue of the worthy burgomaster and his real conscience-haunted mental life. But of itself the contrast does not make a play, and the stage devices by which the contrast is made visible err on the side of being too sensational, just as the play itself does by being devoid of incident. There is really nothing in it but the acting of the murderer, and yet it shows how far from perfect a play may be and succeed, that this part, well done, is quite enough to make the whole remarkably interesting. Mr. Studley, who took the part at the Fifth Avenue, did not appear to have a very refined conception of the character of *Mathis*. It is essential to the idea of the story that his behavior and manner should be calculated not merely to disarm suspicion, but inspire respect and confidence. The murder is the one crime of his life. Mr. Studley made him a hardened criminal, who would have thought no more of murdering a Polish Jew than of eating his breakfast.

—The sixth annual report of the State Charities Aid Association contains the usual record of the Society's progress in some directions and its untiring efforts in others in which it has had less success. Nowhere have the efforts of the organization been productive of more visibly good results than in the hospitals, and particularly Bellevue, the present condition of which may be cited either in proof of the barbarous incompetence of the official management or of the wonderful success of a volunteer attempt to "ameliorate" that incompetence. Bellevue, of course, is merely a typical instance of what is going on all over the State. In the country districts it appears to be often the case that the necessity even of making a difference in treatment between the sick and well is not recognized by the local authorities. The society says: "In some of the poor-houses the sick and the well share the same room, and in others, where separate apartments exist, but little attention has been given to

ventilation; rarely are there responsible nurses or provisions for special diet." With regard to Bellevue, the case seems to be that as to care and nursing (provided to a great extent through the efforts of the Society) its rank is very high; the construction (the work of the city) is very faulty and dangerous to health, and opposed to all the best modern ideas on the subject. The Society has offered to furnish a plan for a new Bellevue conforming to the requirements of sanitary science; but hitherto, owing to the fact that the $30,000,000 annually derived from the taxes of the city is needed for objects of more importance than the systematic prevention of disease and crime, the offer does not appear to have been acted upon. On Blackwell's Island the Female Lunatic Asylum needs looking into. Here over thirteen hundred insane women are crowded into buildings intended for nine hundred and eighty-six; and though it is perfectly well known that for all mental diseases variety of scene, occupation, and change of air afford the best relief, these women live month after month, some of them year after year, "in the same halls on which their bed-rooms open, not having even a dining-room in the other part of the building; and their only recreation—that of walking in the open space about the asylum—is often curtailed for want of hats to shelter them from the sun, or shawls to protect them from the cold, or attendants to accompany them." With regard to able-bodied paupers, the Society reports that great abuses still prevail throughout the State, orders for relief being given for political purposes, and little investigation being made as to the real necessities of those who receive assistance. The idle naturally "prefer to go to the poormaster for an order for $10 than to apply for work," and occasionally aid is given even to persons owning considerable property. As the poormaster receives $2 for every visit and 25 cents for writing an order, his profits are increased by each visit he makes, and he thus has a direct interest in encouraging pauperism. The association appears to have suffered from the general financial depression, the gifts having fallen from $2,259 50 in 1876 to $1,310 in 1877; the subscriptions from $1,936 to $1,505. More money is needed, and we hardly know a charity which is so certain to spend wisely any money it receives.

—The Woman's Education Society of Boston has issued a circular letter of advice to "young women" of from fifteen to twenty, telling them what to read. The object is a good one; the books selected are generally within the capacity of the young reader, and the obvious American and feminine character of the list is not objectionable in a selection meant for American girls. But there is a good deal that is whimsical about it, and the Association seem to have made a special point of striking out from each of their half-a-dozen classes the principal work. There are a dozen or more works on art, but nothing of Ruskin's. There are as many books on science, but not the 'Origin of Species'; and there is nothing on philology. The long list of histories is overloaded with compilations of the school-book kind, like Smith's, but Lecky, Buckle, and Tylor are not mentioned, and there is none of those powerful essays like Froude's 'Calvinism,' Seelye's 'Roman Imperialism,' etc., which one would especially expect to find. The omission of Jewish and Christian history may have been an accident. In biography neither Mill, Martineau, Lewes, nor Forster appears worthy. In fiction the selection was, of course, more difficult, on account of the conflict of individual tastes; but surely there can be no doubt as to the pre-eminent claim of 'Middlemarch,' which is omitted The author of 'My Novel' should not be represented by 'Kenelm Chillingly' merely, which is in his most artificial vein; and Mrs. Edgeworth's over-instructive 'Absentees' takes the place that 'Belinda' should fill. Of novels of the day one finds only 'Realmah' and 'Noblesse Oblige,' the first a clever but unartistic and now lifeless work, and the other, though a charming story, half lost sight of in the crowd of nice English stories of the same class. Yet these are the only two given, while Turgeneff and Victor Hugo, Reade, Black, and Howells, Mrs. Oliphant, Mrs. Alexander, and Miss Thackeray are ignored.

—One class of literature, the dramatic, is (with the exception of Shakspere) quite overlooked. It would, of course, be unjust to suppose that the Association does not approve of Molière's "Tartuffe," Lessing's "Nathan the Wise," Dante's "Commedia," or Goethe's "Faust," but they do not recommend them here. Indeed, the poetical selection is of the hastiest character. The group of Lake poets surely deserved some mention. They may be overpraised sometimes, but "The Prelude" and "The Skylark" are not quite *passé*, and even Keats and Burns, Pope and Southey have some readable morsels that the Association might safely have picked out. With such omissions it is hardly worth while to suggest "Atalanta in Calydon," "Sigurd the Volsung," or Heavysege's "Saul." But we should like to ask any lady of the association who will turn to Allingham's 'Ballads,' and read "Childe Vyet," on p. 309, whether she thinks it a healthy or proper book to put in the hands of young girls. There are other selections—Moore's 'Ballad-Book,' for instance—which are perfectly pure, and at least as good otherwise as Allingham. We fear that nothing short of rewriting the list will make it of much value. If it be rewritten, room can hardly fail to be found for Holmes's 'Professor' and Goldsmith's 'Vicar,' for 'Religio Medici' and 'Pilgrim's Progress,' and some of those English essays, by Spencer, Arnold, and others, that are so deeply affecting the thought of our time.

—M. Barbey d'Aurevilly's 'Bas-bleus' is part of a series entitled 'XIVe siècle, les œuvres et les *hommes*.' The confusion of genders implied in treating of bluestockings in such a work reminds one of the English 'Men of the Time, *including Women*.' But the author protests that he is justified. "Women who write are no longer women; they are men, at least in intention, but *hommes manqués*." The first punishment for their jealousy of male genius is that they lose their own, the feminine genius of dress, that poetry in which they are at once the poem and the poet (whence their blue stockings). The second is that they no longer have the slightest right "aux ménagements respectueux qu'on doit à la femme." So M. Barbey d'Aurevilly, having a strong dislike to female writers—which is, to be sure, but a part of his antipathy to authors in general—has treated his victims *sans ménagement*. The result is an amusing book, if one likes bitter criticism and an evident intention of seeing only literary faults and moral defects. Only one escapes—Mme. de Staël—who is praised for not ceasing to be a woman in becoming an authoress. Of course no one goes to such a book to learn what George Sand and Mmes. Quinet, de Gasparin, de Guérin, and Craven really are. But if one wants to go back fifty years in literary atmosphere, and live again in the first quarter of our century, M. d'Aurevilly will assist the imagination to recall the time when women did not serve on school boards and in professors' chairs and in pulpits, and aspire to vote and be voted for.

—A timely publication, in connection with Jirecek's 'Geschichte der Bulgaren,' is the 'Geschichte der Serben,' translated by Prof. Schwicker from the Hungarian of Kállay, and published at Budapest. The entire work reaches the year 1815, the closing period of the Servian War of Independence (1780–1815) being worked out with especial fulness and excellence. The two numbers which we have received bring the history down to the year 1357, soon after the death of the great emperor, Stephen Dushan. The next following numbers will treat of the important and perplexing period of the Ottoman invasions and conquests. The pages before us contain a very full sketch of the primitive institutions of the Slavs, especially the Servian branch, and of the development and growth of the Servian monarchy. The annals of this kingdom are, like most of its class, rather thankless reading, and are not told in much detail; we have, however, in connection with them, a sketch of the process by which the principality grew out of the primitive family institutions, which is highly instructive in view of the interest that attaches, in this class of studies, to the present phase of these institutions in this same nationality. The author, Benjamin von Kállay, was formerly Austrian Consul-General at Belgrade, and has devoted years to preparation for his subject.

WOOLSEY'S POLITICAL SCIENCE.*

I.

DR. WOOLSEY'S book—our notice of which has been too long delayed—is divided into two parts, the speculative, and the historical or descriptive, or, as he himself calls it, the practical. The two parts are not distinctly separated, however, as a good deal of speculation, and not unnecessarily or improperly, runs through the description. The work taken altogether is a very important contribution to the literature of the subject—indeed, the most important American contribution to it since Calhoun's. That American contributions to this literature have not been more numerous and weighty, considering the extent to which politics has for the last century occupied the national mind, has often been mentioned as fair matter for surprise; but the truth is that the national mind is not fonder of speculation in politics than in other fields, and did most of its speculation once for a long time when the Government was founded.

* 'Political Science; or, the State, Theoretically and Practically Considered. By Theodore D. Woolsey, late President of Yale College.' 2 vols. New York: Scribner, Armstrong & Co. 1878.

The supreme wisdom and absolute power of the numerical majority were adopted at a very early period in the national history as the key to all political problems, and the only sure foundation for Government; and American political development has consisted, until the close of the late war, almost wholly in the embodiment of this idea in legislation. It is only within the last ten or fifteen years that there have been any signs of a desire to revise the propositions with which the Democratic party took possession of the Government, or to doubt their complete working efficacy. So that a book like Dr. Woolsey's is probably sure of more attention to-day than it would have secured at any time within the present century.

The portion of the work which we have called the speculative portion, and which is not confined to any material division of it, but has to be gathered from the author's comments on nearly every page, impresses us, however, as less clear and instructive than the historical and descriptive portion, which we shall notice hereafter. This defect is, it seems to us, due to his failure to decide fully and firmly at the outset on which of two theories he would treat the fundamental points of the rights of individuals and the nature and origin of the state. One of these theories considers man as a social animal endowed, it matters not why or by whom, with certain moral and mental faculties, and defines his rights in society as the necessary facilities for the free exercise of these faculties within the limits prescribed by the free exercise by his neighbors of their faculties. The same theory regards the state as an organization created by the social instinct of man for the supply of these necessary facilities for the free exercise of his faculties, or rather for his protection while exercising them. This theory, however, does not take notice of his origin or destiny, or make the state anything more than an association of men for certain mundane ends—a highly respectable association, it is true, from its permanence and its power, and the great volume of sympathy and pride of which it becomes, if we may use the term, the reservoir. This theory, too, decides whether a man is worthily playing his part as a citizen by the extent of his contributions to what his fellows regard as their welfare, and judges the success of the state by the degree in which it encourages or aids him in making these contributions.

Dr. Woolsey, indeed, in one place (vol. i. p. 213 *et seq.*) describes the state very much in these terms: "The state is, in truth, a large association stretching over a vast territory, acting by itself and empowering others to act, leaving individuals in their freedom, but providing for the numerous wants of a whole community. The interests of men demand unity of law and one power everywhere, in order that life may be on one undisturbed plan, so that a usurper who would introduce it where it was not would be submitted to in his lifetime and venerated afterwards." He then goes on to show that "humanity expresses itself in the state," which intensifies sympathy with suffering, and uses the powers of all to supply wants which only a part may ever feel.

The other theory considers man as not only a social, but a religious, animal, and his citizenship here as largely a sort of preparation for a better city which is to come in another life, and involving duties and responsibilities other than those which connect him with the political organization to which he belongs. It considers the state, too, as something more than an association of men, or, to use Dr. Woolsey's words, declares that it is "not the sum of its members, but something more, and is so for all time." Its right of punishment and administering justice does not rest on contract or "any such flimsy foundation." "Society, in short, has more wisdom and might than the sum of its members," and this wisdom and might come "from the state's being in the natural order of things God's method of helping men towards a perfect life" (vol. i. p. 195). Elsewhere, in elucidation of the same view, he lays it down that the only solid foundation for the state's primitive power is that "in punishing an evil-doer the state renders him his deserts." . . . "In other words, the state has the same power and right to punish which God has; it is, in fact, as St. Paul calls it, a minister of God to execute wrath upon him that doeth wrong" (vol. i. p. 354). Of course this makes the state not only "something more than the sum of its members," but vastly more. It makes it really, to use the old English phrase, a "most dread soverain," armed not only with great power, but with immeasurable wisdom and authority —in short, something awful, sacred, and mystic.

Now, the writer who holds one of these theories of man and of the state cannot use the same political tests and standards as a writer who holds the other. They do not weigh the merits of a citizen or the efficiency of a government in the same way: a man may seem to one a good citizen, who to the other will seem a very indifferent citizen, while a state which one will think a perfect organization, might to the other wear the appearance of an inquisitorial pretender. Dr. Woolsey very frankly states his own position in his introduction:

"Some things must be assumed in an essay like this. We assume the personality and responsibility of man as a free moral being. We assume also a moral order of the world, not founded on utilities that are in such a sense discoverable by man that he could construct a system of laws for human actions on them, however the divine Author of the world may have arranged it on such a plan. *We discard the greatest-happiness theory as of no use, nay, as harmful in the department of politics*, and believe that in human relations *there must be a distinction drawn between benevolence and justice*. At the same time we admit that happiness is an end which the individual and the state may rightfully aim at, and an important one, although subordinate to the rights and the ends contained in the perfection of human nature" (vol. i. p. 1–2).

The italics in the above are ours. It means—if we interpret it aright —that a body of men, however high their social and mental culture, could not construct a just state, either by the aid of political experience or by an examination of their own needs; that even if they so far succeeded as to provide themselves with what are considered the ordinary sources of political happiness, such as security, liberty, industrial prosperity, intellectual activity, opportunities of education and social advancement for all, the state might still be a failure, because it might still fail to provide for "the perfection of human nature."

This repudiation of the utilitarian test is so complete that De Maistre could hardly have made it more so. We were not prepared after reading it for the constant resort which Dr. Woolsey makes to this same test through the remainder of the work. He bases a man's claim to jural rights upon his "needs." Property is justified by the usefulness "to the life, growth, health, and existence of the human race" of the products of the industry which property stimulates or keeps alive. Contract is to be cherished because "it is essential to the development and advance of human society." In his chapter on "The Sphere and Ends of the State" our author claims *theoretically* the widest possible sphere of activity and interference for the state, but in discussing the "Limits to State Power" he applies the utilitarian test unsparingly, and for purposes of practice decides that the state is bound to provide courts of the Anglo-Saxon type for the administration of justice; that justice ought to be cheap, that prescription ought to give a good title, that the right of petition ought not to be restricted, that speech on the platform and in the press ought to be free, that taxation ought not to be laid without the consent of the taxpayer through his representatives, that there ought to be no special exemptions from public burdens, and so on, justifying himself in every case by the fact that these restrictions are called for by the convenience or feelings of the citizen. He condemns Socialism in like manner, by showing how it would result in actual working. He even goes so far as to concede that the state "may, without going out of its permitted path, not only protect religion in other ways, but may also support an established church." "At the same time," he adds, again applying the utilitarian test even to this, "I believe that as a practical question, for the present, in some societies, and for the future, probably, in all, men will come to the opinion that the institutions of religion can be best sustained by combinations of private persons." But why should an institution which stands in the place of God, and which is armed with the awful power of punishing men according to their deserts without regard to the visible effects of the punishment, and which is charged with the preparation of man for perfection, abdicate the function, from this point of view of overwhelming importance, of taking charge of the religious training of the citizen? Suppose "combinations of private persons" neglect the institutions of religion, and the state takes no responsibility in the matter, is it a just and true state? And, finally, why is "the opinion of men" on such a matter of any importance?

Dr. Woolsey nowhere points out where the final source of authority in a state in which the greatest-happiness principle is "of no use," or is only a subordinate consideration, is to be lodged. We have looked in vain through the work for even a hint of the place in which the statesmen or people should look for the oracle which is to tell them whether their institutions do or do not make for human perfection, and do or do not carry out God's ends in the creation of human society; and yet, if popular contentment and prosperity count for nothing, or but little, nothing is more necessary to good government than the existence and accessibility of some infallible source of light.

There is, however, nothing new in Dr. Woolsey's definition of a state. It is, in truth, that which has prevailed throughout the world down to our own day. Take a conspicuous example in modern times of the working of his theory: the France of Louis XIV. We do not by any

means wish to make this theory responsible for the enormities of that monarch, because we grant that cruelty and intolerance are not the necessary accompaniments of the theory. But that monarch had, nevertheless, a political ideal which, taken in its best aspect, we find it difficult to distinguish from Dr. Woolsey's; that is, he held that the end of the state was the working out of God's purposes, in the production of human perfection, and he held that the happiness or contentment of his subjects was a subordinate consideration. He sought, therefore, as part of the proper discharge of this great function, and sought it with sincerity, to establish in his dominions complete unity of belief regarding the fundamental problems of human existence; and in order to produce this he inflicted punishment, *in loco Dei*, according to his notion of the deserts of the criminal, and without any reference to the effect of it on the popular mind, on public tranquillity, or on the national industry. The French Protestants emigrated by the hundred thousand, and whole provinces were desolated by military execution, and France was rapidly prostrated before her enemies; but the king's intentions being good, and the bulk of the people supporting him, on what theory but the utilitarian one can we condemn his course? "My people are not happy," he might say; "but what difference does that make? The chief end of government is not happiness." The fact is that, seductive as Dr. Woolsey's theory of the state is, and elevating as the contemplation of it is to many minds, it contains the fatal spring from which many of the greatest and most wide-spread of human woes have flowed. The authority of the state has, after all, to be exercised by a small body of commonplace mortals, for whom it is useless to claim God's wisdom in inflicting punishment any more than his power in shaping human destiny; and, however august their mission may be, they need to be saved from themselves by the constant reminder that their work will be judged now and here, and by purely mundane considerations.

MRS. LAMB'S HISTORY OF NEW YORK.*

THIS first completed volume of the history of our city brings its story down to the opening of the War of Independence. The author has spared no labor in research, and from many original sources has gathered a great variety of details, and has woven them into a distinct continuous history of New York, as far as the annals of a mere colony can furnish one. Any one who really believes it is time to cry "Ilium fuit" over a city that has been ruled by Dutch and English for two centuries, and by Irish for half a generation only, may be reassured by the clear and vigorous development in these pages of the solid grounds for confidence in New York's greatness.

No wonder that of all the thirteen colonies New York was the one best loved and last resigned by the English. It was the only one they won in war. Its community reflected the ways and thoughts of home better than Virginia without commerce, or Massachusetts without a church. Most of its children were England's step-sons, rivalling her own race in thrift and spirit, and more genial and liberal. What Holland founded it was England's part to improve, but fortunately she could not efface it. Between this and the other provinces there existed many great differences, which bring its colonial history into marked relief. For foreign commerce it was not merely the best port, but also the half-way house to the West Indies and the South. For inland trade it commanded the great waterway northward, and the only natural passes through mountain walls to the West. The enterprise nursed by this position grew into courage and skill in the wars and dangers to which the shape of the country exposed it, where the other colonies were relatively safe. Mountains sheltered the southern and eastern provinces against attack from scattered and weak tribes. Close on the flank of New York hung a formidable confederation of warlike savages, and on the north it was circled by the fortresses of the mother country's watchful enemy, eager to pour its trained forces down through Lake Champlain, called by its Indian allies, as if in prophecy of many wars, "the door of the country." Many of the names and events recorded in these pages tell of feats of arms, keen diplomacy, devotion of wealth and life, smaller in scale but not less great in nature than those the contemporary history of the great world across the ocean recalls.

To win the best from these outward advantages, and to guard against these outward perils, was possible by reason of the happy freedom from oppression or dissension within the gates of the city. The rule of Amsterdam, if not always liberal, was always wise and kindly. And though there were constant disputes with England about imposts, and though many of the royal governors retired rich with plunder and detested, yet, on the whole, in dealing with these stiff-necked Dutchmen her colonial policy was forced to concessions, and to such liberality as the ideas of the age could admit. It was through the general moderation of early English rule that New York grew strong and bold enough to resist later injustice. Above all, religious toleration, prevailing in bright contrast to the temper of the times, kept firm peace among the industrious people. The English found an established church, supplied with a learned clergy, and sustained by the solid inhabitants. They planted an overshadowing new one, without rooting up the old, or excluding later and other religious growths. Once in New York history, in 1689, a political adventurer availed himself of the prejudice against papists, and once, in 1700, a cruel law existed, as a defence of state against Jesuit intrigues with the savages, but we do not read that it ever was enforced. Forty years later Jews were disfranchised, and so were all men who were not freeholders; but neither they nor any other religious sect as such were ever molested in New York, nor the freedom of conscience ever visited with persecution here by the consent of government.

Another striking difference between the rest of the provinces and New York was the co-existence of great landed estates with great commercial activity. The whole country was, of course, originally occupied by means of grants from the prince, or company, or chief proprietor, Plymouth Bay excepted. But while in Virginia the great landholder cultivated his acres on a large scale with his own slaves, and while in New England, if he existed at all, he parcelled out his possessions among colonies of farmers, in New York he kept his domain almost under feudal conditions. Under the Dutch government grants of territory from the company were increased by vast purchases, not always free from fraud, from the Indian holders. The practice continued and increased when the province became English. Owners of patents carried on extensive and profitable trade with the natives, while prosperous merchants converted their fortunes into great manors, and needy governors amassed wealth by speculations in grants. The Dutch authorities early endeavored in vain to break up the system. The English attacked its abuses, grown so serious that in 1700 Lord Bellomont complained that all government land was granted away, much of it in tracts from twenty to forty miles square, and attempted to annul all these titles and to prohibit any person from holding over a thousand acres. The policy was doubtful in the young colony. Commerce was stimulated, settlements encouraged, and the public credit often sustained by these great landholders. They were the capable actors in public affairs. They formed a nucleus of resistance to power whenever the need of it came. Those relics of the system which were the seed of anti-rent troubles in our own time only became evil through political intrigue. Many of these vast estates melted away for lack of entail; some of the largest perished by confiscation; but others, remaining as the foundation of the most solid fortunes and the most substantial families in the city of New York to-day, attest the vigor and forecast of the men who ruled the affairs of the colony before the last century began.

This persistence of families, however, depended more upon race than upon wealth. The peculiarity which most distinguished New York from all the other colonies was the mingling of races among its earlier settlers. Holding the province and the town for two generations, the Dutch character struck root too deeply and firmly to be ever eradicated. When the colony changed masters, it was through a Scotchman allying himself with the chief Dutch family that English influence first became dominant in its affairs and society. A very few years later, the son of a Norman nobleman, marrying also the daughter of a great Dutch proprietor, founded a line which gave a succession of able and distinguished men to the colony. Alongside of these two great houses, issuing from Dutch alliances, many of the Holland colonists continued to hold equal place in wealth, social importance, and public service. Descendants of all these families remain at this day, and among the deluge of later immigrants that swell the multitudes in our streets they maintain the distinctive character of their ancestors, and compose that genuine, substantial New York which strangers hardly understand. It is not easy to trace the lines separating citizens into the different parties that contended, with the usual political rancor, throughout colonial times. But it is clear that an aristocracy, though often divided against itself, usually prevailed in the management of affairs, and that New York at the date of the Revolution is fitly described by the author as a nest of families. Germans were among the later immigrants. There is no trace of their influence in the earlier history of the colony, except in the strange instance of Leisler,

* 'History of New York. By Martha J. Lamb.' Vol. I. New York: A. S. Barnes & Co. 1877.

also connected by marriage with a Dutch family. John Peter Zenger, a German who became conspicuous in 1735 as the object of a trial famous in America and in England, which established the right of a jury to try the truth of a libel, came into the country *in formâ pauperis* only after 1700.

That singular episode of Leisler's usurped government is treated by Mrs. Lamb with fulness and candor. It is impossible to avoid the conclusion that Leisler, while energetic and capable, was arbitrary and narrow, perhaps a self-deceived enthusiast, but more probably an aspiring demagogue. It remains a puzzle, to be explained only on the ground of his family connection, by what means and what supporters he was able to seize power and retain it near two years, opposed by the wealth and ability of the province. His career was a political crime, but his execution as clearly a political blunder, followed by dissensions disastrous to the prosperity of New York for a generation.

This volume closes the colonial history of the city, and pictures it on the eve of the Revolution, with its merchants and lawyers united for resistance, its landholders divided between loyalty and the new patriotism. The author asserts for New York equal claims with Massachusetts for beginning the Revolution. The question of precedence is unimportant. One fire kindled all hearts in the provinces, and it matters little where or how the flame first broke out. The coming volume will deal with more complex subjects, difficult in proportion to their nearness to our own time. As to all that belongs to the past, this record offers a mine of varied, interesting, and, for the most part, authentic information, indispensable to the student who would know how the city of New York came to be what it is from what it has been, and who looks beyond its present with the hope of a better future.

One general caution we would give Mrs. Lamb's readers. She is not a professional genealogist, and she doubtless has not had time, we do not say to verify the pedigrees claimed by or for the old New York families, but to make such researches as would put her on her guard in following private or public authority. She has relied chiefly on Holgate's 'American Genealogy,' and we might easily point out a number of wild and unfounded statements which she has been led into. Thus, she makes the founder of the Kip family (Hendrick Kip, a tailor) a member of the distinguished family of De Kype of Bretagne, for which there is not a particle of evidence (see Purple's 'Kip Genealogy,' p. 1). A similar want of accuracy is discernible in some of the illustrations in which this History abounds. On page 47, for example, appears a view of the "West India Company's House"; but the building represented is of no interest whatever to New Yorkers, inasmuch as it was not occupied by the Company until 1674, at which time all connection between that corporation and New York had ceased for ten years. The building which should (and might) have been depicted is the butchery and weigh-house on the Haarlemmer Straat, Amsterdam, hired by the Company in 1631 and converted to their uses, and occupied till 1647, when their declining fortunes compelled them to surrender it for an inn, and transfer themselves to the six-year-old warehouse on the Oude Schans. Here they remained till 1674, the year of their dissolution, and on their speedy reorganization they took the building on the Cingel, of which Mrs. Lamb shows us not the exterior, but the interior court. The portrait on p. 259 purports to be that of Admiral Cornelis Evertsen, the conqueror of New York in 1673, but it is of a quite different character, though rightly having the same name affixed. The original, as the plate itself shows, died in 1679; the conqueror of New York in 1706. Similarly, the portrait of Robert Livingston on p. 395 is erroneously assigned to the first lord of the manor; it represents a much later member of the family.

Proverbs in Porcelain, and Other Verses. By Austin Dobson. "Majores majora sonent." (London: Henry S. King & Co. 1877. Crown 8vo, pp. 203.)—The six proverbs in porcelain which give name to this volume are little poems suggested by French sayings, and set off by neatly-turned dialogue, retort, and repartee full of the spirit of

> "The little great, the infinite small thing
> That ruled the hour when Louis Quinze was king.
>
> "For these were yet the days of halcyon weather—
> A martin's summer when the nation swam,
> Aimless and easy as a wayward feather,
> Down the full tide of jest and epigram;
> A careless time, when France's bluest blood
> Beat to the tune of 'After us the flood,'"

as Mr. Dobson himself wrote in the "Story of Rosina." Much of the rest of the volume is filled with *vers de société* of the above type and with verses for pictures. But what is most curious is Mr. Dobson's frequent attempt to transplant to harsher Saxon verse the metrical forms of the earlier French poets revived of late in France, under the impetus of Hugo, by M. Théodore de Banville and his immediate followers. How many readers of English verse know what "triolets" are, or "rondels," or "villanelles"? From 'Proverbs in Porcelain' they can get instruction in these and in the "rondeau" (which Leigh Hunt misunderstood), and even in the "pantoum," a most peculiar Malayan verse, which Hugo brought to the notice of the literary world in the notes to his 'Orientales.' It seems to be a form of extreme difficulty; it consists of a succession of four-line stanzas the second and fourth lines of each stanza reappearing as the first and third of the next stanza. To employ these forms and most of their kindred is but a dancing in fetters at best; we admire the skill with which a difficult thing is done rather than value the thing itself. Théophile Gautier, to be sure, thought differently, and in a poem which Mr. Dobson has here very happily rendered he wrote:

> "Oui, l'œuvre sort plus belle
> D'une forme au travail
> Rebelle,
> Vers, marbre, onyx, émail."

But the rondeau stands on a different footing; it is but little more difficult than the sonnet, and has a fair chance of gaining general acceptance. As an example of its form we cite the graceful rondeau with which Mr. Dobson closes his volume of verse:

> "WHEN FINIS COMES.
>
> "When *Finis* comes, the book we close,
> And somewhat sadly Fancy goes
> With backward step from stage to stag
> Of that accomplished pilgrimage. . . .
> The thorn lies thicker than the rose!
> There is so much that no one knows,
> So much unreached that none suppose;
> What flaws! what faults! on every page,
> When *Finis* comes.
>
> "Still—they must pass! The swift tide flows.
> Though not for all the laurel grows,
> Perchance, in this be-slandered age,
> The worker, mainly, wins his wage;
> And Time will sweep both friends and foes
> When FINIS comes!"

Travels West. By William Minturn. New edition. (London: Samuel Tinsley.)—This book, by a citizen of New York who has passed a considerable part of his life in Europe, is the record of a journey from New York to San Francisco and back, and there is a curious mixture of European methods of viewing, with a cordial admiration which is, we believe, without precedent in any English traveller in this country. One thing which people at the East find it difficult to realize is the amount of wealth and luxury which is accumulating in the West. Mr. Minturn does full justice to this. Theatres, orchestras, buildings, decorations, notwithstanding his European experience, meet with hearty approval, and one is a little staggered by such an outburst as this about Chicago: "Wonder of wonders! a second Florence, with a magnificent lake instead of the muddy Arno"—and when he fancies himself shot from a pneumatic tube into the heart of Paris. He omits, however, to dwell upon the element of superiority which the schoolboy claimed for his father's house over that of his fellow's—namely, that it had a mortgage on it. Youthful optimism again stands out rather strongly in this remark upon the Mormons: "A people with only one vice appreciable by the general observer—and that vice a mode of religious opinion in regard to marriage reduced to practice—may be considered tolerably respectable as communities go."

The most enthusiastic lover of his country must admit that travelling in the United States is rather monotonous, and that to make it of much interest requires either unusual powers of observation, insight, and description, or else the conflict of impressions with preconceived habits of mind, as in the case of a European born and bred. It is not surprising, therefore, that in the present case the catalogue of stations on the Pacific Railroad should be somewhat of the guide-book order. Still, it is chatty, mixed with anecdote, and not unpleasant reading. The wonders of San Francisco and the Chinese quarter, of the Yosemite Valley and the agricultural resources of California, are duly detailed. If the state of things described by Mr. Minturn as taking place in a Pullman car on the Chicago and Northwestern Railroad, on his return, by which, in resenting gross insults from the colored porter, he had his face covered with blood and his eyes nearly knocked out amid the applause of the passengers and the conductor—if this account is correct, there are features of Western travel not set down in the guide-books, and which still maintain the traditions of the stage-coach and the bar-room.

The Historic Mansions and Buildings of Philadelphia. With some notice of their owners and occupants. By Thompson Westcott. (Philadelphia : Porter & Coates. 1877.)—In this handsome volume of landmarks both those still standing and those removed are comprehended. Independence Hall, Carpenters' Hall, the Friends' Almshouse, Penn's Cottage, the Chew House, Bartram's House, Arnold's Mount Pleasant, the Washington Mansion and the General's headquarters at Valley Forge, the Swedes' Church, Christ Church, the Philadelphia Library, the First Bank of the United States, are some of the subjects of Mr. Westcott's chapters, which are of a kind made familiar to us by the magazines of the day, and, to tell the truth, better adapted for occasional reading than for steady perusal. The writer's object is to gather in every fact of interest or person of note related, however remotely, to his theme ; and the mind, while it may be amused in receiving them, becomes very quickly fatigued when it undertakes to digest the disconnected particulars. Superficial such work is apt to be, but none the less it presupposes at least great diligence and painstaking on the author's part, and deserves some of the honor bestowed on historical research of a higher order. Mr. Westcott's performance is fully up to the average, whether in point of laborious compilation or of literary style, and his book should find a ready sale outside of Philadelphia as well as at home. The illustrations are not all that could be desired. Those depicting buildings that have disappeared of course had to be taken where they could be found, as from Watson's 'Annals,' etc. ; but the heliotype might surely have been employed for the buildings that remain. The cut on p. 148, purporting to represent Stenton, gives no idea whatever of the place, which is one of the most notable on the list. This is perhaps the worst example, however, and of other cuts of the same class it can only be said that a permanent photograph would have been preferable. It is privately known that a number of ardent Philadelphians have taken in hand the accurate measurement of their best old houses—not all of them "historic" in Mr. Westcott's sense, but all meriting the compliment of the tape-measure as honest architecture having a lesson to deliver to a later and degenerate age. Their drawings, when published, will, we hope, be accompanied by heliotype views of exteriors and interiors.

1420 Chestnut Street, Philadelphia.

Rare Engravings & Etchings.

Notice of Removal.

Frederick Keppel, late of 66 Beekman Street, New York, begs to announce his removal to a more central location at No. 243 Broadway, opposite the City Hall Park. With greater facilities of space and of capital, the present stock will be very much increased so as to make this *the* place in America where the finest works of the great engravers may be satisfactorily procured.

Correspondence is invited. Engravings will be sent on approval to any address, and visitors will be at all times welcome to call and look over the collection.

HINDS'S "AMERICAN COMMUNITIES": their History, Principles, Customs, Covenants, etc., with Illustrations.
Pamphlet, 60 cents ; bound, $1. AMERICAN SOCIALIST, Oneida, N. Y., and Brentano, New York City.

MR. HARE'S NEW BOOK.

Walks in London.

By AUGUSTUS J. C. HARE.

With One Hundred Illustrations.

Two volumes 12mo, cloth.....Price $5 00

The two volumes in one.....Price $3 50

"A worthy and enduring piece of work."—*London Daily Telegraph.*

"'Walks in London' is an exceedingly charming book."—*New York Herald.*

"We can imagine nothing more delightful than to take one of Mr. Hare's volumes, and saunter along the thoroughfares which he has walked."—*Mayfair.*

"All who know Mr. Hare's 'Walks in Rome' will hail the announcement of an American edition of his equally fascinating 'Walks in London.' "—*Library Table.*

"Contains a vast amount of useful information, and is worth a hundred guide-books, for, while it is especially valuable to tourists, it cannot fail to interest the general reader, from its accurate descriptions of notable persons and places."—*Boston Herald.*

"Everybody who wishes to know anything about the great city, everybody who wishes to refresh his memory regarding what he has seen there, and particularly every one who has the prospect, near or remote, of visiting London, should become possessed of this work."—*Scotsman.*

"The man who goes for the first time to London should take with him the new book called 'Walks in London,' by Augustus J. C. Hare. It is, by all odds, the pleasantest and most instructive hand-book of the great metropolis that has come under our notice." —*Philadelphia Evening Bulletin.*

"Every American, fond of walking and sight-seeing, who intends to visit London, should buy this beautiful book. . . . It is a little strange that in a nation of walkers like the English no work of exactly this sort should have been published before."—*Journal of Commerce.*

"Next to an actual visit to the vast metropolis, this volume is in every way calculated to afford that pleasure."—*N. Y. Daily Graphic.*

MEMOIR OF WILLIAM FRANCIS Bartlett. By Francis W. Palfrey. With portrait of General Bartlett. 1 vol. 16mo, gilt top, $1 50.

"Wherever these men appear, by whatever names they are called—Cyrus in Persia, Marcellus in Rome, Bayard in France, Sidney in England, Bartlett in New England—they are the admiration and the darlings of their fellow-men, and the story of their adventures never lacks readers."—*Springfield Republican.*

"A noble record of a most chivalrous man."—*Boston Advertiser.*

KERAMOS AND OTHER POEMS. By H. W. Longfellow. 1 vol. 16mo, $1 25.

It comprises all the poetry Mr. Longfellow has written since 1875, and is one of the most varied and charming volumes he has ever given to the world.

ODDS AND ENDS. Verses Humorous, Occasional, and Miscellaneous. By Henry A. Beers. 1 vol. square 18mo, $1 25.

The New "Vest-Pocket" Books.

ESSAYS FROM ELIA. By Charles Lamb.

FAVORITE POEMS. By Leigh Hunt. Illustrated. Cloth, 50 cents each.

Two inviting little books that every lover of charming essays and poems will delight in.

Books for European Tourists.

A SATCHEL GUIDE FOR THE Vacation Tourist in Europe. Revised edition for 1878. With Maps. 16mo, flexible cloth, $2.

The only compact guide-book covering the whole ground of ordinary "vacation" travel in Europe.

OLD ENGLAND: its Scenery, Art, and People. By J. M. Hoppin. New edition, enlarged, $1 75.

An admirable companion for English travel.

A HANDBOOK OF LEGENDARY and Mythological Art. By Clara Erskine Clement. Fully illustrated, and furnished with a complete Index. Crown 8vo, $3 25.

PAINTERS, SCULPTORS, ARCHI- tects, Engravers, and their Works. By Clara Erskine Clement. With many illustrations and monograms. Crown 8vo, $3 25.

☞ Mrs. Clement's two handbooks are precisely what European tourists need to enable them to visit more intelligently and satisfactorily the numerous art galleries and the masterpieces of architecture.

*** For sale at all bookstores. Sent, post-paid, on receipt of price, by the publishers,

HOUGHTON, OSGOOD & CO., BOSTON.

Paris Correspondence Co. and Press Agency,

ESTABLISHED 1860. Furnishes, on *very moderate terms*, Letters, etc., on Current and Social Events, Theatres, Music, Art, Science, Literature, Agriculture, Markets, etc. Tales.

OFFICE: 14 RUE DE CHABROL, PARIS, FRANCE.

Now ready. The Second Edition of

THE INVENTION OF PRINTING: A collection of Facts and Opinions descriptive of Early Prints and Playing Cards, the Block-Books of the Fifteenth Century, the Legend of Lourens Janszoon Coster of Haarlem, and the work of John Gutenberg and his Associates. Illustrated with 140 facsimiles, chiefly photo-engravings, of Early Types and Wood-cuts. By Theo. L. De Vinne. A broad octavo of 556 pages, suitably printed on old-style laid paper. In cloth, $6; half-morocco, $8. Commended by the *London Bookseller* as "a handsome and interesting volume . . . valuable from its conciseness, its practical common sense, and its general accuracy of statement"; by the *Saturday Review* as "well executed and thoughtfully written, . . . by far the most important and interesting of the American works which have reached us during the month"; by the *Paper and Printing Trades Journal* as "the most rational and readable account that has yet appeared of the invention of printing." A descriptive circular, showing specimens of cuts and paper, will be mailed to any address by the publishers,

FRANCIS HART & CO.,
63 and 65 Murray St., New York.

ANNIVERSARY.

The Fiftieth Annual Meeting of the AMERICAN SEAMEN'S FRIEND SOCIETY will be held in the Broadway Tabernacle (junction of Sixth Avenue and Thirty-fourth Street), New York, Monday, May 6, 1878.

The arrangements for celebrating the Society's Semi-Centenary propose a Convention of friends of the Seamen's Cause, in the Chapel of the Tabernacle (entrance on Thirty-fourth Street) at ten o'clock in the morning, at which carefully prepared papers, historical and otherwise, bearing upon various topics relating to the work of the Society, will be read by well-known gentlemen and submitted for discussion; a business meeting for the election of Trustees, etc., being appointed for 3 o'clock in the afternoon.

Auxiliary and co-operative Societies are invited to be present by their representatives, and to take part in the Convention.

In the evening, at half-past 7 o'clock, a public meeting will be held in the Tabernacle, at which addresses will be delivered by the Hon. Richard W. Thompson, of Washington, Secretary of the Navy; ex-Gov. Stewart L. Woodford, U. S. District Attorney; and the Rev. Howard Crosby, D.D., LL.D., Chancellor of the University of New York.

A cordial invitation is extended to the Life Members of the Society, and to its patrons, as well as to the Pastors of the city and vicinity, and to their congregations, to attend the meetings and to participate in their interest and profit.

STAMMERING.—Prof. Guttmann's School of Vocal Reform, an institution for the correction of defective speech: stammering, stuttering, lisping, and all disorders of the voice. Applications received from 12 to 2 and 6 to 8 P.M. daily. Correspondence solicited. 335 East Fiftieth Street, New York.

PATENT PREPARED

Gasolene.

The attention of owners of Gas Machines is invited to the superior quality of Gasolene that we are making.

Manufactured by a process that is patented by ourselves, it is peculiarly free from all the impurities and heavy properties commonly found in other Gasolenes.

We manufacture these goods more largely than any other house in the world, and are prepared to furnish any gravity from 80° to 90° Beaumé, by the single barrel or car-load.

Orders solicited from gentlemen owning private country residences.

Hotels, Mills, and Manufactories supplied on the most favorable terms.

CHARLES PRATT & CO.,
Established 1770. 128 Pearl Street, New York.

Pratt's Astral Oil.

PERFECTLY SAFE.

Especially adapted for use in the St. Germain Student Lamp.

The Nation.

NEW YORK, THURSDAY, MAY 9, 1878.

The Week.

THE two great events of the week, if we may judge from the amount of space they have occupied in the press, have been the death of John Morrissey and the excursion of the Coaching Club to Philadelphia. "Politics" is a very queer place, but probably nothing odder has ever occurred in it than the lamentations over Morrissey, whose career we have discussed elsewhere. The coaching excursion seems to have nearly driven the Philadelphians wild with excitement; the streets through which the coach entered the city having been lined, it is estimated, with seven thousand to ten thousand carriages, and about sixty thousand people. The sensation produced along the road through New Jersey seems to have been proportionately great. The trip was carried out by stationing relays of horses along the route, having each member drive his own team for one stage. It is questionable, however, whether the result, as far as the spectators were concerned, was not disappointing. The English mail-coach is not an impressive vehicle to the average American mind. It is not large enough to produce the impression of great strength and capacity, and not light enough to seem fitted for great speed, and is too plain in paint or decoration for splendor. Then it has none of the associations which have done so much to make coaching an amusement in England. So that it is not surprising that a good many of the farmers who drove their families long distances to see the coach go by, and expected to see something in the nature either of a circus car or a royal state carriage, went home disgusted.

There is apparently a good deal of Communism in the air if nowhere else. The theoretical Communists have held a May meeting in this city, small, it is true, in numbers but bold in doctrine, at which the speeches gave a fair indication of the kind of notions which are afloat among large numbers of the needy and discontented, though most of them were worthy of a lunatic asylum. Some want all property divided; others want it appropriated by the state; some think fifteen minutes a day as much as anybody ought to work; others would toil for four hours. All lauded the Mollie Maguires and strikers of last summer, and there seems to be a widespread desire for "blood," some calling for it only ankle deep and others up to "the bridles of the horses." Some advocated a strict "neutrality" on the part of soldiers and police whenever there was a strike going on. Most of them are in favor of "free love," or, as they put it, "the right of women to choose the fathers of their children"—or, more properly, the father of each of their children. Many swore in their orations, and spiced them with what "the Money Power" calls indecency. They all want unlimited money issued by the Government, to be lent indiscriminately without interest or security; they want Baxter Street put on a level with Fifth Avenue, and one recommended the slaughter of Mr. Astor. In fact, there was nothing which society as now constituted condemns which some speaker did not advocate, except the practice of going about naked. It is, perhaps, fortunate that they can be induced to express their views publicly.

From other quarters the news is more serious. There appears to be little doubt that in Cincinnati, St. Louis, Chicago, and in Pennsylvania mining districts there is some kind of preparation going on for another outbreak this summer, with more concert of action and better means of resistance. There is, evidently, more or less arming and drilling, but probably far less than has been reported. June is said to be the time fixed for the rising and the beginning of social regeneration, and the tramps are all getting ready for a joyous summer. To complicate matters, the Fenians are reported to be preparing for another attempt to overthrow the British Empire with the aid of Russia, but it will probably go no further than the filling of the "military chest" by the unhappy servant girls, who are probably now hearing nightly tales of the way Canada is to be invaded and British commerce swept off the seas, by powerful bodies of liquor-dealers and "baggage-smashers" from this city. Probably no great political swindle now on foot is so heartless and contemptible as this one, and none has been so successful, for it is said that over $600,000 has been raised, from first to last, towards the destruction of Great Britain, and all from the savings of the very poor, and it has all been spent by two or three score of hulking adventurers on their own clothes, whiskey, and tobacco.

We can hardly call Packard's appointment as Consul to Liverpool—an unexceptionable officer having been removed to make way for him—a contribution to "thorough, radical, and complete reform of the Civil Service," and yet we acknowledge that it is a great gain to get him out of the country. He was one of the worst of the Louisiana politicians. He was United States Marshal during the most disgraceful period of the carpet-bag régime, and was the person who obtained the celebrated "midnight order" from the disreputable Judge Durell, and under it organized the Legislature with the aid of United States troops. In fact, there was no trick or rascality of that period in which he had not a hand. His career then ought, in fact, to have disqualified him for any other office, but it has been felt that something must be done for him, as well as the other Southern politicians whom the President's "policy" has ruined. In Europe he will be spared the pain which Mr. William E. Chandler described as so hard for a "thoughtful man," of looking for outrages and hearing of none.

Mr. Blaine, we regret to say, has been "straddling" again, this time the timber question. He has written a letter, of course not for publication, to a friend in Maine, but of course it was published with "perfect propriety" in the *Maine State Press*. In it he says—after giving a grossly misleading incorrect account of his conflict with Mr. Schurz, concealing the fact that he attacked Mr. Schurz for executing the existing law, and falsely suggesting that all that Mr. Schurz did was to pursue settlers who cut wood for their own use on unsurveyed public lands, and making the directly false statement that "the only issue he had with Mr. Schurz was that raised by the bill he [Mr. Blaine] introduced and passed"—that "the report that he declared it a reproach to Mr. Schurz that he was born in Prussia is too absurd to notice with serious contradiction." Now, this is evasion. He made no such "declaration" as he here cites, but he did give as a probable reason why Mr. Schurz persecuted "the deserving frontiersmen" the fact that he probably had in his mind the oppressive land-laws of his native country, to which he was used in his boyhood, and he sneered at Prussia as a smaller country than Montana, and therefore presumably unfit to be the birthplace of an officer charged with the protection of the Montana timber. The letter proves only one thing, and that is that he is sorry for having made these allusions to Prussia and would like to get out of the scrape they caused him without having to make "a serious contradiction." We have already pointed out how the Prussians deal with such gentlemen as Mr. Blaine, and it is not surprising that he considers Prussia an odious birthplace.

The Bankrupt Bill came up again in the Senate on Wednesday week, and found an easy majority in favor of amendment. Two were passed, fixing the date of operation of the repeal at January 1, 1879, and exempting all cases now pending or future proceedings growing out of the Bankrupt Law, and the bill was then referred to the Judiciary Committee, to be put in shape on these conditions. It was reported back on Thursday, but was objected to by Mr. Voorhees, and so went over. The date fixed, of course, gives Congress a chance at the next session to modify the law as it now stands, and

so perfect it that it will answer the permanent needs of the country. The House bill prohibiting the retirement of greenbacks secured a second reading in the Senate by a vote of 34 to 23. On the same day, Tuesday, the Pension Appropriation Bill was passed. Mr. Blaine's resolution about the inopportuneness and great injuriousness of altering the tariff at this time met with opposition when he attempted to call it up on Wednesday week, and it was postponed. On Tuesday, in the House, Mr. Wood, by a bare majority of one (109 to 108), succeeded in bringing his Tariff Bill before the Committee of the Whole, and debate upon it began with a speech from Mr. Banks, who takes Mr. Blaine's view of the measure. Its fortunes now wear a rather desperate look. The House has passed a bill to provide the District of Columbia with a permanent government, consisting of three appointed commissioners and a council of twenty-four elected by popular suffrage, and these two bodies absorb the functions of the several boards of health, police, fire, etc., now existing.

The latest contribution to the silver controversy is a pamphlet from M. Henri Cernuschi on "the Bland Bill," as he calls the Silver Bill as passed, "its grounds, its alleged dishonesty, its imperfections, and its future." Most of the ground he goes over is now so well trodden that we need not follow him particularly, as he devotes himself mainly to the history of the measure, and is in places too dithyrambic for argument, as where he pronounces mono-metallism, "with all its triumphs, and all its pride, always impotent, always unrealizable, always disastrous, and always inhuman." It is language of this sort, so closely resembling the rhetoric of the encyclicals, which has procured for him the sobriquet of the "Bi-metallic Pope," and causes the European "Gold Sharps" to smile when his name is now mentioned. He has adopted the Western story about the secret passage of the Coinage Act of 1873, but has slightly improved upon it by saying "that it is even alleged not to have been regularly voted." The Sons of Thunder, we believe, never denied that it was put to the vote; this was too much even for the trimetallic Kelley.

What interests us, and will most interest the silver-men, is what he says about the future working of the bill. At present its Western friends are in a state of childlike delight over it, and think that because gold did not rise before silver came into circulation, they have got such a capital joke on the New York papers. We get letters from them now and then telling what laughs they have over the false predictions of the *Tribune* and the *Post*. We now ask them to observe that silver has fallen since the passage of the bill, and remains still below fifty-four pence per ounce, and then to listen to what their friend M. Cernuschi says will happen in case the European nations do not join us in adopting the double standard:

"France will be unable to put in force again her bi-metallic law at 15½; if she resumed mintage at 15½ the United States, governed by their law at 16, would immediately stop manufacturing silver dollars, and silver would be exported from America to France, as happened for the same reason from 1834 to 1874. France, therefore, will not coin, and the United States will end, even if they keep to limited mintage, by having an abundant silver circulation. Silver will drive away gold, and *de facto* they will be silver-mono-metallists, as before 1834. In short, Europe will no longer coin anything but gold, the United States and Asia will have only silver money."

He adds that "the gold-money nations at home and the silver-money nations at home will pay with facility," but "between gold-money nations and the silver-money nations payments will be difficult, slow, always liable to heavy losses." In other words, we shall be in the position towards Europe which we have occupied during the last sixteen years with our unredeemable paper. As yet there is no sign of the slightest disposition on the part of the great commercial countries to join us in the silver movement, so the end appears pretty certain.

The Syndicate of bankers which, on the 11th of April, bargained for $50,000,000 U. S. 4½ per cent. bonds, taking $10,000,000 "firm" and having the option to take the remaining $40,000,000 in monthly instalments of $5,000,000, during the week took the $10,000,000 due in the months of June and July. This makes $25,000,000 already taken and leaves $25,000,000 on option. The Syndicate have sold the bonds at the rate of about $1,000,000 per day, and if the sales keep up at this rate the entire $50,000,000 will be marketed before July. The proceeds of the sales of these bonds are held for resumption purposes and are not reinvested in 5.20 6 per cent. bonds. Perhaps the most surprising result of the $50,000,000 negotiation with the Syndicate on the 11th of April has been the stimulus given to the demand for 4 per cent. bonds. These are sold by popular subscriptions, and the proceeds of their sales are used in buying 5.20 6 per cent. bonds, or for refunding purposes. Enough 4 per cents have been sold to enable the Treasury to notify the holders of $10,000,000 5.20 bonds that they will be redeemed; the first notification or call was for $5,000,000, and was issued on May 1; the second call was for 5,000,000, and was issued May 6. The inference is that the demand for U. S. bonds is now fully $2,000,000 per day, and about equally divided between 4 and 4½ per cent. bonds. A strange feature is that there are so many buyers for the 4 per cents when the 4½ per cents at 102 gold and accrued interest—the current price—are more than 1 per cent. cheaper than the 4 per cents. The large demand for bonds shows great confidence in the ultimate honesty of the people, whose mere promise to pay is all that these bonds consist of. Silver in London fell during the week to 53⅜*d.* per ounce. Here the bullion value of the new silver dollar fell to $0.9106 gold.

The Boston "tax-dodgers" (or, in other words, the citizens who try to escape taxation in that city by acquiring a legal residence in suburban towns) have received a heavy blow in the decision of two tax cases involving the legal principle on which "tax-dodging" is based. Messrs. John H. Wright and William F. Weld, the latter one of the largest property-owners in Boston, selected Nahant, a town whose annual tax-levy is a mere trifle, as their domicile, and as the Boston assessors continued to tax them as residents of Boston they paid their tax-bills under protest, and brought suit to recover the amount. The cases were tried in Essex County (so that no local considerations of municipal advantage can be supposed to have influenced the jury), and the law was stated with great fairness by the judge who tried them. The law, as given to the jury by him, is not new, and may be summed up as follows (it applies probably to many other States besides Massachusetts): a man is taxed where he has his domicile; his domicile is his home, the place where he lives. He cannot have two homes or domiciles, and the question of his legal domicile is to be determined by all the facts of the case. He is entitled to change his home; but a mere notification to the assessor of a town, or any other act of the sort, does not effect a change of itself. In short, the answer to the question, Where is a man's legal domicile? would be identical with the answer to the ordinary question of common life, Where does he live? The jury in these cases decided that Messrs. Weld and Wright (though they had displayed considerable ingenuity in endeavoring to effect a change of legal residence) had not ceased to live in Boston; and accordingly a verdict was rendered in favor of the city.

The Paris Exposition was formally opened on Wednesday, May 1, according to the official programme, although there was the usual degree of backwardness on the part of the builders and exhibitors, for which strikes were to some extent responsible. The distinguished visitors who made up Marshal MacMahon's suite were chiefly the Princes of Wales and Orange, and ex-King Amadeus. M. Teisserenc de Bort, the Minister of Commerce, read a short address which emphasized the significance of the Exposition as both in fact and in intent a proof of the peaceful aims of the republic, of its confidence in its own stability, and of the sympathy of foreign nations. The Marshal then declared the Exposition open amid much enthusiasm. It consists of two parts, separated by the Seine: on the Trocadero height, a crescent-shaped palace permanently dedicated by the city of Paris to the fine arts; in the Champ de Mars, at the opposite extremity of the Bridge of Jena, the Main Exhibition

building, of enormous dimensions—the customary gardens with detached national buildings intervening. It will be some time before we can judge accurately the rank of this Exhibition as compared with preceding ones, but the fact that Germany, Turkey, and Egypt are unrepresented shows how great a disadvantage has to be overcome. The United States exhibit was set up with remarkable efficiency and promptness, and though it takes a place in the second class, it is reported the most creditable ever attempted in Europe; it has filled well a meagre space, instead of half and discreditably filling too liberal an area, as at Vienna. Perhaps, also, the phonograph will secure for this country an eminence which will satisfy our national pride.

The negotiations between England and Russia with regard to the Congress are still going on, Germany acting as mediator, but there is no news worth repeating as to the progress made, though the chances seem to be favorable to peace. Prince Bismarck, fearing the possible break-up of the negotiations through a collision between the forces of the two Powers at Constantinople, has been urging a simultaneous withdrawal of the fleet and army to points previously agreed upon, and efforts have been making in this direction, but the difficulty of settling on an equivalent amount of retreat on both sides has thus far prevented any result. The Russians want to be sure they can get back to Constantinople as quick as the fleet, and the British to be sure that if they repass the Dardanelles they can get back at all. The Turks, on the other hand, say they cannot surrender Shumla and Varna until Russia gives up Adrianople; and so the drama drags along, nobody being willing to trust anybody else very far. The Pomak insurrection in Bulgaria has grown more formidable, but General Todleben, who has been left in command in Bulgaria, has taken vigorous measures for its repression. There is no news of a decided character from Austria, and it looks as if the suspicion that she was holding off in order to see what was going to happen, and be able to make good terms before moving, was well founded.

In Russia public attention has been almost diverted from the war by what is called the Vera Sasulitch affair. One of the most remarkable features in the strange socialistic upheaving which is going on in the upper class of Russian society is the eagerness and even frenzy with which the new ideas are swallowed by young women, and one of these *exaltées*, Vera Sasulitch, hearing that a political prisoner had been brutally flogged by order of the Chief of Police, General Trepoff, for disrespect in his manner, determined to shoot the general, and did shoot him at his office, wounding him seriously but not fatally. She was tried by a jury which was undoubtedly packed to convict, seven of the members being wearers of decorations, and all belonging to the upper classes; but she was promptly acquitted, and left the court amidst thunders of applause. The Emperor is said to have been much troubled by the incident, but Trepoff has been removed, and it still remains to be seen whether the Court will ally itself with the peasantry and the army against the educated class, or adapt its policy to the change in opinion.

There have been other disturbances showing the wide-spread prevalence of the same spirit of revolt against authority. An émeute among the students of the University of Kiev led to the expulsion of one hundred, and the exile of sixteen of them to Siberia, and since then the rector has been assaulted in the college and badly beaten. The exiles, on their way through Moscow, were, on the other hand, attacked by a mob in the streets and severely handled, in spite of the efforts of the guard. In Odessa seven persons of both sexes resisted an attempt of the police and soldiers to arrest them for political offences. "Nihilism," or whatever it is that is at the bottom of all these troubles, is clearly too subtle and impalpable an influence to be dealt with by the police. The accounts of them are sending the public in other European countries eagerly to Turgeneff's books, and notably 'Virgin Soil,' for an explanation of the crisis, which his descriptions of character often clearly foreshadow.

There seems very good reason for believing that Lord Derby's resignation and the powerful speech which followed it have helped to produce a decline of the war feeling in England—or, in other words, to both sober and discredit the "Jingo party," as the Russophobists are now called. At important elections which have since occurred—Northumberland County and the borough of Tamworth—the war issue was distinctly raised by the Liberal candidates, and the Conservatives utterly routed on their own ground. In Tamworth, which is an old Tory borough much influenced by the Peel family, the head of which is now a strong "Jingo" man, the defeat of the Conservative candidate, after a slashing attack on the Government policy by the Liberal, Mr. Bass, a son of the brewer, was overwhelming. Both these incidents have made a profound impression on the "Jingo" mind, which tries in vain to account for them. An article in the *Quarterly Review*, putting forward on behalf of the Crown a claim for the complete control of the foreign policy of the country to the exclusion of the people and the House of Commons, an idea of which the apparent origin has been discovered in 'Coningsby,' is likely to help to rouse the Liberals still more into some determined action, and even moderate papers are becoming vituperative in their treatment of the extraordinary personage who now has the Queen and the army of a great nation under his control. A "Syrian adventurer" and "political charlatan" are now not considered unbecoming epithets to apply to him. An article on him in the last *Fortnightly Review*—the first of two—has rarely been surpassed in English literature for polished and biting contempt. His last stroke, of bringing a large Indian army into Europe without the consent or knowledge of Parliament, is also helping to stimulate the returning thoughtfulness of the country, and the horrid Russians will probably be left wallowing in their untruthfulness and general sinfulness a while longer.

The Lancashire strike among the cotton operatives, which has thrown from 30,000 to 40,000 persons out of employment and deprived three times that number of their means of support, still continues, and has called forth a very interesting discussion of the conditions of English trade in the shape of manifestoes and counter manifestoes from the masters and men. The temper displayed on both sides is very good; there are no threats or denunciations, nothing but rather dry business discussion. The masters say that trade is bad and has been bad for a long time; that they are losing money at the present cost of production, and have suffered and are likely to suffer the partial loss of several markets, notably the United States and China. To which the men reply that the masters were foolish in the good times in building so many new works, and so much machinery, and producing so much goods; that in this folly the men had no share, and that it is unfair now to try to throw on them the loss on the fixed capital; that, however, they are willing to help the masters out of the scrape by submitting to the desired reduction—ten per cent—if the masters will agree to work short time so as to reduce production. To this the masters refuse to assent, and refuse to submit their case to arbitration, professing to understand their business better than any one else.

Some of the facts brought out by the masters in support of their arguments are very interesting. Since 1860 the demand for British cotton goods in the Eastern markets has increased 80 per cent.; the demand in all other foreign markets only 15 per cent. In 1860 the United States took 227,000,000 yards of British cotton goods; in 1877 only 61,000,000. In the former year Great Britain used half the cotton crop; last year she only used 3,017,000 bales, against 3,959,000 used elsewhere. Moreover factories are going up in China, which has unlimited supplies of coal, and also unlimited supplies of labor. "Capital is increasing elsewhere," the masters add; "other nations show themselves to be as capable of organization as our own. The race will be to the frugal, the industrious, and enduring." To which the men reply that they can endure as well as anybody but cannot endure without hope. The end it is difficult to see; but it will probably be the surrender of the operatives who are already divided, the spinners not sympathizing fully with the weavers.

THE COMMUNISTIC MOVEMENT.

TWENTY years ago the prediction that the spread of communistic ideas among the laboring classes would begin to excite uneasiness in the United States would have been treated as a pessimistic absurdity. In fact, a prediction by Macaulay, written about that time in a letter to a friend in this country, that attacks on property through legislation would at some indefinite time be made in the United States by the majority, was treated as an absurdity. It is nevertheless true that we are witnessing at this moment the spread of a movement among workingmen, having its headquarters in some of the great cities, for the avowed object of despoiling the owners of accumulated property in some way—there is apparently no general agreement as to what way. At the bottom of it is a small body of Communists of the French and German school, who have a clean-cut theory of social reorganization which proposes the appropriation by the state of all the great instruments of trade and industry, such as the railroads, factories, mines, and iron-works, and the supply of work through these by the state to all who seek it, at such wages and with such hours as may be most conducive to their health and comfort, with a progressive income tax, free compulsory education, and a more complete direct control of the people over legislation, through mass meetings. The more advanced of this school also wish to get rid of the great argument in favor of the permanence of the matrimonial tie by making the state the nurse and guardian of all children, so as to relieve the parents of the cares of maternity and paternity, and enable them to marry more frequently.

Below these there is a much more unthinking and larger class, which is really the dangerous one, such as the followers of Kearney in San Francisco, who have filled that city with real alarm and inflicted serious injury on business. These men do not trouble themselves with theories, but address themselves directly to the facts of the situation. They dislike poverty, and they see around them great masses of wealth, in which they demand a share by any process, however rough, provided it is short and sharp. They regard a rich man as in a certain sense a wrongdoer, and are only restrained from attacking him by prudential motives. They are, consequently, constantly on the verge of riot rather than revolution, and they have a very large secret following who, without venturing openly to avow sympathy with them, would, if an outbreak came, participate freely in the plunder and disorder, not perhaps for plunder and disorder's sake, but as a means of bringing capital to terms of some kind—that is, of forcing it to make concessions of some kind, they do not well know what, to the laborer. A large number of those who took part in the railroad strikes of last summer were undoubtedly in this state of mind, and if there be a renewal of the strikes this summer, with completer organization, as many persons fear, it will be with some such vague view. Outside all these there are, of course, the tramps and vagabonds, who would make common cause with the Communists, but whom even that name would dignify. How large the whole body of persons who are animated by these opinions and desires is, it is difficult to calculate. The newspaper accounts are apt to exaggerate their numbers, both because secret designs against peace and property naturally work on the imagination, and because the Communists themselves naturally magnify their strength with the view of spreading the terror through which they hope to succeed. But it is certain that it is large enough to be injurious to business, and to make investors and property-holders uneasy, and seriously to increase the difficulties of city government, already very great. It is in this way, too, that it is likely to damage American society. That the Communists will ever get possession of any government in the United States, or that their theories will find acceptance with any really powerful body of the people, is of course wildly improbable, because the bulk of the people own property and save money, and would and will for ages to come certainly be amused by a serious proposal to divide with those who have got none and do not like to accumulate. What Communism really aims at is a new form of civilization, which may come, but if it does will only come at an indefinitely remote period. The régime of private property has created our present civilization and brought man out of savagery; all our morality is based on it, and it will probably take as long to overthrow it as it has taken to bring it to its present shape, if it can be overthrown. All the late advances of the world have not been towards any form of Communism, but towards a wider diffusion of individual ownership—that is, towards the admission of larger numbers of persons to the responsibilities and pleasures, easier transfer and more secure possession, of property.

What we are now threatened with, therefore, is not a great attempt at community of goods, but a falling off in security and ease and rapidity of accumulation. The American Communists, for instance, are not strong enough, or ever likely to be strong enough, to embody one of their ideas in an act; but they are, or will probably be, strong enough to make people afraid of riots, and to stimulate that kind of legislation called "labor legislation," which seems to grow naturally out of the deep-seated public sympathy with poverty, and furnishes demagogues with a cheap mode of gaining popularity with a considerable body of voters, without committing themselves to really alarming theories. Such proposals as that recently made to have the Government manufacture some thousands of tons of iron in order to provide work for the unemployed, and, in a less degree, the schemes for the execution of great public improvements for the same purpose, may not do much harm in themselves, but their effect on the mind of the poor is to keep alive the vague hopes and the confusion about the nature and duties of government out of which Communism springs. The refusal of Congress or of State legislatures to provide sufficient military or police force for the protection of property has the same result. It leads the discontented to feel that they are making headway, that they are frightening the property-holders, and that by a little more effort they will have their own way in everything, and prepares their minds for the preachings of the systematic and theoretic Communists.

The importance of these considerations is due to the fact that thus far communistic doctrines, when they have once taken hold of the minds of workingmen, have never, so far as can be known, been extirpated by persuasion in any form, and for the simple reason that those who preach against them are pretty sure to be property-holders, or members of the property-holding class, or ministers of religion, and therefore discredited from the outset. What roots out Communism is experience of its impossibility—the plain demonstration that society cannot be carried by assault, and will defend itself remorselessly. It is this which has extinguished it in France, but even there it has taken three bloody conflicts to do it, and two generations of civil strife, and nobody who observes what is going on in Germany and in Russia can doubt that the problem will have to be solved there in the same way—that is, Communism will grow, and its pretensions rise, until it thinks itself strong enough to attempt a realization of its dreams by physical force, and then it will find that Property, when really alarmed, is a terrible antagonist, that its strength is tremendous and that it has no bowels of compassion. The fostering of communistic views, either directly or indirectly, either by speech or legislation, is, therefore, great cruelty to the ignorant and unthinking, who form the bulk of those of whom they take hold. The sooner it can be made clear to them that they are seeking the impossible the better for them as well as for society, and the way to make this clear is to show thorough readiness for defence. Nothing, for instance, could possibly clear Citizen Schwab's brain so much, and elevate his moral nature, as to satisfy him that if he attempted to carry out his theories in this city he would be killed. Much can be done, of course, to save the coming generation from this poison—the worst, all things considered, that has yet entered the moral world—by improved means of education and better social arrangements; and the return of better times will relieve from it many of the light-headed who are now in favor of a division of goods simply because they are out of work. The difficulty of dealing with it is great. It creates a distaste for the steady routine of life, and a shirking from realities, not unlike that created by gambling. In order to reason a man out of a vagary, too, you

and he must have some common ground to start from. With the communist there is no common ground to start from. He offers no fulcrum for your lever. He denies and scoffs at your religion. He repudiates all your virtues and all the motives by which your own life is governed. He shares none of your hopes, and is not troubled by any of your fears. He hates what you most admire, and longs for all that you most abhor; denies the force of all your tests and sanctions, and looks on you as a selfish impostor. This is not a pleasant phenomenon, and it is likely to prove to modern society a curse and puzzle somewhat like those which slavery proved to the ancient society, and must be faced.

RAILWAY MANAGEMENT AND NEW YORK PROSPERITY.

THE resolution to appoint a joint committee to take into consideration the railway management of this State, in so far as it affects its prosperity, passed the Assembly last week by a decided majority. If the Senate concurs in this resolution we shall have at last, in some official shape, an enquiry into the facts which caused the meeting at Steinway Hall, which formed the burden of Mr. Sterne's address there, and the resolutions and report of the Chamber of Commerce. The committee charged with this enquiry will bring before the Legislature of 1879 these questions in tangible form, based upon evidence. The extent to which this controversy has been carried, and the feelings which the merchants exhibit against our most powerful corporation, show that these grievances must to some degree exist, otherwise our usually apathetic citizens would not have been so ready to attack so formidable an adversary as the New York Central Railway. Whether or not this enquiry will lead to any beneficial results will very much depend upon the nature of the committee—*i.e.*, the extent to which that committee itself feels called upon to make the enquiry a searching one, and the skill with which the case of the merchants is handled before it.

Sufficient has already been admitted by Mr. Vanderbilt in his letter of the 19th ult. to the Chamber of Commerce to show that the railway problem in this State has assumed very great proportions, and that we have upon us a question of extreme delicacy. Mr. Vanderbilt says in this communication that the pooling arrangements between the great trunk lines resulted in placing "the New York shipper upon an equal footing, and gave to him the same advantages as were enjoyed by the merchants of any rival State. Certainly no more can be reasonably asked. To require the New York roads to carry freights to and from the West at a rate which would disregard the excess of cost of transportation from Philadelphia to Baltimore, to and from foreign ports, would give to the New York merchants such advantages as would destroy the commerce of those cities. Their roads would not submit to this, nor would those cities permit them to until they had been exhausted in the struggle to maintain a fair equilibrium." Yet New York had just these advantages in times past, and did almost immediately after the opening of the Erie Canal destroy as much of the commerce of its rival cities as it did not absorb. From 1830 to 1860 the great mercantile houses that had theretofore existed in Boston and in Philadelphia, more particularly those of the latter city, first opened branches in New York City, then transplanted their main warehouses to New York, with branches in the other cities, and then in process of time did their whole business in New York, without branches elsewhere. Thus did the improved waterways of New York State, built by the State, first absorb, and then practically destroy, the importing and jobbing trade of its rivals down to 1860. The harbor of New York and its facilities for transportation to and from the West gave New York its first advantage, and it then threatened to hold that advantage against all newcomers by reason of the economy which arose from the bulk and value of the commodities that it transported. It looked as though a natural monopoly had been established in favor of the largest transporting centre, resulting in decreased charges for all that it desired to send West or to obtain from the West. The value of its real estate is based upon these advantages; and amid all the depression which the years of reaction since 1873 have brought to New York, in common with her sister cities, her real-estate prices still rule above those which prevail with her neighbors, simply because her citizens have believed that New York had natural advantages which placed her in the rivalry of commerce far beyond any other city on the Atlantic seaboard.

This delusion, if delusion it be, Mr. Vanderbilt's letter dispels. He confesses that the combination which the New York lines have entered into with their rivals of other cities is one of such a nature that whatever advantages New York derives from its harbor it loses in its freight charges; that she is placed upon the level of her rival cities. To use his own words, "the New York roads have put this city on *an equality* with the most favored rival. To this position they are thoroughly committed, and they will stand by it under all circumstances; the rest remains with its merchants." That Mr. Vanderbilt's letter does not at once create a combination of the larger real-estate owners, the value of whose property is dependent upon the natural advantages of New York, as it already has of the merchants, arises simply from the fact that their interests are not so directly and immediately affected as the mercantile interest. Were, however, the full meaning and scope of this letter understood by the owners of the soil of New York, they would be as prompt as the merchants to institute an enquiry as to the nature of the causes which, either naturally or artificially, will deprive them of the main value of their property by placing the owners of property in Baltimore and Philadelphia in competition with themselves.

We can all understand how the building of the Erie Canal gave to New York City its enormous advantage. Although Pennsylvania also built a canal, the Alleghany Mountains form an insuperable barrier which the Pennsylvania Canal could not overcome. The commerce of New York State, on the contrary, was not impeded by any great natural obstructions; excellent rivers furnished constant supplies to the canal, and the Hudson River, navigable for a hundred and fifty miles to the north, gave to the canal an outlet maintained at no expense, and on the bosom of which a hundredfold the freight capacity of the canal could be carried to the metropolis. Cities were thus built up thoughout the centre of the State with a population so large as to give a great local traffic to our first through-line of rail, and made the line practically independent of through-traffic. When the New York Central was consolidated, it was consolidated by the combination of a number of connecting railways between cities, each one having its independent and profitable business. The improved method of transportation introduced by the railway, therefore, maintained the supremacy of New York City which the canal had given to it; and as no other State could build any railway which could compete with ours at the rates at which the combined Central could carry through-freights, because no other State had so many cities, and every State to the south of us had mountain ranges to overcome, and to the north of us greater mileage and reduced population as difficulties to overcome in its traffic between the West and the Eastern seaboard, no one could have foreseen that the railway system would lose that supremacy to the State of New York. Moreover, our first railway had advantages as great over other railways to be built in other States as the canal in this State had over the canals in other States. Railway experts tell us that the volume and value of the traffic and the gradient of the roads are elements of much more importance than mere mileage, and as in all these particulars New York afforded its railways advantages incomparably greater than those possessed by lines to rival cities on the coast, reduced freight charges to and from New York representing those advantages seemed to be the natural property of New York's merchants.

Now, after thirty-odd years of railway rivalry, the city of New York is deliberately told by the president of its leading line of railway that the combination which he and other New York railway presidents have made with lines to cities of sister States takes away the advantages thus far possessed by New York, and puts its merchants upon the same plane of commercial opportunity with rival cities. If the autocratic ruler of a great country

chooses to distribute advantages and disadvantages in this way, so that there shall be no plethora of wealth in one particular district as compared with another, we can understand his motives, however much we may deprecate this paternal system of government; but the motives of a president of a New York railway company when he exhibits a tender regard for the mercantile interests and the value of property of cities to which his road does not run and in which he has probably but very little if any property, is not so easily understood, and a little search must be made for the motive. We find that into this pooling arrangement the Grand Trunk Railway, running from Boston, cannot be forced; that it alone of the railways refused to enter into the great combination of 1877, and insists upon running in competition with the New York Central—a competition which admittedly reduces freights from Boston to the West, and from Liverpool to Chicago, to lower rates than those which exist from New York to the West, mileage notwithstanding. And yet the Grand Trunk Railway runs through towns where the New York Central runs through cities, runs through wilderness, waste, and mountain in great part, has comparatively little local traffic and comparatively a small local business. Why is it, then, that it can compete with so formidable a rival as the New York Central? Because it is insolvent. Insolvency in the case of railway corporations operates very differently from what it does in all private affairs, inasmuch as it not only does not drive the insolvent corporation out of business, but, by lifting from its shoulders all responsibility to pay interest upon bonds and dividends upon stock, enables it to run for operating expenses alone, places it in a position as though the State had built the road for the receiver who operates it, and charges him no rental for it; so that all its earnings need accomplish is to replace wear and tear of machinery, rolling-stock, and permanent way. Such a rival crushes in its turn the solvent corporation which placed it in a position of insolvency. Hence there is nothing which railway presidents who have their property invested in their corporation's stock so much dread as the insolvency of their rivals. The President of the New York Central's tenderness for the commerce of Philadelphia and Baltimore is plainly nothing but a tenderness for the roads that terminate there. He sees to it that they shall not become insolvent by a rivalry with his road, so that his own solvent road shall not be crushed between the upper and nether millstones of an insolvent road to the north of him, and two insolvent roads to the south of him.

This phase of the railway problem has never been presented before in this country. Combinations heretofore have been so short-lived, and the law of competition has so generally held sway in the reduction of freight charges, particularly as to distant competitive points, that a railway having such superior advantages as the New York Central has would constantly make use of them to the exhaustion, and at times to the destruction, of its rivals. But new light seems to have dawned upon our railway magnates. They are beginning to feel the disadvantages of railway wars, and, by so-called "poolings," to enter into copartnerships of a very much more permanent character than any heretofore known between such corporations, and we are now confronted by such a copartnership between the four great trunk lines from the Eastern seaboard to the West, having it in its power to level down and build up great communities, and using that power to the disadvantage of one and the advantage of another of our great centres of population. That the community, under these circumstances, has a duty to perform is too obvious to require comment. Whether there shall be a permanent control over our railways by the National Government, or by State governments acting through commissions, is a question that we shall not at present discuss.

"IN MEMORIAM."

NO one who has paid much attention to the way in which the great body of young men in a country like this, and for that matter in any country, get most of their moral training, can have failed to see that it is through "modern instances" rather than "wise saws"; that is, they form the ideals after which they strive not so much from the discourses to which they listen on goodness and badness, as from the kind of men on whom they see the public bestowing its honors and rewards. It is, in fact, through the spectacle of their success that political rascals do their mischief rather than through their foolish or ignorant legislation or administration. One man who shows that an exposure of his knavery does not hinder his political advancement does damage to the rising generation which no amount of mere didactic efforts can repair. These remarks, too, apply to honors to the dead as well as to honors to the living. Of course "obituary notices" are well known to have a good deal of hollowness and hypocrisy, but when they are the formal and elaborate utterances of the organs of public opinion they do help to form the public judgment about the quality of acts as well as about the quality of men. If your son sees you groaning and weeping at the grave of a noted thief, there will be no use in immediately afterwards giving him a lecture on the sacredness of property; and if your "secular paper" does all in its power to honor the memory of a noted cheat without denying his cheating, there is little use in drawing the attention of your family to a remarkable article in your "religious paper" in elucidation of the Ten Commandments.

The importance of this department of public instruction has received a fresh illustration from the course of some of our leading daily papers with regard to the late John Morrissey. They all published long biographies of him, mostly of the same tenor and evidently drawn from the same source. That of the *Times*, which has done most honor to Mr. Morrissey's memory, filled three and one-half of its columns; that of the *Herald* seven; that of the *Tribune* only a column, and this paper gave him in some degree his due. Three columns of the *Times*, or six-sevenths of the article, are devoted to telling how Morrissey, beginning life as an ignorant and vicious young laborer, forsook steady industry for gambling and pugilism, and became notorious by his offences against the law, and by his turbulence and violence. It is, in short, the history of a member of the criminal class, for whose benefit jails are built, and whose activity and liberty reflect shame on the community which permits them. It shows, also, how at the age of thirty he grew tired of fighting, as all pugilists do, and determined to become a professional gambler; and the last half column, devoted to his "political career," shows how, while keeper of a noted gambling-hell—or, in other words, a professional criminal—he made money enough to enable him to become active and influential in the politics of New York City—or, in other words, to succeed in the same field as Tweed, and win the suffrages of the same class of constituents. So he went to Congress and then to the State Senate. To neither body did he bring any qualification for the duties of a legislator representing a great commercial city, or any experience of any kind except that of a pugilist, bartender, gambler, stowaway, and wandering rough, or what the old English statute calls a "rogue and vagabond," and he died at the early age of forty-seven, doubtless through the exhaustion of his constitution from his excesses. Nevertheless, the *Times* says he was "in public affairs a man of sturdy common sense, clear perceptions, and unbending rectitude," and "no man ever charged John Morrissey with being a venal politician or a dishonest legislator." "The errors of his early career" (he was keeper of a gambling-hell down to the day of his death) "were fairly balanced by his undeniable public spirit and unchallenged fidelity to public trust." That is to say, you may safely lead the life of a criminal if in your thirty-fifth year you go to Congress and take no bribes; and you may keep a gambling-hell, and live by it, if you go to the State Senate and oppose Tammany.

The State Senate was not behind the press in its sorrowful admiration. It expressed by unanimous resolution "its respect" for Morrissey's "great moral courage, for his devotion to principle, and for his rare and unquestioned integrity"; and it started for his funeral "in a body." The Assembly also wept over him as a "well-meaning and upright legislator," and recorded "its high estimate of his character and official course."

There is something better still to come, however. A Washington correspondent of Monday's *Times* filled a column and a half in the most conspicuous part of the paper with an "In memory of Morrissey," giving anecdotes of the illustrious deceased. One passage in it has never been surpassed for naïveté in the political biography of the modern world:

"Last evening a number of gentlemen sat together in a leading hotel here and talked about him until bed-time. All except one of them had been his personal friends, and that one was no less a person than the venerable but still hale and hearty Simon Cameron. One after another they told their little story of the dead man's life, and 'the old Senator' listened in silence and with much attention. At last, when the rest had apparently finished, he broke the silence he had kept so long by exclaiming suddenly and in his own quick, nervous way: 'I never had much

personal knowledge of Mr. Morrissey, but I heard one story of him which always impressed me very deeply.' 'What was it? What was it?' asked the others in a breath, and in reply Mr. Cameron related the following incident. I give his own words as nearly as possible, only omitting names at his request. He said: 'When Morrissey first came to Washington I must confess that I was not very favorably impressed with him. He had a bad record, of course, and somehow or other most people in this world have a mean habit of remembering all the bad things a man does and forgetting all the good ones. At all events, I had never heard anything good of Morrissey. For this reason I was very much surprised one day to hear my friend (Senator Cameron named one of the best known Republican leaders in New York) speak in terms of great kindness of him. I gave expression to this surprise, when my friend told me that I was very much mistaken in Morrissey's character, and to prove what he said related the story to which I alluded. It was to the effect that a young man of great promise, a resident of New York City, and a clerk in a large business house, had found his way into Morrissey's gambling saloon, and while there had lost in play $12,000, which was for the moment in his possession, but which belonged to the firm in whose employ he was. The next morning, the young man, fully realizing his position, went to his mother and told her the whole story. She, almost wild with grief, went to her husband and repeated it to him. The old man was so stunned by the information of his boy's dishonor that he could suggest no plan by which he might escape public disgrace and punishment. In fact,' continued Mr. Cameron, 'they were all in a mighty bad way, but, as usual, the old woman was the first to get her wits about her, and she suggested to the boy's father to go to his friend —— (the Republican leader already alluded to), and to get him to go to Morrissey and see if he would not help them out of their trouble. The friend consented, much against his will. He went to the gambler, told him the whole story, and assured him that disgrace and ruin would be brought upon an estimable family if the money lost by the young man was not returned. Morrissey listened quietly to all that was told him, and then said: "Well, that's all very well, but the young fellow lost the money fair; and as for him bein' a poor innocent young dove that didn't know nothing of the world, that's all stuff; he's been in our place often, and won many a pile, but for the old woman's sake I'll see what I can do. Come to my house to-morrow morning, and like as not I can make the thing all right." The next morning the gentleman came as he was directed, and with the simple words: "Tell the old woman to keep her boy away from sportin' houses," Morrissey handed him the exact sum that the young clerk had lost. If such an action,' said Mr. Cameron, in conclusion, 'does not cover a multitude of sins, my seventy-nine years of life have taught me no lessons and brought me no knowledge.'"

One naturally hesitates about differing from a Pennsylvania moralist of seventy-nine years' standing, but we must remind him that the deceased statesman was, under the statutes of this State, liable to the young man for the money of which he stripped him, and, besides this, in stripping him of it exposed himself by law to the pains and penalties of a "common gambler"—*i. e.*, to two years' hard labor in the penitentiary and one thousand dollars fine, with further imprisonment until the fine was paid. It is, of course, a very surprising and unusual thing for a common gambler to restore their losses to his victims, as it is for a pickpocket to give back her watch to a widow. This latter sometimes happens, however, and we are gratified when we hear of it; but we do not take out our pocket-handkerchief and whimper over it, and describe it to our children as the act of a good and lamented citizen.

The impunity with which Morrissey for years pursued his nefarious calling, both here and at Saratoga, was a disgrace to the government of this State. But it is a more serious matter still that recognized public instructors should declare that going into politics for a few years and resisting the temptation to take bribes can atone for a youth of ruffianism and a middle life of crime, especially when we consider that the money to which Morrissey undoubtedly owed his political "integrity" was acquired by just such villanies as the Pennsylvania Nestor described and sniffled over. This looks like discredit to our civilization itself. No man ought to be publicly praised as Morrissey has been praised by any one who is not prepared to say that he would like to see such men indefinitely multiplied. Morrissey's admirers ought to be ready to declare, if their eulogies mean anything, that they would like to see the State of New York peopled by such men. They ought to be ready to go still further and say that there is not, and ought not to be, any connection between public and private morals, and that a good legislature might be made up out of the inmates of the Sing Sing and Auburn penitentiaries, and that Madame Restell might have made an excellent Commissioner of Charities and Corrections. If they do not mean this, and are not prepared to say this, their funeral discourses over the dead pugilist and gambler are not only trash but pernicious and disgusting trash. Morrissey was a criminal whose efforts to turn "respectable" in his latter years showed the contempt in which he held the morals of the community which tolerated him, and on which he preyed, and this contempt the obituary laudation of him in some quarters certainly seems to justify.

SAINTE-BEUVE'S CORRESPONDENCE.

PARIS, April 19, 1878.

AFTER some years, when time has done its work, nothing is more interesting than to read the correspondence of some great mind. Nothing can give you more keenly, more painfully, the sensation of the vanity and folly of most human efforts. At the same time, nothing can better show the real man, even under all the artifice of language and all the precautions of correspondence. I was reading a few days ago the correspondence of J.-J. Rousseau, so well forgotten, and in many respects so justly forgotten, so inferior to the correspondence of Voltaire; yet I felt that the real Rousseau was there, even more than in the 'Contrat Social,' in the 'Nouvelle Héloïse,' or in 'Émile.' I am reading the second volume of the correspondence of Sainte-Beuve, which has just appeared, with the same sort of interest. The way in which this correspondence comes to light shows well the avidity and impatience of our time. The literary executors have not waited till, by their efforts and by the generosity of the correspondents of Sainte-Beuve, they should find themselves in possession of their whole object; no, they have published one volume as soon as they had matter enough for one volume. They now publish a second volume, because they can feed the public with a volume more; and they announce that during the printing they have received new documents which will furnish the materials for a supplementary volume. They make a new appeal to all the friends and correspondents of Sainte-Beuve, and if these prove to be very generous, there is no reason why we should not expect a fourth, a fifth volume, etc. This hasty method is not very respectful to Sainte-Beuve. Though there is in each volume a chronological order, the series of the volumes will have no unity; but the public of our day cannot wait, and M. Troubat, the executor of Sainte-Beuve, will not wait.

The letters of the second volume extend from 1865 to 1869. I showed when I spoke of the first volume the Sainte-Beuve of the first period—the poet, the member of the Romantic pleiads, the Liberal who refused even the cross of the Legion of Honor. The present volume shows the Sainte-Beuve of the end—the senator, the invalid, the critic, who has himself ceased to create, but who applies his extraordinary faculties to the history of literature. There is more resemblance than I could have thought between the two men—between the Sainte-Beuve of 1830 and the Sainte-Beuve of 1860. The mind has expanded, an intense curiosity has accumulated many and well-chosen materials, familiarity with scientific men has given to Sainte-Beuve new and more exact methods, criticism has really become in his hands a sort of science; but the inner man is not much altered, the first instincts are still there, sometimes dormant, sometimes as ardent as in the days of the Restoration. A kind of atavism can be felt in each man, and connects old age and youth.

Sainte-Beuve had been made a senator by Napoleon III. (with a salary of 30,000 francs a year); he had become one of those dignitaries intended to be the chief support as well as the ornament of the state. For a while he had supported his new dignity with patience, but at the end his inner nature revolted against the subserviency of most of his colleagues. He was by nature not a Conservative, he was a man of opposition. He saw too well the defects of any human establishment; he could not blind his eyes. On the 11th August, 1868, he writes confidentially to M. de Lescure, the secretary of M. Rouher, who was then minister of state:

"My dear friend, you are near the most influential minister, and he deserves to be. I do not go out; I do not stir from my room; but I see, I hear, I observe. Tell your minister that, if one does not take care, all things will go and dissolve, and that everything will soon be at the mercy of the first event. Don't shake your head. Don't laugh and say that you are reassured. All the governments which have fallen have done that till the eve, till the morning, of their fall. The Empire is very sick. As I love it and am in it, you can understand that I am not the last to suffer. How have people come to spoil the finest situation and to be on the point of losing the finest game? How, after so much glory, have we entered the period of contempt? Believe me, and say it to the great intelligence which has not as much power as it ought to have: If you do not do something, and something well marked, the disaffection will increase very rapidly. Why not frankly declare a constitutional ministry? Surely, I would not have counselled it a few years ago; but it may now be our salvation. And do renew promptly a worn-out Chamber, which has ceased to feel, except by vague spasms, the current of public opinion."

Sainte-Beuve drifted into opposition. He quarrelled with his brother senators. He could not endure the stolid and heavy conservatism and Catholicism of the old generals, who voted in the Upper Chamber with a perfect discipline. He had become a member of the little court of Princess Mathilde Bonaparte, a lady who cared little for politics, but who sur-

rounded herself with artists, writers, philosophers, and free-thinkers. He was in the same political mood as Prince Napoleon, the brother of Princess Mathilde, a clever but variable man, who had but one fixed passion, the hatred of clericalism and of the Papacy. "The Louis Sixteenths and the Pius Ninths pay for men who were worse than themselves. The past is on their head. Have you never been in Italy, in Rome, that you are ignorant what the Roman Government is? How this temporal power will fall I do not know; but it is certainly condemned and struck to the heart. It would be dreadful for a country like ours to be tied to a corpse. You can, out of respect, support it a moment. You cannot carry it for ever" (letter of the 29th of October, 1867, to M. Camille Guinhut, editor of the *Standard*).

When M. Thiers spoke in favor of the temporal power, Sainte-Beuve wrote:

"This last sitting of the Chamber has been ominous, as men who have hitherto been the organs of ideas of civilization—Thiers, for instance—have defended without shame decrepit abuses which fall of themselves and are dying of senility. We have seen a minister of the Emperor (Rouher) overstepping probably his orders and saying *Never!* [M. Rouher said that the Empire would never abandon the cause of the temporal power, as limited to the city of Rome.] All the men who love the Empire in the way I do have been profoundly disheartened by this deviation of policy caused by the compromising declaration of the once eloquent lawyer of Clermont. Oh! how mistaken was M. Thiers when he said that if Voltaire should come back to the world he would not do exactly the same things. Voltaire would still have to defend common sense, and he would defend it against M. Thiers" (letter to M. Lasseau, of Clermont-Ferrand, December 9, 1867).

The spirit of unbelief had become, perhaps, the dominant spirit in Sainte-Beuve. He could forgive almost everything to the Empire except its spasmodic indulgence to religion. He had no liking for parliamentary institutions; he had become the enemy of all the old "ornaments" of the reign of Louis-Philippe; he did not believe in the men whom he had known as Liberals in his youth, and who had fallen in 1848. Some of these men were entrenched in the French Academy as in a citadel, and Sainte-Beuve had come to hate and despise the French Academy. His ideal was an intelligent, a free-thinking despot, a man of progress on the throne.

Though Sainte-Beuve had lived so long with the Jansenists (and in this second volume of correspondence we see him very busy with a revision of his 'History of Port Royal'), he had ceased to be a Christian, even in the most elastic sense of this word. He did not believe in the creation.

"The eternity of the world once admitted, all hangs together. The fatality of law is, for whoever reflects, a consolation as much as, and more than, a pain. We ought to submit with gravity. This respectful and dumb gravity of the thinking man is in its way a religion, an homage rendered to the majesty of the universe. Our wishes, ephemeral as they are and contradictory, prove nothing; they are like clouds which the winds push against each other: the sidereal order rules above. You are, my friend, of the religion of Democritus, of Aristotle, of Epicurus, of Lucretius, of Seneca, of Spinoza, of Buffon, of Diderot, of Goethe, of Humboldt. It is a good company" (letter to M. Louis Viardot, 17th of April, 1867).

He was himself of the same pantheistic religion, but, strangely enough, he brought into the calm sphere of pantheism some of the notions of the Jansenists. The Jansenists were the heirs of Calvin, the unconscious remnants of the great reformers; they believed with the greatest fervor in the perversity of man and in the doctrine of grace. Most of our modern free-thinkers have a curious adoration of mankind; let only man be delivered of the thraldom of priesthood and of royalty, and "tout est pour le mieux dans le meilleur des mondes possibles." Sainte-Beuve was too intelligent, too intellectually honest, to adopt doctrines which are only fit for the vulgar demagogue. He had learned history and knew that humanity was made of humans, and that the humans are not perfect in themselves. This is what he writes to Taine:

"You make to me an observation upon my 'Port Royal.' . . . There is a fine basis, you say, a broad basis in natural morality, in virtue as understood by Aristotle, Cicero, Marcus Aurelius, etc. I must confess to you that what has always embarrassed the expression of my thought in this direction and kept my adhesion back is the fact that I have not as optimistic an opinion of humanity as that which I see among all these natural moralists. I am much more struck by the miseries, the imperfections, the vices, the animal coarseness over which people imagine that it is easy to triumph. This natural morality, of which I desire the reign, and which in antiquity was the lot of an élite, seems to me very little advanced among the moderns, especially if you consider the masses. The nations which are praised *sur parole* and celebrated at a distance, are found to be far in arrears. You must be a Laboulaye before you believe that there is no corruption in North America. Our Algeria is dying of absinthe; so are our manufacturing cities of the north. If Rome is rotting, Geneva is becoming coarse. I see everywhere an animality and a brutality which discourages me and which adjourns my hope of the triumph of a healthy and scientific morality; I am contented with admiring and respecting it in a few" (2d of November, 1867).

This letter might be meditated by the worshippers of the new god, Humanity, coming, as it does, not from a Catholic, nor even from a professed or professing Christian. It shows, in my opinion, the best part of Sainte-Beuve, his love of truth, a love so intense that nothing could blind it—no political passion, no party spirit, no worldly consideration. This same love of truth explains the great interest which Sainte-Beuve shows in his correspondence for historical studies. There are many letters addressed to M. Chantelauze, who was engaged in a study of Cardinal de Retz, and who furnished Sainte-Beuve with valuable notes for 'Port Royal.' Sainte-Beuve was always kind to all the *débutans*, if he was often very severe on the men who had *arrived*. He takes great pains with such men as Charles Baudelaire, a sick, and half-mad poet; with obscure writers who never succeeded in coming to notoriety. He answers such men as Louis Ulbach; we see him in correspondence with M. Émile Zola, twelve years before the 'Assommoir.' He takes the trouble to make a long criticism of Zola's 'Thérèse Raquin.' He praises Zola's talent of analysis, the technical execution of many parts, but he shows the defects of thé novel with as much care as a conscientious professor who goes over the boy's theme. I do not believe that Sainte-Beuve was courting popularity when he took such pains with many *Bohèmes;* he knew that pearls are found in the dunghills of Bohemia; he was also, in his own way, a Socialist. He was not on good terms with what is called society; the *salons* of Paris were, under the Empire, hostile to the Empire. He hated the salons; as a Senator, he disliked the little chapels where love of the Papacy kept a timid flame. He resembled, in some respects, the Jacobins of the first Revolution, who died in the gilded uniforms of Senators of Napoleon the Great. What saved him, however, from their servility, was his intellectual freedom and honesty; Jansenism and Port Royal did much for him; he never became a low flatterer of imperialism nor of demagogy.

Correspondence.

IS POPULAR GOVERNMENT A FAILURE?

To the Editor of The Nation:

Sir: It seems to follow from your view of the "Fraud Movement" that there *is* no remedy, and that there *ought* to be none, in case of a President made such by fraud.

A few people devoutly believe in what is alleged by both parties, that fraud or violence sufficient to turn the scale one way or other existed on both sides at the last Presidential election. If that is the truth, *are we not already there*, are we not *now* at the South American level? Be that as it may, convince the sober-minded of the "new" truth that successful Presidential frauds cannot be enquired into, and you have a *reductio ad absurdum* of popular government.

Not a few are already convinced that a good solid despotism is better than the tyranny of party, the rascality of politicians, the anarchy resulting from the elective franchise granted to the "many-headed." But convince the people by demonstration that successful fraud must be left in quiet, and popular government is destined to go to the "moles and the bats."

J. B. W.

Morristown, N. J., May 3, 1878.

[What "follows from our view" is not that there ought to be no enquiry into charges of fraud in a Presidential election, but that the decision who has been elected President when made by the proper authority ought to be final and irreversible, and this not because abstract justice and right are not desirable things, but because in human affairs they are not always attainable, and because the chief end of government is peace and quiet—a fact which the law recognizes in private affairs by making prescription a good title to property. The cause of all the trouble last year lay in the fact that, although the vote for the President takes place on the same day in all the States, certain bodies called Returning Boards in some of the Southern States were armed with "judicial functions," and empowered to revise and change the figures according to their own views of fitness, and to delay the final count until they had learned the result

in other States, thus virtually giving them power to elect a President. A temptation of this kind to political adventurers of low character like McLin and Wells and Anderson was of course overwhelming. The American way of acting on a discovery of this kind is to change the machinery before the next election, so that local thimbleriggers will not have such another chance; and in the meantime to follow our lawful callings. The Mexican way is to lay aside all business and begin fighting and squabbling, bleeding, shouting and dying, in order to put into the Presidential chair the man to whom we think it was awarded by Eternal Justice. There is, and probably always has been, some fraud in every election; but the chief end of man in society is not to procure absolutely pure elections, but obtain in the long run as good government as the present condition of human nature will admit. We ought now either to secure the final closing of the contest in each State on the evening of the same day, so as to prevent trickery by holding over the returns when the contest is close and one or two States can turn the scale, or else make the election a purely Federal concern, with Federal machinery for both taking and canvassing the vote. In other words, we ought to adapt our system to newly-revealed conditions. We have courts and police for the prevention of crime, and yet many criminals escape. Should we all throw aside our private affairs, and declare that we should neither buy nor sell, nor plead nor preach, while a single thief or murderer was at large? Much of the talk about this Presidential fraud strikes us as even worse than Mexican—childish. —Ed. Nation.]

Notes.

HARPER & BROS. have reprinted in their "Half-Hour Series" the two short tales by George Eliot ('Brother Jacob' and 'The Lifted Veil') noticed by us in No. 669.——G. P. Putnam's Sons have in press a volume of humorous sketches by W. L. Alden, "the sixth-column man of the New York *Times*." It will be illustrated by F. S. Church in his peculiar manner.——Robert Clarke & Co. send us their substantial and well-printed 'General Catalogue of Choice Books for the Library, Classified and Priced.' It is well worth the very moderate sum for which it can be had.——*O Novo Mundo* for May contains a likeness of the late lamented Prof. Charles Frederic Hartt, in which the signs of overwork or of sickness are only too plainly visible.——At the recent sale of an English collector's French rarities in Paris, Fontaine's 'Fables,' edition 1677–94, 5 vols. 12mo, the only complete edition published by the fabulist himself, brought $3,390. This sum of money might easily have been spent by M. Feuillet de Conches in producing his unique copy of the 'Fables' described in the last *Polybiblion*. It consists of Lefebvre's large-paper edition, 8vo, illustrated by designs specially procured from all parts of the world, east and west. Ingres, Descamps, Horace Vernet, Rosa Bonheur, Eugène Delacroix, Granville, Johannot, Landseer, Cruikshank, Retzsch, and many other notable artists contributed to this work, in which, however, the Chinese and Japanese designs are conspicuous for their aptness and tastefulness, and the Abyssinian for their savagery, bordering on the grotesque.——M. Frédéric Mistral has undertaken a Provençal-French Dictionary which promises to be of great value and interest. It will make two volumes, 4to, and will cost two francs the *livraison*, or $16 to $18 altogether. Subscriptions should be sent to M. Mistral "à Maillane, par Graveson (Bouches-du-Rhône)."——We regret to record the death, on March 10, of Dr. John Baptist Feuling, Professor of Modern Languages and Comparative Philology at the University of Wisconsin. He was a native of Germany, born at Worms in 1838, and studied both at Giessen and, in the post-graduate course, at the University of Paris. He came to this country in 1861, and opened a German and French school at Toledo; afterwards became an instructor in Greek at Racine College, and in the spring of 1868 was invited to the professorship which is now vacant. Beyond a Greek poem, he left no published works, but he had planned an elaborate one on Germanic Inflections, and had completed a student's arrangement of Montesquieu's "Considérations sur les Causes de la Grandeur et la Décadence des Romains." Dr. Feuling wrote frequently for the press, and was an occasional contributor to the *Nation*.——Powhattan Bouldin, a well-known editor in the South, and a son of J. W. Bouldin, a politician of some note in the early part of the century, has recently published, on his own account, a volume entitled 'Home Reminiscences of John Randolph of Roanoke,' which for a Southern book is exceedingly well printed. Little, Brown & Co., of Boston, are the agents for the sale of it in the North.——J. B. Lippincott & Co. have in press 'The Life of Alexander H. Stephens,' by Prof. R. M. Johnston and Wm. Hand Browne, a work executed with Mr. Stephens's approval.

—The *American Journal of Mathematics*, issued under the auspices of the Johns Hopkins University, has for its primary object the publication of original investigations, together with other contributions which may have special interest for American students; but it is not intended to be a means of communication between those who have puzzling problems to propose and those who take delight in solving such puzzles. The editorial work is in charge of Professors Sylvester, Story, and Rowland of Baltimore, Benjamin Peirce of Cambridge, and Simon Newcomb of Washington. The first number, which has just made its appearance, contains in 104 handsomely-printed quarto pages eight articles, two of them from foreign contributors, in which the separate departments of astronomy, mechanics, physics, and pure mathematics are all represented. None of the papers is elementary in character, and a critical review of them would be out of place in our columns; but an idea of their scope can be given in a few words. The first article is a short note of three pages containing the proof of a proposition, which persons untrained in the methods of modern mathematics may well be excused for regarding as incomprehensible, that "if a fourth dimension were added to space, a closed material surface (or shell) could be turned inside out by simple flexure, without either stretching or tearing." This is followed by the first part of a paper upon the lunar theory by Mr. G. W. Hill. Professor Eddy, of Cincinnati, presents a simplified equation to express the relationship between the moments of flexure of a straight elastic girder at three successive points of support. An algebraic solution of the so-called irreducible case in cubic equations, with examples, covers eighteen pages. A short note on the theory of groups is communicated by Professor Cayley, of Cambridge, England. Professor Rowland's paper is a contribution to our knowledge of the theory of electric absorption. A very favorable review of Ferrero's treatise on the method of least squares is given by Mr. C. S. Peirce, and the balance of the number is occupied by Professor Sylvester with a paper in which the new atomic theory of chemistry is applied to the graphical representation of certain mathematical conceptions. A list of the names of the first hundred subscribers shows that the journal will have at the start a wide, if not a large, circulation, for the names are gathered from twenty-three different States, besides the District of Columbia, and three foreign countries. It is worthy of remark that three of the first hundred subscribers are ladies. We hope that the editors will be confirmed in their belief that the publication of this journal "will materially aid in fostering the study of mathematical science throughout this continent."

—The Society of Decorative Art, of which we had a good deal to say last winter, when its famous Loan Exhibition was held at the Academy, has removed its offices and class-rooms, and now occupies a tolerably spacious and convenient house in Nineteenth Street, a few doors east of Broadway. There was no room in the old quarters for a library, and too little for the class-rooms. The classes must have opportunity to grow, and the library ought to be so enlarged by the enthusiasm of the friends of the Society as to need a large room to itself; so that the removal has come none too soon. This Society has a twofold task to fulfil, which it has undertaken with complete confidence and single-mindedness. How far it succeeds depends upon the intelligence of the community, and it is so hard to reckon on the intelligence of a community. To find employment for persons who can design a little and embroider a little may not be hard, now that there is so general a demand for decoration of household interiors. Ceramic painting is in demand as well, and young women who can paint flowers on tiles can find a sale for them through the medium of the society. But the chief difficulty which the society has to face is in its undertaking to educate its work-people as well as to find work for them. When designs are sent in, whether merely indicated in drawings on paper, or worked out in embroidery, fan-painting, china-painting, or otherwise, they must either be rejected, as not worthy of the society's use, or else accepted for sale. The difficulty of deciding must be very great. In many cases it must be almost insuperable. Any one who is familiar with the trades which have to do with decorative design is aware how few persons there are to be found who have any idea of making designs, and also of the absolute necessity of some training in each particular direction. It is to be expected that the designs sent in from strangers—designs voluntarily offered—will generally be valueless. It is probable that of every fifty de-

signs laid before the society's committee two or three at most have a little merit, and one, perhaps, is actually fit to use. Under these circumstances, then, the first object of the society must be to show the makers of the designs that are the least bad where they may be improved, and what changes would make them acceptable. And the second object must be to persuade the makers of the host of absolutely poor designs that they are not on the right road at all. These duties are hard to discharge under any circumstances. When they are undertaken by unpaid committees the difficulty is greatly increased. And the great danger of failure in the society's undertaking is in the enmity too often felt by persons whose work is not accepted, and in the discouragement felt by all who are told that their work is not good, without being shown convincingly how it might be made better.

—In the meantime there has been launched a new association called the New York Exchange for Women's Work, and professing to accept and to try to sell exactly those productions which come outside of the field occupied by the Society of Decorative Art. Whatever women can make which is not artistical comes within the care of this society ; and it seems a most worthy undertaking, to turn away from vain efforts at decorative design, and to turn toward useful work in a thousand womanly tastes, that large majority of young women who can neither draw nor compose, who cannot express any valuable ideas either in color or form. There is one danger, though, in the undertaking of this society to do what the Society of Decorative Art does not do. There is danger that it will slightly overstep its boundary, and accept attempts at decorative design which the other society has rejected. If it should take any steps toward counteracting the Society of Decorative Art, it would be exerting a most mischievous influence. Let it be granted that the last-named society will make some mistakes, and will reject some designs that might be made available, it is yet the worst thing that could happen that rejected designs should find a welcome elsewhere ; that any one should be found ready to welcome them as not so bad after all ; that the natural sense of disappointment should be flattered into a sense of slighted merit by the approval of another organization as influential, perhaps, and as successful as the former one. It is to be hoped that no such clashing of authorities will take place, and no such degradation of the standard of taste be brought about, but that the Exchange for Women's Work will either limit itself, as its prospectus promises, to work not at all artistic in aim, or, if enlarging its field in that direction, will set up and maintain a standard in all respects as high as that of the Society of Decorative Art.

—Mr. L. J. Jennings, formerly editor of the New York *Times*, has brought a suit in the United States courts against Comptroller Kelly and others, as proprietors of the New York *Express*, for libel, in charging him with beating his wife and with other disreputable practices. We sincerely trust he will be successful enough to make the cut-throats of the political press afraid of this kind of warfare, and he is the better entitled to exemplary satisfaction because he has long borne this particular bit of abuse in silence. But he cannot hope to reappear in New York as plaintiff in a libel suit, as the New York *Tribune* has justly observed, without recalling both to the public and the jury his own remarkable performances in this same line. The New York *Times* under his management was as ruffianly a paper as has ever been published in this city. The foulness and indiscriminateness of the vituperation with which its columns were filled were amazing, although concealed for a time by the excitement about the Ring exposures. Mr. Jennings's ferocious monologues, studded with obscure insinuations, innuendoes, and threats directed against his enemies, political and private, for offenses which the public knew nothing of, or only guessed at, were an absolutely novel and often very comic feature in metropolitan journalism. At times he acted as if he had completely lost his head, as when he loaded a well-known resident of this city, who had never offended him, with filthy personal abuse because he disliked his speech on the relations of science and religion at a public dinner at which they were both invited guests. It was very discreditable to the proprietors of the *Times* that they should have allowed him to go on until he had entangled them in a libel suit to which they had no defence, and from which they had to extricate themselves by an apology ; and it was very creditable to the English press that during his long connection with it no editor or proprietor ever permitted him to display his wonderful capacity for coarse invective, which indeed was so great as to enable him easily to quell the fire of some of the most expert literary blackguards in America.

—The Russians have been taking legal advice on the subject of their rights and duties under the Declaration of Paris in case of war. They have got an "opinion" from Professor Bluntschli to the effect that there is no objection to their privateering, provided their privateers are regularly commissioned and officered vessels in the navy. In other words, they must not be privately owned vessels, which go into the war for the purpose of making a fortune for their owners, officers, and crew, by taking prizes, but must be a constituent part of the Russian navy, with officers of recognized rank, responsible to other officers above them, and so on. The word used in the Declaration is "la course," which has always been translated, no doubt correctly, "privateering." But privateering, as generally understood, is not at all the sort of "course" considered lawful by Professor Bluntschli. A privateer, in the established usage of those nations to which we must look for the history and meaning of the term, is a vessel privately owned and privately maintained, manned, equipped, and officered, but holding from a belligerent government a "letter of marque," or, in other words, a commission authorizing the capture of prizes and their conveyance to a prize court for adjudication. The objection to ventures of this sort is that they are set on foot chiefly for private gain through the plunder of innocent people ; that they are conducted by persons who, from the absence of supervision, are practically irresponsible, and that they therefore offer a premium to all sorts of violence, outrage, and crime.

—Another objection used to be the theoretical advantages of exempting all belligerent commerce from capture. We say theoretical, because never having been put into practice no one can say how exemption would have worked. But though private property on the high seas cannot thus be exempted without striking a fatal blow at privateering, it is perfectly possible to abolish privateering without introducing this exemption. The object of Russia is, of course, the destruction of English commerce by means of a device which does not involve "letters of marque." Many of the objections against privateering which are founded on its *character* as a barbarous mode of warfare would be removed by such a plan as that of the Russians ; and the only difficulties that we can perceive about its execution are, first, that of getting the ships, which is considerable, and, second, the lack of ports into which to take their prizes. For this privilege the Russians would have to look to some neutral power, as in a war between England and Russia the latter's ports would be pretty sure to be effectively blockaded. Professor Bluntschli's opinion seems to confirm positively what we stated last week, that old-fashioned privateering on Russia's part is out of the question ; and to have that definitely settled in case of a war involving great maritime interests would be no small gain. Privateering is a case of "survival" from primitive warfare, and closely resembles on sea the sack of towns on land. In other words, it is a method of crippling an enemy by the plunder of its unarmed and unresisting citizens. It is no doubt an effective method ; but mere effectiveness will no longer satisfy the conscience of mankind in such matters as these. Poisoning wells and killing prisoners are both effective methods of reducing an enemy's strength ; but civilized nations have discarded them.

—A writer in the *Revue des Deux Mondes* for April 1, M. Valbert, discusses with the aid of recent German works the subject of the "Socialist Party in Germany." The very title of his article suggests the organization and power of a sect which, in its least coherent condition, is still formidable and full of evil omen for modern society. In Germany it has been fortunate in having for its leaders men of uncommon intellectual force, able to set forth their doctrines in elaborate disquisitions like Ferdinand Lassalle's "System of Acquired Rights" and Karl Marx's "Capital," and for its apologists, the half-cultured class, the schoolmasters who never forget the saying that it was they who conquered at Sadowa, and whose pretensions to instruct the universe have since known no bounds (a class not unknown in the Mississippi Valley). It derives also great strength from the pessimism which counts so many disciples among the thoughtful aristocracy, from the false ideas of the nature and competence of the state which long submission to paternal government has fostered in Germany, and of course from the material disorder and distress which has partly been caused by the new Empire, and partly has not been alleviated by it. The result is that the party has twelve deputies in the Federal Parliament, that it numbers nearly one-tenth of all the voters, and that its success at the polls is often actively promoted by the Conservatives, both Catholic and Protestant, in their hatred of Liberalism. The Socialists boast of 14 printing-offices, from which issue 41 political sheets, whose increase is remarkably rapid. These are estimated to have 130,000 subscribers. Innumerable pamphlets and a very popular almanac, *Der*

arme Konrad, are other vehicles of propagandism. Only about 400,000 voters stand between the Government and a combination of hostile elements, including Ultramontanes, Poles, Alsatians, and Particularists, as well as Socialists. Some of the Socialist deputies are as ridiculous as Bland or Voorhees; others are able to command attention when they speak; and all, as the mouthpieces of a confident and growing faction, must be "counted with" by the Administration and the National Party. The weakness of democratic Socialism lies in the distrust with which the leaders are sooner or later regarded by the rank and file, and the dissensions sure to arise among those who regard society as conspiring against them. Of this the French Revolution and the Commune furnished abundant examples, and they have not been wanting in Germany. Marx himself, the head of the Internationals, who has for many years resided near London, has been stoutly denounced by the English section, and at the Congress at the Hague in 1872 led the Centralist faction which split off from the Federalists.

—Mr. Grant Allen, whose 'Physiological Æsthetics' we lately reviewed, contributes to the April number of *Mind* an interesting article on "Note-Deafness." His observations were made upon an intelligent man of thirty, who could distinguish differences of pitch amounting to no less than an octave at the upper and lower ends of a piano-scale, while in the middle, where his sensitiveness was greater, intervals amounting to three or four full tones could be discriminated. He was found unusually sensitive to such non-musical accompaniments as the thud of keys, the scraping of a violin, and the sound of rushing air in wind instruments, as well as to rhythm, whether of poetry or music. Intricate harmony caused only ennui. A brass band or fife and drum could pass under his window unnoticed while he was at work, or even suffering from headache. To lively, popular airs, however, with great and rapid changes of pitch, he was by no means indifferent. He could even sing a few familiar tunes so correctly in *tempo* that they were recognizable in spite of the falseness of the notes. The fact that dissonance was not unpleasant leads Mr. Allen to locate the disorder of function in Corti's arches rather than in the nervous centres. The former he supposes in this case to be badly tuned, so that they vibrated sympathetically to sound-waves of considerable range of frequency. It is greatly to be regretted that with so good a subject Mr. Allen did not follow the advice of his scientific friend and construct an accurate curve with a large number of ordinates, by Fechner's simple method. He did not even test his patient for *diplacusis*, which, if it existed, would obviate much of his theory. In one place we are told that his patient could not recognize the high notes of a piano, and elsewhere that he could hear notes as shrill as most other people.

—A recent number of Sybel's *Historische Zeitschrift* (the first number of the current year) contains a collection of notices of books upon the subject of the late American war, twenty-five in number, by F. von Meerheimb. They are mostly very short, but some of them (as those on Sherman's Memoirs and the Comte de Paris's History) are of considerable length; and even the shortest are of value, summing up in a very few words the leading features of the book. Gen. Sherman's Memoirs are pronounced "by far the most important" of all works written upon the subject, as Gen. Sherman himself is declared to be "the most considerable, perhaps the only, general of the North: only McClellan can come in question." The only German work on the list is Scheibert's 'Bürgerkrieg,' which the reviewer says should be rather "Organisation und Administration, Strategie und Technik, etc., im Bürgerkrieg, etc.," inasmuch as the book treats only of military relations—this, however, very well, and on the whole impartially, for one who served on the staff of both Lee and Stuart, and believed heartily in the justice of the Southern cause. Esten Cooke's lives of Lee and Stonewall Jackson are praised in the highest terms: Germany possesses nothing but Droysen's 'Leben Yorks' to compare with them. An interesting remark is made about American soldiers. "It testifies to the capability (*Tüchtigkeit*) of the Anglo-American character, that the soldiers went under fire the second time more resolutely than the first; bad soldiers are sometimes courageous in their first fight, but never after several failures; these volunteers were steeled by dangers, privations, and losses."

—The Old-French Text Society has furnished to its subscribers three volumes of the issue of 1876, the second year of its existence. These volumes are 'Miracles de Nostre Dame par personnages,' after the MS. in the National Library, edited by Gaston Paris and Ulysse Robert (Tome I.); 'Guillaume de Palerne,' after the MS. in the Arsenal at Paris, edited by H. Michelant; and 'Deux Redactions du Roman des Sept Sages de Rome,' by Gaston Paris. The first-named volume is a valuable contribution to the history of the early French drama. The manuscript, of the fifteenth century, contains forty miracles, and will furnish material for six volumes, the last to contain the notes and glossary. These miracle-plays early attracted the attention of scholars, and a number of them have already been published. The present volume contains eight, the most interesting of which are "Miracle de Saint Jehan Crisosthomes" and "Miracle de la femme du roy de Portugal," the latter a tragic drama not altogether unworthy of Calderon. The second work is doubly valuable for the insight it gives us into the manners of the time in which it was written (end of twelfth or beginning of thirteenth century), and from the fact that it is the original of an interesting English version composed about 1350, and edited by Sir F. Madden for the Roxburghe Club, and again in 1867 by W. W. Skeat, in the first volume of the extra series of the Early English Text Society. The last-named work contains two versions of the famous mediæval romance, "The Seven Wise Masters." Both versions are in prose, and the second is a reprint of the French translation (Geneva, 1492) of the Latin version known as the "Historia Septem Sapientum." The extreme rarity of this work makes the republication of this French translation very welcome, as it will, for all practical purposes, fill the place of the original. The editor, in a learned preface, endeavors to show that the "Historia Septem Sapientum" is of comparatively recent date, and has for its source a French version instead of being, as was generally supposed, the source of the French and other European versions.

WOOLSEY'S POLITICAL SCIENCE.*

II.

THE third, and much the largest, portion of Dr. Woolsey's work is devoted to "Practical Politics," and is composed in the main of a historical sketch of the origin and growth of the various known forms of government, monarchical, aristocratic, and democratic, including a careful and valuable chapter on confederations. In this field, of course, the great desideratum is accuracy, a point on which the author is too good a scholar and too experienced an investigator to leave himself open to anything but praise, even from those who are competent to follow him. In discussing the departments of government in a state he defends the constitution of the American Presidency against most of the foreign criticisms on it; is very severe on the "spoils" doctrine, and proposes three civil-service rules: (1) the concession to the victorious party of the cabinet offices, the foreign ministers, and some of the leading custom-houses and post-offices; (2) the local election of the smaller postmasters; and (3) the permanency of the inferior custom-house officers, and "others whose duties are of a permanent character"; but he gives no reason why collectors in the principal ports and leading postmasters should be changed. Experience and the nature of their work go to show that their permanence in office is peculiarly desirable. A change in the head of such an establishment as the New York Post-Office, for instance, every four years would work far greater mischief than the ousting of many hundreds of minor officials. He commends our system of permanent cabinets, but seems to approve but moderately, if at all, the plan of giving the members seats in Congress or the power of appearing before Congress to defend their policy. We confess, however, we do not know where he finds support for the belief that the absence of responsibility to the legislature gives our cabinet ministers "a power of free continuous action" which under the British system they could not have. In practice, the responsibility really exists among us as it does in England, but the penalty of failure to satisfy the legislature is different. Parliament when it withdraws its confidence from a minister turns him out of office; Congress ceases to pay any attention to his recommendations or actually legislates against him; but in both cases the power of "free continuous action" is taken away.

Dr. Woolsey would, in distributing representatives, give the sparsely populated country a larger proportion than the densely populated city, on the ground that the cities have more means of making themselves felt than the country, and are the dangerous element in our system. He touches one of the weak points of our legislatures, by suggesting that districts should, as in France and England, be allowed to seek their representatives where they please, and thus give men of eminence more than one chance of remaining in public life. Probably nothing contributes more to the intellectual poverty of American legislatures than the usage which

* 'Political Science; or, the State, Theoretically and Practically Considered. By Theodore D. Woolsey, late President of Yale College.' 2 vols. New York: Scribner, Armstrong & Co. 1878.

confines the voter's choice to the residents of his own district. Dr. Woolsey expresses a qualified approval of minority representation, but warmly commends the practice of self-nomination, as the best mode of deliverance from the tyranny and corruption of the caucus. He does not, however, point out how a self-nominated man could procure the machinery which the caucus sets in motion for its own candidates, and which, as our author admits, seems to be necessary to guide the mass of voters to a choice in a country of universal suffrage. The English judicial system apparently fulfils his ideal, but in mentioning the failure of the late attempt in New York to secure a life-tenure for the judges he overlooks the fact that the tenure was lengthened from six to fourteen years, which is at least a step in the right direction.

In touching on city government he advocates the organization of all municipalities under a general law, and ascribes existing evils in the government of American cities partly to universal suffrage, or rather the suffrage of non-taxpayers, and partly to the weakness of the mayor or chief executive officer. He proposes as a remedy (which, however, he acknowledges to be more desirable than attainable) "the restriction of the suffrage in civic affairs to taxpayers," but he does not touch on the one employed with so much effect in English legislation, namely, making every occupier of a room, who has furniture to levy on, a direct taxpayer for some amount, however small. The practice of exempting, either by law or in practice, persons who do not own a certain amount of property (in Massachusetts $2,000), is a fruitful source of extravagance and recklessness on the part of city voters.

Want of space will prevent our discussing in detail Dr. Woolsey's observations on the very interesting question of the proper subject-matter of law and administration, which, of course, brings up the relations of the government to the army, the police, education, and religion, the relief of the poor, the regulation of trade and commerce, and of traffic in intoxicating drinks, and other trades which are in themselves or may by excess or absence of control become injurious to the community. For his position on all these matters we must refer the reader to the book, with the single remark that he may be said, in general terms, to be a utilitarian modified by a strong belief in the value of political habits and political traditions, and in the controlling influence of "institutions," as distinguished from laws.

In the closing chapter, on "Political Changes," we expected to find a clearer and more outspoken expression of the author's political philosophy, in what may be called its last resort, than he has seen fit to make. He is, for a man whose political ideals and standards were necessarily formed before the tremendous changes of the last forty years had occurred, and whose studies have necessarily made him familiar with the endless repetition and revival which goes on in almost all political experimentation, singularly hopeful and patient. He acknowledges the possibility of national decline, and enumerates among its causes the unequal distribution of property, the loss of national self-esteem, the decay of genius and culture, the loss of national hopefulness, and the decay of faith and morals. He doubts that the institutions of the modern world are self-sustaining, and declares that "the history of the past does not authorize the opinion that nations carry down with them any great amount of wisdom from one generation to another."

"At least," he says, "they cannot be thought capable of doing this without carrying down with them correct moral judgments and moderation in action, which neither scepticism nor atheism can call forth. The progress of society brings with it new problems to solve. At present the problem of the future of the working classes, of their principles and relations to property and government, is a very serious one, and becomes gloomy and alarming when the pressure of financial and commercial distress is felt. . . . The truth is that, in addition to misgovernment and to calamities arising from the close connection of the parts of the world which propagate their waves of distress, as if through the sky, all abroad, we have new principles of justice, claims of absolute equality of condition through society, claims which so kindle the feverish brain of the depressed that nothing can lead them to patience and tranquillity but some of those Christian virtues they have cast off. The tendency is not to the discharge of duties in these times, but to the enforcement of claims which society cannot admit because they would be attended with immediate financial, social, and political ruin."

He then goes on to show that "the regulative, purifying, and reformatory principle needed in modern society" is the Christian religion, "which, *if believed to be true*, is fit to be the controlling permanent force in human nature." We have italicized the words in this statement which seem to deprive it of its value as an exposition of the mode of escape from the evils with which the modern world is now threatened, and which shows, as it seems to us, that, much thought as he has expended on it, Dr. Woolsey has not gone to the bottom of the great social and political problem of our time. The Christian religion owed all the force it has ever had as a political regulator to the belief of the masses that the historical events on which it is founded actually occurred. They accepted these events on the authority of the educated and well-to-do. They no longer accept them, because the educated and well-to-do have in their eyes lost their authority on nearly all social questions. In other words, the very fact which has created the danger has destroyed the remedy. They now look on Christianity as a cunningly devised fable intended to reconcile the poor and unhappy to their lot, and when the prosperous classes, of whom believers are mostly composed, preach it to them they reject them as interested and even corrupt witnesses. The refusal on the part of the religious world to look this fact in the face is one of the most serious features of the situation.

We believe the truth to be that the present mental condition of the working classes is due in part to the sceptical movement which has run through all classes, and which tends to concentrate attention more and more on the things of this life. In this concentration the able and energetic skeptic finds his consolation for increasing dimness of vision about the things of the future life, but to the poor and feeble and incapable it brings no consolation. It is due, also, to the enormous power over the condition of the individual attributed to government during the great reformatory movement which has been going on since the French Revolution ; and, finally, to the power lodged by universal suffrage in the hands of the working classes for the first time in history, and which they would be more than human if they did not seek to use for the supply of their greatest want, freedom from anxiety about food and clothing—the able and ambitious using it to secure freer play for their energies, which is *their* greatest want.

That the present condition of the working-class mind will do great mischief not through any sudden disaster or cataclysm, but through the diffusion of a feeling of malaise and insecurity through the modern world, which will sensibly check our civilization, we have little doubt. But that the remedy will come quickly, or will lie in any special belief or single influence, it is useless to expect. It will come through a variety of agencies, such as the plain demonstration in the eyes of those who bear the burden of the world's business of the gravity of the crisis ; the gradual adaptation of democratic institutions through this demonstration to the existence of a class in every community which does not share the best hopes and sympathies of the race ; or, in other words, some better provision for the residuum of radical incapacity and feebleness of character which every society must contain ; and, finally, a return in a more humane, and if you will Christian, form, to the old and outspoken belief in the importance of property and of the power of accumulating property, both as an indication of character and as an ingredient in all healthy civilization. One of the mistakes of modern democracy has been the gospel of poverty, or, in other words, the notion that there was something noble and elevating in owning nothing.

THE BELKNAP PAPERS.*

THESE two handsome and well-edited volumes belong to a class which it is very pleasant to read but very difficult to analyze. Jeremy Belknap was a clergyman, a historian, and a physicist, and in these three departments was a diligent student and earnest observer. He was born in Boston in 1744, and died there in 1798. His works, based upon industry and research, still hold their place among our earliest histories, and it was one of his chief honors that he founded the Historical Society of Massachusetts. His 'History of New Hampshire,' in 3 vols. 8vo, and his 'American Biography,' in 2 vols., are distinguished by their extensive information and profound research. In 'The Foresters' he painted the American manners of his time with wit and humor. As a clergyman he naturally printed many sermons, taking a prominent place among the preachers of his day. He was a ready penman and a hard-working student.

Contemporary and friend of this industrious man was Ebenezer Hazard, a native of Philadelphia, who filled the important office of United States Postmaster from 1782 to 1789. Between these two congenial spirits there sprang up an early friendship, to which we are indebted for the life-like picture of the struggles and aspirations of American authors contained in the volumes before us. Both loved research, and seemed never to have suffered themselves to grow weary in copying and commenting historical documents. Both loved natural history'

* 'Collections of the Massachusetts Historical Society. Vol. I. Fifth Series. Belknap Papers.' 2 vols. 8vo. Boston.

and eagerly followed up every new ray of light which they could throw upon it; or, to speak briefly, both loved knowledge in all her forms. Hazard's forte was the collection and arrangement of historical documents; he is still an authority on the ground which he covered. And now, if we consider that we are at the very dawn of American literature, and that one at least of these two men lived with his pen in his hand, we shall easily conceive that their letters are full of interest for every curious enquirer. In those days magazines played an important part, and these volumes afford us many glimpses behind the editorial scenes. "To be an editor in this place is what I deprecate," writes Belknap to Hazard from Boston. "The integrity and firmness of a Cato would scarcely make a man proof against the envy and obloquy to which he would be exposed." A careful examination of these magazines would well repay the labor. The Post-Office also comes in for occasional mention. The transportation of a letter from Boston to New York, and the conjectures with regard to its rapid passage, furnish an amusing paragraph:

"How did that letter reach New York so as to appear in print by 8 o'clock A.M. on Monday, 24th? It could not have arrived by *post* before the 26th. The *stage* left Boston on Thursday the 20th, arrived at Hartford in the evening of Saturday, 22d, and does not travel on Sunday, and the letter could not have come from Hartford hither (130 miles) on *Monday* before 8 o'clock A.M. There was no arrival from *Rhode Island* except one vessel, which left *Newport* the 19th, the day the letter is dated at Boston. So much for anti-federal veracity. I believe the letter was wrote here."

"We have had a very disagreeable tumult here lately," writes Hazard to Belknap, in 1788, "but it has now subsided. Some of our medical tribe have plundered the dormitories of the dead, and, in a most indelicate manner, dissected the bodies of their inhabitants. Their conduct has for a long time given general offence, and last Sunday afternoon a body of people collected, forced their way into the hospital, seized two doctors (who were afterwards sent to jail), and destroyed apparatus, preparations, injections, etc., etc. So great was the ferment that before all was over the Governour was obliged to call out the militia, to quell some folks who had determined to break the jail and glut their revenge upon the doctors. Three people lost their lives by the fire of the militia, and others on both sides were wounded. We are now quiet again, and the law will take its course with the culprits."

The question of slavery is beginning to make itself felt. On the 19th March Belknap writes to Hazard:

"We have nothing new. Our negro bill (I suppose) has passed the Lower House. There are opposers, but their opposition was not daring and form[idable, but] rather sly and evasive. I'll tell you more about it next time. Pray have you, or can you procure for me, without any expense, Clarkson's 'Essay on Slavery'? Is he a Clarkson of your kindred? He is a hero in the cause, and may Heaven prosper his endeavours."

In Boston harbor kidnapping is not altogether unknown:

"You will see in the *Centinel*, of yesterday, an account of a most atrocious insult on the rights of mankind and the laws of society, committed within the limits of our harbour a few days ago. Several peaceful negroes, and some of very good character, who have families here, were decoyed on board a vessell which lay below Long Island, under pretence of shifting the ballast, and then carried off to be sold (no doubt) for slaves abroad. . . . The negroes who were kidnapped here were sold at Martinico, and set to work, which they refused, and were flogged by their masters. In a few days Governour Hancock's and the French Consul's letters arrived, and the Governour of the island took the negroes under his protection, to be returned. Avery (the kidnapper) had disappeared, and the planters will lose their purchase money unless they can find him. A similar scene, I am informed, has passed at Fairfield, in Connecticut; 8 negroes were carried off by one Willard.

"Our law is passed and I suppose will make its appearance in this day's paper. Some people are very angry about it. They say it will operate against the Federal Constitution in Carolina. Clarkson's Essay is indeed a masterly performance—the most complete and comprehensive piece that I have seen on the subject. I wish success to his farther endeavours, which are said to be making, to abolish the inhuman traffick."

But the subject of the greatest interest in those days was the adoption of the Constitution. To us who have proved its efficacy it may seem strange that there could be two opinions about it. The miseries of the Confederation were felt by all, and yet some of the best men doubted. The story of its adoption is told in these pages, if not with elegance, with an intense interest:

"This P.M.," Belknap writes to Hazard, "the great question is decided by a majority of 19, in favour of the Constitution; the whole house being 355. I congratulate you on this auspicious event, and am, with ardent praise to Heaven, and the most sincere affection to you and yours, Your joyful and happy friend, "JERE. BELKNAP."

The reports of the debates are very imperfect. Belknap has preserved the memory of some of them which it would have been a pity to lose:

"Rufus King," he writes, "shines among the Feds. with a superior lustre. His speeches are clear, cool, nervous, pointed, and conclusive. Parsons distinguishes accurately and reasons forcibly; but I need not give the particular merits of each. You will have them in the papers; for the printers are vigilant, and keep a scribe constantly employed to take minutes, though they cannot copy the energy and pathos of the speakers."

We give one more extract, in refreshing contrast to the communistic talk of the present day:

"It gives us great pleasure to hear some of the honest, sensible, independent yeomanry speak in favour of the Constitution. Their feelings, their natural language, their similes are highly entertaining. We had such a speaker to-day, a Mr. Smith, of Lanesborough, in Berkshire. 'I know,' said he, 'the worth of a good government by the want of it. I live in a part of the country where anarchy has prevailed, and that leads to tyranny. We were so distressed last winter that we should have been glad to submit to anybody who would have set up his standard, even to a monarch. And this monarchy might have led to tyranny; but better have one tyrant than many at once.' In answer to the question that learned and monied men were not fit to be trusted with the government, he said: 'Suppose you have a farm of 50 acres, and your title is disputed, and you join on a man who has 5,000 acres, and his title is involved in the same dispute, is it not better to have him for your friend than to defend yourself alone?' Again: 'Suppose you were to join with two or three neighbours in clearing up a rough piece of ground and sowing it with wheat, would you let it lie unfenced because you could not all agree what *sort* of a fence to make? Is it not better to have a fence, though it does not please all of your fancies, than to have none?' In answer to the objection, Let it alone for the *present*, and be not in a hurry, he said: 'Take things when they are ripe. There is a time to sow and a time to reap. We have sowed our seed by sending men to the Federal Convention; now the fruit is ripe, let us gather it. This is the harvest, and, if we don't improve this opportunity, I am afraid we shall never have another.'

"Is not this true natural eloquence and forcible reasoning? This speech was received with the highest pleasure. It was addressed to his 'brother plough-joggers,' as he called them, and it nettled the insurgents, who called him to order, but their voice was overruled, and he went through."

Among the questions which agitated the public was the choice of the name of the new city which the directors of the Ohio Company were about to build:

"In my opinion," writes Hazard, "he cannot give the new city a more proper name than *Protepolis*. *Urania* seems to be quite out of the way. *Tempi* would, I think, do much better. But I wanted something *original*. In this view, *Genesis* would do. There are *Montgomerys* already. The streets are to be wide."

The Dighton Rock comes in for a brief mention:

"Jemmy Winthrop has visited Dighton Rock, and taken off the inscription more perfectly than it was ever done before. But how to translate it? Ay, there's the rub. And perhaps, if it was translated, it might prove an unmeaning scrawl. But we are in the dark in that, as well as many other points of American antiquity."

Dr. Belknap's interest extends to everything that bears the name of knowledge:

"I have been told that *Yankee Doodle* is an old English ballad—as old, perhaps, as Chevy Chase. Did you ever see or hear of it? Is there not a collection of old ballads by Thomas Hearne, the antiquarian? . . . I have heard a word used by some of the old people in Dover—*cantankerous*—which is almost forgotten even in that quarter. It means tough, crabbed, or something of that sort. Goldsmith uses it in his play, 'She Stoops to Conquer': 'a cantankerous, bitter toad'; and, but for this, I should not have known that the old people brought it from England with them. The English may laugh at us as much as they please, but they ought to remember that their ancestors and ours were the same; and many things which they ridicule in us were *absolutely derived* from them. Instance the law proceedings against witches, the severity against Quakers, etc., etc."

We commend these volumes to the lovers of good reading.

Supplément au Dictionnaire de la Langue Française de É. Littré. (Paris: Hachette; New York: F. W. Christern.)—The twelfth and last *livraison* of this important work appeared some months ago. We gave a brief account of the first three. In running through the remainder, we have been struck once more with the hospitable reception of foreign words that have been used, perhaps for a single time, by respectable French writers, whether in books, periodicals, or the daily press. They are let in as if fully naturalized, and give an unwonted cosmopolitan air to a vocabulary deemed rather exclusive. Thus, we find *greenback*, *iceberg*, *Io* ("the 85th telescopic planet, discovered in 1865 by Mr. Peters"), *kioekkenmoedding*, *squatter* (pron. "skoua-teur"), *tramway*, *volante*, *walrus*, *wampoum*, *waste* (used by Chateaubriand), *water-closet*, *wehrgeld*, *zaptieh*, *zootrope*, *ambatch* (borrowed by Laveleye from Schweinfurth), etc. In

not a few instances in which our own language has been allowed to enrich M. Littré's, his etymologies and illustrations have considerable interest for us. Under *évolution* a very apt "example" has been added from 'Tristram Shandy,' Uncle Toby maintaining that the word which his brother had carelessly used for "revolution" had more sense than the latter was disposed to allow it. Under *flirter*, the authority cited, M. Simonin, tells how the "misses de New-York" go riding in Central Park with cavaliers who openly flirt with them. Mr. Bartlett will be glad to learn that *Brother Jonathan* is not derived from his Excellency Jonathan Trumbull, whom Washington is supposed to have been in the habit of addressing in this manner, but has a later and quite different origin, to wit: "At the beginning of the present century a series of letters appeared in Europe, which were written from America, urging the English to emigrate thither, and were signed by a Quacker [*sic*] *Brother Jonathan. C'est de là sans doute que vient la dénomination.*" One of the additions to *plate-forme* is the American political signification of the word: the declarations of candidates are made from "un échafaudage en plate-forme." *Teetotalism*, which receives one explanation from Smart and another from Webster, has still a third from Littré: according to him it comes from *teetotum*. M. Hovelacque contributes to the word *tsar* some further remarks on its derivation. Finally, in M. Marcel Devic's 'Etymological Dictionary of all French Words of Oriental Origin,' which is appended to the 'Supplement,' the English reader will find a great deal of curious information about words of this class which are as familiar to us as to the French.

Among the new French words we have noted *anaconda; ex-libris* (book-owners' plates); *enrégimentement* and *inorganisation*, for which M. Littré cites himself as authority; *gable*, a Norman word, incorrectly, it is said, printed *gâble* by M. Viollet-le-Duc; *ingénérosité* (perhaps unique in Cherbuliez's "Peut-on en vouloir aux Prussiens . . . de leur ingénérosité à l'égard des petits?"); *paléocrystique; Prudhomme*, Henri Monnier's creation, "un bourgeois débitant solennellement les choses les plus vulgaires et parfois les plus sottes"; *téléphone*, "invented by Prof. Bell in the United States"; *audible; câbler*, to "cable"; *désencanailler*, About's way of saying "take me out of that crowd"; *remonétisation*, for whose American origin the *Nation* is cited; *ruine-maison*, the family bankrupt; and *wagnerisme* (pron. "vagh-né-ri-sm'"). The illustrative passage cited under this last title is amusing: "M. Gounod," says M. de Lagenevais, "a tiré du wagnerisme tout ce qu'il avait de bon à nous donner." We miss from these neologisms *formulettes*, the recent invention of folk-lore antiquarians.

For interesting derivations we may refer to *Ghetto; Huguenot*, discussed in the space of more than a column, with the result of strengthening the theory that it comes from German *eidgenoss*, confederate, assimilated in France to a proper name already existing; *péquin*, meaning non-military, possibly from the circumstance that military and *cantonal* delegates (called *cantons* for short) were present together at the festival of the Federation, July 14, 1790; *Pérou; matelot*, definitively shown to have come from the old Scandinavian (*norois*) *mötunautr* or *matunautr*, meaning messmate.

We should never end if we stopped to point out the aid which the dictionary affords the foreigner in comprehending the French idiom. One instance we will allow ourselves: *Au pied de la lettre* is a figurative expression derived from the printing-office, *pied* meaning the part of the letter furthest from the eye when looked at printer-fashion, *i.e.* inverted. Rousseau, who is very frequently cited in this 'Supplement,' appears under *mandarin*, in explanation of the phrase *tuer le mandarin*, that is, to commit a bad act in the hope that it will never be known. Rousseau had asked whether, if in order to become the heir of a rich man whom you had never seen or heard of, and who lived in the depths of China, you had only to press a button (*pousser un bouton*), you would not press it and kill the mandarin. In his day, pressing a button to operate an effect thousands of miles away was not known except to the imagination; but, thanks to electricity, the supposed case could now be realized.

The Great Thirst Land. By Parker Gillmore, "Ubique." (New York: Cassell, Petter & Galpin.)—It seems somewhat strange to the ordinary American that a man should prepare an elaborate and expensive outfit (including in the present instance eleven guns, twenty thousand rounds of ammunition, one hundred pounds of gunpowder, five hundred pounds of lead, and as many of shot, the whole equipment weighing four tons and a half), should proceed to a distant and barbarous country, cut himself off for months from all civilization, and for weeks from the sound of an intelligible human voice, undergoing the severest manual labor, the most frightful hardships, and with life staked at every moment upon the merest turn of chance, and all for the sake of destroying some new wild animal. Yet many Englishmen are at this moment doubtless engaged in similar enterprises all over the uncivilized world, and Mr. Parker Gillmore seems, if we may judge from the number of his works referred to, to have made it the business of his life. It is a pure hunter's book. The English is by no means of the purest, the wit is rather ponderous, and the sentiment, except in a few passages, decidedly thin. But these defects are more than made up by the unconscious development of individual character and simple directness of narrative. To judge from casual allusions, Capt. Gillmore seems to have been in early life crossed in love, and driven by the disappointment to a course of wandering, but, while constantly changing the place, to have always kept the pain.

An affectionate nature appears throughout. Starting for the Cape with a stranger—a Scotchman named Morris—he evinces for him the closest friendship. From Port Natal the travelling is done with a huge wagon, drawn by numerous oxen, and the troubles and difficulties from the outset with these and the native drivers are such as would have discouraged any but the most dogged determination. The country and the life of the Dutch Boers are described with much spirit. Morris falls ill and is obliged to return to England; and thus, after leaving Soshong, the native town of the Bechuana king, Kama, Mr. Gillmore is alone with native servants, with whom he can only communicate by signs, and all of whom, except one faithful Zulu, who has followed him from the coast, he is perfectly conscious would be ready to desert him, or murder him and take possession of his property, on a very slender opportunity. The sufferings from want of water in crossing the border of Kalahari, the Great Thirst Land, are such as to make the successful passage seem almost miraculous. This being passed, game, the object of this quixotic expedition, exists in bewildering abundance. Lions, giraffes, elephants, rhinoceroses, buffaloes, quaggas, antelopes, ostriches, and so on appear almost to swarm, and the bushmen, who seem to have about an even chance of eating or being eaten, are unsurpassed in the world as trackers. But Mr. Gillmore lacks the one taste which appears to be adequate to impel men to such enterprises, that of butchery. He refuses to kill unless for some decided advantage, as food, ivory, or ostrich feathers, and seems positively to enjoy missing his aim, and seeing the animal bound or fly off in its natural grace and wildness. His companion and consolation is an invaluable mare, Ruby, whom he can hardly mention without the epithet "darling", though a part of his affection is bestowed upon several dogs of doubtful breed. The climax of misery appears to be reached when, after arriving at the settlements and selling off his wagon and other possessions, he is set upon, on his way to the coast, by a deserter of the Thirty-sixth Regiment with three or four other scoundrels:

"Between them they pummelled me into a cocked hat (any decent boy at home could have done so then), drove the post-cart off without me, and stole my watch, chain, and money, thus leaving me 150 miles to trudge on foot, without food, and all the surrounding coppies covered with snow; but I did it."

Commencing with a slight feeling of contempt at his account of the voyage out, we found our interest more and more riveted by the simple manliness, the courage and endurance of the writer, and laid down the book with a strong feeling of personal attraction. It is wholesome reading, and particularly to be recommended to parents who would wean their boys from the exciting dissipation of sensation novels.

Canoeing in Kanuckia; or, Haps and Mishaps, Afloat and Ashore, of the Statesman, the Editor, the Artist, and the Scribbler. Recorded by the Commodore and the Cook (C. L. Norton and John Habberton). Illustrated. (New York: G. P. Putnam's Sons. 1878. 12mo.)—From internal evidence we are strongly inclined to believe that the technical information with regard to canoes and canoeing contained in this book is furnished by Mr. C. L. Norton, the rest by Mr. Habberton. With Mr. Norton's style we are not familiar; with Mr. Habberton's we are. The author of 'Helen's Babies' has already earned a wide reputation by what he has been lucky enough to persuade the world into taking for humor, and he might well be pardoned if his success has misled him as to his vocation. That Mr. Habberton has a sense of humor cannot be denied; a perception of incongruity the critics have satisfied themselves is at the root of all humorous ideas, and of the incongruous he is, in his way, quite a master. But it would be proved by his case, even if it were not otherwise known, that the incongruous alone is by no means enough. The idea of

the author of 'Helen's Babies' being a humorist involves incongruity, but it is not amusing. It does not make us laugh, but tends rather to depression and gloom. In a pleasure trip of the sort described here there are many little incidents and accidents which are amusing to the last degree to those immediately concerned, and this will probably continue to be the case to the end of time; they bring out comical traits of character, and reveal all sorts of peculiarities which render the journey agreeable and entertaining, and endear, to those who make it, all its associations. But there is a long way between this and its being made interesting or amusing to those who have had nothing to do with it. And little adventures of this sort cannot become literature until they do interest "innocent blind persons." This we can hardly conceive to be the case with 'Canoeing in Kanuckia.' The information on the subject of canoes and canoeing is valuable, but the description of the adventures of the canoeists far from entertaining. If Mr. Norton would get some one else for his co-laborer he might produce a very readable manual on the subject.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Corporal Bruce of the Balaklava Six Hundred: a Tale, swd	(A. K. Loring) $0 50

MESSRS.

Tiffany & Co.'s

stock of Sterling Silverware, prepared especially for this season, comprises a great variety of novel and attractive articles appropriate for Wedding-Gifts, and complete outfits of household silver.

Their styles of Wedding Invitations & Cards for this season are also ready, as well as some new tints of Paper and Envelopes for correspondence.

Tiffany & Co.'s Safe Deposit Vaults offer absolute security for valuables of all kinds, and articles placed there are always accessible to depositors.

UNION SQUARE,

NEW YORK.

(Messrs. Tiffany & Co. have examples of *Artistic Silverware*, decorated by the processes described at length in the article "SILVER IN ART," in the March-April number of the *International Review*.)

Rare Engravings & Etchings.

Notice of Removal.

Frederick Keppel, late of 66 Beekman Street, New York, begs to announce his removal to a more central location at No. 243 Broadway, opposite the City Hall Park. With greater facilities of space and of capital, the present stock will be very much increased so as to make this *the* place in America where the finest works of the great engravers may be satisfactorily procured.

Correspondence is invited. Engravings will be sent on approval to any address, and visitors will be at all times welcome to call and look over the collection.

PATENT PREPARED

Gasolene.

The attention of owners of Gas Machines is invited to the superior quality of Gasolene that we are making.

Manufactured by a process that is patented by ourselves, it is peculiarly free from all the impurities and heavy properties commonly found in other Gasolenes.

We manufacture these goods more largely than any other house in the world, and are prepared to furnish any gravity from 80° to 90° Beaumé, by the single barrel or car-load.

Orders solicited from gentlemen owning private country residences.

Hotels, Mills, and Manufactories supplied on the most favorable terms.

Missouri Farm Loans

Carefully made on Bond and Mortgage. Interest, 8 to 10 per cent. Perfect security. Well acquainted with local lands and values. Best references.

HARRY W. GRANTLEY, Attorney-at-Law,
Appleton City, Missouri.

Illinois Farm Loans.

Money wanted in sums of $500 and upwards to loan on improved farms in the vicinity of Elgin, Illinois, at 8 per cent. net, for three or five years. Security at least three times the amount loaned. Correspondence solicited. References given. Ten years in business. JOHN W. RANSTEAD, Att'y at Law, Elgin, Ill.

To Holders of Northern Pacific Stock or Bonds.

Having a thorough personal knowledge of the lands along the line of the Northern Pacific Railroad, we would be pleased to correspond with owners of stock or bonds in reference to exchanging them for the company's land. We have ample facilities for making judicious locations, and will cheerfully give you full information. No commissions to be charged unless an actual location is effected. Having interests of our own on the line of the road, we are prepared to advise and to act intelligently. We are convinced that owners will consult their own welfare by exchanging, and by doing so quickly, as the country is rapidly filling up.

CHICAGO MORTGAGE LOANS AT EIGHT PER CENT. negotiated upon first-class real estate. Send postal-card for full information. Estates managed, taxes paid, property bought and sold on commission.

REFERENCES.—Samuel M. Nickerson, President First National Bank, Chicago; C. N. Jordan, Cashier Third National Bank, New York; James Bolter, President Hartford National Bank, Hartford, Conn.; Hon. David Davis, Bloomington, Ill., U. S. Senate, Washington, D. C. Other references given if desired.

The Nation.

NEW YORK, THURSDAY, MAY 16, 1878.

The Week.

THE Senate has passed a bill to distribute awards under the Mexican Convention of 1868, making special exception of two claims whose fraudulent character is pretty evident, and which must at least undergo fresh investigation. It has also passed the Indian Appropriation Bill, and, on Friday, the bill repealing the Bankrupt Act. This last, on its recommittal to the Senate by the Judiciary Committee, failed to be sustained in the point fixing the date of operation as January 1, 1879, for which September 1 proximo was substituted, and the bill again delivered to the House. On Monday an attempt was made to attach a Brazilian steamship subsidy to the Post-Office Appropriation Bill, or, in other words, an engagement to pay for direct mail service under the American flag a hundredfold what is now being paid for the same service under the British flag. Mr. Blaine, fresh from his advocacy of protection at the Permanent Exhibition, boldly stood by the stars and stripes; but as good Republicans as he, and better lawyers, and some of the leading Democrats, opposed the measure, both intrinsically and as being against the rules. Under the latter view, the amendment received its quietus on Tuesday, after which the bill was passed. The Tariff debate was resumed in the House on Wednesday, and Mr. Kelley got the floor on the following day in opposition to the bill. On Thursday the House passed a communistic joint resolution, making eight hours a day's work, and ordering this construction of the Eight-Hour Law to be observed by the Departments. But the Supreme Court, on appeal from the Court of Claims, has decided brutally that for eight hours' work only eight hours' pay is due.

On Monday the long-threatened attack on the President's title was begun, and under the best auspices, for Mr. Clarkson Potter headed it, and the Speaker by previous agreement admitted his resolution as of "privilege." This parliamentary term is so elastic that the burden of proof appears to rest with those who deny its applicability on any given occasion. The Republicans accepted it with considerable success. Mr. Potter's ground that his resolution was based on the memorial of a "sovereign State" (Maryland) was shown, we think, by Mr. Garfield to be irrelevant, but Speaker Randall held fast to it, and was sustained on appeal by 128 to 108, almost a strict party vote. The resolution recited the contents of the Maryland memorial, McLin's Florida confession, and the charge of fraud in certain parishes of Louisiana, and provided for a select committee of eleven to investigate the alleged frauds in both these States, with authority to send for persons and papers, and to report at any time. The power to report was cut off by a point of order raised by Mr. Conger, and then Mr. Hale endeavored on behalf of the Republicans to amend the resolution so as to include all cases of fraud in any of the States. Mr. Potter declined to allow this even to be read, and insisted on the previous question, whereupon the Republicans, denouncing the movement as intended for party campaign uses, left the House without a quorum, and proceedings abruptly terminated. On Tuesday the same performance was repeated, and the Democrats went into caucus to brace themselves up for the struggle, however prolonged it might be.

The Democrats are displaying their usual want of discrimination in their management of the affair. If they do not, as they say, enter on the investigation with the view of ousting Mr. Hayes, they are entering on it with the view either of making party capital for use in the fall canvass, or for providing a basis for legislation to prevent frauds in Presidential elections hereafter. In either case it is folly to refuse the Republican offer to make the enquiry general. If it is plainly undertaken with the view of bringing odium on the Republicans, it will not do much good in the canvass; while if it is undertaken in order to get information for changes in the electoral law, all frauds, no matter by whom committed, and whether in Louisiana or Oregon, ought to be examined, both in order to secure Republican co-operation and in order to make the new plan, whatever it be, effective. In fact, the McLin and Dennis "confessions," just as they stand, would be better things to go before the people with than a huge mass of testimony taken in an avowedly partisan inquisition. The confessions are simple, neat, and comprehensible, while it will be impossible to get the result of the investigation before the public in any digestible form. In the meantime the excitement of the Democratic editors over the "moral aspect" of the matter increases.

Mr. Stanley Matthews's "name having been used in connection with the (Second Ohio) District," he writes to a friend that he will under no circumstances consent to be a candidate. He is doubtless making a virtue of necessity, but that the virtue is a genuine article there is no sort of doubt. Mr. Matthews is an able lawyer, and, we believe, an estimable citizen, but his entrance into political life and sudden assumption, on his own motion, of the functions of a Minister of Finance was, we have no doubt, a suggestion of Satan. Mr. Matthews was no more fitted to tackle financial questions than to take charge of the Coast Survey, and his wrestlings with them, during his brief term in the Senate, was something which nobody but the enemy of mankind could witness without pain. His single phrase about "not caring for abroad" revealed immense ignorance of the very elements of trade and finance. That a roaring, ranting ignoramus like Logan or Voorhees should put himself in such a position would not be surprising or depressing; but that a man of Mr. Matthews's standing and cultivation should do it makes the future of the race look dark.

The community is indebted to Mr. Frank Gowan, of Pennsylvania, for the vigorous assertion of the law which has led to the execution of eleven "Mollie Maguire" murderers within the last year—probably as salutary a lesson as could possibly have been given to the ignorant and lawless men with whom the mining region abounds. The news comes now, however, that all trouble is not yet over, and that a new organization called the "Knights of Labor" has been formed, which is said to number about 200,000 men in the whole State, most of them foreigners, and is, like all secret societies, producing more or less uneasiness. The constitution, which has found its way into print, is harmless enough, and, indeed, differs little from the platform of the National party; it is in the working of it that the mischief will appear. After the usual denunciation of the rich, it proposes to bring "every department of productive industry within the folds of organization"—whatever that may mean—and to "make moral worth, not wealth," the standard of individual and national greatness: a very important undertaking, if it can be carried out. After this comes the usual plan of securing somehow a more equitable distribution of the products of labor and capital, and the provision of health and comfort for the whole working class, including leisure for "intellectual enjoyment" and a sufficiency of pocket-money issued directly by the Government without the intervention of banks.

On the other hand, the communistic movement seems to have received a serious check in San Francisco, where it has been most formidable, by a split in the ranks, the majority, both in numbers as well as in other things, having deposed Kearney from the leadership, for "insanity, Cæsarism, and corruption"—all grave offences. He probably precipitated his ruin by his savage attacks on the

Catholic clergy, who have not minced matters in denouncing him and his followers, and who, in fact, have been behaving admirably everywhere with regard to these anti-social movements and organizations. Kearney had an interview with the Archbishop before his overthrow, at which he requested the prelate "to mind his own business," to which the latter replied by a depressing anecdote of his early experience in California—how he went to bed one night leaving San Francisco apparently very quiet, and on waking up in the morning found the streets filled with armed men and a poor fellow like Kearney hanging to a lamp-post. Kearney has the satisfaction of knowing, however, that during his reign he depressed the price of real estate or made it unsalable, seriously interrupted business, and caused the banks to curtail their loans. This is something of which a half-cracked drayman living in a busy, civilized community may well boast.

The first State "Nationalists" Convention, in preparation for the coming elections, assembled on Wednesday in Philadelphia, embracing some two hundred delegates. The Committee on Credentials had to decide between contesting delegations from Philadelphia, and concluded to admit all the labor delegates and ten of the greenback—among the last, Mr. Henry Carey Baird. When candidates began to be nominated, a resolution was introduced and carried pledging the Convention not to nominate any person (except for the judiciary) who had not "totally severed all connection with either of the old factions known as the Democratic and Republican parties." This broke the "slate" prepared by the chairman. The resolutions adopted resembled the complexion of the Convention itself: nothing was excluded that presented itself, and there was no editing of the hotch-potch to give it harmony and consistency. They propose "that the hours of labor should be so limited as to afford the laborer an opportunity to cultivate his mental faculties, and enjoy rational, social intercourse with his friends," and generally to improve his condition; and to this end the following reforms are declared necessary: (1) prohibition of the prison contract system; (2) lowering the rate of interest on money, "by the Government issuing free legal-tender money sufficient for the wants of trade, and regulating its value and its volume by wise and judicious legislation"; (3) protection through "a tariff based on Constitutional limits for revenue"; (4) bestowing public lands on actual settlers, and not as subsidies; (5) constructing works of national importance; (6) encouraging shipbuilding; (7) founding postal savings-banks; (8) repeal of unconstitutional charters and special (State) privileges; (9) Granger regulation of rates of transportation; (10) immediate repeal of the Resumption Act; (11) equal and just taxation of all property whatsoever; (12) payment of Government bonds in lawful money. A final resolution condemns violent measures and advocates peaceful resort to the ballot. The resolutions by implication define the "producing" interests as the manufacturing, mining, farming, and laboring. A conspicuous figure in the Convention was John Siney, a leading demagogue in the coal districts.

The reform newspapers have been occupying themselves a good deal during the past week with the proceedings of Mr. Hamilton Fish, jr., at Albany. They say that his career this winter has been a "failure," and that he has, by entering into a sort of alliance with the Tammany politicians, by refusing to do anything about the Municipal Amendments, and, finally, by reading a prosy speech on what is called the "bonded indebtedness" measure, shown himself to be "no statesman." We have always taken a great deal of interest in this gentleman's career, because it may be justly considered a typical one. Mr. Fish belongs to a class—the growth of which the newspapers from time to time do what they can to encourage—that of young men of education and position and good family who "attend to their political duties," go to the "primaries," and do what they can to qualify themselves to understand the "mechanism of government." Mr. Fish has done this for a number of years, and with gratifying results. He has risen steadily to his present position, which is that of chairman of an important committee; and he was talked of at the opening of the Legislature as a candidate for Speaker. We have therefore examined the charges against him with care. The important part of the charge is that he has acted with Tammany, and neglected the Municipal Amendments. Now, it is well known that Tammany Hall and Mr. Conkling's friends have made a little arrangement by which the municipal offices at the next election are to be divided by John Kelly, and the Legislature is to be carried by the Republicans. The carrying of the next Legislature by the Republicans means the re-election of Mr. Conkling to the Senate; and it is well known, too, that both Mr. Kelly and Mr. Conkling are opposed to the Municipal Amendments—the former on the ground that they are designed to "rob the poor man of his vote," and the latter because they are "a trap." But Mr. Fish's political future depends altogether on Mr. Conkling. Instead of being misled by the "dyspeptic" reform talk of the newspapers, he has, with what strikes us as considerable sagacity in so young a man, seen from the first that the "mechanism of government" was in the hands of Mr. Conkling; and he has steadily acted in that gentleman's interest. As long as Mr. Conkling's interests and those of Reform do not interfere with each other, he is for Reform; when they do, he is for Mr. Conkling. Instead of being a "failure," we think his career has been a remarkable success; and if Mr. Conkling and Mr. Kelly carry the day next fall, we think it safe to say that Mr. Fish will be a very prominent candidate for Speaker.

As to the treatment by the Legislature of the Municipal Amendments, the impression has been created that the committee having this subject in charge has neglected its duty and not properly pressed the matter on the attention of the Legislature. This is a mistake. There was no real necessity for the Committee to press the matter at all, as the duty of taking up the Amendments rested with the Legislature itself, and these had already been passed by one legislature. But the suggestion that the Committee failed to do its duty is a mere pretence. The facts are, that three months ago the Committee of Fifty appointed two sub-committees, one to endeavor to persuade the Governor to recommend action in his message, the other to do whatever was necessary to urge the matter on the Legislature; that both committees set to work at once; that the latter committee early in the session had interviews with prominent politicians at Albany, who gave them to understand that a hearing on the subject was not desirable, and that the Amendments would be taken up at the proper time; that, trusting to these representations, the Committee waited till they were satisfied that the promises were not honest, and then made application in writing for a hearing some two weeks before the end of the session. The Committee received a reply saying that a day would be set for the hearing; but no further notice of the application being taken, telegrams were sent reiterating it. Then at length a day was set; but when the Committee appeared, after being put off for two or three hours, they were begged to be short, as the senators and representatives wanted to go to tea, and profound regret was expressed that the application had not been made earlier. On the hearing a very good argument for the submission of the Amendments to the people was made by Messrs. Sterne, Peckham, and Olin; but the Committee had, of course, no idea when they went to Albany that any attention would be paid to what they said. They knew, what seems to have been overlooked elsewhere, that Conkling "tipped the wink" to the Legislature on the subject of the Amendments weeks ago.

The sales of U. S. 4½ per cent. bonds were sufficient during the week to enable the Syndicate to anticipate their August and September options for $10,000,000; this they did on the 14th, making $35,000,000 of the bonds taken by them since April 11. The demand for gold to settle bond subscriptions has advanced the price to 100⅝ and 100¾. Foreign exchange has been weak, and has fallen

nearly one point below that at which gold coin can be profitably exported. In London U. S. bonds have been strong, and prices have advanced; British consols and Russian securities have also advanced. Silver has been weak at 53½*d.* to 53⅝*d.* per ounce. The bullion value of the silver dollar at the close of the week was $0.9049.

The London *Economist* makes an interesting contribution to the literature of the Silver question by discussing our proposed international bi-metallic conference. The little fellows of the Latin Union, with whom we are trying to throw in our lot, and among whom the position of a country like this is ridiculous—such as Greece and Switzerland—have accepted the invitation, and, with their aid, the *Economist* thinks the Conference may have "a brief existence," but will never reach "a healthy infancy." The important question, What is France likely to do? has probably been answered in a letter from M. de Parieu, the chief author of the Latin Union, to the Spanish Minister of Finance, in which he says that, if what the United States seek is "international conversations" on bi-metallism, economic truth would doubtless gain by them; but that "if America invites us to an absolute rehabilitation of depreciated silver, in order to gain us over as customers for the metal she produces, may we not suspect the possibility of being her dupes?" He then goes on to point out if a nation has a double standard "the depreciated money will reach it from every side; it is the discredited metal only which will come to fill its mints." The unhappy old man has evidently not read the report of the Jones Commission. Worse still remains to be told. M. Charles Le Toujé, one of the leading French authorities on this question, writes to a Bordeaux paper, declaring that the heavy silver coinage has so gone out of favor in France that the only chance the Latin Union has of prolonging its existence lies in the adoption of a single gold standard. On the other hand, M. Leroy Beau-lieu says there are not now more than $240,000,000 of five-franc pieces in France, of which the Bank holds $100,000,000, and that of these it would have to retain about $60,000,000 for subsidiary coinage, so that the demonetization of silver would only throw about $180,000,000 out of circulation. How the Chicago-and Cincinnati sages will laugh over this.

The Emperor William was fired at twice on Saturday last, while driving in the Unter-den-Linden at Berlin, by a tinsmith named Hoedel, who was arrested at once, and appears to have been an active member of the Socialist organization, though its organs, of course, repudiate all responsibility for him or sympathy with him. He declared at first that he meant to kill himself, in order to illustrate the sad condition of the people under the existing social régime; but this version he does not persist in. The attempt has called out unbounded demonstrations of loyalty and affection from the people of Berlin, with whom the Emperor is very popular. But it has also excited or greatly intensified the feeling of dread and detestation with which the Socialistic movement begins to be regarded, and is bringing the band of professors and theologians who, a few years ago, tried to found a new school of political economy, and became known as "Katheder-Socialisten," into considerable odium. Their teachings threw the responsibility of the condition of the working classes on the Government and "Society" in a very marked degree, and were a kind of protest against the *laissez-faire* theory; and they seem to have flattered themselves that the followers of Bebel and Karl Marx would fall into line under the leadership of scholars and gentlemen, and society would be regenerated by the aid of the historical method. The late attempt of the clergy to "capture" the organization, of which we gave an account a fortnight ago, and which the Socialist brethren met with blasphemy and obscenity, was an outcome of the professorial movement, and its lamentable failure, coupled with the Hoedel attempt, will probably put an end to the alliance between Kultur and Nihilism.

General Todleben made an attempt during the week to frighten the Turks into giving up Varna and Shumla and Batum by threatening to occupy Constantinople, and they apparently agreed to do so on his consenting to retire to Adrianople. This arrangement was disavowed at St. Petersburg, however, and he was directed to hold his present position firmly; and indeed the force at San Stefano has been greatly strengthened. The Turks, therefore, refuse to give up Varna and Batum, but are reported to be ready to surrender Shumla, which is weakly garrisoned, and is of little value since the Russians cut its communications with Varna. Austria is, in the meantime, playing her old waiting game. Prince Auersperg, in the Reichsrath, said her position remains unchanged; that the interests of Europe are her interests, and that she will defend them, and other vague matter; and both he and M. Tisza, the Hungarian Minister, deny all intention of occupying Bosnia by way of spoil, or withdrawing any portion of Turkey from European jurisdiction as her share. There are still rumors, however, and they seem more probable, that she will occupy Bosnia pending the settlement, by way of securing her own frontier and delivering herself from the crowd of turbulent fugitives from the province which are now on her soil and living at her expense.

Everything in European politics seems to be waiting on the result of Count Shuvaloff's mission from London to St. Petersburg, about the nature of which there is little but conjecture. The most probable supposition, and the only one to which the attitude of the British Ministry gives any support, is that England has at last communicated through him to Russia what her desires or expectations about the problem really are, and that Russia having now something to say yes or no to, besides the form of submitting the Treaty to the Congress, there is some chance that the two principals in the controversy may come to an understanding. Shuvaloff's interviews with the Emperor have been strictly private, no one being present except the correspondent of the New York *Herald*, without whom, if we may judge from the news in that paper, they never go to business, and in his presence the Czar said that "he was not disposed to yield a single point to England, and that he was willing to take the chances of a protracted war." In fact, thus far Shuvaloff has not, according to the same authority, made the slightest impression on the mind of his master, who is bent on battle. Shuvaloff is, however, going to keep at him. The Shuvaloff mission is likely to exert an unfavorable influence on the Hartington resolutions about the employment of Indian troops, inasmuch as if peace is secured the subject will lose most of its interest, while if war seems certain the public excitement will be so great that the Liberals will probably again recoil from any attempt to embarrass the Ministry.

The introduction of the Indian troops into Europe without the knowledge or consent of Parliament is exciting increasing attention in England, and Lord Hartington, on behalf of the Opposition, has given notice that he will shortly move a resolution that no forces can be raised or kept by the Crown, except in India, in time of peace and without the sanction of Parliament. What gives the matter a serious air is that if Indian troops can be brought to the Mediterranean on a mere order of the executive, they can be brought to England, and, although there is no likelihood of anything of the kind at present, the mere exercise of the power in the present case would establish a precedent under which the king might maintain a large army in Europe without a vote of the House of Commons. The occurrence, too, is startling in another way: the British army has in nearly every European war been aided by mercenaries; it has generally during the last century had a small German Legion in its ranks, and has usually had foreign auxiliaries. But if Lord Beaconsfield is allowed to carry out his gorgeous dreams, there is a strong likelihood that a purely British force may find itself before long for the first time acting as an auxiliary to a large army of mercenary troops in British pay, which in case of victory would claim the larger share of the honor. People begin to ask themselves what the effect of this on British prestige in Europe would be, and how the Indian troops would feel and act after they got home, after beating white soldiers in the open field. It is a brilliant stroke, doubtless, to convert England suddenly into one of the great military as well as great naval powers of Europe, but it is setting people thinking.

THE SOURCES OF COMMUNISM.

THE reports of the social and political disturbance wrought by the Nihilist agitation in Russia are curious reading to those who remember the serene indifference with which Russian writers and politicians watched the perplexities of other countries over the labor problem in the eventful years between 1848 and 1860. At that time it was their theory that owing to the peculiar land system of Russia, and particularly owing to the institution known as the *mir*, or village community, which prevented the growth of a proletariat, she would never be troubled by the Red Spectre which was frightening France out of her wits, and was, they believed, destined before long to shake the British Empire to its centre. North Germany was, a very few years ago, supposed to be in the enjoyment of similar immunity, owing to her schools, her military system, and the sober and phlegmatic temperament of the people; but she is now nearly as much alarmed by the spectre as France used to be, and France has reached a repose which may be, after all, only temporary, by wading through torrents of French blood. There is not a statesman in the Western World, in fact, who is not at this moment puzzled and even alarmed by the discontent of that vast body of persons who live by the daily labor of their hands. It has been all but demonstrated that no traditions, or training, or peculiarities of position or government are sufficient to keep the Socialistic devil out. All the "modern improvements" seem to help him. He passes the sea and the mountains with the telegraph and the steamer, and makes as much use of the printing-press as either Church or King. He has his newspapers, his tracts and missionaries everywhere, and his vicious roar may be heard all over the Western World from the Ural to the Rocky Mountains. The worst of it is that no means of coming to terms with him has as yet been discovered. He cannot, apparently, be bought off, because after giving him what he wants Society would have nothing left. When the old Sinner, in the 'Lives of the Saints,' sold himself to the old Devil, he always got something for his soul—that is, he was allowed a certain period of enjoyment of certain pleasures before he surrendered himself. But the Red Spectre offers nothing and asks for all. The rich man is called on to strip himself of his riches; the frugal man of his savings; the able man to treat his ability as an incumbrance; and the whole community, as a community, to give up all it loves and glories in. Smoking is to be allowed at funerals, and men and women are to mate in the streets. Children are to go to the foundling hospital. Whatever power there is anywhere is to be lodged in the hands of the most stupid and incapable. The lazy are to lie on their backs and the industrious to get nothing for their industry.

The cause of this extraordinary and widespread outburst of insanity—for so it must be considered—will probably be more thoroughly studied than it has ever been before, now that it is perceived to be an epidemic from which no country or social system is safe, instead of being, as was long thought, a vagary peculiar to France, and it is only from a study of the causes that a remedy will come, if remedy there be. When one makes even a slight examination of the seeds of Socialist doctrine, one is surprised to find how many of them lie in the political and democratic doctrines which have been preached ever since the French Revolution, by progressive people of all classes, mostly with but little thought of where they would lead us. In the first place, the assumption that the numerical majority is all-wise, and ought to be all-powerful, on which all modern democracy rests, makes it difficult or impossible to put any limit on the experiments which the numerical majority may try. It has a right to make mistakes if it pleases, and where outside of it is the standing place to be found for arguments against the expediency of its edicts? Who are you, that you are so much wiser than the rest of the community? is a question which the philosopher who argues about "justice," when he has once committed himself to the democratic theory, finds it difficult to answer. In the next place, contentment, which occupied a very high place among the virtues, and was taught in the churches as a Christian virtue for seventeen hundred years, and particularly contentment with one's station in life and worldly surroundings, has been tacitly repudiated even by social and religious conservatives. Discontent is now taught in all the schools as a virtue of a very high order. You are not to be satisfied with the station in which you were born or with the work you are doing, unless you are at the head of some large organization, a church, an army, a state, a warehouse, an insurance company, or a railroad. You are to strive continually for fame and wealth; or, in the language of plain people, for the position of "boss" of some "job." Every boy in Europe and America has this now dinned into his ears from his fifth year upwards. As the demand for "bosses" is, however, very limited, the immense majority are very much disappointed before they reach middle life, and try to find explanations of their failure which will not wound their self-love. The readiest one is the rottenness of society, and the richness of the field it offers to trickery and greed.

Thirdly, the modern system of industry brings large bodies of poor laborers in contact with great masses of wealth, and by employing them indoors stimulates the passion for speculation on the causes and incidents of their condition, and on the springs of society in general, which used to be mainly confined to shoemakers. More attractive materials for a demagogue, or a better field for the spread of crude social themes, than the population of a great manufacturing town have never existed. Agriculture, or any muscular employment in the open air, keeps down mental activity and strengthens the love of routine, for much the same reason that it makes a man sleepy in the evening; but working under cover, at trades that call for dexterity rather than strength, seems to give the brain a morbid energy which finds relief in imaginary rearrangements of society.

It must not be forgotten, too, though it perhaps cannot be put down among the direct causes of socialism, that "the achievements of science," in increasing our powers of material production, coupled with the incessant boasting of scientific men and philanthropists about what science may yet accomplish in the future, have filled the working-class mind with fantastic dreams as to the possibility of machinery displacing manual labor, and enabling the race to multiply *ad libitum* without inconvenience. Consequently, when population follows close on the increase of production, as it has done, on the whole, even during the past fifty years, and the poor still continue poor and anxious, they begin to suspect some trick or fraud on the part of the capitalist. They are undoubtedly better off than their grandfathers, but they have still to toil and deny themselves, and see the rich enjoying their wealth in greater numbers than ever. This same agency also conceals from them that great fact of sociology—perhaps the greatest of all—that the earth, do what we will with it, will probably never afford much more than a subsistence to the great mass of mankind—that is, plain food and plain clothing. The race, by ceaseless toil and endeavor, throws some of its members up above want or anxiety about daily bread, and gives a few leisure to keep its records and add to the stores of its knowledge, but they are only a handful after all. The notion that by some little device the world can be peopled with what are called "ladies and gentlemen," which is at the bottom of all socialism, springs from an immense delusion about the bountifulness of Nature. This notion, too, is stimulated by much of the teaching of the pulpit and press about the perfectibility of man, which when it becomes current in workshops and mines undergoes curious distortion, and begets a strange impatience. The preacher usually means that one thousand or ten thousand years hence man will be refined, polished, cultivated, at ease in his circumstances, and noble in his life and aims, and able to dispense with the coarse or police side of government. This dream, which seems so attractive in the student's library, puts on a very different shape among the real sons of toil. The laborer does not care much whether posterity is "perfect" or not; he wants to have a taste of perfection himself, and is irritated by all attempts to postpone the great consummation. One cannot say, of course, with any certainty how these difficulties will be met, but it may be affirmed with confidence that during the next fifty years the character of instruction and preaching on all social questions will change

greatly, though perhaps very gradually, and that considerably less responsibility will be imposed on governments and more on the individual man than during the last fifty years, and that when a human being begins to conduct himself like a wild animal the plea of unhappiness will not be so readily accepted in his defence.

THE SENATORIAL VIEW OF THE REPUBLICAN POLICY.

DURING the past two years or more, attention has been frequently called to the failure of the Republican leaders to provide any definite platform or plan of action for their party. They have admitted in numerous speeches and "interviews" that the party's future was clouded, and that it was desirable that it should "rally" and "unite"; but what it was going to rally against or unite on was not explained. Some of the most prominent Republicans are agreed that the President's policy is not a success; that it has broken up the party for the time being; that civil-service reform will never do; and that "conciliation" means a base surrender to the Solid South. They are agreed, too, that the Democrats are just as bad as ever, and that no third party has any chance in the present state of politics. They have, moreover, announced on many occasions that they have plans of their own for reuniting the party and leading it on to victory; but hitherto they have refrained from communicating the exact nature of these to the public, thinking, apparently, that in politics confidence is not a plant of slow growth, and that they have only to let their new platform be known to have the party at their backs in full force again. From recent indications, however, it seems that they have at length determined to throw aside all reserve and unfold their designs. The last number of the *North American Review* contains two articles by leading Republican Senators, giving a sketch of the present position and future policy of the party. These articles are all the more valuable because they have been drawn out by an attack of Mr. Julian's, in a preceding number of the *Review*, in which he described the party as being engaged in a "death-struggle." Mr. Julian's attitude towards the party, it is needless to say, is critical and despondent.

The reply to this article, the author of which belongs to the class variously known as "idealists," "doctrinaires," or "dyspeptics," as their discontent is believed by the political class to spring from the head, the heart, or the stomach, naturally divides itself into two parts—the first a refutation of the charge that the Republican party is "in its death-struggle," a task undertaken by Senator Howe; the second a description of the new platform now in process of construction by its leaders, this being the work of Senator Angus Cameron. Mr. Howe, as those know who have read his late speech on Mr. Schurz, is a master of irony and satire, and nothing can be better than the ingenious turn by which he produces at the outset, on his reader's mind, the impression that it is not the Republican party but himself and Mr. Julian who are engaged in a death-struggle. Mr. Howe goes into an examination of the history of the Republican party and brings it down to the adoption of the new Constitutional Amendments. Down to this point he considers Mr. Julian's course consistent and patriotic; but after the adoption of the Amendments he shows that Mr. Julian deserted the party and is now a traitor. He is a traitor because the work of the party is not yet done. He says it is; but Mr. Howe points out that it is not; because, though the Amendments have been adopted, the Democrats are not in sympathy with them, and will not protect the negro if they come into power. We have examined this part of his argument with a good deal of care, because it is here that the dispute seems to hinge, and we have looked to see what the Senator thinks the Republican party can now do for the negro. It must not be supposed that he has not examined this subject carefully. He has found something in the way of protection for which the Republican party is needed. The Constitution provides that State and United States officers "shall be bound by oath or affirmation to support" the Constitution, and it may be inferred that if they do not take the oath, they will not carry out its provisions for the protection of the negro. But what, he says, if the Democrats come in, and the oath is not taken? Who is to see that it is taken properly? Who is to administer it?

But Mr. Howe's main business is with Mr. Julian's treason. To the statesman treason is always a fascinating subject. If the political speeches of the last twelve years could be examined for the purpose the public would be surprised at the number and variety of traitors this country now contains. But Mr. Julian goes beyond them all. Language fails for a description of them, and Mr. Howe is obliged to invent an epithet and set him down as "politically a unique," and what sort of a person a "unique" is may be guessed from Mr. Julian's reckless behavior about the New York Custom-house. We have often observed that this institution is a sort of political touchstone. When a man, after hearing for years of the abuses that go on within its walls, walks up to it, looks it calmly over, and, after an examination of its manner of working and some of its staple products, turns round and enquires quietly what there is to complain of, he may be set down as a true man; but if he gets excited over it and denounces it, it is safe to assume that he is meditating some act of treason. Now, Mr. Julian allowed himself to indulge in language concerning the New York Custom-house which we should not think of repeating, but which was, to say the least, strong, and he suggested that investigation into its operations was "spoiled by whitewash." Now, says Mr. Howe, Mr. Buckingham, of Connecticut, was at the head of the investigating committee, and if Mr. Julian accuses him "of having concealed official guilt," he has nothing to fear for this world, for Mr. Buckingham is no longer living; and hereafter he will be tolerably safe too, for after such slander there will be little chance of any meeting between the two in the next world—an insinuation which leads us to infer that Mr. Howe takes the same view of Mr. Julian's prospects hereafter as that taken by the clergyman in the story, who, on being asked where So-and-so was, replied, "If he were dead I could tell you." There are things in recent politics which Mr. Howe confesses an inability to deal with. The Cincinnati movement of 1872 is one of these. "We are," he says, "too near that event. We cannot outline it. We do not appreciate it. We are dazed by the din and glamour of the great pretence." "But," he thoughtfully adds, "History will laugh."

Like Mr. Howe, Mr. Angus Cameron begins his article with one or two propositions calculated to carry the reader with him. It is in politics, he says, as it is in nature—"there is 'action and reaction'; there is ebb and flow." Not even a Democrat can deny this, and yet it is pregnant with meaning. Mr. Cameron having established this as the basis of his argument, gives an instance of "ebb and flow" in the alternations of the light of noon-day with the darkness of the eclipse. Mr. Cameron is fond of metaphor. He declares that he is not alarmed at the dissensions in the Republican party; that these are "the mere flotsam and jetsam thrown up by the self-moving Gulf-Stream of Republican Destiny"; the people, he goes on, are rulers here; "leaders are no longer necessary." "Men die," he continues, "or fall out of line, or desert to the enemy"; but it is all one with the people; "no ambition sways them, no reverses discourage them"; the only man fit to be the "ruler" of a republic is he who has "no policy of his own." Charles I. tried having a policy, but his attempt is only noteworthy as a "startling illustration of the tragical element that lies hidden behind the mask of the ludicrous." Calhoun, it seems, tried it too.

No one can doubt, Mr. Cameron continues, that the Republican party has been the party of progress. It has freed the slaves—and with what result? Only this: a Solid South—"a war-chariot armed with disciplined and exultant soldiers," without which the party would be "a feeble faction, a moral night-scavenger's cart, laden with the offscourings of Tipperary civilization." He does not say that the South should not rule solely because its leaders were traitors. That he considers a sufficient reason, for "magnanimity becomes imbecility; manly forgiveness becomes eunuchal sentimentality; Shakspere becomes a Tupper, when it is contended that condonation of treason involves the rule of the traitor.

Having disposed of this branch of his subject, Mr. Cameron ap-

proaches his second division, and asks, "Can the leopard change his spots?" To this he replies with considerable force that "the negative of this question would seem to be supported by the greater weight of human testimony"; and if the leopard cannot, can the Democrat or Southerner? He then proceeds to "call up in review one or two only out of scores of important issues still undecided," to see whether the correct decision is more likely to be reached by Democrats or Republicans. The first of these is civil-service reform. This, he shows, was invented by some "literary men," though he does not specify whom. He makes short work of their hollow pretences by a novel argument. "Every inventor," he says, even of a mouse-trap, can secure protection for his mechanical skill in almost every civilized country. Yet Longfellow and Emerson "cannot protect their productions one mile beyond the limits of the country." Are men of this sort fit to deal with practical questions of administration? "Do the literary class marvel that national legislators do not pay a swift homage to their political suggestions?"

Having thus disposed of civil-service reform, he shows that the question of the national debt can only be dealt with by the Republican party, because the Democrats do not mean to pay it; that, if not repudiated directly, the South means to repudiate by bankrupting the Treasury by means of Southern claims, and so on. But this part of the article is not new; it was to be met with in most of the campaign speeches summer before last. We have turned over with interest the pages of Mr. Cameron's article to see what he has to propose for the future. He certainly does provide a new platform, and it is this: The Republican party, he says, "will endure just as long as it worthily represents the principles of Progress." What are these principles? the reader may be inclined to ask. Do they involve States rights or Federal centralization, free-trade or protection, direct or indirect taxation, anti-sectarian or sectarian education? On these matters Mr. Cameron maintains a strict silence. "The Principle of Progress," he says, "or, to use the newer word, of Evolution," is what we want. So long as we stick to that, and so long as we are "confronted by an organization hostile to every phase of human development, whether in the individual or the state or the nation; an organization whose ideal leader is a political Columbus with his eyes in the back of his head—sailing American waters under the American flag, but ever seeking with a longing unappeasable for a southwest passage to the lost but loved Laurentian seas of our antediluvian world," we are safe. Henry Wilson "could see no reason why the Republican party should not endure a thousand years," and Mr. Cameron says that he thinks "the Vice-President was right." We have endeavored not to exaggerate or misrepresent Mr. Howe or Mr. Cameron. "Progress and Evolution" may strike "dyspeptics" as a rather vague party cry; it is less definite even than the bloody shirt; but it has the advantage of being comprehensive, and the man who can say he is opposed to both Progress and Evolution in the coming campaign can be only fit to be led by a political Columbus with his eyes in the back part of his head.

PROFESSOR JOSEPH HENRY.

IF Mr. Galton's researches on hereditary genius were supplemented by equally careful ones on cases of genius which appeared to be entirely sporadic, we might find an exhibit yet more striking than that with which he presented us. It is certainly worthy of note that the man who, during the present generation, has exerted the most enduring and widespread influence upon the progress of American science, is not known to have had a blood relation of intellectual prominence. His ancestry is unknown, and his parentage offers no features of interest. Even the year of his birth is in doubt—some authorities placing it in 1797, and others in 1799 or even later. His father died when the son was still very young, and his mother before he grew up. A parish library supplied him with boyish reading, and his earlier tastes were in the direction of romance and the drama. He was nearly grown when the accidental possession of a copy of Robinson's 'Mechanical Philosophy' turned his thoughts towards natural philosophy and led him to seek a scientific education at the Albany Academy. Here he made himself so good a name as to be taken into the family of the Patroon in the capacity of private tutor. Failing physical health led to his spending a year as a civil engineer in the western part of the State. He returned home with a robust constitution, which never failed him throughout his long life. He declined further lucrative employment in the same capacity to accept the more congenial position of a professorship at the Albany Academy.

It was while a professor at Albany that he commenced the brilliant series of researches in electricity on which his purely scientific reputation principally rests, and which culminated in the discovery of the principles of the Morse telegraph. If we compare the poverty of his apparatus and the poverty of his means for research and publication with the importance of the results which he reached, we may accord him a place by the side of Faraday as an experimentalist. He became the sole discoverer of one of the most singular forms of electrical induction, and was among the first, perhaps the very first, to see clearly the laws which connected the transmission of electricity with the power of the battery employed. One of the problems to which he devoted himself was that of producing mechanical effects at a great distance by the aid of an electro-magnet and a conducting wire. The horse-shoe electro-magnet, formed by winding copper wire around a bar of iron bent into the form of a U, had been known before his time, and it was also known that by increasing the number of coils of wire greater force could be given to the magnet if the latter were near the battery. But when it was removed to a distance the power was found to weaken at so rapid a rate that the idea of using the electro-magnet for telegraphic purposes seemed hopeless. Henry's experiments were directed toward determining the laws of electro-motive force from which this diminution of power resulted, and led to the discovery of a relation between the number of coils of wire round the electro-magnet and the construction of the battery to work it. He showed that the very same amount of acid and zinc arranged in one way would produce entirely different effects when arranged in another, and that by increasing the number of cells in the battery there was no limit to the distance at which its effects might be felt. It only remained for some one to invent an instrument by which these effects should be made to register in an intelligible manner, to complete the electro-magnetic telegraph, and this was done by Morse. Henry himself considered the work of an inventor as wholly distinct from that of a scientific investigator, and would not protect the application of his discoveries, nor even engage in the work of maturing such applications. He never sought to detract from Morse's merits as the inventor of the magneto-electric telegraph, but did on one occasion, under legal process, give a history of the subject which was not favorable to Morse's claim to the exclusive use of the electro-magnet for telegraphic purposes. Some feeling was thus excited; but Henry took no other part in the controversy than to ask an investigation of some charges against himself contained in an article of Morse's.

In 1832 Professor Henry was tendered the chair of Natural Philosophy in Princeton College, a promotion which he accepted with great diffidence. The change was accompanied with a great increase in the means of continuing his researches in electricity. He found congenial society, a large and appreciative circle of listeners, large additions to his supply of apparatus, and a scientific society glad to publish his researches. Heretofore his publications were mostly confined to papers in *Silliman's Journal*. The Transactions of the American Philosophical Society now afforded him room for much more extended memoirs, and enabled him very soon to acquire a European reputation.

In 1837 he visited Europe and made the acquaintance of Faraday, Wheatstone, Bailey, and other eminent physicists, discussing with Wheatstone their projects for an electric telegraph. He returned to his lectures with the zest and vigor acquired by this exchange of views with men of like pursuits with himself, and held his place as the foremost of American scientific teachers until 1846, when he was called to an entirely different sphere of activity.

Ten years before, Congress had accepted by a solemn act the curious bequest of James Smithson, made to the United States in trust, "to found at Washington an establishment for the increase and diffusion of knowledge among men." The will gave no indications whatever as to the details of the proposed establishment, and long consideration was therefore necessary before the Government could decide upon its organization. It was not until 1846 that a definite plan of organization was established by law. When this was done, Professor Henry was at once looked upon as pre-eminently the man to be the principal executive officer of the Institution. He accepted the position with "reluctance, fear, and trembling," upon the urgent solicitation of Professor Bache. To describe what he did during the thirty years of his connection with it would be to write the history of the Institution. We shall, therefore, confine ourselves to some

episodes of a special interest at the present time, hoping to revert to the subject of its general management upon a future occasion. From the beginning two different views of the proper direction in which the energies of the establishment should be devoted have been entertained. There was a scientific party which held that the operations of the establishment should be confined strictly within the limits prescribed by the donor, and in the sense in which he himself, as a scientific investigator, would naturally have construed his own words—in fact, that it should be entirely an institution for scientific research and publication. Another party was desirous of giving it a larger scope and wider range, including literature and art as well as science. These latter views were naturally entertained by the men who framed the plan of organization. Accordingly we find that the act alluded to provided for a capacious building, with suitable rooms or halls for the reception and arrangement upon a liberal scale of objects of natural history, for a library, gallery of art, and lecture-rooms, and for the reception and exhibition of "all objects of art and of foreign and curious research," of objects of natural history, and plants and geological specimens belonging or hereafter to belong to the United States, which may be in the city of Washington. The new secretary, of course, sympathized entirely with the scientific party, who considered most of these objects as foreign to the proper purpose of the Institution, and the expenditure of money upon them as contrary to the expressed intention of the donor. An acrimonious controversy thus arose, resulting in the retirement of a large minority of the Board of Regents and several of the assistants of the Institution. The whole policy of Henry was directed towards diminishing as far as possible the expenditure of the Smithsonian fund upon the library, the building, the museum, and art-gallery, by having these several objects provided for in other ways. He got the library removed to the Capitol and deposited in the Library of Congress, and the art-gallery superseded by the Corcoran Gallery of Art. The impropriety of charging the Smithsonian fund with the support of the Governmental collections was so obvious that Congress has for several years provided for the maintenance of the National Museum, as it has now become, in connection with the Institution. He aimed at a complete separation of the Museum from the Institution; the Government leasing the building for the use of the former, while the latter should find more modest and appropriate but less expensive quarters. This project, however, he did not live to carry out.

Henry was, of course, the authority most frequently and regularly consulted by the Government on all questions which arose involving applications of science or of scientific principles. His greatest services to the Government were rendered as a member of the Light-House Board, a position which he held from the time the Board was organized. His principal duties were at first to enquire into the various methods of illumination, and especially to test the oils proposed for this purpose. Of late years he began to investigate the subject of fog-signals, which led to a very extended series of experimental researches on the causes which influence the propagation of sound through the air, and which sometimes render it inaudible at comparatively short distances. These experiments were mostly published in the annual reports of the Light-House Board.

The idea of using the telegraph for communicating the weather reports originated with Professor Henry, and was put in operation at the Institution at an early period of his connection with it. Visitors of that period will recall the large map of the United States which hung in one of the public halls, on which the state of the weather at many points of the country was indicated by marks pinned to the map. In accordance with his life custom, as soon as another department was found ready to continue any of his researches with a prospect of success he turned them over to it without any reserve except that of receiving due credit. The subject of meteorology was, in 1871, left by him to the Signal Office.

The whole course of Professor Henry was marked by an elevation of character entirely in keeping with his intellectual force. Placed in a position where the temptation to lend the use of his name to commercial enterprises was incessant, he so studiously avoided every appearance of evil that the shadow of suspicion never rested upon him. His services to the Government in many capacities, especially in that of member of the Light-House Board, where his experiments saved it hundreds of thousands of dollars, were entirely gratuitous. His salary was paid from the Smithsonian bequest, and he never asked the Government for a dollar on account of his services. An elevated but genial humor, a delicate poetic taste, a memory replete with anecdote, a refined, intellectual face, and an impressive bearing made him one of the most valued members of the intellectual society of Washington. One of his most remarkable traits was the entire absence of personal feeling against those by whom he felt himself wronged. His address to the Board of Regents asking an investigation of charges brought against him by S. F. B. Morse, the celebrated inventor of the electro-magnetic telegraph, was such a model of elevated sentiment, and breathed such purity of feeling, that no one in reading it could doubt the result. Like most men of his kind, he was averse to controversy, and we believe never took the slightest part in any of the disputes with which his name was sometimes associated. As secretary of the Smithsonian Institution he is entitled to the enduring credit of preventing a permanent misdirection of its activities, and this of itself will earn him the gratitude of men of science in generations to come.

Correspondence.

THE AMERICAN COLLEGE AT BEIRUT.

To the Editor of The Nation:

Sir: The reviewer of Dr. Hamlin's 'Among the Turks,' in the *Nation* of March 7, refers to the "American College" at Beirut, Syria, but, while speaking well of it, makes a statement which will convey a very wrong impression concerning it. Since this institution was founded by some of the leading men of New York, and the funds for erecting the various buildings here and for endowing the professorships were given mainly by New York merchants, you will allow me to correct such an impression.

The reviewer says "there is great difficulty in finding suitable text-books, and the students, being instructed in no foreign language, are thereby cut off from still further improvement," and more to the same effect. The college here was established to be an "institution where native youth may obtain, in their own country and language, a literary and scientific education." The instruction from the first was given, therefore, in Arabic. But the students have *never* been in the position of "being instructed in no foreign language." English and French are thoroughly taught, the former through a six-years' course, the latter four years. The reviewer may have had the medical department in mind when he wrote what he did, and in that department English is not taught, at least at present; but one of the conditions of admission to the study of medicine is that the applicant "has studied English, French, or German, and passes an examination in one of those languages." At first, the medical students came to us from without the school and knew French, but now the majority of these students come from our literary department and English is the language best known.

It is but just to add that experience is teaching us more and more that no "further improvement" is made after graduation unless English or French has been well learned. We see this so clearly that we are extending our course of instruction in English, and are now teaching Chemistry, Physics, Geology, Modern History, and Moral Philosophy through the medium of the English.

The college is, of course, unsectarian, though not un-Christian, and numbers among its students Protestants, Catholics, Greeks, Druzes, and Moslems. Regular morning and evening prayers are attended by all, and a Sunday preaching service is attended by the boarders.

Yours truly, Edwin R. Lewis.

Syrian Protestant College, Beirut, Syria, April 18, 1878.

TURGENEFF AND HIS TRANSLATORS.

To the Editor of The Nation:

Sir: The reprint of Mr. James's essay on Turgeneff gives a suitable occasion for a word about the translations of this author's works. The only ones to be heartily recommended are the German published by Behre at Mitau. They are the author's copyright, and may be depended upon as containing *the whole* of the originals, given with all the fidelity that could be expected of the heavier, more-involved German in dealing with the direct, crisp Russian. It is a great pity that the earlier edition of Janke of Berlin has been the medium by which so many persons have obtained their first knowledge of Turgeneff. At a mark a volume one has no business to ask for exactness, but the cutting was a little too wholesale which, for instance, reduced 'Smoke' ('Dunst') to hardly two-thirds of the original. Turgeneff's master-hand is shown in nothing so much as in his perfect sense of proportion. This cutting and compressing destroys all that. One might as well reduce a Meissonier or a Turner by cutting out an inch-strip here and a hand's-breadth there.

The French have not done so much better, for they too have often left out long passages, the omission of which completely disturbs and falsifies the relative positions of the characters; nay, it almost reverses the order in which the artist has placed them in the planes of his picture. I have before me a French sketch of Russian contemporary literature, an accepted authority, which describes 'Smoke' as "a love-affair with a married woman," without the slightest hint of the earlier betrothal, the essential circumstance which gives the whole force to the well-nigh tragic story. But, turning to the translation, one is not so much surprised, since the condensing of the first third of the book has altered the perspective completely. Potughine and Litvinoff are no longer in the foreground, as in the original, but Irena herself. Without the correction of the French by the original or by the 'Rauch' (Behre), the storm which raged against the author, the anathemas hurled upon him by both the Slavophile and the Occidental party, are incomprehensible. Russian social questions may not have the same interest in Paris or here that is awakened by the intensely passionate drama of the romances, but Turgeneff, whether artist or man, is not Turgeneff apart from them.

I have said the German is too heavy, its construction too involved, for the Russian. The French, though light and fine, is still less adequate to express the wonderful vividness and picturesque variety of the Russian. Since the translators had at the outset the difficult and inevitable condition, to render the fullest of modern languages in that which is the narrowest, one might have expected of them a most persistent attempt at exactness and literalness; but so far from that, there is always a preference for general terms, an aim at something that seems to be a curious idea of "finish," according to some supposed standard, all which ends in a copy wherein the lines are faint, the colors dull and dead, the action tame. Taking up this same 'Smoke' at random, I find an instance like this: It is a moment of no less importance than the first appearance of Irena in the story, on the staircase of the hotel at Baden. The French reads:

"Une dame de haute taille, avec une courte voilette sur son chapeau, le descendait; en apercevant Litvinoff, elle s'arrêta comme frappée de la foudre. Elle rougit et pâlit; Litvinoff ne la remarqua pas; elle descendit rapidement l'escalier."

The Russian, as literally as I can render it, is:

"A tall, stately lady, in a hat and a short black veil, with light, soft grace was descending the same stairway, and, seeing Litvinoff, turned towards him and stopped as if overpowered (struck still) with surprise. Her face in an instant flushed, and then as quickly grew pale, under the close-woven lace; but Litvinoff did not notice her, and the lady, more lightly and softly than before, went on down the broad steps."

Perhaps the saving of space in the French is enough to supply a plausible motive for this condensing, but how are we to account for the omission of the closing words of Neshdanoff's letter to Marianna in the last chapter of 'Nov'? The French reads "Adieu, Marianna, adieu!' The English follows that in "Farewell, Marianna, farewell!" The force of the Russian word itself is unattainable; for though it is the common word of parting, yet that is not, as with us, a wish for others' welfare, but a direct personal appeal for pardon for any pain or trouble given. It is commonly supposed to have passed into ordinary speech from its use by the dying. Since, then, so much of the pathos of the original must inevitably be wanting, how extraordinary that the closing words, "My pure, untouched one," should have been *left out*. I am assured that the word for "untouched" would bear without forcing the rendering "immaculate," but I prefer to leave the original figure. The light thrown by those simple words upon the much-discussed question of the relations of Neshdanoff and Marianna in those last weeks of his life makes their suppression almost a wilful violation of facts.

Nearly all the English translations have been taken from the French, and, of course, adopt all these alterations in form and perspective, while the style suffers a further depreciation from the tendency to use the Latin side of our language in translating from the French, and so departing more and more from the vigorous and vivid definiteness of the original. Our English is the one adequate language for translating Russian, both from the similarity in directness of construction and the fulness of vocabulary it derives from its double parentage. One need know no language but English to feel the superiority of Mr. Ralston's 'Lisa' ('Une Nichée de Gentilshommes') over all the other translations. It is a pity to have to put at the other end of the scale Mr. Schuyler's 'Fathers and Sons.' While the French have altered the form, Mr. Schuyler has falsified the tone, the atmosphere. The whole book is belittled and "vulgarized" by the ignoble touch. Imagine a great drama played with all the perfection and grace of the Français, and then put it into the hands of the stock company of one of our second-best theatres, and the difference is not greater than between Turgeneff's 'Fathers and Sons' and Mr. Schuyler's. The baldest literal translation of the scene in Bazaroff's death-chamber would be ample proof of the justice of this criticism.

All the criticism upon Turgeneff known in this country has been based upon these imperfect translations. To Mr. James, 'Smoke' is the story of "the baleful beauty who robs Tatiana of her lover"; Bazaroff's claims are "brutal"; Turgeneff is himself a hopeless pessimist, scarcely different from the crowd around "the Russian tree" at Baden. There is more and better and deeper than all that, more than there is space here to analyze. In the dim, blurred picture that is all we get: only the stronger lines, only the tragic lights and shadows remain; the softer, tenderer half-tones are lost. The style, too, as essential to the force and the truth of the work as to its beauty, we have scarcely heard of. Turgeneff's style is as well worth study as Goethe's. Clear, simple, and perfect in measure, it renews for us the hope that it is even yet possible to embody the intense situations of modern life in the statuesque beauty of the antique.

CLARA B. MARTIN.

BOSTON, April 30, 1878.

THE REISSUE OF LEGAL TENDERS.

TO THE EDITOR OF THE NATION:

SIR: The Cincinnati Central Club of the "National Party of the United States," at its meeting in this city on the 29th ult., passed the following resolution:

"*Resolved*, That Judge Hilton, of this city, a member of this club, be requested to enquire of the New York *Nation* the authority for its statement in its issue of 18th ult., p. 350, 'that the Supreme Court of the United States had denied the right of the United States to reissue legal-tender notes in time of peace'; and that Judge Hilton make such statement of the decision of the Court referred to, for publication in the *Nation*, as truth, the dignity of the subject, and the immense interests involved to the Government and the people require."

In compliance with the above, this communication is addressed to you, in order to provoke investigation and probe this matter to the bottom, and we therefore hope you will deem it worthy of publication and of editorial notice in your widely-circulated and influential paper. Certainly the gravity of the subject at this particular juncture, when the Secretary of the Treasury is about to reissue (or proposes to do so) as a circulating medium the legal-tender notes which he may from time to time redeem in coin under the Resumption Act, requires this investigation. The Secretary thus aims to give the notes the highest possible character the Government is capable of giving; particularly so should Congress also authorize them, at his suggestion, to be received in payment of duties on imports.

In your article, on p. 257, you say:

"If he (Secretary Sherman) means to reissue the greenbacks, he ought in decency to ask Congress that they may be deprived of their legal-tender character and allowed to circulate for what they are worth as Government promissory notes. It is exceedingly doubtful in any case whether his reissue would be accepted as any thing more than this, and whether the courts would hold them to be a legal tender."

The above suggestion would be like the play of "Hamlet" with the part of *Hamlet* left out by special request. It is what Chief-Justice Chase, in his dissenting opinion, after the war was over, urged, as a plea for their unconstitutionality, that the legal-tender property did not add to their value. This could only excite a smile, for without it they would have totally depreciated. As there was no coin in the country, there was nothing left to circulate as legal tender, or pass as money from hand to hand in payment of the immense business transactions of the country. That salutary principle engrafted upon it, and which really makes it money, has survived all the vicissitudes of war and peace. It was potent then, and it is still more potent now. Without it those notes would have been no better, if as good, as the national-bank notes, which are not money but a mere promise to pay money, and not a legal tender. The others are, as declared by the law creating them, both lawful money and a legal tender—an immense difference—and thus endowed with totally distinct and substantive qualities.

This brief statement is all that is required on this point. I now address myself to the question which is fundamental and lies at the bottom of this whole discussion. Has the Legal-Tender Act of February 25, 1862, been pronounced by the Supreme Court of the United States con-

stitutional, a power which may be brought into requisition in peace or in war at the discretion of Congress? If the Supreme Court has so declared, it is the supreme law of the land, and must be so everywhere held and enforced, until repealed or altered by the same power that enacted the law. Justice Strong, in the opinion of the Court, 12 Wallace, 530, says:

"There may be a difference in the effects produced by the acts and in the hardship of their operation, but in both cases the fundamental question—that which tests the validity of the legislation—is, Can Congress constitutionally give to Treasury notes the character and qualities of money? Can such notes be constituted a legitimate circulating medium, having a defined legal value? If they can, then such notes must be available to fulfil all contracts (not expressly excepted) solvable in money, without reference to the time when the contracts were made. Hence it is not strange that those who hold the legal-tender acts unconstitutional when applied to contracts made before February, 1862, find themselves compelled also to hold that the acts are invalid as to debts contracted after that time, and to hold that both classes of debts alike can be discharged only by gold and silver coin."

Can "the fundamental question" be stated clearer than this, or the English language used stronger or in terms more distinct? It is this fundamental question that the Court decided in the affirmative. The opinion of the Court is a very able one, examining all the arguments and authorities pro and con. The case was decided in 1870, after repeated arguments by the ablest counsel in the country and by a full bench. There is not one word in the decision that puts it on the ground of a war-power, or only to be exercised in time of war. The acts were enacted during the war, and the money created exercised a powerful influence on the war. But it places the exercise of the power as a necessary and incidental one to the emission of bills of credit, Treasury or bank notes, to circulate as money, which the Court had previously decided was a constitutional prerogative of Congress, in Veazie Bank *v.* Fenno (8 Wallace, 533). And, as the Constitution is silent as to what the Government may make a legal tender, even as to coin, the whole power results as a necessary incident of the other delegated powers, over the entire circulating medium.

The Court say, on p. 544 (12 Wallace), referring to the above case in 8 Wallace:

"It is not easy to see why if State bank notes can be taxed out of existence, for the purposes of indirectly making United States notes more convenient and *useful for commercial purposes*, the same end may not be secured by making them a legal tender." . . .

Further, "They claim that the clause which conferred upon Congress power 'to coin money, regulate the value thereof and of foreign coin,' contains an implication that nothing but that which is the subject of coinage can ever be declared by law to be money, or have the uses of money. If by this is meant that because certain powers over the currency are *expressly* given to Congress all other powers relating to the same subject are impliedly forbidden, we need only remark that such is not the manner in which the Constitution has always been construed. On the contrary, etc."

And then the Court gives at considerable length examples of the contrary. Finally, on p. 553, the Court say:

"But without extending our remarks further, it will be seen that we hold the acts of Congress constitutional as applied to contracts made either before or after their passage."

I might close here; but I will briefly refer to the concurring opinion of Justice Bradley, which has been charged as placing the decision upon the war-power doctrine, and an extract from which, often quoted and taken out of the connection of what is stated before and after, has misled many and I am glad to have an opportunity to correct it. In opening, Justice Bradley says, p. 554:

"I concur in the opinion just read, and should feel that it was out of place to add anything further on the subject, were it not for its great importance." And on p. 567 he says: "I do not say that it is a war-power, or that it is only to be called into exercise in time of war; for other public exigencies may arise in the history of a nation which may make it expedient and imperative to exercise it. But of the occasion when, and of the time how long, it shall be exercised and in force, it is for the legislative department of the Government to judge."

In the other parts of his lengthy opinion he rests it upon general principles fully stated, as does Justice Strong, and not upon any emergency of peace or war. However, the above extract is clear, as Congress is *the judge of the "occasion," and the time when it may exercise it.* This is enough. Respectfully, GEO. H. HILTON.

CINCINNATI, May 6, 1878.

[As regards the extent to which the legal-tender quality added to the value of the greenbacks, Judge Hilton's memory seems to fail him. He may "smile," but the *fact* is that they began to depreciate immediately after they were issued, until at one period, near the close of the war, it took $2 80 in paper to buy a gold dollar. They rose and fell with the credit of the Government, just as ordinary promissory notes would have done, and it is difficult to believe that the simple promissory notes of the Government would at any time have sold for less than thirty-six cents on the dollar, which is all the greenback at one time brought. We do not say the legal-tender quality was of no value to the paper. In the first place, as Judge Miller pointed out in his dissenting opinion in Hepburn *v.* Griswold, it caught all creditors with debts outstanding when the issue was made, and, in catching them, expelled specie from the country. This gave the greenbacks a monopoly of the work of currency, and therefore in some degree strengthened them. The illusion under which Judge Hilton and a good many others labor, and have labored, is that when a government makes a worthless material a legal-tender, it catches not only the actual creditor but all who may wish to sell or lend afterwards. This is the fundamental fallacy of the greenback movement. But as soon as you have hit the existing creditor the force of your legal-tender bolt is spent, and your note becomes practically a simple promissory note, owing its value partly to the chance of its being paid and partly to its convenience as currency. Prices of all commodities, and the amount advanced on all securities after the issue, are based simply on the seller's or lender's *own* estimate of the value of the note. To the Government estimate of it, or wish about it, he pays no attention whatever. If people cared what Congress said on this subject, gold in 1864 would not have risen to 280. This is, indeed, one of the best-known incidents in the history of legal-tender paper. The passage Judge Hilton quotes from Judge Strong's decision does not touch the question we are discussing at all. That question is not, Has Congress a right to issue legal-tender paper money at any time, and, if so, is such issue valid as regards previous as well as regards subsequent contracts? What we are discussing is: Has the Supreme Court denied the right of Congress to issue such paper money in time of peace, or has it only affirmed that right as a war right? On this point Judge Hilton has been far too sparing in his quotations, and has not, as it seems to us, by any means "probed the matter to the bottom."

The judgment in the two cases, King *v.* Lee and Parker *v.* Davis, which overruled the decision in Hepburn *v.* Griswold, was delivered in two opinions by Judges Strong and Bradley respectively. The former maintains the power of Congress to issue paper money and make it a legal tender by a variety of arguments with which we have here no concern. Its right to exercise the power in 1862 he shows by describing the circumstances under which it was exercised, or, in other words, the nature of the crisis which called for it, such as the existence of a civil war, "threatening the Constitution or the Government itself with destruction"; the emptiness of the Treasury; the impossibility of meeting the needs of the Treasury by taxation or a voluntary loan at home or abroad. The assertion that the money might have been procured in some other way he treats as "mere conjecture," and argues that the issue having, in point of fact, met the "emergency," Congress exercised a legitimate discretion in resorting to it. But he concedes that "Congress is not authorized to enact laws in furtherance even of a legitimate end merely because they are useful, or because they make the Government stronger." He "does not assert that Congress may make anything which has no value money." "What we do assert," he says, "is that Congress has power to enact that the Government promises to pay shall be, *for the time being*, equivalent in value to the representative of value determined by the coinage acts. . . . It is, then, a mistake to regard the legal-tender acts as either fixing a standard of value or regulating money values, or making that money which has no intrinsic value."

Judge Bradley is still more explicit. After affirming the prerogative of every Government to "*anticipate its resources*," by the issue of exchequer bills, and to make them legal tender in the absence of a Constitutional prohibition, he goes on to say that the exercise of this power

"is a pledge of the national credit. It is a promise by the Gov-

ernment to pay dollars; *it is not an attempt to make dollars.* The standard of value is not changed. The Government simply demands that its credit shall be accepted and received by public and private creditors *during the pending exigency.* Every government has a right to demand *this when its existence is at stake.*" . . . "But it is said, Why not borrow money in the ordinary way? The answer is, the legislative department, being the nation itself by its representatives, has a choice of methods, and is master of its own discretion. One mode of borrowing, it is true, is to issue the Government bonds, and to invite capitalists to purchase them. But this is not the only mode. It is often too tardy and inefficient. *In time of war and public danger,* Congress, representing the sovereign power, may authorize the President to take private property for public use and give Government certificates therefor. . . . It is an indirect way of compelling the owner of property to lend to the Government."

From this he draws the conclusion that if the Government, instead of directly taking the property, buys the property from those who are willing to sell, and gives certificates in payment which the seller is authorized to force on his creditors in payment of his debts, "it is nothing more than transferring the Government loan from the hands of one man to the hands of another—perhaps more able to advance it." He adds:

"No one supposes that these Government certificates are never to be paid—that the day of specie payments is never to return. And it matters not in what form they are issued, the principle is still the same. Instead of certificates they may be Treasury notes, or paper of any other form. . . . Through whatever changes they pass, their ultimate destination *is to be paid.* But it is the prerogative of the legislative department to determine when the fit time for payment has come. It may be long delayed, perhaps many may think *too long after the exigency has passed.* But the abuse, if proven, is no argument against its existence."

We will here remark that Congress *has* provided that the "certificates" now outstanding shall be "paid" on presentation on and after January, 1879, and it is therefore plain that the reissue of them by Secretary Sherman will be made without a shadow of authority. He will be virtually issuing new exchequer bills which Congress has not authorized, and which are not called for by any public "emergency" or "exigency."

Judge Bradley further says, in a passage of which Judge Hilton has conveniently quoted only one-half:

"It follows as another corollary from the views which I have expressed that the power to make Treasury notes a legal tender, whilst a mere incidental one to that of issuing the notes themselves, and to one of the forms of borrowing, is nevertheless a power *not to be resorted to except on extraordinary and pressing occasions,* such as war and other public exigencies of great gravity and importance, *and should be no longer exerted than all the circumstances of the case demand.* I do not say it is a war-power, or that it is only to be called into exercise in time of war, for other public exigencies may arise in the history of a nation which may make it expedient and imperative to exercise it."

We think, although the financial discussions in the opinions are very foggy, that it may therefore be affirmed that the Court has, by a very strong implication, denied the right of Congress to issue legal-tender paper, except in "time of war," or of great national danger or distress, threatening the country with the loss of a convenient medium of exchange; and that the notion that Congress, when the country is furnished with an abundance of paper issued by banks, founded, regulated, and secured, in so far as their circulation is concerned, by the Government, and when peace reigns everywhere within our borders, can go into the business of issuing legal-tender exchequer bills to any amount it pleases, and to an amount which would probably be changed once a year, is unwarranted. We have italicized the passages in the above extracts to which we wish to direct the particular attention of "the Cincinnati Central Club."—Ed. Nation.]

PRESIDENT HAYES'S HONOR.

"The Electoral Commission . . . delivered the country from a great peril, and Mr. Hayes from what was, or ought to have been, a great perplexity. It gave him as good a title to the Presidency as was possible under the circumstances, and a good enough title to satisfy all sensible men who cared more for the stability of the Government and the prosperity of the country than for the triumph of any political party. It not only enabled him to take the place without discredit, but made it impossible to avoid taking it. It was awarded to him by as good authority as if Congress, instead of creating the Electoral Commission, had itself declared him elected in the usual way. The fact that frauds had occurred in any particular State concerned him no more in the one case than it would have concerned him in the other. No honorable man could accept the Presidency if before accepting it he was bound to satisfy himself that in every State in which he had a majority, the vote had been lawfully cast and the count honestly made."—*Nation,* May 2.

To the Editor of The Nation:

Sir: I do not object to the political conclusions reached in the above paragraph, but its ethics are shocking, and it confuses the moral duties of Mr. Hayes by making no distinction between his obligations before and after the Electoral Commission.

The scamp whose title to his property is secured by his plea of the statute of limitations, or his minority, is no less a scamp because of the security which the law, for other than moral reasons, gives him. His title is good, but decent people give him a wide berth.

That Mr. Hayes, under ordinary circumstances, ought to have taken for granted that the election was fair, and was not "bound to satisfy himself that in every State in which" a majority was returned for him "the vote had been lawfully cast and honestly counted," may be assumed. *Omnia præsumuntur rite acta* is, perhaps, predicable of elections as well as judicial proceedings. But how when that presumption of correctness is rebutted and destroyed? How when honest men of his own party (Gen. Barlow) sent there by him reported to him that he had not a majority in Florida? How when honest newspapers (the *Nation* among others) told him he was not elected? How when every honest man in the country knew that the vilest wretches in the land were his election officers, counting, altering, forging, and swearing falsely for him, and that his friends, "the visiting statesmen," all since rewarded by him, stood by and silently or otherwise helped the cause along? Then one would say that the presumption of fairness which you invoke for Mr. Hayes hardly applies, and he was, if an honorable man, bound to do something. What?

It was not after the decision of the Electoral Committee that Mr. Hayes committed his crime. It commenced on the morning after the election, when Wm. E. Chandler, chairman of the committee conducting his canvass, telegraphed South that Louisiana and Florida *must* be held for the Republicans. From that hour to the time when the Returning Boards returned the fraudulent majorities was the supreme hour for Mr. Hayes. Can it be doubted that a word, a hint from him then on the side of truth, would have prevailed? Will the *Nation* maintain that it was not for him to have said that word then, in the face of what was notorious to every honest man? Silence, or what in the light of after events must be construed into worse than silence—acquiescence with knowledge—on the acts of his agents, is Mr. Hayes's dishonor, and no verdict of any tribunal on the question of his title, especially that of a tribunal which (properly, I think) gave him his title because it could not investigate the fraud, can wash out that stain.

When the public works of Pennsylvania were sold by the State to the Pennsylvania Railroad, corruption ran riot in the Legislature. It was barely concealed sufficiently to prevent legislative enquiry. Every one knew of it—what men's votes were bought, how much went into this one's pocket, and how that man managed it. Yet in a litigation arising out of it the president of the mighty corporation out of whose treasury the money came was able to swear that he did not know of any improper practices through which the legislation was procured. Are you of the opinion that the president of this road, much more the would-be President of this great Republic, from whose exalted seat no beams save those of the highest purity and honor should be reflected, can call about him the villains of his community, can show them the end he would accomplish, can fill their hands with money, and then say that *he* knew of no unlawful means used?

No! We won't deny his title. But let not the *Nation,* of all the papers in this country, say that the question of Mr. Hayes's title is the question of his honor. J. S.

Philadelphia, May 8, 1878.

[We have not overlooked the distinction between Mr. Hayes's position before and after the decision of the Commission. We said very distinctly at the time that we saw no way in which he could take the place by the award of his own party simply—that is, by the proposed count by the Vice-President, backed by the Army and Navy,

and supported by the reports of "visiting statesmen." That scheme having been fortunately abandoned, we thought him, under all the circumstances, justified in concluding that inasmuch as it was not his purely personal concern, he being really the representative of a party containing a large body of men as moral and honorable as himself, he ought to wait and see what *both* parties would decide as to the best mode of terminating the controversy, and abide by the result. Both parties did come to an agreement, and arranged that the office should be awarded to one of two claimants in a certain manner, and it was so awarded. J. S.'s parallel about the statute of limitation fails, owing to the fact that "the scamp's" rival claimant never agreed to have the matter settled by the statute of limitations, or by proof of the date of his birth.

We confess, however, that we do not and did not look on Mr. Hayes's attitude during the count down in Florida and Louisiana as entirely satisfactory. He ought not, we thought and think, to have permitted the operations of the "visiting statesmen," and his conduct at that period has been put in a worse light by the rewards since showered on those "statesmen," and on members of the Returning Boards. We naturally think, too, that he ought to have paid more heed to General Barlow and the *Nation*. But when it comes to setting him down as dishonorable for these reasons we are met by serious difficulties which do not seem to have occurred to J. S. We do not feel that we have a right to exact from Mr. Hayes, in a time of tremendous popular excitement, a nicer sense of propriety than that which during that unfortunate winter prevailed among the bulk of the best members of his own party. We believe he was sustained in his attitude by the great body of the most honest and upright Republicans, and it was idle to expect that he would not be much influenced by this support in the midst of a crisis which put such a terrible strain on the judgment; and it would be unjust to heap reprobation on him for doing what a thousand honored and honorable men, whom we could name, would have done in his place. That the moral standard of these thousand was at the time temporarily lowered we do not deny, but it was lowered just as the standard of so many excellent men is lowered in war, when the end seems so tremendous that their sense of proportion is disordered, and any means seem welcome and even lawful.

It must be taken into account, too, that the consciences of those worthy Republicans who believed the Returning Boards had cheated Tilden were quieted by the equally strong belief that Hayes had been cheated at the polls by intimidation and violence, and that in the matter of fraud, therefore, both candidates stood on the same level. We pointed out frequently in these columns what we considered the objection to this theory, but we never felt authorized to denounce as a rascal anybody who did not accept our view. As an illustration of the condition of the public mind at that time on points of morals, we may recall the fact that we suggested as a way out of the terrible dilemma in which the country found itself in the month following the election, that any member of the Electoral College who thought what J. S. thinks Mr. Hayes ought to have known, and must have known – that the vote of Florida and Louisiana had been fraudulently counted—should, by casting his vote for a third candidate, refuse to consummate the fraud, so as to throw the election into the House and thus commit the issue to the regular machinery of the Constitution. That an elector who thought so was bound to withhold his vote from the conspirators, in the absence of any mode of reporting the facts to his constituents and resigning his trust to them, is as plain a proposition in morals as the Eighth Commandment. Nevertheless, not only did no elector think so—which is not perhaps surprising—but thousands of professed moralists, ministers, editors of "religious" papers, deacons, and what not, thought that the mere proposal that an elector should divert his vote, fraud or no fraud, was a shocking one. In other words, a mere political usage was more sacred in their eyes than one of the fundamental canons of civilized morality. In view of this state of facts, why single out Mr. Hayes as peculiarly and conspicuously feeble in his moral perceptions?—Ed. Nation.]

Notes.

A SECOND edition of Tuckerman's 'Greeks of To-Day' has just been published by G. P. Putnam's Sons. On comparing it with the edition of 1872 we find that it has been revised to good purpose, though not thoroughly, and can now be praised with less reserve than formerly.——Revisions and additions, including a number of maps, have added much to the value of Leeds's 'History of the United States,' of which the second edition has lately appeared (Lippincott & Co.)——Sheldon & Co. have issued Wayland's 'Elements of Political Economy,' recast and freshened by Dr. Chapin, President of Beloit College.——Dr. R. S. Storrs's two public addresses on "The Early American Spirit" and "The Declaration of Independence," heretofore printed separately, have now been brought out in one elegant volume by A. D. F. Randolph & Co.——The following are among the latest Government publications: Vol. vii. of the U. S. Geological Survey of the Territories, 4to, being Prof. Lesquereux's report on the Tertiary Flora of the West, accompanied by sixty-two highly interesting plates of fossil leaves; the same Survey's Bulletin (vol. iv., No. 1), of whose fourteen articles we can only mention Sennett on the Birds of the Lower Rio Grande, and Coues on a Breed of Solid-hoofed Pigs in Texas; and vol. iii. of the Powell Survey's 'Contributions to North American Ethnology,' 4to. This last is a report on the tribes of California by Stephen Powers, and has a popular as well as a scientific interest, being well garnished with legends and excellent illustrations.——The discussion in which Prof. Dunbar had the last word is continued in the *Penn Monthly* for May, by Prof. R E. Thompson, who writes of the "Use and Abuse of Examinations."——The third year of the Bowdoin College Summer School of Science opens July 15, at Brunswick, Me., and lasts six weeks. Instruction will be given in chemistry, mineralogy, and zoölogy.——The London scientific journal, *Nature*, begins this month a new volume, and announces simultaneously that it will be enlarged and that its price will be raised. This is a sign of prosperity which every one who knows the character of the paper, and its immense utility as a scientific medium, must rejoice to observe.——Prof. Ernst Curtius's 'Atlas of Athens' will soon appear, with twelve new maps.——A "Mazarin" Bible is to be sold in Paris, June 1; it is described as more perfect than the one which brought £3,400 at the Perkins sale in 1873.——Houghton, Osgood & Co. have nearly ready a volume of 'Memorial and Biographical Sketches,' ranging from Rousseau to John A. Andrew, by the Rev. James Freeman Clarke.——R. Worthington is about to bring out a new and enlarged edition of Lord Dufferin's 'Letters from High Latitudes.'——Fords, Howard & Hulbert will publish, May 22, Mrs. H. B. Stowe's 'Poganuc People.'——The obituary of the week includes, besides the honored head of the Smithsonian Institution, Miss Catherine E. Beecher, the oldest child of Lyman Beecher, and a prolific and useful author in her day.

—That which is inevitable is sure to come to pass, and "cultured" Boston may thank the committee of divines and other well-intentioned men who set up and support Joseph Cook, for *un mauvais quart d'heure*, very amusing withal, to which the *Saturday Review* treats us in its review of the Lectures on Biology. The title of the article, "Spread-Eagle Philosophy," is not amiss, and the inference that the lectures "show one what the metaphysics of Massachusetts are like, and the kind of style and of argument that pleases a serious American audience," is not unfair under the circumstances. Having noticed how these demoralizing deliverances were lauded by a Boston audience with an unequalled amount of brains in it, the reviewer may well "wonder what sort of trash he could pour out before an audience which he held in less respect." The following hits the mark:

"'Herr Lotze's philosophy,' we are informed, 'is the most brilliant, the most audacious, the most abreast of the time, of all the philosophies of the globe.' *The most abreast of the time*—these words sum up the popular conception of philosophy. Who is the very newest man? people ask; what is the 'last novelty' in opinion? That is the faith to run after, just as the last hideous color is the most fashionable. People seem to think that Herr Lotze, or Herr Haeckel, or Mr. Huxley has found something out that proves or disproves the mysterious and eternal questions. If we have loops at the end of our nerves all is well; there is a God and a future life. If the horse is descended from a pony no bigger than a fox, let us eat and drink, for to-morrow we die. The last speaker is sure to know best; the most recent work on the microscope contains the secret of the universe."

—Whoever has enjoyed Zamacois's well-known painting, "The Education of a Prince," will appreciate the contrast afforded by the account,

in *Scribner's* for April, of the school-life of the young Queen Mercédès of Spain. The story is told by one of her fellow-pupils in a conventual *pensionnat* near Paris during the term 1873–74. The princess was a day-scholar only; her Boston friend, the writer, spent all her time at the convent. The gossip about Mercédès is conveyed in a series of home letters, lively and graphic, and of unusual literary merit considering the age of the writer. Except in being addressed as Madame, the princess of thirteen was treated to perfect equality, and she eagerly courted it. She would not lend the weight of her rank to a movement to pardon an offender justly punished, in her opinion; she would neither head it nor join it at all, much as the culprit was wanted for a play in which a leading part fell to her. Other characteristic scènes are where Mercédès herself submits to a just though humiliating punishment, and afterwards voluntarily thanks her superior for reminding her of her duty "to give the highest example"; where she tries to recite Longfellow's "Psalm of Life" and breaks down, and sits down as if the earth had swallowed her up, in mortification; and where she avoids taking the honor of a purple ribbon because she thinks she does not deserve it. These incidents speak well for her conscientious disposition and careful training. One curious family custom is reported on her authority. The youthful Montpensiers are never allowed to retire for the night without receiving their father's blessing, and usually they keep very early hours. Sometimes, however, "when their father is off with the hunt he is delayed till nearly midnight; but, instead of undressing, the children stay down-stairs and take naps in chairs till he gets back. . . . When the father comes home they just wake up enough to receive his embrace and blessing, and get off to bed as fast as they can." Besides what this article ("A Queen at School") has to tell of its immediate subject, it may be recommended for its spirited pictures of religious *pension* life. Extremes seem to meet when we read a passage like the following, which suggests the ideal of co-education:

"After they had gone, *Horatio*, *Bernardo*, and I repaired to the dressing-room to get ready, studying our parts till the last moment, and Sister Marie N—— flying round to put us in order. What a palpitation of the heart it does give you to have a pretty creature, with whom you are desperately in love, suddenly drop on her knees before you to strap up your boots!"

—The *Sun* has obtained from Mr. Schuckers (the biographer of Chief-Justice Chase), and published, the protest drawn up at the time of the forced rehearing of the legal-tender cases by the judges who were opposed to the reopening of the question. This paper, corroborated in many points by a narrative of the circumstances written by the Chief-Justice, and now also published for the first time, was actually filed with the Clerk of the Court, in 1870, but was subsequently withdrawn from the records. It gives the following history of the matter: At the time of the legal-tender arguments the legal-tender question was involved in a number of cases before the court; in order to avoid the necessity of going over the ground several times, the cases of Lathams *agst.* the United States and Deming *agst.* the United States were continued on an order of Court that the question should be argued in other cases, and not in them. That these cases were to abide the result in the others was the understanding of counsel, as is proved by notes addressed by them to the Chief-Justice; beside this, leave was given to the Attorney-General to make an argument on behalf of the Government, and under this permission Mr. Evarts did make a full and thorough argument. Every precaution having thus been taken, the legal-tender question was decided in a series of cases ending with Hepburn *agst.* Griswold, in which the legal-tender acts were decided to be unconstitutional as to contracts made before their passage, by five judges to three; this decision was made in conference January 29, 1870, but the reading of it was delayed a week to give time for the preparation of the dissenting opinion. The cases having all been thus decided, Messrs. Bradley and Strong were made members of the court, and "within two days after this change had been effected, the Attorney-General (Judge Hoar) moved that these two cases, which had been passed under the order already stated, be set down for argument, and suggested that the legal-tender question might be reconsidered in them." "And then," the protest continues, "for the first time we heard it insisted that the legal-tender question had not been argued and decided in those identical cases, and might therefore be re-argued in them." But, besides the objection to reargument arising from the fact that the understanding had been all along that the Latham and Deming cases should abide the result in the others, there was in force a rule of court announced in 1852, and "very recently reiterated," to the effect that no reargument could be granted in any case "unless a member of the court who concurred in the judgment desired it." Notwithstanding all this the reargument was ordered by a vote of five to four, the majority being secured by the union of the two new judges with the minority. Considering that it was known in advance almost certainly how these new judges would vote, it would require a good deal of evidence, after the publication of this document, to refute the charge that the court was "packed" to obtain a reversal.

—Calmann Lévy has published Emile Augier's plays in six volumes. Augier was one of the followers of Ponsard in the reaction against the Romantic school that began about 1843. His first play "La ciguë" had a Greek story; it was as bright as Ponsard's "Lucrèce" was austere. He soon turned to the comedy of contemporary manners, but so long as he wrote in verse it was evident that the Greeks and the poets of the seventeenth century had all his admiration; and even in his prose comedies there is that restraint and absence of passion and sensation that becomes a disciple at once of the classic school and the "school of good sense." Many of the plays seem in some respects more like novels than dramas. The movement is a little slow, the action is peaceable, there is a certain want of force to which we are not accustomed on the stage. Nevertheless, almost every one has been warmly applauded, and they are excellent reading, with their graceful versification, sparkling dialogue, and most ingenious studies of character. Some of the comedies that are highly esteemed by the French critics—and indeed, so far as their words go, have little that is objectionable—offend American sensibilities by their subject. Naturally the pieces "qui relèvent une plaie sociale" are not altogether agreeable reading. But the following can be recommended to any one: "L'habit vert," "Ceinture dorée," "La pierre de touche," "Un beau mariage," "Maître Guérin," "Lions et renards," "Le post-scriptum," and, less unreservedly, "Philiberte." Augier has just brought out a new five-act comedy, "Les Fourchambault" with such success that his election to the Academy is thought to be assured.

—All students of Spanish literature and all lovers of the sonnet doubtless remember the celebrated "Sonnet to Violante" in Lope de Vega's comedy, "Niña de Plata." In it the poet bewails his inability to obey his mistress's request to rhyme her fourteen lines, and so bewailing and half unconscious, as it were, achieves the task. The idea has been imitated many times and in many languages; in Italian by Marino; in French by Voiture, who adopts the "rondeau" form instead of the sonnet. In Lord Holland's 'Life of Lope de Vega' (London, 1817) is an English version by Edwards, and this French one by Regnier Desmarets:

"Doris, qui sait qu'aux vers quelquefois je me plais,
Me demande un sonnet, et je m'en désespère
Quatorze vers; Grand Dieu! le moyen de les faire!
En voilà cependant quatre déjà de faits.
Je ne pouvois d'abord trouver de rime; mais
En faisant on apprend à se tirer d'affaire.
Poursuivons: les quatrains ne m'étonneront guères,
Si du premier tercet je pus faire les frais.
Je commence au hazard; et si je ne m'abuse,
Je n'ai pas commencé sans l'aveu de la muse.
Puisqu'en si peu de tems je m'en tire du net,
J'entame le second, et ma joie est extrême;
Car des vers commandés, j'achève le treizième;
Comptez s'ils sont quatorze, et voilà le sonnet."

In the recently issued almanac of the Paris newspaper, *Le Figaro*, is this somewhat similar sonnet by M. Henri Meilhac—a writer generally of sufficient originality not to tread in the tracks of his predecessors:

"Un sonnet, dites-vous; savez-vous bien, Madame,
Qu'il me faudra trouver trois rimes à sonnet?
Madame, heureusement, rime avec âme et flamme,
Et le premier quatrain me semble assez complet.

"J'entame le second, le second je l'entame,
Et prends en l'entamant un air tout guilleret,
Car ne m'étant encor point servi du mot âme,
Je compte m'en servir, et m'en sers en effet.

"Vous m'accorderez bien, maintenant, j'imagine,
Qu'un sonnet sans amour ferait fort triste mine,
Qu'il aurait l'air boiteux, contrefait, mal tourné.

"Il nous faut de l'amour, il nous en faut quand même;
J'écris donc en tremblant: Je vous aime ou je t'aime,
Et voilà, pour le coup, mon sonnet terminé."

A neat English version of Voiture's rondeau, turning on the same point, can be found in Mr. Austin Dobson's 'Proverbs in Porcelain.' And while we are discussing this class of literary coincidence we may as well note that Mr. Bret Harte seems to have taken a fancy to Mr. Dobson's dainty "Tu Quoque," for in a recent poem the American poet has "lifted" the color and form of the English poet's Horatian verse.

—A writer in the Milan *Perseveranza* of April 21, 24, discusses the portraits of Columbus whose claims are worth considering. He begins by declining to express any opinion about a portrait said to have turned up here at a sale in New Orleans in 1865, and which he had not seen; but he clearly intimates his belief that it is one of those sophistications for which the special word "humbug" has been devised. The portrait regarded as

most genuine, he says, is that attributed to Antonio del Rincon, the favorite court-painter of Ferdinand and Isabella, whose portraits by him are still preserved at Toledo. This artist died at Seville in 1500. After enumerating the several likenesses reproduced by De Bry; that attributed to Parmigianino and preserved in the National Museum at Naples, which was accepted by Prescott; Colendi's engraving from an old anonymous portrait in the family of Colombo of Cuccaro; the niello (after an original design by Stradano) copied by Paul Lacroix in vol. i. of his 'Les Arts au Moyen Age,' and others, the writer gives his reason for thinking that the miniature of Saint Christopher at the head of De la Cosa's Map of the New World (1500) may be intended to represent Columbus. If so, the likeness might be allowed a place amongst the most probable, seeing that John De la Cosa accompanied Columbus as pilot in his second voyage (1493), which the map delineates. This idea has occurred to others, *e.g.*, Ferdinand Denis; and Michael Colin's edition of Herrera's 'Novus Orbis' (Amsterdam, 1623) has a portrait of Columbus which *appears* to be De la Cosa's St. Christopher enlarged.

—We feel that we are doing those of our readers who are especially devoted to the study of the Greek language, and are sufficiently familiar with German to use the book to advantage, a service by calling their attention to J. H. Heinrich Schmidt's 'Synonymik der griechischen Sprache,' the first volume of which came out not much more than a year and a half ago, and the second volume of which appeared recently. We might be surprised at the fact that works on Greek synonyms are so rare, although the subject is one of such great importance, especially in the case of a language whose vocabulary is so copious and at the same time full of such delicate distinctions of meaning, if we did not know the extraordinary difficulty of the task, and the almost total absence of preparatory monographs by uniting, improving, and enlarging which a comprehensive work on Greek synonyms might be formed. Something in this direction has, indeed, been done—observations as to synonyms are found scattered over the whole field of Greek philological literature; but this is the first time that the subject has been treated on so extensive a scale, with so scientific a method, and with proper, not excessive, attention to comparative philology as far as it bears on Greek etymology. The author promises to give us the third volume at no very distant date, and immediately afterwards to prepare a comparative manual of Greek and Latin synonyms for the use of schools.

—From German papers we gather the following statistics concerning the number of students at their principal universities during the past winter:

	Theology.		Law.	Medicine.	"Philosophy."	
	Evang	Cath.				
Berlin	168	—	1,758	345	1,163	2,834
Bonn	50	89	219	126	375	895
Breslau	49	52	432	168	552	1,253
Erlangen	133	—	51	110	154	448
Freiburg	—	41	77	143	70	331
Giessen	20	—	88	61	130	294
Göttingen	86	—	275	115	433	909
Greifswald	43	—	73	218	126	460
Königsberg	43	—	174	134	305	655
Leipzig	339	—	1,067	365	1,263	3,034
Marburg	51	—	85	100	179	415
Strassburg	49	—	156	147	275	627
Tübingen	215	168	256	222	145	946
Würzburg	—	135	92	431	274	922

These figures are at least interesting as showing the continued prosperity of the Leipzig University, and that Berlin promises to regain something of its former numerical glory. At Leipzig there has been a pretty regular growth, the figures for the summer semester of 1872 being, for example, 2,315, while for that of 1877 they were 2,842. Berlin, on the other hand, has shown a curious fluctuation, due, perhaps, in a measure to the hard times and high rents; the number of matriculated students has been: winter 1871–2, 2,603; summer 1872, 1,990; winter 1873–4, 1,757; summer 1874, 1,609; winter 1874–5, 1,824; summer 1877, 2,237. There is another way of calculating the attendance upon the Berlin University, by including the students of several institutions who are permitted to attend university lectures. As this privilege is given to the *Bau-Akademie*, the *Gewerbe-Akademie*, and the *Berg-Akademie*, as well as to the training-school for the army medical service, and those permitted to attend lectures without matriculation, the teaching influence of the University is represented by adding from 1,000 to 1,500 to the number of matriculated students, resulting this past winter in the handsome number of 4,386, the corresponding sum for last summer being 4,311. At Leipzig there are no such institutions to draw from, and the matriculated students form without question the great majority of the hearers of lectures, the number of those who are admitted to lectures without being matriculated varying from 100 to 125 only; this gives Leipzig for the past winter the number 2,163, that for the preceding summer having been 2,038.

RECENT POETRY.

In some previous papers under this head it has been necessary to exhibit some flowers of rhetoric so marvellous as to excite a little incredulity among readers. It has been suggested that we must have invented them; that they never could have been seriously printed in books. If this distrust has been created by merely local and cis-Atlantic productions, it is hard to predict what will be said when the book under consideration is 'Elva: a Story of the Dark Ages,' by Viscount de Figanière, G.C. St. Anne, late Envoy Extraordinary and Minister Plenipotentiary of his Majesty the King of Portugal at the Imperial Court of Russia, from 1870 to 1876 (London: Trübner). The very announcement sounds improbable and suspicious. Mr. Blaine, for instance, reflecting on the small size of the kingdom of Portugal, must be amazed at the daring of a mere foreigner who claims for himself so many titles to the square inch. General Badeau must be astounded that any one but an American consul should announce himself so loftily. The book was apparently written in Russia, by a Portuguese gentleman; the scene is laid in Spain; it is dedicated to an English lady, and on the closing pages there is a list of the author's additional titles and honors, as well as of his writings in English, French, and Portuguese. It thus comes to us as a sort of poetic International Exposition, and there is nothing left for Americans but to inspect it.

It was, perhaps, wrong to say that the scene is laid in Spain, since a large part of the action takes place in the atmosphere above that peninsula. Most of the *dramatis personæ* are bewitched in different ways; they rise out of ponds, disappear through windows, ride magic coursers, and exhibit claws and cloven hoofs. One of them thus describes his parentage, and his parents' wedding:

> "I said my father was a Jew—
> His name is in Leviticus—
> But he was then an incubus
> When he my mother knew.
> They met, and married near a bog,
> Where hissed the snake and croaked the frog.
> An owlet black performed the rite,
> While tempest howling chilled the night.
>
> The nuptials graced an ape and bat;
> There came a toad, a swarthy cat;
> There squatted, too, the frog hard by,
> Safe in its back the bone;
> There coiled the adder, and its eye
> The carbuncle outshone" (p. 18).

There is a good deal of this sort of society, and it is, on the whole, preferable to that of the supernatural performers who constantly appear in the book. The nearest approach to a human being is Elva herself, who is ultimately vowed to the fiends, in a rash moment, by her father. She is thus represented:

> "Her beauteous face can well portray
> The early blush of lovely day,
> But ne'er damned spirit's hate!
> Her glossy hair, so soft and fine,
> Eyes which decorum shades—
> Swimming in lymph more crystalline
> Than dew on quiv'ring blades" (p. 21).

Allowing for some difference of longitude, the landscape scenery reminds one very much of the Michigan poem of "Teuchsa Grondie," noticed in these columns some weeks ago. Take, for instance, the following Homeric catalogue of localities:

> "The sierras Dima, steep Lecándè,
> Altah, Gorbea, and Ochándè,
> Send forth their hardy denizens
> Who meet, near Oca's base,
> With those whom claim Durango's glens,
> And mingling there in scores or tens,
> A common way they trace;
> While some in wherries forward urge,
> The rest walk by Mundaca's verge.
> Not far from Cosnoaga's side—
> Which greets Astraeus' roral bride" (p. 52).

Here is a milder description, portraying cloud-scenery at nightfall:

> "The mass crenated edges rolled,
> And eft assumed a smaller mould;
> The while its pitchy darkness sped,
> And sapph'rine silver through it spread;
> Then so diaph'nous was its sheen,
> That twinkling stars athwart were seen.
> Such vap'ry stool had lightly pressed
> Kind Mary's feet, I trow,
> When she, 'mid cherubim, angels blest,
> Gave from on high some holy hest,
> Or her esteem in smiles expressed,
> To rapted saint below" (p. 89).

But such peaceful scenes are rarely found in this volume. The author is in incessant motion; his headquarters are in the saddle, like General Pope's. In the first canto he gives chase to a mad bull, and in the last he rides upon a goblin mare, the vehemence of whose movements is thus described:

> "They see a something leap the wall—
> A fox?—a deer?—a horse? They call—
> Whiz! driz! 'tis in their midst. Aghast
> They scatter, or they fall. 'Tis past!
> A mile away. The hedge is cleared—
> Ere Echo ceased, 't had disappeared" (p. 153).

Thus rapidly, and thus regretfully, must we permit the Viscount de Figanière to disappear from these pages.

It is impossible to speak favorably of Mr. Paul Dyrsen's 'Goethe's Poems, translated in the original metres' (New York: Christern). The translator aims at a full version of Goethe's minor poems; the intention is praiseworthy, but the utter want of poetic grace and form renders the whole effort a failure, while the meaning is sometimes so hopelessly perverted as to suggest a doubt whether the translator is familiar with either English or German. One would say, for instance, that it was impossible wholly to spoil the lovely little song of the child Mignon in "Wilhelm Meister" when she wishes to retain the angel-garments she is wearing. "So lasst mich scheinen bis ich werde," she says; and Carlyle translates it *verbatim*, and yet gracefully: "Such let me seem till such I be." Mr. Dyrsen drops all this innocent yearning, and substitutes the exceedingly prosaic statement:

> "What I shall be I now am seeming."

Again, in the yet more familiar verses from the same book, beginning

> "Wer nie sein Brod mit Thränen ass,"

he contrives to denude the poem of all its solemn sweetness, and to introduce additions of his own; thus:

> "Who never ate with tears his bread,
> Who never by remorse persistent
> For nights was kept awake in bed,
> Does not yet know that God is distant.
>
> "That we are born, and have desires
> That lead us into sin, he suffers,
> And wretchedness till life expires
> To make atonement for He offers."

The last line, if intelligible, is misleading; and the "remorse persistent" and "God is distant" are both added by the translator.

Mr. Henry Phillips, Jr.'s 'Poems translated from the Spanish and German' (Philadelphia: privately printed) may be read to advantage after those just mentioned, and have a fair degree of merit. They are, however, disfigured by a frequent habit of italicizing important and even unimportant words, thus really affronting the reader's intelligence, and making what is flat sometimes seem flatter, as in this from Von Zedlitz:

> "I met a beauteous maiden
> Whose thoughts were pure as snow;
> Her voice was like a mellow flute,
> My heart was in a glow.
>
> "Her words were full of wisdom,
> Her soul, of feelings strong;
> She *seemed* a perfect woman—
> *Though probably I'm wrong*" (p. 71).

'Poke o' Moonshine,' by Latham Cornell Strong (New York: G. P. Putnam's Sons), is written with more care and thoughtfulness than most poems of its class, but it has a most unattractive title and an Indian theme. No one has ever yet explained why it is so hard to make long poems on Indian subjects agreeable or even readable; but even Whittier has not conquered this difficulty. Yet we prefer the rather tiresome simplicity of this tale to the jaunty air and sensuous themes of 'Cothurnus and Lyre,' by Edward J. Harding (New York: Authors' Publishing Company). This volume was written, as is stated, by "a young English bookkeeper, at present residing in New York, and composed in the scanty leisure of his evenings and early mornings." There is something modest and disarming in this appeal, but the tone of the poems hardly carries it out; they seem intended rather to challenge the reader's homage than to win his sympathy. The main poem is a drama entitled "Ernest," of whose style this is perhaps an unfavorable sample:

> "O maddening moon! I miss thy beams to-night:
> Enchanted seas antipodal pursue
> Thy white and cruel feet; for me, I shudder
> At thy sardonic lights and awful shades,
> Thy cold embraces and thy deadly loves,
> Thy sterile coinage of illusive silver,
> Mirage of limpid springs on arid sands,
> And all thy meretricious comeliness" (p. 26).

This dramatic poem has a modern English theme, and is crammed with horrors; it may have some strength behind the crudeness, but it is hard to tell. The eighteen "odes" which follow seem to aim at a Horatian flavor, but that is all which can be said for them.

'The Viking, Guy, Legend of the Moxahala, and Other Poems,' by Charles Edgar Spencer (Philadelphia: Lippincott), is a thick volume of beautifully-printed verses, which give an impression of great ease and volubility in rhyming, and of a ready imitativeness. The reflection of various authors greets us in turning the pages, and among these is that of the most dangerous of all models, Poe. The poem "Ouranopetes" contains fourteen stanzas in the following strain:

> "I remember—and thus am I cursed.
> O how sweet were a Lethean measure
> To deaden the memory of Pleasure
> When the bright-tinted bubble is burst!
> When dreams that, while *dreaming*,
> Seem teeming
> With bliss,
> Are no more;
> Ah! why are we doom'd to deplore
> That *something* we ever shall miss?" (p. 195).

The flavor of Poe being thus dangerous, it seems a relief to turn to a poet who prefers that of Aldrich. Mr. Edgar Fawcett dedicates his 'Fantasy and Passion' (Boston: Roberts Bros.) to this older poet, and has before now taken pains, in other ways, to show his fidelity to his friend. Such loyalty is to be respected, but it is self-limiting; a man usually names his standard in his dedication. However pleasing may be the poems of Mr. Aldrich, it will hardly be asserted that they show enough of wealth or vigor to allow of much dilution, and imitation must almost inevitably dilute. The result is what we should expect—where Mr. Aldrich is weak, Mr. Fawcett is weaker; where Mr. Aldrich seems a little over-dainty, Mr. Fawcett is simply spasmodic. What other epithet can be given to a verse like this, from the poem on "The Winds"?

> "Here grouped in superb frigidity
> The blasts of the North repose,
> Proud spirits of stern intrepidity
> Whose wings with clangors unclose.
> In their saturnine eyes crepuscular
> Cold hatreds bitterly glow;
> In the girth of their dark arms muscular
> Lie shipwreck, ruin, and woe!" (p. 120).

There is one trait in which Mr. Fawcett especially reminds us of his friend: the frequent selection of too large a canvas for some slight and delicate thought. "The White Rose Lover" is one of Mr. Aldrich's prettiest conceits, and it is hammered out into four verses only; but it would be still better in two. Thus Mr. Fawcett, wandering in a neglected garden, sees in fancy the encroaching weeds as an insurgent mob and the one white rose as a fair young queen. It is a genuinely poetic motive; Heine would have crystallized it into two short verses, and Browning into a line and a half, but it takes Mr. Fawcett twenty-four lines, and before he is half through the material is exhausted. The same defect marks many of the "fantasy" poems—too much elaboration for the thought; while in the verses of passion the reader has a constant suspicion that the poet is nourishing, encouraging, and, so to say, pumping up his emotions. The simple fact that out of the hundred and twenty-five poems in this volume all but seven end with exclamation points, awakens a suspicion of their genuineness. The volcano does not need to erect guide-posts to show where the lava flows. There is so much of this attitudinizing, and so much of the repulsive, in Mr. Fawcett's pages that the reader is often in doubt whether to recognize him as a poet at all, were it not that he sometimes consents to show himself tender and strong and self-restrained, as in this:

> "IF TRULY.
>
> "If truly thou art still the same,
> Deep-eyed, soft-speaking as of old;
> If nothing strange or sad or cold,
> Nothing that hints of tears untold,
> Nothing that one might name or might not name,
> Meeting thee after these flown years be seen,
> To mar the accustomed sweetness of thy mien,
> Then surely 'tis not mine to chide
> Harsh fate, being satisfied!
>
> "If truly thou art happy, this
> Alone suffices, love, to me!
> If all that I might ever be
> That other now has grown; if he
> Awakes the pure deep thrills of utter bliss
> I had believed one only could awake;
> If he has found the secret that can make
> Thy days to music glide—
> Enough! I am satisfied!" (p. 63).

LORD MELBOURNE.*

WHEN the Whigs offered Sir Walter Scott the use of a frigate to convey him to the Mediterranean, he "exclaimed that things were still in the hands of gentlemen." The words, though only the expression of personal feeling, precisely hit off a striking peculiarity of the peaceful

* 'Memoirs of the Right Honorable William, second Viscount Melbourne. By W. M. Torrens.' New York: Macmillan & Co.

revolution carried through by the authors of the Reform Bill. The control of a democratic movement remained throughout "in the hands of gentlemen." Of the gentlemanlike aspect of the Whig revolution Lord Melbourne was the representative. He was in every fibre a gentleman and a man of fashion. He had the knowledge of the world, the coolness, the easy temper, the agreeable manners, the suavity, and the wit which secure and deserve social success. He possessed just that kind of cultivation and interest in intellectual pursuits which adds weight and distinction to social talents. He held power for at least as long a period as any Minister who has been in office since 1830. He lived at a period of great changes and keen party feeling; yet even now he is remembered, as far as he is remembered at all, not like Brougham for his marked personality, not like Lord Russell for his connection with great measures, not even like Palmerston for remarkable administrative powers, but for *mots*, such as the well-known "Can't you leave it alone?" or "I wish I were as cocksure of anything as Tom Macaulay is of everything," which have much more connection with knowledge of life than with statesmanship. So slight, indeed, is the impression which he has made on the minds of his countrymen that such permanent fame as he will possess arises from Sydney Smith's picture of his manner:

"Our viscount," writes the Whig reviewer, "is somewhat of an impostor. Instead of being the ignorant man he pretends to be, before he meets the deputation of tallow-chandlers in the morning he sits up half the night talking with —— about melting and skimming, and then, although he has acquired knowledge enough to work off a whole vat of prime Leicestershire tallow, he pretends next morning not to know the difference between a dip and a mould. I, moreover, believe him to be conscientiously alive to the good or evil that he is doing; but if you have no mind to put or be put to, the sooner you get out of his way the better."

The eight hundred pages of Mr. McCullagh Torrens's turgid rhetoric will not convey to the reader half so vivid an idea of the patriotic *poco-curante* who presided over the English Government at a most critical period as may be derived from the ten or twelve lines of Sydney Smith's banter. When we add to this the fact, mentioned by a reviewer who apparently knew the viscount, that not one of Lord Melbourne's best remarks can be quoted without a free use of expletives which the taste or the religious sentiment of modern times condemns, we may form some idea of the character of the man of fashion who, with all the talents which fitted him to shine in the society that gathered round George the Fourth when the Regent still affected to care for wit, was destined to guide England through the transition period which divides the aristocratic Toryism of Lord Liverpool and Lord Eldon from the Conservatism of Peel or the closely-allied Liberalism of Cobden.

The first feeling which arises in the mind of an historical student who weighs impartially the talents and the career of Lord Melbourne is curiosity to ascertain what was the force or fate which placed an easygoing man of the world at the head of affairs at a time of vehement party feeling. The answer is not far to seek. The power which made Melbourne Prime Minister was the same power which took Lord Althorp from his hunters and his prize-fighters and set him to make budgets. This power was the House of Commons. Macaulay has written pages to show that, as eloquence governs Parliament, the tendency of parliamentary government is to place men in office simply because of their capacity for speaking. Lord Russell has retorted with considerable effect that the House of Commons has again and again refused to follow the most brilliant rhetoricians, and has forced into power men who abhorred office and who could not string together ten sentences of idiomatic English. Yet, while appearing to differ, these expounders of sound constitutional doctrine at bottom agree. Where Parliament is sovereign, qualities which captivate Parliament are rewarded by office. The eloquence which charms or overawes a deliberative assembly will not miss its reward. But an assembly is influenced by other qualities than eloquence; high character, what people call weight, tact, knowledge of men, powers of management, or it may be talent for intrigue—all have their effect on a legislative body, and are certain to receive from such a body the honor which it can confer. Lord Melbourne floated into power because, without eloquence and without high statesmanlike capacity, he conciliated the liking and trust of the respectable and commonplace gentlemen who have seats in Parliament. That the men who have Parliamentary talents will reap the rewards of Parliamentary influence is almost too obvious a truth to need comment. The important question is whether the Parliamentary talents are likely to be connected with the qualities required in a statesman.

At first sight it must be admitted that Lord Melbourne's career does not raise our opinion of the capacity of Parliament for appointing fit men to high office. His glaring defects as a minister were patent to all zealous reformers. Miss Martineau, after her manner, hated a minister who could be jocose even on matters of political economy. The man who could, as the story goes, say at the conclusion of a cabinet meeting, "Now, are we going to say that lowering the duty will raise the price of corn or will sink the price of corn? It does not much matter which we say, but we must all say the same thing," naturally excited the abhorrence of a lady who believed that her economical tracts saved the country. We may be sure, again, that zealous Benthamites like Mill and his little school, who dreamed that they were revolutionizing England, despised a premier who was not as far advanced on the path of political truth as the ordinary Whig leaders, and who (it is highly probable) did not study the *Westminster Review*. All "earnest" persons (and between 1830 and 1840 earnestness was coming into vogue) must, in short, have condemned with more or less severity a leader whose apparent function was to prevent his own party from carrying out their own principles to their full length. Nor can the present generation, which has lost the passion for earnestness, and has got no other in its place, fail to see that Lord Melbourne's censors were in many respects in the right. He was not a man capable of forcing a revolution to its legitimate results. If a minister like Gladstone or Peel had guided the Whigs immediately after the first Reform Bill, he probably could have carried into effect measures which were only passed when the generation who in 1830 were enthusiastic for reform had for the most part gone to their graves. To expect, indeed, that a minister should execute with great zeal a policy with which he had no keen sympathy is unreasonable; but Melbourne did not even take the trouble to give effect to measures of which he entirely approved. His intellectual liberality and his clear good sense made him averse to all intolerance. He saw at a glance that Catholic emancipation lost half its beneficial effect if the Catholics of Ireland were not made to feel that they were socially the equals of Protestants. He would gladly have opened every career to the ambition of Catholics, but he never ventured to give effect to his own convictions. Protestants were estranged and Catholics were not conciliated. The Ministry lost credit in England from the patronage of O'Connell, and at the same time by disappointing the just hopes of the Irish leader forced him into the advocacy of repeal. The half-heartedness of Melbourne's policy in Ireland was precisely paralleled by the timidity of his ecclesiastical policy in England. He was fond of theological speculation; he sympathized with Liberal Churchmen; but if he ventured to raise Thirlwall to the bench on receiving an episcopal guarantee of the historian's orthodoxy, no persuasion could prevail upon him to promote Arnold, who, next to Sydney Smith, had ventured more for Liberalism than any Churchman of the day. Lord Melbourne's prudence had its natural reward. The bishops he appointed at once voted with the Tories, and Liberal Churchmen felt no enthusiasm for the Whig Ministry. When at last the Conservatives returned to power the effect of Lord Melbourne's policy became apparent: the popularity gained by the Reform Bill was gone, and even Liberals looked with relief to the advent of a government ruled by a minister of undoubted capacity.

If the career of a minister who became Premier because he was a gentleman seems a satire on Parliamentary government, there is another side to the picture, and a theorist who wished to illustrate the sagacity with which popular assemblies instinctively discover the person who fitly represents their wishes, might find in Lord Melbourne a good illustration of his theory. His lordship's defects were patent, but his lordship's defects and his lordship's virtues met the requirements of the time. The Reform Bill had excited an amount of popular enthusiasm and aristocratic rancor which was full of danger to the state. The movement which produced reform had, moreover, outrun the wishes of commonplace Englishmen. The new electors wished to avoid both Tory reaction and radical innovation. The peril which menaced the nation was that, to use the slang of modern politics, the "era of revolutions should not be closed." An attempt to push the reform movement to its logical consequences would have suggested reactionary schemes for undoing the results of the Reform Bill. What was needed was that passions on all sides should be pacified, and Lord Melbourne was from every circumstance of connection and character born to be a pacificator. Violent democrats could not suspect him of treachery. Bigoted conservatives could not believe that the disciple of Canning and the companion of George IV. wished to overthrow the monarchy. The very complaints of his radical supporters reassured his Tory opponents. His passion for letting things alone enabled the nation to recover its calmness. His studious care to avoid offence, the knowledge of character which made him see that he could not trust Brougham as a colleague and could trust Wellington though an op-

ponent, soothed down the mass of personal irritation which always results from revolutionary change. When some one complained to Wellington that Melbourne was too frequently at the palace, the duke replied: "I only wish he were there always"; and these words probably expressed the feeling of all the more sagacious Conservative leaders, who knew that come what would Melbourne's conduct would be the conduct of a gentleman. In nothing could a prime minister's character be put to a severer test than in his relation to the young Queen, and in this relation Lord Melbourne, by the admission of his opponents, displayed all his best qualities. It is, in fact, as the almost paternal guide of a sovereign who was scarcely more than a child that Lord Melbourne (if at all) will be remembered. His tact, his kindliness, his social talents, had all full play in directing the steps of an inexperienced young lady who, as far as age went, might have been his daughter. That he was the confidant of his sovereign without incurring even the suspicion of being a flatterer or an intriguer; that he gained her implicit confidence, and so exercised his influence as to obtain the approval of political enemies, is proof enough that he possessed gifts and virtues of no ordinary character. His best qualities were, no doubt, rather the characteristics of a great gentleman than of a great statesman; yet there are different kinds of eminence, and Lord Melbourne's admirers need not be ashamed of their hero if, to adopt the suggestion of Lord Houghton's, he is known among English premiers as "the last of the gentlemen."

Constantinople. By Edmondo de Amicis. (New York: G. P. Putnam's Sons. 1878.)—One of the effects of the modern facility of bookmaking is that whenever any quarter of the world becomes of exceptional interest (and never, perhaps, were more minds turned to one point than now to Turkey and Constantinople) there is a deluge of publications enough to frighten the stoutest reader. Only the exceptionally strong ones, therefore, can really claim attention. On opening the covers of the present work we find that it is translated from the Italian, and, more than that, from the seventh Italian edition. Farther information, from a high Florentine authority, tells us that

"Without any slight to other clever authors, it is the positive fact that Signor de Amicis is the most popular writer in the country. Each new book of his sells faster than its predecessors, and his last book, 'Constantinople,' has taken Italy by storm. His brief volume has reached the seventh edition in less than as many months, and the last, only issued a few weeks ago, is already in its second. This, for Italy, is an enormous success."

The reader will, therefore, enter upon his labors hopefully. The first general remark which presents itself is that the enthusiasm is very highly strained; in fact, to a degree which, in English or American hands, could proceed only from a very young person, and would, therefore, almost certainly degenerate into feebleness. But the Italian language has something child-like in itself, and the child-like enthusiasm shows not ungracefully in a mature mind. One is reminded of Macaulay's climax, "What the Englishman is to the Italian, what the Italian is to the Hindoo," and so on. Of humor, as we understand it, there is not much in this work, but one remark will excite a smile in travellers of different kinds. Some persons at the hotel had objected that there were no sidewalks, that the theatres were dark, and there was no place to pass the evening. "They had come to Constantinople," observes the author, "to pass the evening!" The horrors of the Turkish bath, again, excite him to a grim banter which, though of finer texture, has some flavor of Mark Twain.

The first chapter describes the arrival in the Golden Horn, and we can scarcely imagine a more vivid picture expressed in words. One can hear the captain warning the passengers over-night that whoever comes up late shall be thrown into the sea. One can feel the early fog which damps all hopes, notwithstanding the captain's assurance that it will rise with the sun; and then the lifting and the golden light which spreads over Stamboul and Galata and Pera and Scutari; over Saint Sophia and the mosques of Ahmed and Soliman and Mahomet and Selim, till the whole is bathed in the full light of day. It is curious to note throughout the book how the Southern blood rejoices in the full power of the sun. One of the first visits is to the floating bridge which crosses the Golden Horn, and furnishes the occasion for a description of the motley population which swarms across it, quite as vivid as that of the external appearance of the city. Then follow excursions through the city and suburbs—to the Great Bazaar, the Dolma Bagtche, Saint Sophia, the Old Seraglio; through the respective quarters of the Greeks, Armenians, and Hebrews, with some account of each nationality. The dogs of Constantinople are almost as famous as the city itself. We give a little extract out of half a dozen pages devoted to them, as illustrating a municipal administration which may make New York feel quite proud:

"Often in the night the peaceful citizens of Galata and Pera are awakened by the most diabolical noises; and looking from the window they behold a crowd of dogs leaping high in the air, whirling round and round, and beating their heads furiously against the walls, and in the morning the ground is strewn with corpses. The doctor and apothecary of the quarter having the habit of studying at night, and wishing to procure a week of quiet, have been distributing a little poison."

Four pages upon the eunuch have a touching pathos in their account of this most awful form of human slavery, and the traffic is still carried on in Constantinople with only a "hypocrisy of secrecy." The following is from the "Ramazan":

"It is amusing to plant one's self upon the bridge of the Sultan Validé a few minutes before the sun goes down. About a thousand boatmen may be seen at this point, far and near, going and coming, or sitting still. They have every one been fasting since dawn, are wild with hunger, and have their little supper ready in the caique, and their eyes constantly move from the food to the sun, from the sun to the food, while there is a general agitation and restlessness among them as in a menagerie when the animals are about to be fed. When the sun is half hidden they begin to take the food in their hands, while all with one accord turn toward the West, and stand fixed, with their eyes on the sun, mouths open, bread in hand, and joy in the visage. At last the fiery point vanishes, the cannon thunders, and at that very instant thirty-two thousand teeth bite off enormous morsels from a thousand pieces of bread."

The least successful parts seem to be those in which the writer attempts to recall the past glories of the sultans. We can accept his strong language for the things which he sees, but when he sets his imagination to dress up the past, we must beg to be excused. Still, when in making the tour of the walls he sketches the famous siege, perhaps the most momentous in history, by which the Christian Empire passed to the Turk, even those familiar with Gibbon will feel a new thrill. The architectural description also lags a little. Saint Sophia appears to have occasioned some disappointment and to have forced the visitor to whip his Pegasus a little, but there is a natural tone again in the admiration of the graceful and beautiful minaret, the Mohammedan substitute for bell-tower, and of the cry of countless muezzins, who are selected apparently for their sweet voices.

Though the book is of recent publication, the visit took place before the events which threaten the existence of the Turkish Empire, as is evident from the fact that the Sultan seen and described is the late Abdul Aziz, already become, what *Punch*, at the time of his accession, said of his predecessor, Abdul *As-was*. The analysis of character under "The Turks" is not mixed up, therefore, with attempts at forecast. It sets forth only the never-failing interest of this camp of Asiatic fatalists thrust into one corner of Europe. The closing picture takes us through the beautiful and historical shores of the Bosphorus to leave us in the gray mists of the Black Sea. The work of translation is very well done, though we notice here and there an idiom such as "secular," a word which both French and Italians are very fond of applying to trees, not as opposed to "religious" but in the sense of "century old."

Stories from Homer. By the Rev. Alfred J. Church. (New York: Harper & Bros. 1878.)—This little book deserves high commendation. It is another attempt to render Homer accessible to those who cannot read him, or who can read him only with difficulty, in the Greek text, and this purpose we think it fills most satisfactorily. All professed translations in metre have hitherto, however literal or however free they might be, resulted either in something stiff, awkward, and disagreeable to read—an "ugly likeness," not to say a caricature, of the beautiful original—or in something, smooth indeed to read, but so powdered and periwigged *à la* Queen Anne, like Pope's, or so mock-Miltonic, or otherwise so thoroughly English in tone, as to rob the reader completely of the flavor of the original. On the other hand, a prose version rendering the Greek as near as may be word for word, but ignoring its poetic tone, and straining with painful contortions to transfer to English the vivid, graphic, and melodious long compound epithets of the Hellenic epos, also fails utterly to give an ordinary reader any idea of the poet. Till the long-looked-for, really Heaven-sent translator of Homer comes (for it is rash to assert that no satisfactory version can be made), the best way for a mere English reader to get an idea of the 'Iliad' and the 'Odyssey' will probably be through such a book as this, where the poems appear in the form of stories, told in easy, natural English, which any child could understand and enjoy. Work of this kind has, it is true, been don

already, but Mr. Church's is far more satisfactory than any other attempt of the sort. He transfers the Homeric narrative into good, plain, easy English, which is idiomatic, without introducing a tone foreign to the matter, following the corresponding passages faithfully, though not too literally, but, of course, passing over large portions of the poems for the sake of keeping within the limits of his design. The semi-biblical phraseology adopted in many places is wisely restrained from being too pronounced. Above all, the *tone* of the original is carefully preserved. The naïveté of the epic spirit is faithfully given, its childlike repetitions and leisurely breadth of description are sufficiently indicated, and while the standing epithets and long compound descriptive adjectives are most sensibly omitted, the Homeric similes are reproduced with excellent effect. The secret of the author's success lies, we think, to a great extent in the happy rendering of these similes, in the simplicity of his English, and, most of all, in his writing in the true spirit of the epic, the spirit of childlike, joyous story-telling.

The tales from the 'Odyssey' are somewhat less carefully done than those from the 'Iliad,' and the retention of a few more words or of a sentence in some places would have made the story clearer. The author evidently understands his text well, and we have not noticed any slips in scholarship. There are a few annoying misprints, especially, p. 42, "Lycaon" for "Pandarus, son of Lycaon." The illustrations are selected from Flaxman's designs and are colored, the figures being given in red on a black ground with an effect similar to that of the Greek, or, as the author calls them, the "Etruscan" vases. They differ, however, from the vases in the extensive use made of a yellow tint, employed by the Greeks on vases with red figures only sparingly. The same author is about to publish a book of 'Stories from Virgil.'

JUST READY.

New Flora of North America.

By Professor ASA GRAY, M.D.

Part I., imp. 8vo, pp. 402, describing all North American plants of the Gamopetalous or Monopetalous Division after Compositæ. An independent and wholly original work, but arranged so that the present volume continues Torrey and Gray's Flora of North America. Cloth bound, $6. By mail on receipt of the price.

IVISON, BLAKEMAN, TAYLOR & CO.,
PUBLISHERS,
138 and 140 Grand Street, New York.

PATENT PREPARED

Gasolene.

The attention of owners of Gas Machines is invited to the superior quality of Gasolene that we are making.

Manufactured by a process that is patented by ourselves, it is peculiarly free from all the impurities and heavy properties commonly found in other Gasolenes.

We manufacture these goods more largely than any other house in the world, and are prepared to furnish any gravity from 80° to 90° Beaumé, by the single barrel or car-load.

Orders solicited from gentlemen owning private country residences.

Hotels, Mills, and Manufactories supplied on the most favorable terms.

CHARLES PRATT & CO.,
Established 1770. 128 Pearl Street, New York.

MR. HARE'S NEW BOOK.

Walks in London.

By AUGUSTUS J. C. HARE.

With One Hundred Illustrations.

Two volumes 12mo, cloth.....Price $5 00
The two volumes in one.....Price $3 50

"A worthy and enduring piece of work."—*London Daily Telegraph.*

"'Walks in London' is an exceedingly charming book."—*New York Herald.*

"Every American fond of walking and sight-seeing, who intends to visit London, should buy this beautiful book."—*New York Journal of Commerce.*

"Those who are unable to visit London will find their disappointment largely compensated in the perusal of this delightful volume."—*New York Daily Graphic.*

"The man who goes for the first time to London should take with him the new book called 'Walks in London,' by Augustus J. C. Hare. It is, by all odds, the pleasantest and most instructive hand-book of the great metropolis that has come under our notice."—*Philadelphia Evening Bulletin.*

"He gives the cream of whole libraries of antiquarian research in a single walk, and not only as a guide, but also as a storehouse of information as to all that is worth seeing and knowing of the great city, his book is invaluable. We know nothing to compare with it."—*Buffalo Courier.*

Lippincott's Magazine

FOR JUNE.

HANDSOMELY ILLUSTRATED,

Now Ready—Containing:

1. EASTER ON THE RIVIERA. By W. D. R. Illustrated.
2. THE GREEN LEAVES WHISPER LOW. By Celia Thaxter.
3. "FOR PERCIVAL." A Novel. Illustrated.
4. THE FOUR-IN-HAND, AND GLANCES AT THE Literature of Coaching. By Jennie J. Young. Illustrated.
5. THE PROFESSOR OF DOLLINGEN. A Story. By Anna Eichberg.
6. IN ROUMANIAN LAND. Second Paper. By Edward King. Illustrated.
7. SILENT. By Louise Chandler Moulton.
8. RUE ST. JEAN. A Story. By Oscar F. Adams.
9. A JUNE NIGHT. By Emma Lazarus.
10. THE MASONS OF VIRGINIA. By M. T.
11. HEPHZIBAH GUINNESS. A Story. By S. Weir Mitchell.
12. ELIZABETH BARRETT BROWNING. A Sketch. By Marion Couthouy.
13. CHASED BY AN ENGINE: A Conductor's Story. By E. P. Buffitt.
14. VISUAL PHOTOGRAPHY. By H. S. Schell.
15. PARISIAN MANIACS AND MADHOUSES. By Lucy H. Hooper.
16. OUR MONTHLY GOSSIP: A Few Words on Art; On Learning Foreign Tongues; A Bit of Romance; The Islands of the Sea of Marmora; The Charms of Improper Language.
17. LITERATURE OF THE DAY.

For Sale by all Book and News Dealers.

TERMS—Yearly Subscription, $4. Single Number, 35 cents. Specimen Number, 20 cents.

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

BACK NUMBERS AND COMPLETE SETS of all the leading *MAGAZINES* and *REVIEWS* for Sale cheap, at the American and Foreign Magazine Depot, 24 Dey Street, New York City.

THE TYPE-WRITER is to the pen what the Sewing Machine is to the needle. It more than saves the time of one whose time is valuable: it saves his strength and greatly increases his efficiency.

All the loss by learning is in the first week—two or three weeks at the most.

It is worth our while to afford to thousands a brief experience of the *usefulness to themselves* of the Type-Writer, even at some expense; and, as it is not liable to injury by unskilful use, we send it for trial at our own risk and cost.

FAIRBANKS & CO.,
311 Broadway, New York.

☞ *Circulars on request.*

Rare Engravings & Etchings.

Notice of Removal.

Frederick Keppel, late of 66 Beekman Street, New York, begs to announce his removal to a more central location at No. 243 Broadway, opposite the City Hall Park. With greater facilities of space and of capital, the present stock will be very much increased so as to make this *the* place in America where the finest works of the great engravers may be satisfactorily procured.

Correspondence is invited. Engravings will be sent on approval to any address, and visitors will be at all times welcome to call and look over the collection.

Mutual Benefit Life Insurance Company, Newark, N. J.

Incorporated 1845. Purely Mutual.

LEWIS C. GROVER, President.

Total Assets, Jan. 1, 1878, . . $33,181,828 49

All approved forms of policies issued. Reports and Statements furnished at the office of the Company, or any of its Agencies.

DEALER IN INVESTMENT SECURITIES AND COMMERCIAL PAPER.

Missouri Farm Loans

Carefully made on Bond and Mortgage. Interest, 8 to 10 per cent. Perfect security. Well acquainted with local lands and values. Best references.

HARRY W. GRANTLEY, Attorney-at-Law,
Appleton City, Missouri.

Illinois Farm Loans.

Money wanted in sums of $500 and upwards to loan on improved farms in the vicinity of Elgin, Illinois, at 8 per cent. net, for three or five years. Security at least three times the amount loaned. Correspondence solicited. References given. Ten years in business. JOHN W. RANSTEAD, Att'y at Law, Elgin, Ill.

Chicago & Alton Railroad

Six per Cent. Gold Sinking Fund Bonds.

Free of all Taxes imposed or to be imposed.

Bonds due 1903. Interest payable May 1 and November 1. These bonds are a direct obligation of the Chicago & Alton Railroad, and have a first lien over the Chicago, Kansas City & St. Louis Railroad—162 miles—in Missouri. They are recommended as a safe and desirable investment. For sale at par and interest.

JESUP, PATON & CO.,
52 William Street, New York.

Colorado—Mines.

A Mining Engineer and Metallurgist of experience expects to go to Colorado this month. Capitalists interested in knowing the actual condition of particular mines or mining operations there will find this a good opportunity. First-class references given. Address MINING ENGINEER, Box 727, New York.

Shirts, Underwear, Gentlemen's Goods.

PEERLESS TOBACCO WORKS, ROCHESTER, N. Y.

STAMMERING.—Prof. Guttmann's School of Vocal Reform, an institution for the correction of defective speech; stammering, stuttering, lisping, and all disorders of the voice. Applications received from 12 to 2 and 6 to 8 P.M. daily. Correspondence solicited. 335 East Fiftieth Street, New York.

The Nation.

NEW YORK, THURSDAY, MAY 23, 1878.

The Week.

THE dead-lock in the House over the Potter resolution was not broken till Friday, when the Democrats succeeded in making a quorum and a majority together, and so carried their point. On Wednesday, Mr. Wood got the Senate resolution on final adjournment postponed for consideration till May 29, and the Potter resolution was then ineffectually voted for by his party. On Thursday, the result was the same, but the proceedings were varied by a proposal from Mr. Banks that the struggle should be suspended till Saturday, in order to attend to public business while the Democratic side was recruiting. Mr. Potter would not entertain the motion, nor would he allow Mr. Stephens, of Georgia, to be heard on behalf of Mr. Hale's obnoxious amendment. On Friday, Mr. Potter began to force a conclusion by shutting the doors and calling on the sergeant-at-arms to arrest delinquent members, and in this way finally the tale was completed, the only enlivening episode being the challenge of Mr. Goode's right to vote on the ground that he was paired with a Republican. Defeated in the House, the Republicans issued their protest to the country through their Congressional Committee, charging their adversaries with intent, "under the pretence of an investigation, to lay the foundation for the revolutionary expulsion of the President from his office." On Saturday there was an interesting debate on the Army Appropriation Bill, which was expounded by Mr. Hewitt and carefully analyzed and forcibly opposed by Mr. McCook, one of his colleagues from New York. The debate on Tuesday was significant only for the number of speakers who protested against the use of the army as a national police in times of public disorder. The Senate passed on Friday a bill providing an extra judge for the Iowa District, and on Monday took up the bill to appoint General Shields a Brigadier-General on the retired list. Mr. Sargent moved an amendment providing for the appointment of Ulysses S. Grant as General on the retired list, with full rank, pay, etc., and this obtained the support even of some of the Democrats, who were bent, as Mr. Edmunds well said—referring to their rejection of General Shields as doorkeeper of the House—on rectifying a party mistake. But the bill thus amended was defeated on Tuesday by 34 to 30.

The composition of the Investigating Committee is, on the whole, a fair one. The members are Messrs. Potter of New York, Morrison of Illinois, Hunton of Virginia, MacMahon of Ohio, Stenger of Pennsylvania, Cobb of Indiana, Blackburn of Kentucky, Cox of Ohio, Butler of Massachusetts, Reed of Maine, and Hiscock of New York. They are all, with the exception of Butler, men of high character, though some are bitter partisans; but it may be safely said that the country will regard Messrs. Potter's and Cox's presence on the Committee as a guarantee that there will be no jugglery or pettifogging, or that if there is any we shall know of it. The four Republican members are generally accepted in Washington as an excellent representation of the party, both as regards its honesty, acuteness, and rascality. An enquiry in which the tricky element in it was not represented would not give satisfaction, but with General Butler to appear for them even the Chandlers cannot complain.

Mr. Hayes is said to have at last evinced some signs of mental disturbance in the presence of the Democratic investigation, being much impressed with the rapidity with which the party has been driven into support of it, and thinking that this readiness "to wheel into line" may indicate the approach of some more serious trouble. But it seems very unlikely that if an attack on his title were really meditated this readiness would have been displayed, considering what we know of the views of the bulk of Democratic Congressmen. They have undoubtedly gone over in the belief that they will get "capital" out of the investigation for the fall elections. If there has been nothing wrong, is it not better, on the whole, that General Noyes, Mr. Sherman, General Garfield, Mr. Conkling, and the rest who are accused in the matter, or say they know something about it, should be examined thoroughly, and an end be put once for all to the gossip which has been so long flying about? It must be remembered that within the last six months a member of the Republican National Committee, and one of the most active managers of the Republican canvass, has declared that there was a bargain of some kind between Mr. Hayes's friends and the Returning Boards; that two Republican canvassers have made quasi-confessions of fraud; and that one "great Senator," also Republican, has announced his knowledge of something "infamous" on Mr. Hayes's part. It seems as if all these things take away the appearance of absolute wantonness from the Democratic move; they may not prevent its proving futile and foolish. Mr. Sherman has opened the contest by a letter to Mr. Potter, traversing every charge made against him, directly or indirectly, in the most unqualified terms.

A striking illustration of the slightly maniacal state of mind about the Democrats in which many Republicans keep themselves, and which has more to do with hindering reform both within and without the party than most people imagine, has just been afforded by the usually staid and ever faithful Boston *Advertiser* in treating the Potter investigation. It sees in this investigation a determination to oust Mr. Hayes and disband the army. This done, there is to be "a rising of the sovereign people" under three illustrious leaders, Grant, Sherman, and Sheridan, who are "to suppress the revolution against law and order," and in the course of this suppression, the result of which, the writer prudently remarks, "no one can foretell," there is to be a fight in "every State, city, and school district in the country." From this he says "anarchy might result." We should think so; anarchy at least. Now, this is the kind of talk about America and American government that one might expect from a European despot to one of his effeminate nobles when taking his evening foot-bath in the warm blood of one of his serfs; but if it was reported as coming from him, how we should all laugh at him and pity the poor noble. Is it not time for Republicans to stop telling the world that the stability of this Government depends on one party keeping in power, and that if the other party uses its constitutional right to do things the minority dislikes, red ruin will rage through our now smiling and exuberant prairies and blue hills, and the furniture in all our "elegant parlors" be broken up to roast the babies of the land? It looks sometimes in politics as if our leading alienists were not doing their duty.

The platform which the Republican Convention in Pennsylvania has just adopted is a good illustration of the difficulties which the party has to contend with in the national field, and why the illustrious Cameron of Wisconsin declares that what it aims at is "Evolution." The Pennsylvanians, as might be expected, declare their hostility to free-trade; utter the usual seesaw about the relations of labor and capital; call for Government "fostering" and "development" for all kinds of "commerce" and "home enterprise"; demand the public lands for the "industrious poor"; denounce Southern claims and discriminating rates of freight; express sympathy with white and black Southern Republicans, and endorse Governor Hartranft's administration. If we take the tariff plank out of the platform, there is, however, little left for a political party to plant itself on. Everybody wants capital and labor to be reconciled, commerce and industry to be developed, Southern Republicans to have their rights; but what is it exactly which the Government ought to do about these matters? To this question the party as such has no definite answer. Then the platform utterly ignores the two topics which are just now most seriously and properly occupy-

ing the public mind. It says nothing about the Government's relations to the currency, and nothing about the mode of electing the President. So that after reading it one gets no very clear idea of what the Republican party is.

Mr. Evarts has communicated to Congress the views of the Administration on the Canadian Fisheries Award. After reciting the facts which led to the appointment of the Commission, he draws attention to the circumstance that the Canadian Minister of Justice, Mr. Blake, declared in March, 1874, in a speech, that the award would have, under the terms of the Treaty of Washington, to be unanimous, and that the same view was taken in July of the same year by the London *Times*. Congress may, therefore, Mr. Evarts thinks, either waive or insist upon the objection of want of unanimity; but, in the absence of any Congressional declaration on the subject, the Executive will not consider it its duty to raise the point in any discussion with the British Government. But if Congress should, in making an appropriation, direct that the attention of the British Government should be called to the point, the payment of the sum might be made dependent on Great Britain's positively maintaining that unanimity was not necessary; but he would not advise our refusing to pay on this ground, in the absence of British concurrence. He shows the excessiveness of the award by a statement of the facts which have been already set forth in these columns. The sum and substance of them is that we are condemned to pay $5,500,000 for twelve years' use of a thing for which in perpetuity the American High Commissioners, in framing the Treaty of Washington, were only willing to offer $1,000,000, and which the evidence taken before the Fisheries Commission really showed not to have yielded more than $25,000 a year profit to the United States during the last five years. It is an easy deduction from this that the award cannot furnish a permanent measure of value, and that this consideration ought to be urged on the British Government as a very good reason for consenting to such a modification in the award as will make it the basis of a final settlement between the two countries.

We suggested some weeks ago in these columns that the holders of repudiated State bonds had one means of redress open to them still untried—the assumption of the claims by their own States, followed by suits in the Supreme Court. This plan has been partly carried into effect by the Legislature which has just adjourned at Albany. A bill has been passed by both Houses allowing holders of repudiated bonds to assign them to the State, and permitting suit to be brought in the name of the State, the expenses being borne in all cases by the owners of the securities. The bill only covers bonds held by citizens of New York, and leaves the assignment in the discretion of the Attorney-General. A vigorous opposition will probably be made to the signature of the bill by the Governor, but we trust he will not be affected by it. The only objections made in the Legislature to the measure were that it converted the State into a claim agency—an objection curiously illustrating the potency of mere words on the political imagination. There is, of course, a certain amount of odium clinging to the occupation of a claim agent, partly owing to the fact that many claim agents are dishonest, and there would be a certain amount of degradation in a State's going into the business of collecting claims for profit. But this is precisely what the bill does not contemplate. It no more makes the State a claim agent than the prosecution of the *Alabama* claims or the French claims or the Spanish claims for its citizens made the United States a claim agent. The bill should become a law, if only to teach repudiating communities that the people whom they have swindled mean to exhaust all their legal resources to protect themselves. When it has become a law there are a great number of legal questions involved which the Supreme Court is amply able to dispose of.

The seizure and investigation of certain distilleries and rectifying-houses in Cincinnati by revenue officers have led to a repetition of the request made some two weeks ago by the Secretary of the Treasury for the resignation of Collector Louis Weitzel. Mr. Weitzel, hastily assuming that the call for his resignation had some connection with alleged whiskey frauds in his district, refused to resign. Secretary Sherman disabused his mind of any such suspicion, and gave him a "character" of which any collector ought to be proud, but still insisted on the resignation. Mr. Weitzel then drew the unjust inference that if the Washington authorities did not take him for a knave they must take him for a fool, an imputation which he felt bound to resent even more strenuously. Accordingly, he reiterated his determination to hold on. The investigation to determine in which category, if either, Mr. Weitzel belongs is now in progress, and one of the discoveries is that the collector's official bond was made up and signed by five wealthy distillers and liquor-dealers. The particular charge brought against Cincinnati as a distilling centre is that of "liberal gauging," by which it is alleged that two to three dollars per barrel have been lost to the Government, according to the liberality of the gauger. This charge dates back to the whiskey war of 1875, at which time Revenue Agent Yaryan reported to Commissioner Pratt that the complaints of other cities against "the liberal gauge" of Cincinnati were, in his judgment, well founded, and that the Government must have lost in this way more than $100,000 per annum. He added his opinion that Collector Weitzel was responsible for this condition of affairs, and that it would not be corrected while he (Weitzel) remained in office. Anticipating this report, the collector induced his brother, Gen. Godfrey Weitzel, to write to President Grant that Collector Weitzel was "one of nature's noblemen, and as honest a man as ever the sun shone on." It followed, of course, that "liberal gauging" was not practised in Cincinnati to any harmful extent. So when Secretary Bristow forwarded Yaryan's report to the White House the President declared that he should pay no attention to it, being convinced that Collector Weitzel's record was stainless. The censorious Yaryan was shortly afterward removed from office, and what disgrace came upon Bristow for his connection with these proceedings is known to everybody.

Although $35,000,000 is the full amount of United States 4½ per cent. bonds which the Syndicate have taken from the Treasury on the $50,000,000 negotiation of April 11, nevertheless engagements have been made for the sale by the Syndicate of nearly $40,000,000 of these bonds, and the time when a formal subscription will be made for the untaken $15,000,000 depends wholly on the convenience, in the matter of settlement, of the Syndicate. It is safe, therefore, to assume that the Treasury has secured the additional $50,000,000 of gold coin which was deemed necessary before resumption, and several months in advance of the appointed time for resumption. The New York banks held during the week ending April 13 (the Syndicate contract having been signed on the 11th) an average of $35,486,900 specie; last week they held an average of only $23,030,200 specie. The legal-tender note average advanced during the same time from $28,666,100 to $41,020,100. The latter change has no significance so far as the bond sales are concerned, but does show why the money market has not been unfavorably affected by the withdrawal to the Treasury of so much gold from the reserve of the banks. Nearly three times as much gold as has been lost by the banks in the last five weeks will, however, be returned to them in the early future in the form of interest on the public debt; so that there is no reason for apprehending serious disturbance on account of the large bond subscriptions. In London there has been a buoyant market for English and Russian securities, on account of what is regarded as the more peaceful outlook. United States bonds also have been very strong, and the combined influence of the foreign members of the Syndicate has very decidedly changed the tone of the London market for our securities. It is hoped that this is more than a temporary change such as can be made by skilful manipulation backed by ample means. Silver has ruled at 53⅛*d.* to 53½*d.* to 53⅝*d.* per oz. At the close of the week the bullion value in New York of the new dollar was $0.9049 gold. The United States legal-

tender note for one dollar had a gold value at the close of the week of $0.9913.

The Fenians appear to be practising on the Canadians again, and are helped by the local papers along the border, who transmit "the scare" with fidelity, and report Fenian gatherings and movements of Fenians and appearances of "strange men" at a hundred points from the Atlantic to the Wilderness. The Canadian militia are consequently holding themselves in readiness, and "prominent Irishmen" are being interviewed by the reporters, and are observing a solemn and ominous silence. There is not the least reason for supposing that there is any movement on foot which will go beyond marauding, or which it would not be ridiculous to meet with troops; but there probably are movements in contemplation that will stimulate the flagging liberality of the servant-girls, and give a parcel of lazy rascals an opportunity for a drinking picnic free of expense in the neighborhood of the Canadian frontier. It is hard to suppose that the sense of shame has never existed among Irish patriots, but it is difficult to reconcile its existence with the continuance and activity of the Fenian organization. A fighting organization that never fights, and is maintained by the pennies of the very poor, and officered by persons with no visible means of support, is, surely, the most ridiculous and discreditable manifestation of love of country the world has yet seen. The most degraded and cowardly of the subject races have never yet got up anything like it.

The activity of the Russians in purchasing vessels in our waters for use against British commerce, in case of war, has begun to attract a great deal of attention in England. A curious criticism on the present condition of international law between the two countries is made by the *Pall Mall Gazette*. The objection which has been felt to the "three rules" on this side of the water has been that they were too stringent. But the *Pall Mall Gazette* thinks that they are not stringent enough, and complains that, owing to the fact that they do not come into operation until a state of war actually exists, there is nothing to prevent a nation like Russia, while peace lasts, from getting ready, in the waters of a friendly power, a whole fleet of cruisers which may be far at sea by the time that an actual declaration of war brings the "three rules" into operation. In other words, the *Pall Mall Gazette* would have neutral obligations in force always, and make them as effective to prevent the escape of *Alabamas* in time of peace as in time of war. But our neutrality acts are in force at one time as much as another, and the question is whether they do not already apply to the fitting-out of cruisers in our waters. Under them, to prevent the escape of an *Alabama*, the English Government must be able to show that the intention of Russia was to fit her out, not in general anticipation of war, but with a definite intention that she should be used against a particular power. Both Russia and England deny emphatically that they now intend to make war on each other, and the preparations on both sides would, no doubt, be made whether their professions were hypocritical or not.

The cotton strikes in England, in spite of the calm, rational tone of the written discussion between the mill-owners and the operatives, have been attended by very destructive riots, the burning of factories and wrecking of private houses, and the troops have had to be called out. The outbreak has undoubtedly been due to the exasperating refusal of the employers to submit to arbitration, which they justify by declaring that with their knowledge of the conditions of their business, in which no arbitrators could equal or surpass them, they are confident that an adverse decision would ruin them. The strike is a very peculiar one, as the men are willing to submit to a still greater reduction of wages than the masters propose, but they demand that it shall be accompanied by a serious change of policy. The masters say that the depression is due to the loss of certain markets owing to increased foreign competition, which must be met by a diminution in the cost of production. The men deny the effect of foreign competition, and say the depression is due simply to injudicious over-production, and are willing to live on half-wages for a while if the owners will only work half-time, so as to diminish the existing supply of goods. To which the owners reply that this is demanding a transfer of the control of the business to the operatives, and the conduct of it on principles which they (the owners) believe would prove disastrous, and they must, therefore, resist or perish.

The debate on Lord Hartington's resolution condemning the introduction of the Indian troops into Europe without the consent of Parliament is pending at this writing, the Ministry having met it by an amendment declaring that "as the control of Parliament over the military forces of the Crown is fully secured by the provisions of law, and by the power of voting the supplies, it is inexpedient to pass any resolution tending to weaken the hands of the Government at this juncture." The debate is reported as being very languid, owing, doubtless, to the feeling that, in spite of the strong interest the matter has excited, the discussion will have no practical result. But the gravity of the question is acknowledged on all sides. The conduct of the Government in keeping such a step secret, particularly when it promised to add nearly $5,000,000 to the military budget, is generally condemned or only feebly defended; it has alarmed some Liberals as a dextrous attempt towards that extension of the personal power in the Government in which Beaconsfield's main strength lies, and which has been advocated and foreshadowed in a recent remarkable article in the *Quarterly Review;* it promises to make a larger army than ever necessary in India, which, however, Indian finances cannot support, and it promises to put British supremacy in India more than ever before in the power of the native troops, and this at a moment when the Council has just passed a rigid censorship act for the purpose of restraining the treasonable utterances of the native press.

Still the Liberals do make headway. They have carried the borough of Reading by an increased majority, though, as might have been expected, they have been defeated heavily in the University of Oxford, where, however, the candidate did not take very strong anti-war ground. The country parsons who come up in considerable force for an exciting election are generally Conservative in their sympathies at the present crisis. Mr. Bright has delivered another of those marvellous speeches of his, in which almost every weapon of oratory may be found in high perfection, making the bitterest attack on the Ministers which the crisis has yet called forth. He was almost ferocious in his allusions to Lord Beaconsfield, recalling his forty years of indifference to every generous movement which has been made in English politics during that period, and closing with the remark that "he had not a drop of English blood in his veins." The Liberals cannot get over the feeling that the country is being used to realize the gorgeous dreams of a romantic Jew, who has no real sympathy with it.

Of the actual condition of the negotiations nothing more is known than last week. Count Shuvaloff has left St. Petersburg on his way back to London, stopping at Berlin long enough to give rise to the rumor that England and Russia had agreed on certain points, and on others were to refer their differences to the arbitration of the Emperor of Germany. At Constantinople there is nothing new beyond somewhat menacing movements of the Russian troops under Todleben around Constantinople, which make the Turks fear a *coup de main*, but which he says are simply designed to secure him a better position in case he has to defend himself. The relations of Russia with Rumania are not improved, the Czar, apparently, continuing inexorable about the slice of Bessarabia; but Servia is armed and ready for the fray, her head full of Slavism and the old Servian Empire. The Germans still take only a subordinate interest in the war, owing to the excitements of home politics. The Government proposes sternly repressive legislation against the Socialists, which it is supposed the Liberals will modify, and there is more or less uneasiness on the Ultramontane question, caused by rumors of the resignation of Dr. Falk, the author and administrator of the celebrated anti-papal laws,

"FRAUD" AND THE "BLOODY SHIRT."

THE performances of the last few days at Washington are only important as regards their probable or possible effect on the business interests of the country. That they have any political gravity nobody seriously believes. We have no doubt that any of the Democratic chiefs would smile, and expect you to smile, if he were to begin telling you in a private room about the evidence he expects to discover against Mr. Hayes and the "visiting statesmen"; and the Republican chiefs would smile, too, if asked in confidence whether they really believed that the Potter investigation was a "revolutionary movement" or the beginning of a "new rebellion." The manœuvring and counter-manœuvring, the voting and the refraining from voting, and the passionate objurgations on both sides, are really preparations for the fall canvass, and the aim of both is not to oust Mr. Hayes or bring Mr. Hayes to justice, nor yet to save our Government from "Mexicanization," so much as to stir up the slumbering voter and bring him early to the polls. If the honest and industrious men of both parties who are not actually engaged in working "the mechanism of government" are imposed upon by this sword-play, and their returning activity in business is checked, it will undoubtedly do great mischief; but there are several weighty reasons why they should not concern themselves about it to which we ask their attention.

It must be borne in mind that the Democratic party is no better off as regards reasons for existing than the Republican party—that is to say, the things which it once defended have ceased to be, and it has adopted and made its own most of the things it once attacked. It is rent by internal dissensions, and has no body of doctrine on any subject to which the bulk of its members adhere. The principal difference between it and the Republican party just now is that it contains a larger proportion of the baser and more ignorant element of the population, and is ready to go somewhat further than the Republican party in order to satisfy this element, either by legislation directed against capital or by attempts to depreciate the currency. But even in its more nefarious designs there is no consensus among its members; in other words, it has no policy. One thing it has which does more to keep it together than anything else, and with which it is more likely than with anything else to make an impression on the public mind, and that is the charge of fraud against the Republicans in the late election. It finds it can no more go into the canvass without this than the anti-Administration Republicans without "the bloody shirt." The proposed investigation is, therefore, simply a formal and energetic way of embellishing this charge and keeping it before the public mind. That it is a serious attack on Hayes's title, we are quite sure, nobody "inside politics" really believes. The Committee will fish for evidence during the summer, and accumulate great quantities of those confessions or proofs of rascality on the part of Southern officials with which the people are now so familiar, and they will probably be dealt out in quantities to suit the exigencies of the struggle; but probably no report can be made before next December, by which time the elections will be over and interest in the matter totally gone. That the next Congress, if there is a Democratic majority in both Houses, will refuse to recognize the present Administration, and initiate a period of great disorder and alarm, one year before the next Presidential campaign, may seem a telling thing for the newspapers to say, and probably will frighten a good many business men, but it will not be believed by many who pay any attention to the ways of Democratic politicians, reckless and unskilful as they have so often of late shown themselves to be. We do not believe they had the slightest idea of disturbing Mr. Hayes or disputing his title, though it may be that they have made a great tactical mistake in acting as if they meant to do so, or in giving their adversaries good ground for saying they were going to do so.

It must be borne in mind, too, that there is very little question that Tilden is the principal promoter of the investigation into the fraud. There can hardly be a doubt that it is owing to his efforts that the McLin and Dennis "confessions" have been extracted, and that it will be owing to his efforts that any damaging evidence about the election, if any exists, will hereafter be brought to light. He is shrewd, active, persistent, and untiring, and has plenty of money for expenses. Everybody who knows much of the matter recognizes his hand in all that is going on, but everybody knows that he would have no object in now ousting Hayes, or in setting up an opposition Presidency before the eyes of a scandalized and infuriated people during half a term. He is not so crude or modest in his ambition as that would indicate. What he is working for, and is intent on getting, is the next Democratic nomination, and the evidence he is trying to accumulate is not evidence which will give him the residue of Hayes's term of office, but which will make it appear that he was cheated out of the Presidency; that, in short, he is a great Democratic martyr and ought to have another chance. For this the investigation will serve excellently well, and it is for this it will be conducted. It will not do to calculate, as some of the Republican papers do, that his hopes in this direction are chimerical, and that the hatred of the Democratic politicians towards him is so intense that he will now be thrown overboard. We believe there is some reason for thinking that he has a stronger hold on the rank and file than he had three years ago, and that they really look on him as a victim who is entitled to compensation, and that he may be forced on the Convention, not, as last time, by the excellence of his own arrangements, but by popular pressure. Moreover, confident as he was last time of his election, he will probably be more confident next time, as the Returning Boards will be in the hands of his own friends, and we discover no trace on the Democratic side, at least, of any burning desire to amend the election procedure so as to prevent the recurrence of the scandals and abuses of 1875.

As to the merits of the proposal to investigate, one's opinion about it must, of course, depend a good deal on the end in view. If it be desired to discover what frauds were committed in the late election with the view of providing against their recurrence, and there is reasonable ground for believing that frauds *were* committed, investigation is not only allowable but desirable; but then investigation of this kind would have to be carried into all States in which fraud was suspected—into Oregon as well as into Florida and Louisiana. The *World* makes a distinction, which has a good deal of plausibility, between "operative" and "inoperative frauds"—or, in other words, between frauds which accomplished something and frauds which accomplished nothing, or between Mr. Hayes's, for instance, and Mr. Tilden's; it thinks the former a proper subject of enquiry and the latter not. The distinction is a good one, if your enquiry into an "operative fraud" aims at setting aside the result. In the present case, however, the Democrats deny that they mean to disturb Mr. Hayes's title; and if this be true, and their object be merely the exposure of wickedness, and the discredit of persons concerned in it, and the creation of guarantees against its repetition, the distinction is futile. All frauds are good material for doctrine and reproof, whether "operative" or not, and the means by which Mr. Tilden won Oregon can be made to contribute just as much to the purification of politics as the means by which Mr. Hayes won Florida and Louisiana. So that it is difficult to see, on the Democratic theory, any good ground for objecting to a general enquiry; but it is also difficult to see any danger to the nation in partial enquiry.

There would be little to regret in the imbroglio if it seemed likely to unite the Republicans on the real questions of the day, and induce them to formulate a new creed and set up as a really reform party, occupied with the material interests of the country, and the promoter of honest and rational legislation on them; if, in short, instead of clinging to the past, or trying to level its policy down so as to catch the support of whatever is most crazy and degraded in popular thought, it tried to do over again what it did when it was formed, by raising the popular political thought up to a higher plane. At present, however, the disposition of the party leaders seems to be, as the Congressional address to the voters indicates, to fall back on "the bloody shirt" whenever the Democrats make a mistake, and

engage us all once more in the battle of Gettysburg, and ask us to use our ballots or bayonets in resisting a "new rebellion." It depends on the independent voters of the country to decide when this seesaw of "fraud" and "bloody shirt" shall cease. As long as they can be roused by it, it will never cease. As long as the political game can be played on the theory that all politics consists in the division of offices, and that the use made of the offices is a secondary matter, and that any cry is good enough to divide them with, we shall not get much further than we have got in the last ten years towards a solution of the problems bequeathed to us by the war. The one duty of the honest and patriotic voter just now is not to be roused by the investigation, or scared by the "ringing address" of Messrs. Gorham and Hale. If everybody keeps cool, the warriors on both sides will shortly take off their tin armor and join in the merriment of the audience.

THE POLITICS OF THE PARIS EXPOSITION.

THE Paris Exposition, which has opened with great éclat, and has probably evoked more popular enthusiasm than any that has yet taken place, is remarkable also as having the character of a political demonstration. The mere project exerted a good deal of influence last winter in bringing to an end the reactionary attempt of the Fourtou Ministry; for the Republicans were able to alarm the Marshal by pointing out the certainty that it would fail in case he persisted in his hostility to the Radicals. An international fair would have been out of place in a country distracted by a political crisis, and the prospect of the breakdown of an enterprise in which he would be a leading figure was very humiliating both to the Marshal and his wife (who counts for a good deal in the inner councils of the Septennate), and was, on the whole, much more formidable than "latent Radicalism." Since his surrender and the return of Republican supremacy, the Legitimists and Bonapartists have made no secret of their hope and belief that the Republicans would not be able to conduct an Exposition and attract distinguished visitors to it, and that its shortcomings in their hands would both illustrate their incapacity and the distrust and dislike of their rule felt both at home and abroad. All preceding French Exhibitions have been the work of the Empire, and the Emperor was the leading figure in them, and to the Bonapartists in particular, therefore, the occasion, under present circumstances, is a very trying one. To the Republicans, on the other hand, its success has for similar reasons been of the last importance, because it will indicate that France is happy and contented, and enjoys the good-will of foreign states, and that neither king nor emperor is necessary to give Paris the festive splendor and the affluence of foreign custom which the population of all classes find so flattering and so profitable. The result has been that the people of the capital have thrown themselves into the fête of the opening with extraordinary ardor and enthusiasm. Their pride has been tickled, and the ceremonial side of Republican government, which has been always its weak one in France, has been glorified by an unusual conflux of foreign princes and noblemen, whose arrival has filled the Monarchists with rage and despair. One of their papers gloated over the rain and mud of the opening day, and another called attention to the fact that the Prussian flag was again floating in Paris, thanks to Republican rule. Their electoral misfortunes, too, have continued and increased. The Republicans have carried nearly all the seats declared vacant by the Assembly, and where they have not carried them have increased their vote in such a way as to show that they are sure of the future, and that France is steadily and irresistibly gravitating towards them. The Monarchist organs of the Right Centre, such as the *Soleil* and the *Revue de France*, acknowledge frankly that Monarchy has, for the present at least, lost the game, "that France has accepted the Republic," and that there is nothing now for sensible and farseeing Conservatives to do but to continue to take part in public affairs, not with the view of hindering the Government but of watching and restraining it, so as to prevent as much mischief as possible, and do as much good until the country comes back to "political truth," or, in other words, to the monarchical idea.

The triumph of the Republic being assured by the certainty that it will have a majority in both houses when the time comes for the revision of the Constitution in 1881, speculation has not unnaturally begun as to what the effect of undisputed possession of power will be on the Republican party itself. Hitherto it has been consolidated and strengthened by the necessities of the struggle with the Monarchists, in which it has been engaged ever since the downfall of the Empire. The first of these necessities was abstinence from everything, whether in speech or legislation, that would alarm the property-holders and give the Executive an excuse for a *coup d'état*, and it is said to be M. Gambetta's keen perception of this fact which accounts for the great change that has taken place in his demeanor since the days of his dictatorship. From a fiery and very denunciatory tribune, not to say demagogue, he has gradually calmed down into a sober, sedate, and very self-restrained politician of the English school, keeping himself a good deal in the background, and sedulously eschewing everything that bears the appearance of a love of change or of dissatisfaction with what the French call their "institutions"—that is, a large army, a paid clergy, and a highly centralized administration, and the system of taxation which has come down from the Revolution, the two leading features of which are a fixed valuation of the land and the absence of an income-tax. What has excited more surprise, however, than his change of policy is the success he has had in retaining his leadership even of the extreme Radicals, in spite of his change of policy. He has killed all opposition even among the Paris Radicals, who are the most extreme of all, and had them so well drilled when the crisis of May 16 came that they bore the extraordinary provocations of the Fourtou Ministry for six months with a patience and good temper which their warmest admirers have never claimed for them, and absolutely suppressed all expression of the old Socialistic ideas, which though greatly scotched can hardly be supposed to be completely extinct. Being asked to account for this remarkable display of political sense, M. Gambetta is reported to have ascribed it to the great "finesse" of the French working class. One result of it—and it may be called the most impressive political result that has been achieved in France since 1830—is that the peasantry have lost their fear of the great cities, and have been actually won over to the Republic, as the late elections all show.

This remark of M. Gambetta's about the "finesse" of the city voters has suggested the question whether, when the necessity of reticence and prudence has passed away, the Radicals will not again reappear in their real character, and seek to force the Conservative wing of the party into that "progressive legislation" which the bulk of the French people so much dread, and which has heretofore made the Republic such a bugbear, and whether M. Gambetta will be able to retain his position without either making serious concessions to this tendency or advocating a foreign policy in marked contrast to the modest and prudent attitude towards foreign powers which France has for the past seven years so sedulously maintained? When the Republicans have no longer the Monarchists to fight, and when the question of the form of the Government, having ceased to be a practical question, has disappeared from French politics, it is hardly possible that the party will be able to retain its present unity. It will certainly divide, and the people are beginning to ask, with a shade of anxiety, on what difference of opinion will the division be based. The prospect, however, even taking the darkest view of it, cannot be considered alarming. The Republican party, owing to the accession of the peasantry, to the very great advances made by the peasantry in education, and to the extraordinary degree to which France is now influenced by foreign opinion, can never again be what it was in times past, when Paris was its principal seat, and its great advantage lay in the fact that it could threaten the Government with violence. Paris will probably never again decide what form of Government the country shall have, and even the worst type of Republican demagogues will have to consider the prejudices of the country people (which he has never had to do before), if he means to succeed.

THE LONDON EXHIBITIONS—THE GROSVENOR GALLERY.

[FROM AN OCCASIONAL CORRESPONDENT.]

LONDON, May 8, 1878.

THE second summer exhibition of the Grosvenor Gallery, which opened a week ago, is pronounced quite as good as the first, if not rather better. This fact is worth noting, for there had been plenty of people ready to declare that this novel enterprise was all very well for once, but that it could not keep itself up. It is really not at all apparent why the Grosvenor Gallery should find the struggle for existence so arduous, and the supposition rests upon a vague idea, diffused to an amusing degree, that it had undertaken to be excessively "peculiar." What form its peculiarities are liable to assume most people would find it hard to say; but they have, at least, a strong impression that this exhibition will somehow not be as other exhibitions are. They go there with the expectation of finding something very strange and abnormal; and it is certain that as a general thing they must be grievously disappointed. The last time I entered I heard a lady confessing to this sentiment in rather an amusing manner; she was passing out, with a gentleman, as I came in. "I am rather disappointed, you know; I expected the arrangement of the pictures would be more unusual." I wondered in what fashion this good lady had supposed the productions of Mr. Burne-Jones and Mr. Watts would be arranged—hung upside down, or with their faces to the wall? There is, it would seem, but one manner of arranging pictures at an exhibition, and to this time-honored system the Grosvenor has rigidly adhered. As for the pictures themselves, some of them are very good, and reflect substantial credit upon British art. From this point of view the exhibition, as a whole, is much more glorious than the show at the Royal Academy, which has but just opened, and of which I will speak on another occasion. If on the one hand it is much smaller, on the other it is not disfigured by the presence of any member of that contingent of the old-fashioned Academicians who, at Burlington House, offer so painful and humiliating a reminder of the depths of vulgarity to which English art had sunk thirty or forty years ago. The painters represented at the Grosvenor this year are almost the same names that figured in last summer's catalogue; the artist most conspicuously absent is, perhaps, Mr. Holman Hunt. This year, as last, Mr. Burne-Jones is easily the first, and his several works are far away the most interesting and remarkable things in the exhibition. To the visitors in quest of "peculiarity" they are, as usual, a particularly opportune spectacle.

Mr. Burne-Jones's contribution consists of two large pictures—"Laus Veneris" and "Le Chant d'Amour"—and eight smaller ones, several of which were painted some years ago. I have space to speak only of the large things, which are certainly, as yet, the painter's strongest works. "Laus Veneris" represents a wonderful royal lady in a flame-colored robe, seated among her maidens, who are singing to her the praise of love, and accompanying themselves on quaint musical instruments. A long, low open window behind the maidens reveals a company of gentlemen in white armor, on white horses, who, as they pass, peer curiously and wistfully into the splendid room. The lady is leaning back wearily, with one arm thrown up and passing over her head, whose dense tresses are all unfolded, while she has lifted off her terrible great crown and placed it before her in her gorgeous lap. She has the face and aspect of a person who has had what the French call an "intimate" acquaintance with life; her companions, on the other hand, though pale, sickly, and wan, in the manner of all Mr. Burne-Jones's young people, have a more innocent and vacant expression, and seem to have derived their languor chiefly from contact and sympathy. "Le Chant d'Amour" is a group of three figures, seated, in rather an unexpected manner, upon the top of a garden wall. The middle one is a young woman in a white satin dress, kneeling upon a blue cushion before a small organ, over whose keys her white fingers move. On the right, behind the organ, a young angel, of uncertain sex, plies the instrument with wind from a pair of bellows; on the left sits a melancholy youth in armor, with a dark brown face, leaning on his hand, with his legs folded beside him, listening to the melody produced by his two companions. These two pictures are open to the same sort of criticism that was freely bestowed upon the artist last year. It will be a matter of course to say that the subjects are unreal, the type of figure monotonous and unpleasant, the treatment artificial, the intention obscure. There is much to be said about Mr. Burne-Jones every way; but the first thing to be said, it seems to me, is that no English painter of our day has a tithe of his "distinction." After that there is more to say than I have space for. If his figures are too much of the same family, no English painter of our day has mastered a single type so completely and made it an image of so many different things. In color, the two pictures of which I have spoken are a great achievement; they have extraordinary beauty. They are extremely different, and only a master could offer us such contrasts. The "Laus Veneris" is pitched in a high key—a key given by the wondrous flame-colored robe of the heroine fretted with little circular figures in relief. The colors are all brilliant, the shadows thin, the whole impression that of bright surfaces in a strong light. "Le Chant d'Amour," on the contrary, looks at first like some mellow Giorgione or some richly-glowing Titian. The tone is full of depth and brownness, the shadows are warm, the splendor subdued. As a brilliant success in the way of color it is hard to know which picture to place first; each of them, at any rate, bears in this respect the great stamp—the stamp of the master for whom the play of color is a freedom, an invention, a source of thought and delight. In the way of design the strongest point in these two works is the attitudes of the two principal figures—the grand weariness and, at the same time, absorption of posture of the mediæval Venus, and the beautiful, rapt dejection of the mysterious young warrior. It must be admitted that the young warrior, with his swimming eyes, has a certain perplexing femineity of expression; but Mr. Burne-Jones does not pretend to paint very manly figures, and we should hardly know where to look for a more delicate rendering of a love-sick swain. The fault I should be inclined to charge upon Mr. Burne-Jones's figures is that they are too flat, that they exist too exclusively in surface. Extremely studied and finished in outline, they often strike one as vague in modelling—wanting in relief and in the power to detach themselves. They are, however, so wonderfully elegant that I should not insist upon that. The compositions of which they form part have the great and rare merit that they are *pictures*. They are conceptions, representations; they have a great *ensemble*.

There are some other excellent things at the Grosvenor, though I should greatly hesitate to name among them the numerous contributions of Mr. G. F. Watts. Mr. Watts has been for thirty years one of the first—perhaps, indeed, the very first—of English portrait-painters; but in the evening of his days he has taken to allegory, and it must be declared that in this pursuit his zeal has decidedly outrun his discretion. His big, mystical "Love and Death," last year, had indeed a great deal of nobleness, and might, all things considered, be pronounced a success. But this season Mr. Watts is really too big and too mystical; he appears to me, in vulgar parlance, quite off the scent. There is a good deal of fine color and of what may be called the intention of imagination in his two large canvases, "Time and Death" and "Mischief," but there is still more of a certain dense confusion and of an indefinable something which reminds the spectator that nothing is so precious as good taste, or, in its absence, so much missed.

Two American painters are substantially represented. I may seem to stretch a point, indeed, in speaking of Mr. James Whistler as an American painter, for it is not fair to attach to Mr. Whistler any label that serves for any one else. He is quite sole of his kind. He covers a large space of wall with an array of his usual "harmonies" and "variations," "arrangements" and "nocturnes." "I don't know," was the answer of a friend to whom I had uttered some restrictive criticism of these performances; "I think they are very pleasant things to have about." This seemed to me an excellent formula. Mr. Whistler's productions are pleasant things to have about, so long as one regards them as simple objects—as incidents of furniture or decoration. The spectator's quarrel with them begins when he feels it to be expected of him to regard them as pictures. And, even as "objects," it is hard to feel strongly about them; for Mr. Whistler paints in a manner to make it difficult to attach a high value to individual pieces. His manner is very much that of the French "impressionists," and, like them, he suggests the rejoinder that a picture is not an impression but an expression—just as a poem or a piece of music is. Mr. George H. Boughton proceeds in a very different manner, and his results are always charming. More exactly than any one else he preserves the balance between landscape and figures; with him it is always difficult to say whether the group or the background constitutes the subject. This is pretty sure to be one of two things—a study of the costume of the early years of the present century, or a study of the English rustic ("navvy" or ploughboy) and his brawny sweetheart. At the Academy, this year, Mr. Boughton shows us the big bonnets and pelisses, the scanty skirts and long mittens, of the year 1810; he understands these things in perfection and paints them charmingly. At the Grosvenor he

exhibits, beside an excellent landscape with a single figure, a rustic pastoral with a large element of landscape—a couple of huge-armed swains in corduroys, at the edge of a stone-quarry, contending with the hammer (they are trying to crack a big block) for the favor of a thick-necked and thick-wristed maiden who sits watching them like the queen of beauty at a tournament. In all Mr. Boughton's work, and especially in his partiality for a certain bright soberness of color, there is something very refined and discreet.

Mr. Millais is present at the Grosvenor in two contributions—one of the sort that is spoken of at present as representing him at his best; the other looking very much like the work of a vulgar and infelicitous imitator. The better of these two pictures is a portrait, entitled "Twins"—two young girls of eighteen or twenty stiffly posed and drawn, but very freely painted, and looking out of the canvas as Mr. Millais can so often teach his figures to look. It is kinder not to speak of the other example of this strangely unequal painter—a painter whose imperfectly great powers always suggest to me the legend of the spiteful fairy at the christening feast. The name of Mr. Millais's spiteful fairy is vulgarity; but, fortunately (it must be added), the good fairies are *au complet*. The trio of clever foreigners—MM. Tissot, Alma Tadema, and Heilbuth—are in force; and I must find space to mention two young Englishmen (or, as I believe, Scotchmen) who have this year "revealed" themselves—Mr. Gregory, with a really superb portrait of a gentleman, and Mr. Cecil Lawson, with two very large and ambitious, but very original and interesting, landscapes.

ANTI-RUSSIAN SENTIMENTS IN FRANCE.

PARIS, May 2, 1878.

THE Exposition of 1878 was opened yesterday officially, with all the pomp and circumstance of such ceremonies. As an exhibition it is still in the most embryonic state; it will not be perfect, I hear, before a month. At a distance its huge towers appear like the minarets of a gigantic mosque; but I must confess that I have only seen it yet at a distance. Paris was very merry yesterday, notwithstanding the showers which from time to time cooled its enthusiasm. Paris was contented with itself, and made phrases about the great feast of peace and progress and the wonderful revival of France, and put flags in its windows, and illuminated its monuments, and cheered the foreign soldiers who have been sent to the Exhibition as guardians, and who lounged in their uniforms on the boulevards. Boys with Venetian lanterns went in troops, and sang songs of a republican character. Long lines of gas marked the outlines of the Madeleine, of the Opéra, of the Triumphal Arch. The sky above the town was red with the glare of so many thousands of lights, and then, one by one, each monument was darkened by the turning of a cock, and the shouting died by degrees, and the gloom of the solemn night began.

This festive day was in reality like a ray of sun between two showers, for never was the future of Europe so dark as it appears now to a thinking mind. It is a curious fact that thus far the only objects of admiration in the Exhibition have been soldiers—your American soldiers, the Spanish, the Danish, the English soldiers. We are comparing uniforms. The most notable work of art in the great Exhibition, when it is complete, will undoubtedly be the tomb of a general. Dubois will show us his monument of Lamoricière, exactly as it will appear in the walls of the cathedral of Nantes. I rejoice in the hope of seeing this wonderful triumph of French sculpture. You are probably by this time familiar in America with the two figures of "Charity" and "Military Courage." We shall see the two others with them—"Hope" and "Faith"—and Lamoricière on his death-bed, in his military uniform, guarded by these admirable statues. It will be worth a journey to see the tomb of Lamoricière in the Champs de Mars, but why should I at once think of it in connection with what pretends to be an industrial exhibition? It is probably because war is now in the minds of all. Europe is full of rumors; we have ceased to hope in peace. It must be apparent to all that England is determined to open the gates of the Temple of Janus. She is probably but waiting for the Indian troops to arrive at Port Saïd, which can only be in a fortnight. Meanwhile time must be gained, and people can continue for a while to speak of German mediation, of diplomatic inventions and combinations of all sorts. An English friend, speaking to me yesterday of the arrival of the Indian troops on the European battle-ground, told me that this exodus of the Indian army was to him the most ominous sign of the times. "How can we now avoid war? When you invite a man to dinner, you must give him something to eat." The old India men are not overjoyed at this; they ask themselves what may happen if the natives of India find out that they are a match for European troops.

It is not for me here to speak of the wisdom of these measures; I will only note their effect on the French mind. Till within a few weeks public opinion in France was in a state of complete, of absolute neutrality on the Eastern question. This condition of things was partly the work of the Duc Decazes, who had been the Minister of Foreign Affairs for several years, and who had cultivated good relations with all the European Powers indifferently. It was also the expression of the good sense of the country, which felt that the determination to remain at peace precluded any strong expression of opinion—that neutrality in deeds must be accompanied by neutrality in words. We were neither Turk nor Russian nor English in sentiment; if there was a little, a vague preference, it was, I must confess, on the side of Russia. Even at the time of the Crimean war France felt no hatred for Russia; our officers of high rank returned from the Crimea with sentiments of admiration and of sympathy for the Russian army. At the time of our great misfortunes the support which was given indirectly to Germany by the Czar did not much irritate the French. We were, indeed, abandoned by all Europe, and if France had the right to expect any sympathy it was not from the nations against which she had made war, it was from those which had been our friends and allies. Napoleon III. had made the Crimean war for dynastic purposes, but he had nevertheless frustrated the plans of Russia; he had during the Indian mutiny offered to the English troops the passage from Calais to Marseilles; during the American rebellion he had tied his policy to the policy of England, and abandoned for a while the traditions of France with regard to the United States. Finally, he had nearly ruined French manufactures by a sudden change in the whole tariff, and by a free-trade policy suggested by Cobden and the Manchester school. England was not obliged to pay to the French Republic of 1870 all her debts to Napoleon III., but, on the other hand, she had no right to screen herself behind the famous Benedetti treaty in order to explain and justify her complete indifference to the territorial losses of France. This indifference was, at the time, very painful to the French people. We did not expect England to go to war for us, as she was unprepared, but she could have said something about the treaties of Vienna when our frontier was altered. The treaties made after Waterloo were surely as important to her as the Treaty of Paris made after the fall of Sebastopol. The French people imagined that England had really and for ever renounced interference in the affairs of Europe, but since the accession of Lord Beaconsfield to power a great change has been made: England has assumed a new attitude, and, in fact, she is now assuming the position of defender of the treaties, though she quietly saw every treaty torn to pieces twenty years ago.

The French public could not be much interested in this change of policy on the part of England, so long as it was openly proclaimed that England would never stir for anything except English interests. But while this is still the language of those who desire to work a change in that part of the English people which is afraid of war, and cannot yet be induced to approve a warlike policy, there is now a notion abroad, which has found its expression in many places, that England is not preparing to fight for selfish English interests; that she is the champion of European law, of international law, of the sacred rights of the European community; that she is preparing to do for the Continent what she has often done—to give heart to the weak and oppressed, and to resist the tyrants—"debellare superbos." A few writers of great merit have endeavored to excite public opinion in France in favor of England, and they have been aided by the desires of the leaders of the Republican party. The chief enemy, the arch-enemy, if I may say so, of Russia in France is the author of "The Two Chancellors," the author of so many articles in the *Revue des Deux Mondes* on the Danish War, the ex-Aulic-Councillor of Vienna, the ex-Deputy to the Gallician Diet, the friend of Baron Beust, who now directs and inspires the foreign policy of an important Parisian paper. I will not pronounce his name, as his articles are not signed; but who could fail to recognize his mark, his old habit of citing Shakspere, his charming anecdotes, his great knowledge of the diplomatic personnel of Europe? The policy of this eminent writer is very plain: he means to work at a coalition of France, England, Austria, and, if possible, of Italy, against Russia and Germany. His articles have been much read, and have undoubtedly produced much effect. They have fallen in the mill-pond of our home policy and have stirred its waters.

The Republicans, after the 16th May, went to the polls with the word of peace in their mouths; they accused the Conservatives of hidden de-

sires, of clerical, anti-Italian, and Papal wars, an accusation which they did not themselves believe, but "all is fair in love or war." The peasants, when they gave their votes for the Republicans, thought they were voting for peace, just as they did when they voted for the last plébiscite before 1870. The Republicans, taken *en bloc*, certainly are for peace, but some of their leaders, and the most important of all, the man who has in his hands the whole power of the country, as he holds the legislative majority at his disposal—this man is not one of those minds which are easily contented and satisfied with a quiet and inglorious prosperity. He has, like M. Thiers, gone from country to country; he is restless, he has everywhere emissaries and correspondents. Well, it has been remarked that the *République Française*, which is under the constant and direct inspiration of M. Gambetta, and which had from its foundation kept a very reserved tone on all questions of foreign policy, suddenly changed its style and began to echo the bitter and sarcastic attacks of the *Journal des Débats*. The war against Russia has begun in words, the *mot d'ordre* has been sent to all the local Republican papers; they all now, as one man, have adopted a *politique polonaise;* they abuse the Northern Bear and Russian ambition; they represent the Russians as tied for ever to the policy of Bismarck, as accomplices in his great work against civilization, liberty, parliamentary institutions. England is the country of "civil and religious liberty"; communistic papers speak with raptures of its "noble aristocracy." The "noble" Prince of Wales is the lion of the day here, not only in the sporting world but in the Republican *salons*—for there are Republican *salons*. This is perhaps the time to ask the famous question: "Qui trompe-t-on ici?"—What does all this mean? Public opinion is arming against Russia and in favor of England. But will the deeds follow the words? It all depends on Austria. Our great Slavophobists will tell you that, of course, France alone cannot rush against the triple alliance; that she would at once have war at home, while the English ironclads would make what we call "des ronds dans l'eau"; but if Austria is detached from the alliance of the Emperor, if she makes an alliance with England, then will it not be the duty of France to seize this opportunity?

To which it may be answered that Austria will probably not detach herself from the alliance, that Count Andrássy will have it in his power to give many millions of new subjects to his Emperor without drawing the sword; only we may be so far entangled in some plan against Russia and Germany that it will be difficult for us to fall back; we may make a new Benedetti treaty, and if we do . . . But do not let us borrow trouble.

Correspondence.

MYTH-MAKING.

To the Editor of The Nation:

Sir: In *Fraser's Magazine*, April, 1866, an article on the late Henry Thoreau appeared, in which was related an instance of his intimacy with nature, namely, his occasionally taking a fish out of Concord River with his hand. "If," it is there said, "the fish had also dropped a penny from its mouth, it could not have been a more miraculous proceeding to us." On the same page is quoted from Thoreau's works an explanation of the feat. The fish is the bream (*Pomotis vulgaris*), which has a way of defending its ova when a hand approaches, and may be so caught.

Now, there is a book written by one "H. A. Page" on Thoreau which adduces that naturalist to illustrate a rationalistic theory of miracles. As this production has been reprinted in America it may be well enough to remark how it deals with the incident of the fish. The author quotes the story from *Fraser*, word for word, down to the explanation; that is entirely suppressed; instead of it we have the surmise that "the secret, as we guess, was not a communicable one under any conditions," and "a full explanation would probably have been more hard for Thoreau than the feat itself." The allusion to the penny is italicized. The authority from which the story is taken is not mentioned—not even the magazine being named. "H. A. Page" is a pseudonym. Thus the radical and naturalist, his friend who wrote the article, and the editor (Froude) who published it, are all impressed for the work of building up a new miracle by a writer under a fictitious name.

And this is the way mythology is made!

Moncure D. Conway.

London, May 2, 1878.

Notes.

The Rose-Belford Publishing Co., Toronto, announce as in preparation a work entitled 'Canada, under the Administration of Lord Dufferin,' of which Mr. George Stewart, jr., of St. John, N. B., is the editor. It will have for its frontispiece a steel portrait of Lord Dufferin, and the publishers will also bring out a lithographic portrait of His Excellency in the style of the well-known *Atlantic Monthly* series, and obtainable only by subscribers to the book.——Robert Clarke & Co. have promptly issued a neat brochure on the great Cincinnati organ—the largest in the country—whose completion, with the ample Music Hall which it adorns, has just been celebrated with the aid of Theodore Thomas. The public spirit which secured these valuable possessions to the city was seconded in a remarkable manner in the decoration of the case of the organ, of which the carving was largely the unpaid work of ladies, both married and single, trained in Cincinnati's schools of art. This brochure gives a number of the designs for the panels.——The eighth annual report of the Metropolitan Museum of Art shows how much has been gained by acquiring the second Cesnola collection; explains the failure to buy the Castellani collection; and calls the attention of the friends of the Museum to the fact that on removal to the new building in Central Park (in the course of next year) the revenues of the institution from admissions will wholly cease, and its support become somewhat precarious.——A short bibliography of works, English and foreign, relating to ceramic manufactures is given in the London *Bookseller* for May 3, in the hope that provincial booksellers may be stimulated to add pottery to their more legitimate wares.——Mr. Fred. W. Foster has just begun in *Notes and Queries* a bibliography of archery. He reserves the works relating to the Robin Hood and William Tell group of mytho-historical tales for separate lists. He mentions with approval Mr. Maurice Thompson's articles on the subject in *Scribner's* and *Harper's*.——Henry Holt & Co. will print an American edition of Mrs. Thomas Brassey's entertaining 'Voyage of the *Sunbeam*.'——'Recollections of Two Distinguished Personages' (Countess Guiccioli and Count de Waldeck), by Mary R. D. Smith, is announced by J. B. Lippincott & Co.——We find the following curious advertisement in a St. Louis paper: "To-night: Lecture and free discussion on the principles of the Soc. Labor Party, at Washington Hall, Third and Elm sts. Everybody is invited. N.B. Allusions to nationalities or indecent language are forbidden."——Dr. Daniel Sanders's little 'Wörterbuch der Hauptschwierigkeiten der deutschen Sprache,' which we favorably noticed some years ago, is now entering upon its eleventh edition, which is to be more than twice the size of the first.——R. Oldenbourg, Munich, has just issued Vol. i. of a new work in two volumes on the United States by Dr. Friedrich Ratzel, Professor of Geography at the School of Technology in that city ('Die Vereinigten Staaten von Nord-Amerika: ihr Land, und Volk, ihre Natur und Cultur'). It is illustrated by twelve wood-cuts and several colored maps. If the expectations held out by the prospectus are fulfilled, we shall have a work as valuable as it is unique on either side of the Atlantic.——Salmin Brothers, Padua, have undertaken to publish a 'Memoir of Maurizio Quadrio,' the Italian patriot and exile, and desire the immediate loan of letters or any documents relating to him. The work will be edited by Emilio Quadrio, and will be elegantly printed in an Elzevir edition.——We did grave injustice last week to the author of 'Les Fourchambault,' M. Émile Augier, in remembering to forget that he long ago won his chair in the Academy.——The regents of the Smithsonian Institution have unanimously elected Professor Spencer F. Baird, heretofore the assistant-secretary, to be the successor of the late Professor Henry. Professor Baird's remarkable executive ability is well known.

—A paper which records the recent coaching excursion to Philadelphia gives to *Lippincott's* for June the stamp of the daily newspaper, which keeps its forms open for the latest despatches. Its title is "The Four-in-hand, and Glances at the Literature of Coaching"; and the writer, Jennie J. Young. The illustrations are both of antiquarian and of present interest, and include views of several of the teams of the Coaching Club, after photographs, and portraits of the president and of Col. Delancey Kane. Mr. Edward King's second paper on Rumania conveys a good deal of information about the customs of the people, their mode of living, and their curious language. The scanty population of that portion of Bessarabia sought to be annexed by Russia "is distinctly Rumanian. The men are rather more manly in bearing than their brethren of other sections: they have broad foreheads, frank eyes, long coarse hair, dense black mustaches, well-turned limbs, and generally

carry weapons. But they live in hideous little cabins unfit for the habitations of cattle, banked with mud, and furnished inside with the rudest articles of prime necessity. . . . The women are dull, submissive, and rarely pretty." *Lippincott's* opens with a well-written, and for tourists useful, article on the Riviera ; and we may also mention a tragic little history, quite Southern, of one branch of the Masons of Virginia.

—The June *Scribner's* is conspicuous, even in its own series, for the beauty of the illustrations. Those designed by Mr. W. L. Sheppard, with his usual mastery of Southern scenery and character, to illustrate coon-hunting, are engraved with an effectiveness and a *chic* that rival the best work of the *Tour du Monde*. Still, the most remarkable proofs of dexterity in engraving are undoubtedly to be found in some of the wood-cuts after Cruikshank, whether from an etched or a xylographic original. The well-known Grimaldi vignette, for instance, which stands at the head of Mr. Russell Sturgis's article on the great caricaturist, and the full-page "Triumph of Cupid," on p. 172, and "The Booby," engraved by a lady, on p. 176, leave nothing to be desired in point of delicate fidelity to the original. Mr. Sturgis regards with less favor the designs reproduced by photographic process, of which there are several ; but, while only the connoisseur can readily discover their defects, one need have but a slight acquaintance with the art of wood-engraving to appreciate the wonderful success which has attended the more dangerous task of fac-simile by engraving on wood after copper. Mr. Sturgis does what can be done in the compass of a few pages for the busy lifetime of a veteran artist. He defines the several periods of Cruiksnank's long activity, enumerates the principal directions in which his prolific talent was employed, and the books and editions in which his best work is to be found, and bestows a passing judgment on his character as a man and his rank as an artist. What will excite most attention is his showing that Cruikshank, as a caricaturist, was ready "to be employed by either side." But, if this should be resented by the artist's admirers, they cannot but be mollified by Mr. Sturgis's excuse, which, indeed, harmonizes with the nature of a humorist : "It is probable that he never held very positive political opinions, and was swayed by philanthropic feelings alone. It is probable that he saw things fit to ridicule in both sides of every question—in both the armies in any contest." Mr. Sturgis's selection of examples must have caused him great embarrassment. He was allowed twenty-three, where a hundred could have been profitably used. Among these he contrives to introduce no less than five portraits of his subject.

—The controversy in which we lately took part, apropos of the question of sending specimens of American wood-engraving to the Paris Exposition, is revived in *Scribner's* by Mr. W. J. Linton. His text is the *Evening Post's* dictum that "Wood-engravers, properly speaking, are not artists, nor do artists, as a rule, recognize them as such." Mr. Linton's rejoinder has the rhetorical defect of a want of clearness of style. What he really maintains is that any wood-engraver who (1) engraves upon the wood directly—without at all, or fully, drawing on the block the design in advance ; or who (2) can design as well as engrave ; or who (3) translates brush-work into line-work—whether from the painter's canvas or the draughtsman's scumbled drawing on the block, is an artist. Mr. Linton himself does all these things, and does them well, and is incontestably an artist. On the other hand, the admirable assistants of Dürer and Holbein, who cut in fac-simile the master's designs, were very good mechanics but not artists. This distinction is clear, but its acceptance is not unattended with difficulties. Take, for instance, the illustrations in this very number of *Scribner's*. Does it require more artistic sympathy to produce the "coon-hunt" scene on p. 217 than "The Triumph of Love" on p. 172 ? Perhaps it does. One is an interpretation, the other a line-for-line imitation ; but, however they may be ranked as works of art, we find it hard to admit that the latter is exactly on a par with the photographic fac-simile. When Mr. Ruskin sets the student copying a corner of Dürer's wood-cuts or Turner's etchings, he recommends a not wholly mechanical process, or there would be no art-training in it ; and the student who best succeeds has best comprehended the value of each line, and so most nearly caught the spirit of his exemplar. Let any one compare the picture of Bewick's starving ewe in Jackson and Chatto's 'History of Wood-engraving' with the cut in Bewick's 'Quadrupeds,' and he will guess the difference between fac-similes and fac-similes. Mr. Linton, by the way, we think underrates Bewick's thoroughness in putting his own designs on the block, though he was doubtless capable of "drawing the bird before him with the graver." And if he was "not known as a painter," he has left many exquisite studies in water-color.

—As orthodox readers of the *Atlantic*, we turned first to Mr. Bishop's "Detmold," and having found the conclusion at once answering our expectation and gratifying our sense of poetic justice, we are free to say that we hope the story may be republished in book-form. The author deserves this by way of encouragement as well as of admonition. Thoreau's "June Days" are, perhaps, hardly as suggestive reading as were the two previous months from his diary ; but he gives an interesting account of camping out on Monadnock, and does not overlook "the newspaper and egg-shell left by visitors" on the summit. Mr. Henry Cabot Lodge contributes a vigorous sketch of the career of Timothy Pickering, more especially that part of it suppressed by the late Dr. Upham, and brought to light in Prof. Henry Adams's 'Documents relating to New England Federalism,' of which this article is ostensibly a review. Pickering was eighty-two when invited to meet President John Quincy Adams privately at dinner. He was too frank to accept without asserting his unchanged views of Mr. Adams, and too manly to shun meeting him ; so he writes a letter to the host in which he calls Adams a slanderer and a President by apostasy (not by "fraud" *and* "apostasy," as in these corrupter days), and concludes, "I accept with pleasure your invitation to dinner." Mr. A. G. Sedgwick discusses the "Unforeseen Results of the *Alabama* Dispute," of which the most novel and even startling is the dilemma that if Congress, in distributing the Geneva award, recognizes the so-called "exculpated cruisers" claims, and the war-premium claims, it will bind us to the inconvenient doctrine that "a neutral is bound to pay damages which arise from her acts, however remote." There can be little doubt that this view is as sound as it is novel. Mr. T. S. Perry has, perhaps, undertaken a rather thankless task in summarizing M. Doudan's essay on "The Revolutions in Taste." Nevertheless, those who have read with eagerness the reviews of this remarkable person's letters, in lieu of the letters themselves, may well feel obliged to Mr. Perry for his account of the essay, even if it should not dispose them to procure it and read it in the original.

—How long it has been the fashion for one newspaper to call another "our contemporary," or why a newspaper should be a "contemporary" any more than an individual man, we are unable to say. If the term be a correct use of language, it would also seem to be proper for a newspaper to refer to one which has preceded it in point of time as its "prior," or to those which are to come after it as its "posteriors," and to talk, when in a genial mood, of our "venerable priors" and "our energetic posteriors." But the fact is that for an unknown period "contemporary" has been what may be called the editor's polite professional word, like the lawyer's "learned gentleman" or the legislator's "gentleman from Cattaraugus," of designating another newspaper. When the two editors were on friendly terms it has not been uncommon to say "able contemporary" or "brilliant contemporary," though we cannot recall any case in which these epithets were accorded to a journal published in the immediate neighborhood or cultivating the same field. The recipients of these have almost always been so far off that compliments to them would not be likely to be injurious to the eulogist's own business, or likely to be construed injuriously as an admission of professional superiority. The use of the term "contemporary," too, probably has always been defensible on the same ground as the corresponding parliamentary circumlocution, viz, that it gave the person referred to the air of an abstraction, and thus kept down the pugnacity which the contemplation of him as a man might rouse in the heat of political strife. It must be confessed, however, that in the press the device has only been partially successful, and it has been no uncommon thing for a "contemporary" to be described in most opprobrious language, resulting in some parts of the country in the appearance in the streets of two "contemporaries" clad in seedy black and well armed, bent on mutual slaughter.

—What is attracting attention to the term just now is the fact that a variety hitherto but little known—indeed we may say in this city totally unknown—the "esteemed contemporary," has made its appearance in New York. The *World* has several "esteemed contemporaries" ; the *Sun* has two or three ; so has the *Post*. The *Times* has only one, but the *Tribune* as yet has none. Twenty years ago this would have been considered a sign of weakness, and have considerably interfered with the rolling of "the ball of discussion," as the art was then practised. At that time there was, we believe, no newspaper office in the city in which a contemporary could have been honestly esteemed, owing to the firmly-rooted belief in his folly and depravity. Any day in which he was not blundering grossly in the very elements of knowledge he was engaged in the promotion of some scheme of iniquity, and there was no self-respect-

ful way of liking or admiring him. Now, however, probably owing to the greatly diminished prominence and importance of the editor's personality, it is found possible for journalistic rivals to carry on very animated debates in words of honeyed courtesy. Your contemporary may be constantly making mistakes and taking most mischievous views of grave questions, but he still remains "esteemed." As far as one can make out, too, the term is not ironical, like the "beloved contemporaries" of the terrible Jennings—a term which, in his mouth, was a synonym for unconscionable ruffians and liars, whom he was going to blackguard severely. It does not, we are quite sure, mean real love or admiration, but it means a desire for peace and sober discussion which has been long unknown in "journalistic circles" in this city, and the reign of which would be wider if the balance-sheets of the *Tribune* could be made satisfactory to the *Times* and *Sun*. It is this more than anything else which prevents the *Tribune* at present from being even a "contemporary," much more an "esteemed contemporary," to either of these papers. The *World*, also, as far as human eyes can see, will never become a "contemporary" to the *Times*, or anything like it, owing to causes "far brought from out the storied past," the elucidation of which, so rapidly does time fly, will probably need before long the best historical talent our country can produce. But it ought to be observed, at the same time, that journalism is above all pursuits that in which the unexpected is likely, and in which the most sudden revulsions of feeling occur. In fact the journalist proper, in his relations to his professional brethren, seems incapable of calm and steady respect, or even indifference. He usually passes from "the rage of the vulture" to "the love of the turtle," and either extols to the skies or damns to the lowest pit of imbecility and rascality. That persistent urbanity does not work well in the profession, and in fact indicates a lack of staying power, would seem to be deducible from the fate of the *Evening Mail*, which has just died, and was probably, during its brief existence, the most civil-spoken paper in the world. It had a kind word for everybody, and was full of admiration for the talents and enterprise of all the other papers. A better paper for a young man just beginning his education, and needing to cultivate his powers of reverence, probably never existed. Its fall raises the question whether too great politeness and suavity is not injurious to a newspaper—whether, in short, admiration of its "contemporaries" does not suggest secret weakness or want of that self-confidence which is to the journalist what courage is to the soldier.

—A consoling theory about torpedoes has recently made its appearance in the English papers, to the effect that a harbor may be cleared of these obstructions to an attacking fleet by

"exploding large charges of powder, gun cotton, or other explosive, sunk to some distance below the surface of the water, in order that the shock produced, transmitted through the surrounding fluid, may stave in or otherwise injure any of the enemy's submarine mines which may be arranged in the vicinity. A certain area being thus cleared of any hostile torpedoes, this space may be continually enlarged by dropping and exploding other countermines, each one in advance of the other, until finally the whole passage is cleared. Unless, however, the exact position of the defensive torpedoes has been determined beforehand, it is evident that a very large quantity of explosive material will have to be expended, since, the radius of rupture of a counter-mine being comparatively small, several charges may be exploded at points where they will do no damage."

Careful and repeated experiments by the Engineer Corps in this country show that this is an illusion. Putting aside the fact that water is a non-elastic body and will not "transmit shocks" sufficient to produce an explosion, we may mention that General Abbott, who is in charge of the torpedo station at Willett's Point, has demonstrated that you cannot explode a torpedo by another torpedo, even out of the water. We were present a few days ago at some of his experiments, which left no manner of doubt on the subject. He placed a thirteen-inch shell charged with dynamite on the ground, and put in actual contact with it a dynamite cartridge the explosion of which cracked the shell in every direction without disturbing its contents. He then exploded another dynamite cartridge in contact with it, which blew the shell to pieces, but without any effect on the charge beyond scattering it about on the ground.

—To meet the difficulty of finding out where the enemy's torpedoes are, the authors of the "shock" theory say they are to be discovered

"by 'sweeping' the area in which it may be suspected they have been placed. This operation is performed by dragging through the water a rope which is weighted so as to keep it at a certain depth below the surface, and the ends of which are attached to two boats which are rowed or steam forward together at a given distance apart. The mines of the enemy having been discovered by this means can then be readily destroyed by countermining."

They do not seem to be aware that the electrical apparatus of the torpedo system is now so perfected that touching the torpedo with a "rope," or anything else, will discharge guns on shore which would sweep with grape and canister the lines on which the torpedoes are laid. In other words, stationary torpedoes now give notice of any danger to themselves, without exploding, on the mere condition that they shall be in some manner disturbed. In fact, the only thing that prevents the harbor torpedo in its present state from being a perfect defence is the necessity of protecting the operators on shore with heavily fortified works. These must be strong enough of themselves to resist the attacking fleet; as otherwise a landing party would take possession of the instruments and cut the wires.

—A valuable monograph by Mr. John B. Pearson, Fellow of Emanuel College, Cambridge, discusses 'The Theories of Usury adopted in Europe during the Period 1100–1400 A.D.' It is largely made up of a statement of the doctrine of the Bible and of mediæval writers—especially in the decretals of the popes and the writings of Thomas Aquinas—upon the subject; and these are amply illustrated by references and citations. The third Appendix, for instance, contains six pages of quotations from mediæval writers. It is made very clear that *usury* at this period did not have the meaning it has now, but meant any demand of money for the use of money. With our modern ideas it is hard to comprehend the prohibition; and, indeed, by the close of the period under discussion the casuists of the church had enough to do to justify the absolute prohibition of the practice in all cases with its permissibility in some cases. Nevertheless the Old Testament prohibition, from which it is ultimately derived, is not so very hard to understand when one places one's self, as Mr. Pearson does (p. 7), in the point of view of that early society. From this "we see at once the reason for lending to the poorer of their brethren; while lending to the rich at all is not contemplated, nor yet anything like employment of capital in our sense of the word; nor thirdly, as I think, the notion of an indolent borrower, who borrows to expend on his own convenience and comfort." The manner in which the practice of lending on interest forced itself into recognition in the later Middle Ages, although stated clearly enough, is not well worked out in detail; and, indeed, legal relations and terms are far from being satisfactorily defined. In regard to the *emphyteusis*, for example (p. 50), strangely enough there is no mention of any connection with the tenure of land.

MASSON'S MILTON.*

IN these two volumes Mr. Masson's narrative drags its slow length from the execution of Charles I. to the Restoration, a period including many transactions that still need elucidation, and promising to display to best advantage the peculiar method which the author has deemed it necessary to adopt in constructing his work. For during these eleven years Milton was not only brought into most direct personal connection with the stirring events of his time, but far more than at any other period he may be taken as the representative of its political and ecclesiastical tendencies. Here, therefore, more than at any earlier stage of his undertaking, we may expect to find Mr. Masson justified for embedding his proper theme in such a minute and exhaustive survey of contemporary history. His success or failure here will decide the verdict respecting his entire work.

Beginning with the foundation of the Commonwealth, Mr. Masson enters at length into the difficulties which beset it at the outset, arising in part from lack of agreement among the leaders, and in part from the threefold opposition of Presbyterians, Royalists, and Levellers. The campaigns of Cromwell in Ireland and Scotland are described, and the relations of the Commonwealth with foreign powers very fully explained. The growing antagonism between Parliament and the army, which culminated at length in the forcible dissolution of the Rump, is carefully traced. The conservative reaction, which resulted in the establishment of the First Protectorate, the differences respecting toleration, the Petition and Advice, the Second Protectorate, the French alliance, the policy of Cromwell with respect to education and religion, the ignominious rule of Richard, and the miserable succession of plots and counterplots which only served to hasten a foregone conclusion, are all described with a fulness of detail found in few histories of the period. It would be unjust to

* 'The Life of John Milton, narrated in connection with the Political, Ecclesiastical, and Literary History of His Time. By David Masson, M.A., LL.D.' Vols. IV. V. New York: Macmillan & Co. 187[illegible].

deny that Mr. Masson has shown great diligence in exploring sources of information, and that he has succeeded in collecting many interesting facts. He is at his best in dealing with the most difficult part of his task—the relations of the various religious sects. Here he is uniformly fair and thorough. Yet we cannot regard his general treatment of the history of the Commonwealth as very successful. His skill lies much more in collecting material than in using it, and he leaves on the mind no distinct impression of an epoch full of high strain and of brilliant incident. His facts hang loosely together without generalization, and the value of his original conclusions seems by no means commensurate with the unwearied pains he has taken. While he has called attention to some incidents that had been overlooked, he has done little on the whole to modify prevailing opinions. Most of the great actors in the drama are presented neither in a very novel nor in a very striking light. On what has been perhaps the most debated passage of Cromwell's career, the dissolution of the Rump, Mr. Masson has nothing new to communicate, and contents himself with reciting the familiar story. Even the foreign policy of the Protector, once so extravagantly praised, but which has recently been called in question as an error into which he was betrayed by his essentially conservative and unspeculative temper, receives from Mr. Masson no special notice. He accepts the theory that Cromwell's elevation to some kind of sovereign power was a necessity of the time, as the only escape from the wild civil and religious idealism which had been the visible drift of the Barebones parliament, but he alleges no new reasons in favor of a view which the eloquence of Mr. Carlyle has already made so familiar. A noticeable feature, however, of this part of Mr. Masson's work is his emphatic assertion of the essentially conservative tendency of the Protectorate.

So far as relates to the author's proper subject, the life of Milton, these volumes include the publication of his tract on the 'Tenure of Kings and Magistrates,' his 'Eikonoklastes,' his two 'Defences of the English People,' the 'Treatise of Civil Power,' the 'Considerations on Hirelings,' and the 'Ready and Easy Way to establish a Free Commonwealth.' During these years Milton was also in the employ of the Council of State, as Secretary for Foreign Tongues, and in this capacity wrote the 'Letters of State,' which for style, if not for substance, must be reckoned among his works. Mr. Masson brings for the first time to light the somewhat surprising fact that the author of the most passionate plea ever put forth in behalf of unlicensed printing himself served for some time in the capacity of censor of the press. To this same period belong the sonnets, several of which are simply political tracts in verse. All these writings Mr. Masson has elucidated with much care, and all students of Milton will owe him a debt for his painstaking investigations. His labors are especially useful in helping us to understand the contemporary judgment respecting Milton. He is also successful in exhibiting the personal relations of Milton with the different governments which he was called to serve. At the outset the poet was an ardent republican, defending in the first tract that he published after the execution of the king the most extreme doctrine of popular sovereignty. He was the friend and admirer of Vane, and, like Vane, advocated the most entire separation of church and state. Yet he supported Cromwell against the Rump, though, as Mr. Masson asserts, with reservations. Yet the contrast between the elaborate eulogy of Vane in the famous sonnet addressed to him, and the studious omission of that statesman from the republican leaders so eloquently praised in the Second Defence, would seem to indicate that Milton leaned pretty strongly to the theory of a "single person." Mr. Masson labors hard to vindicate Milton's consistency, but we suspect that the real explanation lay in the fact that Milton's speculative political opinions were never the result of any strict logical method. He was far from being a republican in the modern sense. In fact, his opinions would excite the disgust of some who have given him the most unqualified praise. Thus, while stoutly claiming for every people the right to change their form of government at will, he just as strongly asserts that nature gives to every wise man rule over the less wise, and that whoever takes away rule from stupid persons acts wholly in agreement with nature—a maxim well calculated to make an American "statesman" stand aghast. It is a most characteristic remark when he says of Cæsar, that "though he introduced kingly government into a free state in a rather violent manner, he was perhaps the worthiest of being king." He had no high opinion of majority rule. The liberty which he adjured Cromwell to respect was far from being the constitutional liberty for which Eliot and Pym had contended. As little did he care for the enlightened scheme of electoral reform which the capacious understanding of Ireton devised. When it was certain that the great majority of the nation was against him, he coolly denied that the greater number, "for the pleasure of their baseness," should compel the less.

As an exposition of Milton's political opinions this part of Mr. Masson's work has a real value, and so far it helps us to understand a difficult period. We find on every page evidence of intimate acquaintance with the facts and dates of Milton's history. The most trivial circumstances are carefully noted, such as the attendance of Milton upon the sittings of the Council of State, and the probable reasons for the reduction of his salary. But with all this diligent accumulation of details, Mr. Masson still fails of making evident what the whole construction of his work assumes—that Milton was in any sense a central figure in the picture. We nowhere detect that close and organic connection between Milton's career and contemporary events which was Mr. Masson's original pretext for inflicting on his readers this prodigious compilation. Not only does he not succeed in showing that Milton was a leading actor in the great drama; he does not even make it clear that as a writer he exerted any controlling influence. The changes that so swiftly came over the complexion of affairs were brought about without his co-operation. In no sense whatever, according to the view which Mr. Masson presents, can Milton be reckoned among the statesmen of the Commonwealth. As an official, his position was throughout a very subordinate one. He was a vigorous and eloquent partisan writer, and was without doubt regarded as the most conspicuous representative of English republicanism. Mr. Masson does not in the least exaggerate his significance in this respect. Yet his treatment of political questions was rhetorical rather than logical, and he was more successful in discomfiting an adversary than in establishing any important principle. Posterity has drawn from his pages no permanent lessons of political wisdom; nor do we think that his reputation is likely to gain from Mr. Masson's minute recital of the details of his personal controversies. It is not the side of Milton's character that we prefer to contemplate. The author of 'Comus' and of 'Paradise Lost' must always inspire us with reverence, but the bitter opponent of Salmasius is not an attractive figure; and the unscrupulous assailant of Morus, pursuing his adversary with a pitiless vituperation which even Mr. Masson is forced to acknowledge "becomes perfectly painful," affects us with a feeling of positive disgust. We are at a loss to conceive why Mr. Masson should deem it necessary to dwell at such length on the least creditable episode of Milton's life. Surely the miserable scandal about poor Bontia need not have been revived with such fulness of detail.

Milton the man fares no better in Mr. Masson's hands than Milton the Secretary for Foreign Tongues. Here, again, we are overwhelmed with trivial details of domestic history, but we miss the touch that alone endows the dead with life. We are invited to follow him from his house in High Holborn, "looking backwards into Lincoln's-Inn-Fields," to his temporary residence in Charing Cross; and we are assured by Mr. Masson, with great probability, that "in the early half of the year 1649" he may have been seen walking between Whitehall and Spring Gardens with one or another of the leading personages of the time. We have an elaborate description of the house which he afterwards occupied in Petty France, which, fortunately for Mr. Masson, remained standing until our own day, and which in its last estate he represents as "oldish, but with signs of modern doing up." But the real life that Milton led amid these outward surroundings Mr. Masson does not set very vividly before us. Conjecture is made to take the place of any definite facts. Respecting the great calamity that began to cast its shadow over this part of Milton's career, Mr. Masson can only say that "we shall not be wrong in assuming" and that "we have to imagine" some very probable circumstances. But this is not the style of writing that lends biography its distinct charm. We confess to a feeling of extreme disappointment at finding in so voluminous a work so little that helps us to understand what manner of man in his private life Milton really was. During his residence in Petty France, as one of his nephews tells us, "he was frequently visited by persons of quality" and by "learned foreigners of note"; but no one of this choice company seems to have bethought himself of making any memoranda of his conversations with one of the supreme characters of history, and we are left to imagine what may have passed at these interviews. In fact, almost the only knowledge of Milton during this period that is of much real value in understanding his character is that furnished by his sonnets. Besides this there is little save the occasional personal allusions in his private correspondence. Most of what Mr. Masson has succeeded in adding to this has not helped the picture. It is a striking evidence of his want of constructive skill that while he evidently cherishes the most hearty admiration for Milton's character, and has been unwearied in his

pains to portray it, he has on the whole rather chilled our admiration for his hero.

In a work constructed on the plan of these volumes we naturally look for a somewhat full and appreciative estimate of the leading men with whom Milton was brought in contact. Of these none drew from him such hearty meed of praise as the younger Vane, and with the opinions of none were his own in more entire accord. Yet Vane receives only incidental mention in Mr. Masson's pages. Mr. Masson's notion of what biography involves inevitably suggests Carlyle, but we miss in these volumes the masterly portraits which, in the 'Life of Friedrich,' atone for so many faults. Monk, the least attractive of all the men who were conspicuous during these eleven eventful years, is, singularly enough, the one who receives the most elaborate treatment. Simply as the biographer of Milton, no obligation rested on Mr. Masson of leading us through a portrait gallery of republican statesmen; but with his avowed purpose of making the life of Milton a study of contemporary history, he certainly owed his readers this service. When we have worked through his endless digressions we have a right to complain if he has not fulfilled his original agreement. In one instance, however, the author has earned the thanks of his transatlantic readers. All familiar with his earlier volumes will remember the cordial appreciation with which he always refers to Roger Williams. During the period of which he now treats, the founder of Rhode Island made his second visit to England, coming into familiar contact with Milton and Vane, and Mr. Masson is prompt to assign him an important part in the struggle for unlimited religious liberty. He is inclined to trace the Voluntary movement largely to Williams's influence, and rightly regards him as the editor of the "Four Proposals" put forth in favor of absolute toleration. Mr. Masson's estimate of Williams is in striking contrast with the studied depreciation of some American writers. We are, however, at a loss to conjecture on what ground he asserts that the pamphlet 'Ill News from New England' has been ascribed to Williams.

It is not pleasant to find fault with a work to which so much honest labor has been devoted, but we are forced to the conclusion that Mr. Masson's method is faulty, and that his skill as a literary artist is by no means equal to the task he has undertaken.

HINDU LITERATURE.*

As time rolls on, it must become more and more difficult to gain the ear of the general reader when the question is of orientals, either such as they have been or such as they now are. It will be a long while, we suspect, before our first impressions of the people of the East cease to be derived from the 'Arabian Nights.' And the form of these tales which is still almost exclusively in favor owes, confessedly, a great part of its charm to adulteration. The French *rifacimento* of the 'Arabian Nights,' of which the ordinary English version is only a reproduction, is the outcome of mangling, and interpolating, and splicing, and all with an exceedingly free hand. Nor, in order to make the tales palatable to Frenchmen, were the liberties which are taken in it felt to be unnecessary. Hence it has come to pass that the Arabs of our youthful apprehension are, in many respects, wonderfully like Parisians of the old school. That they are not uninteresting creatures, we acknowledge. For all this, they are far from being genuine Arabs; and as we grow older, and come to learn what genuine Arabs are like, and find that, their picturesqueness of aspect and surroundings apart, they have a much larger element of the repulsive than of the attractive about them, it is not altogether singular that we should turn from our later acquaintances with something of the dissatisfaction justly awakened only by detected counterfeits. Again, and also in consequence of our juvenile ideas, it is hard not to image all orientals to ourselves as homogeneous. Study, if one chooses to give one's self to it, will, of course, correct this misconception, with others kindred to it. Only very few, however, make oriental studies their election; and, to say truth, there is little demonstrable inducement to them. Travellers in the East who make books out of it are, for the most part, satisfied with the mere surfaces of things, and rarely succeed, nowadays, in doing better than ring changes on commonplaces of which everybody is weary. And their successors will hardly do otherwise than as they have done. As to scholars, those who have gone to the heart of the matter, why they, with all their love, should fail to excite anything like a wide interest in their subject is, we think, a question of easy solution. Nothing of orientals but the mere exterior is capable of being popularized. At all events, the more closely we scrutinize them, the keener is our disappointment at coming upon scarcely anything which we did not know before, and in a shape more acceptable to cultivated reason.

In well-nigh the whole of their thoughts and ways orientals are essentially childish. Alike as to what we find in them to admire, and as to what we find to dislike, they remind us in the main, even when we contemplate them in their most developed condition, of precocious children, and of girls rather than of boys. But besides this and other peculiarities, they are conspicuous, not to speak of their profound dissimulation, for a trait by reason of which they are hardly distinguishable from the humbler order of barbarians. We refer to their all but habitual misappreciation of the credible and of the incredible. They have their type, in fact, in Dr. Johnson, with his disbelief in waterspouts and his belief in goblins; or in the mythical old lady who accepted the story that Pharaoh's chariot-wheels had lately been recovered from the bottom of the Red Sea, but felt herself insulted when gravely told of flying fish. Science proper of their own they have never possessed, some elementary mathematics and astronomy excepted. Their essays in history are generally such as can only move contempt; and their poetry, in anything approaching a faithful and unembellished rendering, is, with rare reservations, barely better than tenth-rate. Their favorite pursuit and speculation is, as might be anticipated, theology. Among the sons of Adam they are not exceptional in that the less they know of it the more they have to say of it. Few matters are so familiar and self-evident as not to have been communicated to them from the skies. Their gods, made strictly after the fashion of men, and those not at all the most exemplary of men, have not only been most liberal in displaying themselves and their direct intervention up and down the earth, but now that they have retired from transacting business visibly, have bequeathed so ample a legacy of their will and precepts, and such full particulars of their exploits, that obedience and recollection might seem to be all that devolved to the devout in the way of duty. With this understanding of duty, however, the devout have not rested satisfied. In the faculty of much speaking they have thrown their gods themselves into the shade. If the foundation of their theology, premises asserted to be of divine origin, is extensive, the superincumbent structure of deductions and moralizations falls but little short of the illimitable. We here have especially the Hindus in our contemplation; and considering that these religionists regard all human knowledge, from the science of Brahma to the culinary art and dancing inclusive, as founded on specific revelations, and considering that during many centuries vast numbers of them gave themselves wholly to study and bookmaking, it can occasion no surprise to be told that their literature, particularly in its speculative and commentatorial departments, is by much the most voluminous which has been handed down from any people of antiquity.

Of this enormous aggregate only a small part has been printed, or is likely ever to be printed. Thousands of volumes of it, too, as they have never been read by any person of a Christian nation, so they will continue to the end to be by such unread. Yet not only will their resolution into dust involve no loss, but it may be questioned whether, save in the interests of philology, we should have been robbed of anything seriously regrettable if their honored fellows had experienced the fate which awaits themselves. Lord Macaulay has said in one of his Indian minutes: "I have conversed both here and at home with men distinguished by their proficiency in the eastern tongues. I am quite ready to take the oriental learning at the valuation of the orientalists themselves. I have never found one among them who could deny that a single shelf of a good European library was worth the whole native literature of India and Arabia."

However, no less than Arabic and Persian scholars, Sanskritists have, from one cause and another, become a numerous brotherhood, and as industrious as numerous; and their diligence, instead of abating, increases. Naturally enough, there are those among them who, from various motives, desire that the results of their researches should be imparted to the world at large. Professor Monier Williams is one of these; and his 'Indian Wisdom,' whether its effect be to stimulate curiosity or to satiate it, will, at any rate, not be censured for its meagreness. Some of the abstruser topics of Hindu literature he has touched on but lightly. That it would not have been more prudent simply to name them is a surmise which must obtrude itself on the initiated. At least, it would have been well if he had been briefer on philosophy, his copiousness touching which bears no proportion to his intelligibility. The truth is, that the real import of the Hindu philosophical systems is a thing of which we have as yet

* 'Indian Wisdom, etc. By Monier Williams, M.A., Boden Professor of Sanskrit in the University of Oxford.' London: Wm. H. Allen & Co.

only a few isolated ideas, and those painfully dubious. In the meantime, it is, almost certainly, but justice to the ancient philosophers of India to protest distinctly that they cannot in the nature of things have been the incomprehensible jargonists which they approve themselves in ordinary representations. In Hindu poetry, in particular, Professor Williams is much at home; and he has done the subject full and intelligent justice. His account of Hindu jurisprudence is also meritoriously executed, at least as regards the oldest and most valuable of the legal institutes. Nor is praise to be denied to the conscientious manner in which he has compiled, from multifarious sources, chiefly German, a circumstantial description of the Vedas, their appendages, and their supplements.

'Indian Wisdom' is, then, a work which, taken for all in all, we can warmly recommend to those for whom it is intended. Still, there is much in it for which we can find no conceivable justification, and which we advise its author to eliminate when he comes to a second edition. We mean its thousand and one references to Christianity, with design to evince the advance, in point of reasonableness, of the religion of the Bible over that professedly drawn from the Hindu scriptures. By nothing of this sort, as Professor Williams deals with it, will any Hindu who can read English be moved to reject one iota of his ancestral superstition. Nor are Christians, we hope, transplanted Pharisees, taking pleasure in unceasing reminders of their title to self-complacency because they are not as other men are. Moreover, in these days when carefulness in composition is so common, we have a right to look for something superior to the newspapery stamp of English which the learned professor seems to think good enough for his readers. As there are occasions when we admit a dressing-gown and slippers to be quite in place, and other occasions when we expect a dress-coat and its conventional accompaniments, similarly, however we may be patient of negligence in a familiar letter, or in a journalistic leader scribbled against time, we reckon on something considerably better in a grave book written leisurely and for duration. The errors, mostly unimportant, which we have noticed in Professor Williams's pages, in the course of a careful perusal of them, we have no room to detail. At page 97 he credits to the wrong authority the application of the epithet *hylotheistic* to the Sânkhya philosophy. Again, he is mistaken in his assertion, at page 259, that the corruption of the Rig-veda-text adduced for the burning of widows has been attributed to Raghunandana. These, very trifles, are specimens of what it would be frivolous in us to accumulate.

SARCEY'S THÉÂTRE-FRANÇAIS.*

WE should imagine that M. Francisque Sarcey received his first introduction to most American readers when Mr. Henry James, jr., took the earlier issues of this series of biographies as the text of his interesting article on the Théâtre-Français contributed a year ago to the *Galaxy* and recently reprinted in his new volume of essays. In fact, although M. Sarcey has for twenty years been growing in authority as a writer, he has not until now put forth a volume calling for other than casual consideration. A graduate of the great Normal School, which he entered fifth in the class of which M. Taine and M. Edmond About were first and third, he taught until 1858, when he abandoned teaching for journalism, under the guidance of his firm friend, M. About. He has published half-a-dozen volumes, including a novel; he writes almost daily articles on contemporary politics, and he is a frequent lecturer—if so light a thing as a French *conférence* can fairly be called a lecture. But it is as a critic of the acted drama that he has made his mark. He began to criticise the stage twenty years ago, and for now twelve years he has contributed the weekly dramatic *feuilleton* to the *Temps*. Here his "authority" has steadily grown, until he has become by far the most influential critic of plays and players in Paris. And those who best know the large part the stage holds in French life and literature can judge best how important a position M. Sarcey fills thus worthily, and how fine a combination of qualities he needs must have to attain it and to keep it. As a critic M. Sarcey is honest, earnest, acute, and, above all, logical. As a writer, in mere point of style, he is generally solid, and even heavy. But when he wrote the successive chapters of the book before us he seems to have been especially inspired; his style is lighter and livelier, and at times almost epigrammatic—in short, more like a Frenchman's and less like a professor's.

'Comédiens et Comédiennes' is to consist of several series of critical biographies of the leading dramatic artists of Paris. It is the first series only, devoted to the Théâtre-Français, and containing lives of more than twenty of its actors and actresses, which is now completed; and it is not too much to say that in this volume M. Sarcey has given to students of the stage not only one of the most readable and amusing of the many readable and amusing books about the theatre, but one of the most valuable works upon the dramatic art which we have in any language. In the twenty-four or twenty-eight pages which he devotes to each of the leading actors he briefly sketches the biography, giving the salient facts, and gliding hastily over mere gossip; then he carefully analyzes the merits of the performer, pointing out his natural advantages or defects, showing how he has availed himself of the one or conquered the other, laying bare his artistic method, and incidentally and all the time throwing light on the difficult and little understood principles of the art of acting. One rises from the reading of this series of M. Sarcey's, as from Mr. Lewes's collection of criticisms, with far clearer ideas of the art than before. Mr. Lewes (and the contrast between his work and M. Sarcey's is interesting and instructive) criticises individual actors of unusual prominence—Kean and Rachel, Lemaître and Macready—"stars," to use the idiom of the stage. M. Sarcey here takes up in turn the members of a company of picked performers, playing continually together, working freely under the accumulated traditions of more than two centuries, and containing artists of unusual ability, but still essentially a "stock company." The distinction between "stars" and "stock" is that which marks exactly the difference between the stage of England and the stage of France, as it does between Mr. Lewes's book and M. Sarcey's.

The first of the eighteen pamphlets bound together in the book before us is devoted to the theatre itself, the "Maison de Molière," perhaps the noblest monument ever erected to the memory of a poet. Then follow in irregular order critical biographies of MM. Regnier and Bressant and of Mme. Arnould-Plessy, who have all retired and taken final leave of the stage since M. Sarcey began to issue his pamphlet lives some two years and a half ago. Then in turn he considers Mlles. Sarah Bernhardt (the worthy successor of Rachel), Favart, Croizette, and Brohan, and MM. Got, Coquelin, Delaunay, Febvre, surely the finest phalanx of comedians ever bound together in the same theatre; Maubant and Mounet-Sully, the tragedian, M. Émile Augier's despairing appeal to whom ("Monsieur, if you only had a little less genius and a little more talent!") is here duly recorded. Other criticisms there are also of performers as yet less known. Last year, in noticing M. Legouvé's little book on the art of reading we made mention of the importance he attached to *diction*, a word which has no exact English equivalent, "delivery" being perhaps the closest synonym. M. Sarcey recurs again and again to *diction;* it is a quality indispensable at the Comédie-Française, where many if not most of the plays are in verse, abounding in sonorous lines. This skill in delivery is either a natural gift, as in the case of Mlle. Sarah Bernhardt, or it is only acquired in the Conservatory, whence most of the actors of the Théâtre-Français have graduated. It is not so much needed at the other theatres, and when an actor from them comes to the Français he often finds out his deficiencies for the first time. M. Febvre made this discovery, and has been striving hard for ten years, in the maturity of his career as an actor, to gain an accomplishment possessed by the stripling graduates of the Conservatory. As we are without any such institution here, the rare actors and actresses we have who can freely handle blank-verse must have got their precious gift by nature.

The profit which even those most gifted by nature may derive from the severities of criticism, just or unjust, is well shown by two of M. Sarcey's anecdotes. One is of M. Got, perhaps the strongest and (to carry out the author's suggestion) the most philosophic of French comedians. On his first appearence he acted very badly; two days later he read a very severe criticism of his performance, immediately after which he met the writer of it, one Charles Maurice, a journalist now forgotten, but then known for his biting wit and base venality. He asked the actor why he had not called on him. M. Got, discouraged and reckless, replied that he did not know his address. "Why not come to the office of the paper—for I have a paper?" asked Maurice. "The fact is, monsieur," replied M. Got, "I am poor, and I have no money to pay the *claque!*" For this the journalist never forgave the actor, but he was a most useful enemy. "He had," said M. Got to M. Sarcey, "a marvellous skill in finding the weak points of an actor and an incomparable malignity in setting them forth. I corrected myself of many faults through his criticisms—which cost me nothing. It was clear profit." In the second case the critic was M. Sarcey himself, and the criticised was Madame Arnould-Plessy, the most polished and consummate of all actresses of comedy. She chose one day to play *Agrippina* in Racine's tragedy, "Britannicus." "I shall not

* 'Comédiens et Comédiennes: La Comédie-Française. Notices par F. Sarcey.' Portraits d'Artistes gravés à l'eauforte par Léon Gaucherel. Paris: Librairie des Bibliophiles. New York: F. W. Christern. 1877.

say," wrote M. Sarcey in his next Monday's *feuilleton*, "that Madame Plessy is mediocre. With her intelligence, with her natural gifts, with her immense authority over the public, she could not in any way be mediocre. She is therefore not mediocrely bad. She is bad to an inexpressible degree." He then proceeded to prove his assertion. A few days later, finding Madame Plessy at a friend's house, he concealed himself as best he could, but she came straight to him, holding out her hand while she smiled like a heroine of Marivaux. "You are right," she said, "you might have told the truth more amiably, but it was the truth. My friends and I were wrong, and I shall not again risk myself in a tragic part. I thank you." And with a grand curtsey she left him stupefied, for never in his twenty years' experience as a critic had he ever had such an experience.

Of the eighteen etchings by M. Léon Gaucherel it is possible to speak in terms of high praise. One of them is a view of the Maison de Molière itself, and serves as a heading to the introductory chapter; it is an effective and even a poetic rendering of the building which houses so many precious memories and traditions. The seventeen other etchings are full-length portraits in character of the leading performers. In some few cases the characters are not well chosen; M. Febvre, for instance, and Mlle. Reichemberg are depicted in the parts in "L'Ami Fritz," a play of merely fortuitous success, not likely to last. In general, however, those selected are worthy of pictorial record; Mmes. Plessy and Brohan are represented in 'La Critique de l'École des Femmes' of Molière, and M. Delaunay in 'Le Menteur' of Corneille. M. Gaucherel has contributed etchings of the same size as these to the little *Almanach des Spectacles* which we have had occasion to commend; his portrait of Mlle. Sarah Bernhardt in the *Almanach* of two years ago is perhaps even more characteristic than it is here. 'Comédiens et Comédiennes' is an exquisite specimen of printing, well worthy of the reputation of M. Jouaust's press. Unfortunately there is neither index nor continuous paging, each of the eighteen parts being independently numbered.

Voyage of the Paper Canoe: A Geographical Journey of 2,500 miles, from Quebec to the Gulf of Mexico, during the years 1874–5. By Nathaniel H. Bishop, author of 'One Thousand Miles' Walk across South America,' and corresponding member of the Boston Society of Natural History, and of the New York Academy of Sciences. (Boston: Lee & Shepard. 1878.)—The latter half of the nineteenth century, besides many other interesting peculiarities which distinguish it from other half centuries, is remarkable for the number and variety of persons whom it has produced ready to go through any amount of arduous labor, privation, and discipline in order to perform feats requiring extraordinary endurance or skill. It is an age more prolific in men who can walk a thousand miles in a thousand hours; ride three hundred and five miles in fifteen hours, with fifty horses only; break nine hundred and eighty-seven glass balls out of a possible thousand at fifty paces; waltz eighteen hours without stopping, or perform other apparently impossible and useless feats, than any of the preceding ages. We may see the germs, perhaps, of this remarkable development in the first fifty years of the century; but the immaturity of that period could not be better shown than by the great *éclat* won by Byron in swimming the Hellespont—a performance now considered by gentlemen who devote themselves to swimming little more remarkable than wading across a trout stream. Swimming the English Channel is the least nowadays that a man can do to be talked about; and it seems hardly beyond belief that by the process of natural selection which is always going on in these matters, swimmers may, before long, make their appearance who will be able to get across the Mediterranean, if not the Atlantic, eating, drinking, and sleeping by the way. It was announced the other day that a prominent "walkist" had made an agreement to walk, in two years, a distance equal to the circumference of the earth, and there is little reason to doubt that some one else could be found to undertake a distance equal to the diameter of the sun in a correspondingly short period. Most of the feats to which we have referred are the work of professionals, and are therefore regarded by the mass of mankind with unenvious wonder, like the performances of a circus. They have discovered that the modern means of publicity are so great that by calling one's self a "professor" and being one's own manager, a larger audience and income may be obtained than by vulgarly merging one's identity in that of a "company" or a "troupe," or joining what Barnum calls an "Academy of object-teaching." There are, however, another class of persons who are also given over to feats of the same sort, but who are simple amateurs. They do not walk, swim, ride, shoot, waltz, or row for a livelihood, but for the pleasure of the thing. Partly for what Mr. Ruskin would deem the base and degraded pleasure of enjoying the poor satisfaction of having done something that no one has ever done before, and partly from what seems to us a very laudable desire to test their own powers of endurance and skill, they undertake feats which no amateurs of previous generations have ever attempted. To the world at large it certainly seems of very little utility that a man should have pulled in a canoe from Quebec to the Gulf of Mexico. But, in the first place, the use in cases of this sort is primarily self-regarding; and to say that a feat which tests, and therefore strengthens, the courage or skill of the person who sets himself the task is useless because it is useless to other persons, is quite beside the point. Moreover, who can say how far in the long run experiments of this sort may benefit the human race, for whose interests we are all so unselfishly striving and longing? In the inscrutable dispensations of Providence collective humanity might profit even by such canoeing as this.

To the class of amateur performances of which we have been speaking the cruise of Captain and Mrs. Crapo in their whaleboat might at first sight appear to belong, but after seeing them and their boat on exhibition at Gilmore's Garden in this city we have fears lest their European trip may have been undertaken not altogether without an eye to the main chance. With regard to the voyage of the paper canoe, however, described in Mr. Bishop's volume, there can be no doubt; the trip appears to have been undertaken solely for the purpose of accomplishing a difficult feat. The trip was not, as might be imagined, made on the high seas, but almost entirely on inland waters; for, strange as it may seem to those not familiar with the American coast, there is almost a continuous line of islands, or what are islands at high water, stretching from New York to Florida, while across that peninsula to the Gulf there is a nearly continuous line of water communication. Behind these islands it is easy enough for a small, light boat like a paper canoe to find all the water that she needs. His book is the log of his voyage along this singular highway, with a good deal of description of one sort and another of the country through which his route lay. To a canoeist his log is interesting, but the rest of the book can hardly be called so. Probably no canoe-trip in the world could be selected which would be so long, pass through a country so devoid of interest, and expose the voyager to so much peril of the least romantic kind—from snakes and malaria. Regarded as a feat, the trip may be considered a great success. We have little doubt that Mr. Bishop will remain during life the only canoeist who has ever accomplished it. It appears from the book that it is only one of a number of "geographical journeys" made by this energetic voyager.

One interesting piece of information the author gives with regard to the timber-thieves of the South, whom Congress has recently intervened to protect. It appears that in a certain region in Florida one of the most prominent of the citizens was a stalwart timber-thief, who "operated" on a large scale, and grew so rich that he gained the respect and esteem of all his friends and neighbors. His fame spread far and wide, and came to the ears of the Government, and by and by the United States sent an agent down to look into his case. The agent was surprised to find the citizen very anxious to pay the Government the due amount of "stumpage." He explained that he had mistaken the boundary line between the Government lands and his own adjoining property, and admitted that it was difficult to calculate the exact number of acres over which his depredations had extended. The agent thought it was about a thousand, but the penitent timber-thief assured him that that was too little, and finally forced the agent, who was astonished at such evidences of good faith, to take payment for four or five thousand acres. The agent went back to Washington, and the eminent citizen went on with his depredations. Seeing that he had not ceased to cut timber, his neighbors gathered about him and enquired the reason. He thereupon explained to them that he had only before cut one thousand acres, but that he held a receipt from the Government for five thousand, at a very low price, and since no power under heaven could now stop him, he proposed to cut the remaining four thousand.

A Manual of the Anatomy of Invertebrated Animals. By Thomas H. Huxley, LL.D., F.R.S. (New York: D. Appleton & Co. 1878.)—For some time it has been impossible to recommend without a sense of guilt any English book as giving a compendious account of the invertebrate animals. Gegenbaur's 'Elements of Comparative Anatomy' had not been rendered into English, though there was a good French translation

of the edition of 1870 by Carl Vogt. It has been a time when it was especially hard to write a text-book. Morphological knowledge has been advancing very fast during the last twenty years under the influence of the views of development which diffused themselves so rapidly on the appearance of Mr. Darwin's 'Origin of Species' in 1859. This advance has been due, naturally, to the direct logical outcome of these views in remoulding the form in which facts already ascertained were to be preserved and presented, in changing the estimates of the comparative value of facts, and in giving rise to general philosophical views on biological questions of all sorts, but also and especially it has been due to the happier direction which was thus given to observation, to the greater activity thus aroused among biologists of all kinds, and to the great accessions of students which it brought into their ranks. The *result* of the rapid growth has been that while the need of new text-books was much increased it was necessary to the success of such a text-book that it should be brought up to the times from an acquaintance with a vast amount of periodical zoölogical literature, and that the reputation of the author should be such as to give it a sale and make it pay for itself before it became antiquated.

This book of Huxley's leaves little now to be desired. It is not at all inferior to the similar work of Gegenbaur. It begins with a general presentation of the more important views of life and living things, and this, like the rest of the book, is marked by a wise caution. Among the more important features we note with pleasure the adoption of the Metazoa as a natural group. The pile of taxonomical refuse known as Vermes is broken up and distributed, though the exact form of the distribution needs confirmation, for this is one of the most difficult problems in general zoölogical classification. Balanoglossus, the Tunicates, and the Vertebrates are united into one group as Pharyngopneusta. At least it is fairly to be inferred from what is said in the text that the Vertebrates are to be included, though the statement is not directly made, apparently for the reason that the work is upon the Invertebrates alone. The Polyzoa, Brachiopoda, and Mollusca are placed under the head of Malacozoa. These are things on which we are glad to have the sanction of Prof. Huxley's authority. The duress of the Cuvierian four sub-kingdoms is almost a thing of the past.

Of course the book is one of detail, and there is nothing left but to congratulate ourselves on the timely appearance of this new contribution of Prof. Huxley's to the diffusion of knowledge, and so to its advancement.

"THE NATURAL METHOD"

OF TEACHING LANGUAGES.

NEW BOOKS

FROM

Profs. Heness and Sauveur.

SAUVEUR'S INTRODUCTION TO THE TEACHING OF ANCIENT LANGUAGES. 12mo, paper, 50 cents.

SAUVEUR'S TALKS WITH CÆSAR DE BELLO GALLICO. *(In June.)*

SAUVEUR'S FIRST THIRTY CHAPTERS OF CÆSAR. With Map, Marks of Quantity, and Accents. *(Shortly.)*

HENESS'S DER SPRECHLEHRER UNTER SEINEN SCHULERN. 12mo, cloth, $1 35.

KLEMM'S GESCHICHTE DER DEUTSCHEN LITERATUR. 12mo, cloth, $1 50.

JAYNES-OTTO INTRODUCTORY FRENCH LESSONS. *(In June.)*

GORNER'S "ENGLISH." Ein Lustspiel. Edited by A. H. Edgren, of Yale College. College Series of German Plays. *(In June.)*

HENRY HOLT & CO., New York.

A TIMELY BOOK.

The Indian Question.

By Lieutenant-Colonel E. S. OTIS, U.S.A. 1 vol. 12mo, cloth, $1 50.

Few men have had a better opportunity to see and study the Indian than Colonel Otis. "This book will help greatly to solve the Indian Question." Colonel Otis takes a practical view of the whole question, and his experience with the Indians entitles him to great consideration.

The Nation.

NEW YORK, THURSDAY, MAY 30, 1878.

The Week.

IN spite of the assurance which several Republican organs have given us that the Democratic investigation "leads logically to revolution," and that "revolution" will lead to fighting, one side under Grant, Sherman, and Sheridan, and the other side under Tom, Dick, and Harry, we see no sign of preparation for this appalling struggle, which, according to one authority, is to rage in every State, town, and school district in the country. Business continues on the whole to improve, the price of stocks is steady, and we have heard of no one removing his helpless family to a place of safety. This apathy under the circumstances is very strange. As the conflict must come, however, sooner or later—that is, probably, about the time the last Florida or Louisiana scoundrel has "confessed" to the committee—we would make one suggestion for the consideration of thoughtful patriots, and that is that the people of the same town or school district should arrange to do their own fighting, so as to prevent the irruption of irresponsible outsiders. By a little judicious arrangement, for instance, they might fight on rainy days and at leisure moments, so as to prevent its interfering with the summer's farm-work, or causing any bloodshed or destruction of property. How much fighting will be needed to "save society" from the Democrats we do not know, but should think three months of active, even if harmless, warfare ought to make this country all it ought to be, and satisfy even Chandler and Blaine.

The insincerity which characterizes much of the proceedings connected with the Democratic investigation was brought out strikingly in the action of both parties on the Carter Harrison resolution on Wednesday week. Mr. Harrison, in order to meet the popular disapproval of any assault on the President's title, introduced a resolution providing that the Potter Committee should investigate the alleged frauds in Oregon and South Carolina if the majority thought proper, and declaring that the title of the present incumbents to the offices of President and Vice-President was definitively and indefeasibly settled by the last Congress. The question being put whether the resolution was a question of privilege, the Democrats were, in accordance with their precedent on the Potter resolution, bound to vote in the affirmative, which, had the resolution been ultimately adopted, would have committed them to nothing but the confirmation of the President's title. But only sixty-one Democrats, including all the members of the Potter Committee except one, voted in favor of the resolution, to fifty-one against it. Inasmuch as the Republicans maintain that the designs of the Democrats are "revolutionary," and that what they are really aiming at is the expulsion of Mr. Hayes from office, by here joining the majority of the Democrats they might have placed on record a solemn confirmation of his title by a vote of the majority of the House. Instead of this, however, they resolved, after consultation, to abstain from voting, and the resolution was lost for want of a quorum. Ten Republicans, however, voted for it.

There is nothing definite as to the programme of the Investigating Committee, though all sorts of stories are afloat about it. It will have to map out its work carefully if it is to have any dish worth serving before Congress adjourns. One "important witness," who appears to be a dreadful scamp, has turned up in the person of one Anderson, the supervisor of registration in the parish of East Feliciana, who proposes to reveal the story of Republicans keeping their voters away from the polls, and then cooking up affidavits of intimidation. He is going to tell all he knows and "bring Mr. Sherman down off his high horse." Another rascal of the same stamp is one Pyles, a former clerk of the Louisiana Returning Board, who was afterwards rewarded with an office, but, losing it in some way, proposes to make revelations also. We presume others of the same kind will turn up. It would not be surprising if even the well born Madison Wells had a change of heart and made a clean breast of it.

Mr. Clarkson Potter has written a letter to a friend defending and explaining his action in the investigation matter. After denying that Mr. Alexander H. Stephens was "howled down" in his attempt to oppose the resolution, he goes on to show that as everything done by the committee, or in consequence of the committee's report, will be legally done there will be no disturbance or "Mexicanization." He then gives a historical sketch, tinged with bitterness, of the formation of the Electoral Commission, the decision of which he acknowledges to be binding; declares that if Congress does anything more than enquire it will be because the country will require it to do more; pronounces the object of the enquiry to be "to ascertain facts, so that if frauds be established a repetition of such frauds may be prevented, and if not, to clear up the belief through the country that there were such frauds." Thus far all is pretty plain sailing, but when he comes to answer the question why the Republican feeling that the Democratic bulldozing had been as effective as the Republican cheating does not also need to be satisfied by investigation, he maintains that it makes a great deal of difference whose ox is gored, for, says he, "the Republicans ought to understand that the condition of things by which the negroes were prevented from voting was fraudulently prepared by the Republicans." But why should the Democratic assertion about bulldozing be accepted any more than the Republican assertion about cheating? The same observation may, *mutatis mutandis*, be made on his allegation that the army was allowed to interfere with the elections.

Mr. Stephens has replied to Mr. Potter in a warm and telling letter, which will undoubtedly have considerable effect on the public mind, showing that the Potter resolution took him completely by surprise; that he wrote to Mr. Potter and Mr. Candler protesting against the attempt to make the enquiry one-sided, and against the opposition to Mr. Hale's motion to make it general; ridicules Mr. Potter's theory that the Hale resolution was not "germane," as if all electoral frauds committed or attempted at the same election were not germane; and winds up with a strong protest against the whole enterprise, as likely "to disturb the peace, quiet, and harmony of the country," and "to end either in a contemptible farce or a horrible tragedy." There are no materials whatever for a tragedy in it, but the farce is very probable.

That the Potter move continues to make some impression at the White House is shown by the publication of a sort of proclamation to the people of the South by Mr. Key, the Postmaster-General, which assumes it as proved that if the Democrats have a majority in both Houses of the next Congress "they intend to oust Mr. Hayes and inaugurate Mr. Tilden." But he maintains, as the question of title was irrevocably settled by the last Congress, the next one would have no more right to oust Mr. Hayes than Mr. Hayes to send a file of soldiers to unseat a Democrat whom he did not consider lawfully elected. The leaders in this enterprise, he says, rely on the "solid South" to help them to carry it out; but he asks the South, which the Northern Democrats have so often betrayed, whether it can afford to participate in any such scheme, and warns it to send up men to the next Congress who will "prevent the Mexicanization of our institutions," and show that the confidence which Mr. Hayes won by his withdrawal of the troops has not been withdrawn. The usual rumors are afloat that Mr. Hayes

is so frightened by the aspect of affairs that he has sent for the Republican leaders, and bid them take as many offices as they please, if they will only stand by him in defence of his own, and that he will soon dismiss the odious Schurz and the renegade Key, and put "stalwart" men in their places—all of which is, we believe, as true as usual. The fall canvass in the meantime promises to be a lively one, one side being bent on "revolution" and the other on the concealment of fraud, with civil war in the background, and a judicious mixture, Mr. Thurlow Weed says, of Communistic riots of a horrid character. Gail Hamilton will have a high command, and Mr. Blaine will probably "straddle" the whole field before the summer is over, one leg cased in embroidered breeches, with a big silver spur, and the other in plain black "pants," with a prunella boot. Probably the funniest figure in the struggle will be Mr. Tilden, when they are inaugurating him by force as a Mexican pretender.

The Senate has passed, by a vote of forty-one to eighteen, the bill prohibiting the further withdrawal of the greenbacks, and directing the Treasury to reissue them. Mr. Bayard made a vain attempt to have them deprived of their legal-tender character except in payment of Government dues, and Mr. Morrill solemnly warned the Senate of the gravity of the step it was taking, but nothing had any effect. The bill was passed exactly as it came from the House, being, it is understood, a kind of compromise between the contractionists and anti-contractionists, which, as affording Mr. Blaine a chance to "straddle" another important question, secured his vote for it also. The gravity of the measure it is almost impossible to overestimate. No piece of legislation since the first issue of the greenbacks has approached it in importance. That issue it was which planted in America the crazy notions about the province of government which have finally ripened into the lawless Communism which is now alarming the country. This second issue—for it is a second issue—makes the provision of paper money a permanent duty of the Government, and gives the Government the right to fix the volume of the currency; and we now venture to predict that the proper amount of this currency will hereafter be an issue in every political canvass, and that the honest, intelligent portion of the community will have to fight hard every year, to their enormous loss and detriment, to prevent the disorganization of industry and trade by violent and sudden changes in the value of all existing contracts; and under the incentive which the control of Congress over the matter will furnish to demagogues we shall feel the effects of our huge ignorant vote in ways few people now dream of.

The Senate has confirmed Packard's nomination as Consul at Liverpool, and he goes abroad with a certificate of character from both parties. It has also passed a bill to add another judge to the Second Judicial Circuit (which includes this State, Vermont, and Connecticut), and will doubtless give the same relief to the Illinois district, in spite of opposition from some of the Democrats, who prefer to wait till 1881 for a Democratic Executive. The House has been mostly engaged in mangling Mr. Hewitt's Army Appropriation Bill. As it emerged from Committee of the Whole it was unrecognizable by its author, and his maximum of 20,000 had been put back to 25,000. But on Monday that important action was, unhappily, reversed, owing to absences on the Republican side, and reconsideration was prevented by a very gross piece of impertinence and discourtesy on the part of the Speaker. Mr. Garfield, foreseeing the result, changed his vote that he might have the parliamentary right to move a reconsideration. On attempting to do so, however, Mr. Randall refused to recognize him, and recognized Mr. Hewitt instead, excusing himself, when called to account for this behavior, on the ground that Mr. Garfield's last vote was "insincere." But Mr. Randall has more than once, during this session, shown the bad influence of his ambition on the discharge of his duty to the House and to the country. Mr. Knott succeeded in getting adopted a mischievous amendment prohibiting, under penalties of fine and imprisonment, the employment of any part of the army as a posse comitatus or otherwise under the pretext, or for the purpose, of executing the laws, except in such cases and under such circumstances as such employment of troops may be authorized by Congress. The illicit distillers, the Mexican border marauders, and the July rioters will be much obliged for this favor. By another amendment, conceived in hostility to Mr. Schurz's administration, the Indian Bureau is transferred to the War Department. The bill in this shape was passed by a vote of 130 to 115 on Tuesday.

The Pennsylvania Democratic Convention met in Philadelphia on Wednesday, the 22d, and owed its chief interest to the struggle to control it of the partisans of Senator Wallace and Speaker Randall, respectively. There was a good deal of disorder at the beginning of the session, and much virtuous indignation, rowdily vented, over the attempt of the Wallace ring to "fix things" to suit themselves. In the end, as usual, the ring prevailed in all essential particulars, and the Speaker returned to his place in Congress with the uncomfortable feeling of having been outgeneralled. According to the resolutions, the Pennsylvania Democrat holds that the Republican party is responsible for all the present financial and industrial distress; that the greenbacks should be reissued as fast as received, and circulate at par with gold and silver; that commerce and manufactures should be encouraged by a protective tariff; that the public lands should be kept for settlers; that the public debt should be held at home; and that the electoral frauds ought to be investigated, but the President's title not disturbed, since any attack upon it would be "dangerous to our institutions and fruitless in its results." Except the perfunctory abuse of the Republican party and qualified approval of the Potter investigation, there is nothing in this platform to distinguish it from the one adopted by the Republicans the week before; for the currency plank above quoted is what the Republicans would in all probability have put forward as their own if they had not thought it more politic to say nothing about the matter. The great State of Pennsylvania, therefore, has no explanation to give of the existence of two distinct political organizations whose views of permanent public policy are as like as two peas.

What first distinguishes the Vermont Republican Convention's resolutions is their extreme brevity, seeing that they are but four in number, and the longest not a dozen lines in length. They cover but three points: (1) the President's motives and the general course of his administration, which are heartily approved and declared not to justify division in the Republican ranks; (2) the Potter investigation, which is pronounced "unfair, uncalled-for, and revolutionary"; and (3) the condition of the Southern mind, which is deplored so far as it is opposed to the bestowal of equal rights and privileges on all citizens, and "cordially recognized" so far as it stands firm for the Union and the perpetuity of good government. This would seem an extraordinary manifesto in any State which was not, like Vermont, overwhelmingly in the hands of the party making it. It teaches nothing, does not look ahead and forestall coming issues, nor take advanced ground or even positive ground with a view to shaping the conduct of the party.

The sales of United States 4½ per cent. bonds by the Syndicate to the investing public were concluded early in the week, many of the bonds having been sold ahead. At the close of the week, however, the Syndicate had not taken the last $15,000,000 from the Treasury, so that the negotiation as between the Treasury and the Syndicate is yet formally unclosed. The reason why the last instalment has not been taken is on account of the gold market, which neither party wishes to disturb more than is absolutely necessary. As it is, gold has become scarce in the market, and the scarcity has advanced the price to 101⅛ to 101¼. As the Treasury has the power to make gold deposits with the banks, the scarcity is regarded as a temporary matter. The closing out, so far as the buying public are concerned, of the $50,000,000 4½ per cent. bonds, has stimulated a general demand for all classes of investments. Enough

United States 4 per cents have been sold to warrant the notification of holders of $5,000,000 more 6 per cent. bonds that they will be redeemed ninety days hence. For railroad bonds and first-class dividend stocks the investment demand during the week has been unexampled, at least for many months; and even speculation at the Stock Exchange has been enlivened and strengthened. The large transfers of gold from the banks to the Treasury have not affected the money market, which has been unhealthily easy, with demand loans ruling at 2 to 3 per cent. All the foreign markets have been strong on the consent of Russia to enter a congress for the consideration of the San Stefano Treaty; and British consols have advanced to 97⅛ to 97¼, the highest price for many months. Silver in London continues depressed at 53½*d.* per ounce. In New York the bullion value of the new silver dollar at the close of the week was $0.9010; the gold value of the United States legal-tender note for one dollar, $0.9888.

One of the reasons the Silver Sages gave for the low price of silver three months ago is that the Treasury was "unfriendly" to it. The Treasury has now opened its arms to the dear metal, and held on the 30th of April nearly $17,000,000 of it in one form or another in comfortable, dry vaults; nevertheless, the ungrateful little wretch continues to sell itself for little over 53 pence per ounce, or less than it went for when the glorious Silver Bill was passed. The Secretary is adding to the amount at the rate of about $3,000,000 a month, so that we shall soon be pretty well supplied, not with the metal, which will stay in the cosey vaults, but with paper certificates, which after a while will make excellent legal tenders, being worth nearly ten per cent. less than gold or greenbacks. We pointed out to the Sages the other day, in view of this rapidly threatening state of things, the fact that neither France nor any other great Power was likely to join us in the great silver movement, and asked whether they were ready with any solution of the difficulty. The Cincinnati *Commercial* has none to offer, but observes that the mono-metallists said France was not a bi-metallic country; and yet they say now that she is going to become mono-metallic. What they said was that France, having suspended specie payments at the transition period, was neither one nor the other, but when she resumed would probably adopt the single standard, and this is how the case stands at this moment. In the meantime we are threatened with a single standard of silver, and an abundance of paper payable in silver, and the severance once more of our monetary connection with the foreign commercial world; and the maniacal authors and instigators of this mischief simply smile and change the subject.

The late Mr. A. T. Stewart began in his lifetime an enterprise which excited a good deal of interest, in the shape of a hotel in which "working-women" could have all the necessaries and many of the luxuries at a low rate. His representatives, Mrs. Stewart and Judge Hilton, finished it after his death, and offered rooms in it for six dollars a week, with the use of "elegant parlors" and a library, to such working-women as chose to go without sewing-machines, pictures, birds, beasts, and fishes in their rooms, and to see no company except in the public parlor, and go to bed promptly at eleven. It was evident from the outset that the number of working-women who could pay six dollars a week for board and lodging was small, and that the number who could pay it and would submit to the rules was smaller still, and accordingly only 50 boarders ever presented themselves, though there was accommodation for 1,000, and accordingly after a month's trial the experiment has been abandoned, and the house converted into an ordinary hotel. One of the reasons given by the proprietors, and indeed the principal one, for their failure, is that it has been discovered that women will not live in a hotel where they are cut off completely from the society of male friends. This is a most important fact, and we must say that if the hotel were burnt down to-morrow the $3,000,000 which it cost would have been well spent in finding out this striking feminine peculiarity. We would ask those who say that it is no great discovery after all, Why was it not made sooner? Woman's liking for the company of Man in her leisure hours has, in all human probability, existed now since the first recorded Olympiad, or about 750 B.C., and yet it has been, it appears, successfully concealed—so successfully that as shrewd a man as Judge Hilton opened a hotel on the assumption of its non-existence. On lighting on the great truth, however, instead of keeping it to himself and trying to make money by using it in his business, as a quack would have done, he has generously communicated it to all mankind, and turned the building into something else.

The Shuvaloff mission seems, in some way not yet fully explained, to have resulted in an arrangement for the meeting of a congress. Russia appears to have made concessions on points which were undoubtedly magnified in the San Stefano Treaty for the purpose of furnishing the basis of a compromise, such as the size of the new Bulgarian principality and the amount of the indemnity. The difficulty about the submission of the whole treaty to the congress, which was the war-horse of the British Ministry, has, it is said, been got over by Germany's agreeing to call a congress to consider the three last treaties relating to the East—those of 1856, 1871, and that of San Stefano—and see whether they need modification. If this be really the solution that has been reached, it looks as if we had been on the point of seeing one or two hundred thousand men killed for a very small matter.

The Government and the National Liberals have come to an open breach in the German Parliament over the bill for the suppression of the Socialists, introduced by the former, and the first clause of which was defeated on Saturday by an overwhelming majority, after which the measure was withdrawn. The Liberals object to the increase of police powers over the press and public meetings which the enactment of the bill would involve, and they are supported, though for different purposes, by Ultramontanes and Particularists, and malcontents of all shades. The majority against the bill was so great that it was rumored that the Government intended it to be defeated with the view of using the check as an excuse for the dissolution of Parliament, but this the Ministers have denied. They have also been accused of having winked at the Socialist movement with the view of discrediting the middle classes, among whom the bulk of the Liberal sentiment lies. All attempts to come to terms with the new Pope have thus far failed, as he refuses to recognize the Falk laws in any manner or form. His health is, however, so feeble that it is not probable he will contribute anything towards the solution of the problems left by his predecessor.

In England the labor troubles in the North furnish the most prominent topic. A vote has been taken among the operatives on the question of accepting a compromise proposed by one of the manufacturers, but it was overwhelmingly rejected, and the manufacturers did not take the trouble to consider it. The rioting is at an end, but has left behind very bitter feelings. The operatives in one town—Oldham—have agreed to the employers' proposed reduction. The death of Earl Russell, the news of which has come too late to receive more than a mention, is, so far as it has any political effect, likely to prove a help to the Liberals, as bringing once more to people's minds the wonderful changes which the party brought about in England since the death of George III., and in all of which the deceased earl bore a part more or less prominent. The repeal of the Corporation and Test Acts, of which the Nonconformists celebrated the fiftieth anniversary the other day, the Emancipation of the Catholics and the abolition of slavery, the reform of municipal government and parliamentary representation, and the repeal of the corn laws, have virtually created a new England, the great and splendid England which we see to-day; and the transformation was the work of the party of which Lord Russell, during a long life, was one of the distinguished chiefs, and which now at his death is resisting an attempt to revive the bulldog policy of the last century, and put down reason by singing songs over a glass of grog.

CONGRESS ON THE ARMY.

THE debates over the Army Bill in Congress have been interesting rather for the picture they present of Congressional feeling about the army than for any effect they are likely to have on the army itself. The attempt to reduce the force ought to, and probably will fail, for reasons of overwhelming weight. The 25,000 regulars now in the service of the Government are charged with the defence of a frontier 12,207 miles long, against 278,000 occasionally hostile Indians, to say nothing of the Mexican frontier, on the other side of which lies a barbarous and ill-governed and predatory population; and with the protection of $204,601,681 worth of Government property, not including the public buildings, archives, and collections at Washington. What is most remarkable in the debates is the eager interest of the House in a question which apparently has no interest at all, or very little, for the country at large. There is no sign anywhere of a strong public desire that the army should be diminished or even reorganized. In fact, the only strong opinion expressed about the army during the past year has been the opinion of those who were alarmed by the riots last summer, that it ought to be enlarged. On the part of the majority of the people of both parties, there is, as far as one can see, considerable, and even too great, indifference to the subject.

The hostility to the army, and the preoccupation about it, in fact, seem to be confined to the class in and out of Congress known as "politicians," and this hostility is partly instinctive and partly due to the notion that "capital" may be made out of it. Any disciplined military organization is hateful to a politician, because of the restraints it puts on individual freedom. The punctilio, the order, the close attention to details, the exact obedience, and the arbitrary exercise of power with which it has to be conducted, are the things of all in human society which he can least put up with. The military officer, too, is a most offensive person to him, and could not be made inoffensive in any way that would not destroy him as a military officer. A person who interferes with or rails at men about their clothes, their hair, or their beard, who makes them salute him when they meet him, who assumes the superiority of his own knowledge and of his own way of doing things, and who expresses his wishes in the form of commands, offends a politician in the very recesses of his being. He outrages all his notions of propriety, and contravenes all his theories of proper human relations. West Point, as a place in which young men are taught, at the public expense, to exercise arbitrary authority and to think they know certain things better than other people, has also always tried him sorely, and he only submits to its existence under the overwhelming pressure of public opinion. This instinctive dislike may, indeed, be said to cover the whole instructed and specialist class, such as professors and scientific men, when they venture out of their libraries and utter judgments or attempt to exert influence on public questions. The pretensions of the whole body of them are to him monstrous and intolerable; but it is only those who are paid by the Government, and whom therefore he can get at, that thus rouse his fury. For the others he satisfies himself by expressing a mild contempt, like that uttered by Mr. Angus Cameron, of Wisconsin, the other day, for Mr. Emerson and Mr. Longfellow, because they were not able of themselves to prevent their works from being pirated, which he looked on as a sign of imbecility.

The belief that "capital" may be made by denouncing the army is due to a combination of circumstances which are probably only temporary in their operation. The use of the army in the South for so many years after the war, in work which practically amounted to aiding in keeping the Republican party in power, would, it was easy to see, be certain to make it an object of attack to the Democrats whenever they got a majority in Congress; nothing but Mr. Hayes's prompt withdrawal of the troops from the Southern States has prevented the recent onslaught from being fiercer and much more successful than it has been. The use made of it in suppressing the riot, and the demand made for its services as a protection against riots hereafter, have revived and given a new and more plausible form to the hostility to it bred by the Southern question. From the theory which has been extensively preached—that the distress now prevalent among the laboring classes is due to the fraud and treachery of capitalists, and, indeed, to the greed of all owners of property—the deduction is easy that the exercise of some sort of physical pressure on capitalists in order to make them satisfy the demands of labor is allowable. Indeed, once a strike ceases to be a simple difference of opinion about the price of a commodity, it becomes an attempt to assert a right, the loss of which means the loss of a man's subsistence and of that of his family, and in defence of which any excesses are excusable. Accordingly, we find several Congressional orators virtually treating pillage and arson as legitimate incidents of a strike, and the use of the army to prevent them as an outrageous interference with the poor man's legitimate means of self-protection; and all their arguments against the use of the army to prevent them, would apply with equal force to the use of the militia or the police. The chief argument was indeed very simple, viz., that under a popular government, where every man has access to the ballot, criminal riots—that is, riots attended with wanton or unjustifiable damage to person or property, *cannot* occur—these things being confined exclusively to monarchies and aristocracies. You may say that, whatever the theory may be, the fact is they have occurred; but to this the reply is that what you took for a riot, and what seemed to you wanton damage to person and property, was really a rough mode of adjusting the rate of wages. In other words, if the theory that riots do not occur under a democratic government does not fit the facts, so much the worse for the facts.

Mr. Hewitt pushed this mode of reasoning a little further. He said that there is now no Communism in this country, but if you have a large standing army it will produce Communism. Look at France, he said. There had been Communism there, and there was a standing army of 450,000 men at the same time; therefore it was the army that produced the Communism; for as soon as the Republic was established, and every man got the ballot, it left France and went to Germany, where it is now raging. Mr. Hewitt did not mention the fact that the French workingman has had the ballot since 1851, nor did he allude to the little circumstance that Germany has had large standing armies for half a century, or the other little circumstance that Communism in migrating from France to Germany went from one country of universal suffrage to another. Now, when a man of Mr. Hewitt's power argues in this way what can we expect from ranters like Mr. Kimmel, who began a gigantic ratiocinative attack on standing armies by quoting Tacitus, and worked his way down through the Middle Ages to our own time, covered with foam and dust, and knocking the mercenary soldier "higher than a kite" at every step. The great objection to the army seemed to be that it was "standing" and that the soldier obeyed his officers blindly; but these objections only seemed to apply to an army of 25,000 men or upwards. An army of 20,000 or 10,000 would not, it would appear, constitute a danger to our liberties or bring Communism among us; so that the danger lies not so much in the character as in the size of the force, and so delicate is the relation between the dimensions of the army and the security of our liberty that an increase or diminution to the extent of 5,000 men would turn the scale. All the debates, in so far as they ran not on the economy but on the expediency of having any army at all, were purely debating-club exercises.

The question of maintaining a standing army in this country is simply a business question. We have only to ask ourselves whether this or occasional levies of militia is the more efficient and cheaper method of doing certain administrative work. The old dread of a standing army took its rise in the fact that it was raised without the people's consent, and commanded by persons over whom they had no control, and was so large that it could strike fatal blows before the means of resisting it could be organized. None

of these objections would apply to an army of 50,000 or even 200,000 here, just as they do not apply to an army of 150,000 in England. All modern police is a standing army, and has to be, because the police of modern society is a work of great delicacy and magnitude, and whether the policeman shall be armed with a club and revolver or a rifle and bayonet, is a question of detail. So, also, whether the national police shall consist of a constantly organized force of hired men, or a force of citizens called away every now and then from their affairs, like the sheriff's posse, and shall number 10,000 or 50,000, are questions of detail. The assertion that under our Government there is a great principle involved in them, and that American institutions would be put in peril if 50,000 men were scattered in garrisons over the whole continent, is a striking illustration of the soundness of the growing opinion that we have too much Congress, and that the necessity which members find of filling up the time with some kind of noise disorders their sense of proportion, and smothers the plain practical sense which most of them bring from home.

THE FRAUD INVESTIGATION.

MR. CLARKSON POTTER has written a letter in explanation of the Democratic programme in making the investigation, which will probably furnish many good Republicans with food for reflection. He shows that the great objection to the adoption of the Hale resolution making the enquiry general was that it would have so retarded the process that no report could be made before the present Congress adjourned—a statement which we think sufficiently confirms our suggestion last week, that the great object of the investigation is the provision of "capital" for the fall canvass. If the ousting of Mr. Hayes was in contemplation it would make no difference whether the report was made to this Congress or not. It would be just as effective, and in fact more so, if made to the next Congress. But, indeed, Mr. Potter expressly repudiates the idea that it is an attack on Mr. Hayes's title. He acknowledges that the Commission gave him a good title, as long as it is not impugned by some legal remedy, and whether there exists any legal remedy he does not say; but in all this he does not go beyond the terms of the act creating the Commission, for this expressly reserved any right of appeal to the courts which either candidate might possess. So that in form there is certainly nothing "revolutionary" in the proceeding. It is perfectly constitutional for the majority of the House to enquire whether frauds were committed in any State at a Presidential election; the majority of the Republican House entered on such an enquiry in 1868. It will be perfectly constitutional, too, for anybody who thinks the investigation furnishes proof of fraud to make an attempt to assail Mr. Hayes's title before a court of law, and it will rest with the judges to pass on his motion. There will, in short, at no stage of the programme as now traced out be any room for fighting, or for the intervention of a "savior of society," either in the person of General Grant or anybody else. But it will rest with the people at the polls in the coming election to say whether they approve of these performances of Mr. Potter and his friends or not. If they do not—and we feel sure they do not—Mr. Potter and his friends will have to let the President and his title alone, and will suffer for their attack on it; if they do approve of it, it is not the investigation which will be revolutionary, but an attempt to resist it.

Mr. Potter's account of the way in which the Democrats lost the election is instructive and in parts amusing. It contains many assumptions which one might readily upset, but when he says that the sum and substance of it was that "the Democrats held the cards and the Republicans bluffed them," he describes somewhat neatly the whole affair. During the count two sets of exceedingly able and by no means scrupulous managers were pitted against each other, the Republicans possessing, however, the advantage of having the electoral machinery of the disputed States in the hands of their own friends and having the Administration on their side. Consequently the attempts of the Democrats to meet fraud with fraud by purchasing their one needed vote in Oregon were clumsy and unfortunate, and it was characteristic and comic that when both parties began to enquire into each other's operations after Congress met, Chandler and Tilden were heartily glad to drop the whole matter by common consent. Where Chandler was mistaken was in supposing that Tilden would dismiss the electoral contest from his mind and prepare to pass the evening of his days in a private station. The fact was that Tilden probably began on the very day he retired from the struggle with Hayes to seek for compensation in the struggle of 1880. He has achieved a certain success thus far, owing to an unlooked-for combination of circumstances. That the Republican managers were able to play their game without losing their hold on the conscience of the better element of their own party at the North was due to the ease with which, owing to the Ku-klux traditions of the South, they persuaded the people that the Southern Republican canvassers—the Wellses, Andersons, McLins, Dennises, and the like—were ardent patriots and philanthropists who were risking their lives in defence of the Union and the negroes. The failure of the Administration to satisfy these men—a failure due largely to its very goodness—has set them to "confessing" their own frauds, thus furnishing the Democrats both with an incentive and an excuse for investigating. Since we last wrote on this subject another of them, Anderson, the Supervisor of Registration in East Feliciana, who appears to be a consummate scoundrel, has been avowing knowledge of prodigious frauds at the last election. Probably he lies, like McLin and Dennis, but the effect of the revelation that it was rascals of this sort who did the figuring for the returns to which Mr. Hayes owed his election, is not pleasant.

Even these disclosures, however, disagreeable and shameful as they are, would probably have produced little effect if Mr. Hayes had retained his hold on the Republican party. That this would be a difficult task was plain from the outset, because both his nomination and the platform on which he was nominated were an open repudiation of the influences which had dominated in the party management under General Grant. To the enemies thus arrayed against him in the beginning others were added by his Southern policy, which of course those who fought Tilden on the "bloody shirt" issue could hardly swallow, and which roused the whole carpet-bag interest into fury. There was only one way of meeting this, and that was a thoroughgoing appeal to the sympathies and judgment of the reform element in the party; but this he failed to make, by a series of omissions and mistakes which it is now needless to recall. It is not surprising, therefore, under these circumstances, that a large proportion of the Republicans who are openly opposing the investigation at Washington are secretly hoping for its success, and would not be sorry if it did end in dispossessing Mr. Hayes. This is so notorious now that it is not any longer denied, and it sheds a curious light on the shouts of "new rebellion" and "revolution"! In the meantime, the appropriation bills are not passed; some Government employés are living, like those of Spain, on discounted certificates; the country is kept in a state of disquietude, and the mind of the riotous element in the population is turned away from honest industry by attacks on the army, and by continued attempts at inflation. That there will be any improvement in the situation as long as the honest and patriotic men of both parties refuse to seek salvation in any other way than through the existing party organizations, we see no prospect. The best Republicans are to this hour wasting their virtue and wrenching their consciences in trying to believe that the two Chandlers and the "visiting statesmen" were engaged in pious missionary work in Florida and Louisiana; and the best Democrats are trying manfully to persuade themselves that "inoperative frauds" do not count, and that they can save their own souls by showing that some one else is an awful sinner. If we go on as we are now, each candidate at the election of 1880 will be run on the other's badness—a phenomenon which we came very near witnessing in 1876. The plan of campaign which both parties have traced for the present year points strongly in that direction.

THE UNEMPLOYED RICH.

THERE is probably no condition of English social life stronger than that which associates gentility with idleness, or, at all events, with the absence of any fixed duties. We remember reading some years ago in an English manual of etiquette, intended for persons in good society, a solemn warning against walking fast in the street, on the ground that it would lead people to take you for a "business man"—that is, for a man with work to do or engagements to keep. It is not very long, too, since a witness in an English court turned savagely on the counsel who was examining him because he asked him "what his business was," telling him "he had no business, that he was a gentleman." It goes hard with a boy at the more aristocratic English public schools to acknowledge that his father does anything to make money, as hard as it went once with an American boy whom we knew to confess to his fellows that his father did nothing. In a "symposium" which appeared in the *Nineteenth Century* the other day on the comparative value of the opinions of the upper classes and the working classes respectively, one of the contributors pointed out that the upper classes were not likely to have sound political opinions because they did nothing to qualify themselves to form any, being engaged mainly in "amusing themselves and each other"—or, in other words, having no serious occupation. And there is no question that the class whose members devote themselves to amusing themselves and each other is now very large in England and grows larger. The vast mass of accumulated wealth which the country owns enables a very large body of persons to live on the interest of the money without care or anxiety or exertion, and to pass their days in inventing pleasures and enjoying them and getting other persons similarly situated to share them. They amuse themselves in the city with society, in the country with field sports, abroad with travel from place to place. The men are thoroughly acquainted with the things which make for amusement—horses, dogs, sporting firearms, the habits and habitat of game, yachts and yachting, the rules of betting, the conditions of good eating, the peculiarities of good wine, the history and characteristics of the most prominent persons and families in the world of pleasure. The women, too, are becoming, more and more, pale reflections of the men. They share in their sports so far as they can, and when they cannot do so they watch the men at theirs as the next best thing, so that a rather brusque and plainspoken *camaraderie* has, it is said, taken the place in the relations of the sexes of the old deference and assumption of women's mingled helplessness and ignorance.

The class is, however, strange as it may seem, of comparatively recent growth. Down to the beginning of the present century in England the wealthy class was essentially an officeholding and, therefore, a working class. It was almost altogether a land-holding class. The head of it was a landed proprietor with duties which kept him pretty steadily occupied. He had the administration of his estates on his hands; he was a magistrate; he was a member of either of the Houses of Parliament, or, in other words, had regular duties which made his amusements seem legitimate relaxation. The younger male members entered the army or navy, or the church, or went to the bar, or to the Colonies in some official position. So that the work of government may fairly be said to have been done by the upper class, which very nearly resembled in this respect the Prussian aristocracy of to-day.

But since the beginning of this century the growth of commerce and manufactures has created an immense body of wealth, and thrown it into the hands of persons who literally can find nothing to do. The work of politics has, since the passage of the Reform Bill, been in a considerable degree taken away from the aristocracy properly so-called, and the offices in the civil and military service and in India have been thrown open to general competition, and offer a career within the reach of any competent person, whether he has "connections" or not. The makers of great fortunes in trade bequeath them to young people who "go in" for yachting, hunting, coaching, pigeon-shooting, and make these things the business of their lives. The boys look forward to being masters of hounds as their highest ambition, and the girls to marrying masters of hounds and having all the other good things which go with this position. The growth of this class has been stimulated in England by the facility with which matrimonial alliances are contracted between blood and money, a facility which does not exist in Germany; and in France the law of distribution makes the transmission of great fortunes even to one generation difficult. Moreover, the rich French, not being fond of out-door amusements, attract much less attention than the rich English. They do not hunt, or yacht, or coach, or shoot pigeons to any great extent. They prefer the indoor luxuries—good cookery, rich furniture, bric-à-brac, and household ornaments. They take their exercise, when they take any exercise, in a salle d'armes, and are more expert with the small sword than with any other weapon. Their horsemanship is essentially the horsemanship of parade, and needs a promenade and plenty of spectators to be really enjoyed. The "chasse" in France is in reality a promenade, and owes much of its pleasure to the costumes. So that it cannot be said that the pleasures of the rich in that country are conspicuous, and they are mostly confined to the capital. In the United States, in two or three of the great cities, there has been within the last twenty years a perceptible beginning of the growth of a wealthy class of much the same kind as that in England, and owing to very similar causes—the transmission of great fortunes to men who can find outside of the business of money-making no attractive field for their energies. They are shut out by a variety of causes from a share in the work of government, and they take to amusement, and find that amusement, as pursued nowadays, is really a business needing considerable capital and some power of organization, and fully capable of filling up the time. The growth of this class has attracted but little attention here, because its members are apt to spend a great deal of their time in Europe, where the materials for their pursuits exist in greater plenty, and they have more congenial society. But they have become in all countries a sufficiently conspicuous phenomenon to form an element in the "labor problem" by stimulating the delusions about capital and capitalists which form the basis both of theoretical communism and of simple working-class discontent.

After one has exploded all the fallacies with which the socialist's head is filled about the functions of the capitalist, and has shown the important part he plays in finding work for labor to do, one is met more and more by the question, What is the use of the rich who do nothing but amuse themselves, who serve the community in no way whatever; who neither fight, nor administer, nor teach, nor produce, nor do anything but draw on the products of the general labor, and make ducks and drakes of it—that is, spend it in gratifying the whims, caprices, and longings of men and women who make self-indulgence the main object of their lives; or, in other words, practise none of the virtues which we preach to the workingman, and are exposed to but few of his temptations? They unquestionably constitute the weak point in the régime of liberty, and are on that account worth serious study. The philanthropists have long tried to deal with them by exhortations to "do good" and "live for others," but it cannot be said that this mode of solving the problem has met or is likely to meet with any great success. In the first place, a rush of the unemployed rich into charitable work would be anything but a public blessing; in fact, there is no reason to suppose that any more good would come of it, or any less evil, than came of the almsgiving of the mediæval monasteries. Philanthropy needs in our day, in order not to be mischievous, to have a good deal of the hard and cold and incredulous counting-house spirit infused into it, and needs, like commerce, to get the worth of its money—that is, it is well settled that it is mischievous to be charitable to anybody who will make no return in the shape of efforts of his own to improve his own condition; and to secure this needs the system, and the persistence, which the merchant puts into the business of buying and selling. So, also, the conduct of a charitable institution does not differ essentially from the conduct of a mercantile institution. It needs the same prudence, method, and attention to details, and it is, therefore, not in the least surprising that nearly all the charitable work of the world is done by serious people who have plenty of work of their own besides. The fact furnishes a ready explanation, too, of the oft-repeated paradox, that it is the busy who usually have time to attend to other concerns than their own. Asking men of pleasure, therefore, to charge themselves with the care of the unfortunate of the world is much like asking them to go into business—or, in other words, to do violence to all their tastes and to form totally new habits. Now and then these appeals are successful, but for the most part the idle rich prefer to relieve distress with a bank-check to relieving it in any other way, and the very same causes which prevent their opening a store prevent their taking charge of a hospital or almshouse. It has to be taken into account that, as a general rule, the habit of work has to be acquired in working for some loved and desired result. The men who render the best unpaid service to the public are men who have been broken to harness in laboring for the rewards by which human nature is most influenced—wealth, or fame, or power; and a man who has never tasted the sweets of this kind of toil does not take readily to toil which holds out no promise of them whatever.

The place in which men of fortune and leisure could be most readily

turned to account is the public service, if the public service brought, as it does in some countries, social consideration ; for its pecuniary returns could not tempt them. In the absence of this, the spectacle of their idleness must be treated as one of the severer tests of the régime of freedom. The busy people must put up with them, for the simple reason —which ought to be explained to every child in school—that there is no legal way of getting rid of them which would not do untold harm for the smallest perceptible good. We should have to begin by meddling with every hard-working man's disposal of the fruits of his toil or sagacity. We should have to insist either that it should never exceed a certain amount, or that he should spend it all in his lifetime, or that he should have no testamentary power over it after his death. Any country which undertook this would either ensure the emigration of its most enterprising men or the transfer of the bulk of its floating capital to places where people were allowed to do as they pleased with their money, or would take away from the energetic and thrifty the most powerful incentive to industry and self-restraint. But even if it succeeded in getting the money-making class to submit to the new regulations, it would have to provide a board of censors to check people's misuse of their funds, and this board, to work properly, would have to be made up of angels. No men such as the world now produces have ever been found competent to direct other people in the use they should make of their talents and opportunities, and any attempt in this direction usually ends in spoliation pure and simple. The inference that, because a man who does nothing but amuse himself is an unworthy citizen, everybody who labors is entitled to act as his spiritual director, is far from being borne out by the facts. The melancholy truth is that out of every thousand who criticise the unemployed rich there is not over one who would not imitate them if he could, or who does not labor daily through sheer necessity, and whose soul's health is not promoted by being prevented both by law and usage from interfering with them. So that probably the very wisest thing for the community to do about them is what this community does, viz., put effective legal difficulties in the way of the prolonged retention of great fortunes in a few hands, and heap honor and respect on the men who, though placed without any endeavor on their own part in possession of all that money can give, still keep alive within them in its noblest form the love of laborious days.

Correspondence.

DUTY OF THE RICH AND EDUCATED CLASSES.

To the Editor of The Nation :

Sir : Your able editorial on the "Sources of Communism" (*Nation*, May 16) omits from the enumeration, as it seems to me, one cause which deserves recognition among those brought forward by you. You speak of "that great fact of sociology—perhaps the greatest of all—that the earth, do what we will with it, will probably never afford much more than a subsistence to the great mass of mankind—that is, plain food and plain clothing. The race, by ceaseless toil and endeavor, throws some of its members up above want or anxiety about daily bread, and gives a few leisure to keep its records and add to the stores of its knowledge, but they are only a handful after all."

Now, if you are right in this statement, as I believe, this "great fact" should be best known to and understood by that "handful" who, thrown up "above want or anxiety about daily bread," have leisure to secure the education indispensable to a right comprehension of social problems. Practically, is it this "handful" which furnishes to any considerable extent those who "keep the world's records and add to the stores of its knowledge"? How many men or women who have risen to eminence in art, science, or literature have done so unencumbered by pecuniary anxiety, and unstimulated by pecuniary need? Two great writers of our time, George Eliot and George Sand, wrote in the beginning simply to make money, and their genius might have been lost to us if they had been above the pressure of want and anxiety. It would be easy to multiply instances ; in fact, the instances seem to me few and far between in which serious work has been done in any department, except statesmanship and philanthropy, by those whom fortune has placed above the need of maintaining themselves by their own exertions.

However this may be, there can be no question that the "ceaseless toil and endeavor" of the race throws up not only those whose leisure is reasonably employed in the service of society, but a class of ladies and gentlemen who claim immunity from this great law of labor which weighs so sternly and immutably upon humanity at large, and whose right to a life—not of selected occupation, but of idle and aimless luxury—is recognized by society. Another class thrown up to the surface consists of the Jay Goulds, the Vanderbilts, the Jim Fisks—the clever, successful, unscrupulous wielders of power over their fellow-men—and these, as conspicuous employers of labor, are constantly present to the imagination of the workingman, which has only a remote and shadowy conception of the more useful working members of the privileged class—the Theodore Roosevelts and others. Is not the presence of these two classes—the idle and the unscrupulous—in the front rank of society a perpetual and not unnatural source of irritation to the workingman, who feels the inequality without education and foresight to enable him to realize the difficulty of redress, the dangers of anarchy, and the importance for right social progress of that provisional maintenance of the *status quo* which we call government? And is it not the part of the educated classes to recognize this law of labor as binding upon them also, and to see to it that they render to society such service as can be most effectually rendered by men and women of education, and relieved from the immediate pressure of "want or anxiety about daily bread"?

AMERICAN WOMEN ABROAD.

To the Editor of The Nation :

Sir : In the letter of your Paris correspondent in the *Nation* of April 18, I find my countrywomen arraigned on two capital charges, from which "no amount of conscious rectitude" can avail to deliver them. The charges are : venturing abroad alone, and living in a foreign capital "with no visible means of support." The jury is composed of a class of Frenchmen "who are accustomed to draw certain inferences from certain appearances." No doubt ready material for such a jury could be found among the gentlemen of the Paris "Jockey Club," who are accustomed to observe feminine "appearances," and who would feel no scruple at proving "certain inferences" correct. Let me recall the indictment in full :

"One meets single ladies who have come to study for prima donnas or for 'general culture' with no visible means of support ; married ladies without their husbands (many American families, like their mercantile houses, having branches on this side) ; widows of the class called *vedova pericolante* in Italy, sometimes alone, sometimes with a daughter pretty, dressy, not bashful, *qui s'habille et babille ;* and young girls travelling together without chaperonage or duennage, *sans peur* and all, of course, *sans reproche ;* but no amount of conscious rectitude will get them the respect of people who are accustomed to draw certain inferences from certain appearances."

I find it hard to believe that the writer *intended* the indelicate innuendo which these closing words direct to all American ladies who travel or live in Europe without some recognized guardian or protector; but in chasing after the burlesque his pen ran a little close upon the limit which separates satire from slander. By generalizing exceptional behavior, which Americans are no less prompt than foreigners to condemn, he has cast an unworthy suspicion upon multitudes of American women in Europe ; and by endorsing the prejudiced and unscrupulous gossip of a class as the tone of society, he has given a picture of society in Paris which may well disquiet in America those who have female relatives or friends in the French capital.

No doubt, years ago, European society was scandalized by the irruption of American manners upon the Continent, and especially by the free and independent ways of American women. A society in which the tutelage of woman is a lingering remnant of old-time servility, and a surveillance of suspicion begets deception and infidelity, would naturally misconstrue the unconscious freedom of the American girl, prompted by her "conscious rectitude." But those days of misconception and prejudice are passing away. Of course there are in Europe American women whose ways are still a puzzle to society, whether foreign or American; and there are some who discredit their sex by their effrontery, and are more of a nuisance than a puzzle. For obvious reasons these will be found chiefly in Paris. But here in Germany it is well understood in the best circles that the personal independence to which the American girl is trained puts her above the suspicion of evil and protects her from insult. This habit even commands the respect of society. Such a woman comes to study music or art. She goes quietly about her business, lives decently, pays her bills punctually, and yet she has "no visible means of support." May I venture here to lift the veil? Perhaps her means are the savings of years of toil; perhaps a loan, for which she has insured her life, or which a friend has advanced upon faith in her talents ; perhaps a small purse delicately pro-

vided by a circle of friends who prefer to be unknown; perhaps she is seeking in art a refuge from domestic griefs that cannot be spoken, and a means of supporting children whose father is faithless or incompetent; perhaps she is living upon her father's purse with a worthy purpose to qualify herself for usefulness and independence; perhaps she is seeking by self-sacrifice to repair the losses of her father's fortune. But just what are her means of support is no concern of mine: my presumption should be that she is deserving of respect. If she is misjudged by "people who are accustomed to draw certain inferences from certain appearances," such are not the people whose "respect" she requires; nor is theirs a habit of mind which entitles them to her respect. I am happy to testify that in this German capital such women do "get the respect" of the best people—of those who judge "by appearances" that such industry, modesty, fidelity, talent, zeal, womanliness, indicate a lady worthy of confidence, whether her means of support be visible or invisible, from things present or things to come. And I am proud to feel that it is the honorable office of an American gentleman to do what he can to shield these countrywomen from infelicitous circumstances or adverse criticism, and to cheer and encourage them in their work.

As to young ladies who have already taken a place in society at home, why should they not travel abroad as freely as young men, whether for study, pleasure, or "general culture"? Can any one surmise or suggest a reason against this which does not imply dishonor in the objector? Certainly ladies *can* thus travel in Germany with entire safety and propriety, without "chaperonage or duennage." Nor are these so much needed in society as some imagine. Years of observation have led me to say to my countrywomen: If you aspire to "high society," the presumption is that you will never gain access to it, and you may make yourself ridiculous by the attempt. If you wish to move in really good society, you can enter this just as you would at home, and just as any foreigner must do in New York, by being well introduced and by conforming to the rules of etiquette. But if your object is not society but study and improvement, go quietly about your own affairs, live modestly and naturally, as you would at home; by and by you will discover that you are not only respected but admired; society will court you, for the best people have too much sense and experience to exact of foreigners a servile conformity to their habits and ideas, and you can afford to despise the self-convicted critics "who are accustomed to draw certain inferences from certain appearances."

BERLIN, May 6, 1878

Notes.

FROM F. Gutekunst, Philadelphia, we have received a speaking likeness of the late Professor Henry, imperial size, executed in the admirable style which always distinguishes the work of this photographer. ——The American Association for the Advancement of Science will begin the sessions of its twenty-seventh meeting at St. Louis on August 21. Prof. O. C. Marsh will preside. Chancellor W. G. Eliot is Chairman, and Prof. John K. Rees Secretary, of the local Committee. Mr. F. W. Putnam, the Permanent Secretary, may be addressed at Salem till August 14. ——The Worshipful Company of Fan-Makers are to hold a competitive exhibition in the hall of one of the City Livery Companies in London some time in June. The exhibition will be divided into five classes: Ancient and Modern European Fans, Exotic Fans, Modern Fans of British Manufacture, and Miscellaneous Fans. Manufacturers, amateurs, collectors, and dealers are invited to contribute. Either sticks or mounts may be exhibited singly. Prices may be affixed and all fans will be insured during the exhibition. The prizes will consist of gold, silver, and bronze medals, bearing the arms of the Fan-Makers' Company and a suitable inscription. They will also include the freedom of the company and an engraved diploma. The Hon. Secretary is Mr. James Curtis, 12 Old Jewry Chambers, E. C.——Still another Summer School, of which the variety is now very considerable, is announced to open July 15, for five weeks, at Vineyard Grove, Martha's Vineyard. Literature, art, science, and the modern languages, and even phonography, are included in the Institute's course. Information may be obtained of Col. Homer B. Sprague, Hotel Berwick, Boston.——The European maps of Zell's 'Descriptive Hand-Atlas of the World' have been bound separately, together with their several indexes, with a flexible cover, and now form a convenient roll known as the 'Tourist's Atlas of Europe' (Philadelphia: T. Ellwood Zell, Davis & Co.) The same house are the American agents of W. H. Smith & Son's (London) War Map, showing the new boundaries in Eastern Europe and Asia in accordance with the Treaty of San Stefano. The compass of this map, from Bordeaux to the Caspian and from Moscow to Crete and Tunis, ensures its usefulness during the approaching complications whether of Congress or of war.——Mr. Lawrence B. Thomas, 54 McCulloh Street, Baltimore, sends us a curiosity of literature: 'Autograph Poems: I. The Martyrs,' consisting of eight four-line stanzas filling two pages of note-paper, and a frontispiece by no means badly drawn after S. J. Pinwell. Text and illustration are executed by the papyrograph process, and the printer has been employed only for the outer title. The binding of these three leaves and two detached covers is effected by a silk lacing through eyelets. This is only the beginning of Mr. Thomas's undertaking to be his own publisher. Typographers and librarians will do well to take notice of so alarming an example.——We have received Part 1 (for May) of the illustrated *Magazine of Art* (Cassell, Petter & Galpin). It will amuse and perhaps instruct by its pictures, but it promises little to the reader who seeks in it clear doctrine about art or valuable criticism.——Much pains have been taken with the illustrations of Dr. John Savage's 'Picturesque Ireland,' of which the first part comes to us from Thomas Kelly, of this city. A map of Ireland, an illuminated and an engraved title still further enhance the attractiveness of this well-printed work. The text seems readable.

—We have before us No. 2 of the French-English *American Correspondence*, published in this city at 4 Warren Street, and also the prospectus of the "Athenæum Bureau of Literature." The *American Correspondence* resembles the European circulars which it imitates in being printed on thin paper and in its general news summary, which has two rubrics: Washington and New York. It "is intended to present, in a practical and synthetical manner, the political, financial, and commercial interests of the United States to the attention of Europe and Central and South America; and, in the way of reciprocity, to advise Americans on questions which may be to them of immediate and paramount interest in the general affairs of other countries." The timeliness of the enterprise appears to be based on somewhat speculative considerations, as that "Foreign nations, convinced of a bright political future for America as the consequence of the tranquillity prevailing at Washington [in the White House?], are also confident in the moral and financial responsibility of the people and corporations of the land." The "Athenæum Bureau" has its "Home Office" at 233 Broadway, and is conducted by Willett J. Hyatt, Manager, and H. R. Waite, Ph.D., and Wm. C. Conant, Editorial Directors. It "aims to afford authors, not only professionals but also amateurs and beginners, a long-felt want, namely: a medium through which they may secure the market value of their productions, without incurring the expense or annoyance of becoming their own auctioneers." This is not all, however, for it undertakes to place the MSS. of amateurs and young authors "to the best advantage, irrespective of pecuniary compensation [to said amateurs]." We suspect this will be the heaviest part of the business of the Bureau. In dealing with foreign authors the Bureau expects to furnish them "the practical immunity and security of an international copyright law with the United States" in the following manner:

"A foreign author placing a copy of his MS. with the Bureau, before submitting it to his home publisher, may, upon special arrangement with the Bureau to that effect, sell the American right to publish, upon terms equally as favorable to himself as could be secured were he a citizen of this country. This secures the author's right to fix his own price upon his own work, to exact a royalty upon every copy sold in the United States, and to publish under copyright in his own country."

This has a pleasant sound, but whether such contracts are made directly (and there is nothing to hinder them now) or through the good offices of the Bureau, the "pirate" seems to remain the master of the situation.

—A class not affected by hard times is appealed to in the announcement by Smith, Elder & Co. of a sumptuous illustrated edition of Thackeray's works in twenty-four volumes, imperial 8vo. The publication will be at the rate of two volumes a month, beginning October 1, and only a thousand sets will be printed for sale. Subscriptions must be made through booksellers. All the illustrations will be printed on real China paper, and mounted either on plate-paper or with the letter-press. Quite otherwise is it with the complete edition of Tennyson's works just published by C. Kegan Paul & Co., which is confined to one volume, crown 8vo, of 700 pages, and sells for six shillings. The same publishers are about to issue 'An Inland Voyage,' by R. Louis Stevenson, the author of many acceptable tales and essays in the *Cornhill*, who here tells of canoeing in the canals and rivers of Flanders and Northern France; and they have also, says the *Academy*, brought out a new and revised

edition of General Halleck's 'International Law,' with the addition of an index, notes and cases, and the text of official documents of various countries. The following announcements we take from the last *Bookseller*: 'Carthage and the Carthaginians,' in two volumes, with maps and plans, by R. Bosworth Smith; 'Journal of a Tour in Morocco,' by Sir J. D. Hooker and John Ball; the first two volumes of a 'History of England, from the Conclusion of the Great War in 1815,' by Spencer Walpole; a translation of Moritz Thausing's 'New Life of Albert Dürer'; 'A Descriptive Catalogue of the Etching Work of Rembrandt,' by Rev. Charles Henry Middleton; lectures by the late Sir G. Gilbert Scott on 'The Rise and Development of Mediæval Architecture'; a 'History of Egypt, from the Earliest Period,' derived from monuments and inscriptions, by Dr. Brugsch, of Göttingen; and 'A Glossary of Peculiar Anglo-Indian Colloquial Words and Phrases, Etymological, Historical, and Geographical,' by Col. Henry Yule. The *Athenæum* states that the Council of the Camden Society holds out a prospect of the early publication of the General Index of the first series of the Society's publications; and that Mr. Henry Stevens has finished his catalogue of American books in the British Museum up to 1857 (only a portion, we suppose, of the total 75,000 which Mr. Stevens mentions elsewhere incidentally in the same paper). This last is an enterprise which co-operative card-cataloguing ought to make superfluous hereafter.

—Mr. Stevens gives in the *Athenæum* of May 11 a lucid account of the embarrassment caused to the International Postal Union by the attempt in this country to bring the book-post under the surveillance of the customs authorities. In the absence of any treaty the foreign sender could have no redress for this application of municipal law; but having entered into a common agreement with other nations to receive and deliver free, without further charges, the usual categories of mail matter, the issue between a treaty and a statute comes up anew for us. No doubt we must allow in the end that the principle we insisted on when demanding the extradition of Winslow holds good here, namely, that the treaty takes precedence of the statute. Mr. Stevens says, "It is historically certain that hitherto, whenever a Federal law has been found in conflict with a treaty, Congress has never yet failed to provide a remedy, in all cases leaving the treaty to stand"; and he thinks that the United States will in the present instance adhere to the Postal Union in spite of the pressure of the "republishers"—the parties most interested in keeping out of the mails books less than twenty years old. "They might be reminded," he forcibly adds, "that those mail packages are no more fraud on the revenue than their own reprints. The Government derives no customs revenue from the reprints, and it is believed that most of the books by mail would not be sent at all if the mails were closed." The book-post, moreover, is a source of profit to the Government and to the ocean carriers; and finally there is the absurdity of a Government based, as ours professes to be, on general intelligence, checking the free exchange of books on a pretext which no European government has deigned to use, although similar grounds for it exist. Meantime, packages of books are being constantly returned to England, marked "liable to duty," though the rule is very irregularly and arbitrarily enforced. We know of a case in which seventeen copies out of twenty-five of the same book, despatched in the same mail, reached their destination in this country, while the remainder were turned back as being dutiable. Even newspaper packages have been rejected.

—The timely article in *Harper's* for June is Mr. Lossing's "Battle of Monmouth Court-house," copiously illustrated; for that battle, which ought to have been a brilliant victory for the American arms and shortened the struggle with the mother country, was fought at the end of June, 1778. General Charles Lee's responsibility for the fiasco is unsparingly denounced by Mr. Lossing, but he does "not care to repeat" Washington's passionate words to his faithless subordinate on that memorably hot Sunday. There is also a seasonableness about Mr. S. G. W. Benjamin's "Along the South Shore" (*i.e.*, of Massachusetts Bay), a chapter, we believe, of a work soon to be published concerning the whole of a variously charming coast. What with Mr. Benjamin and Mr. Drake and Mr. Nordhoff and Curtis and Thoreau, and numerous magazine monographs, and the poets Longfellow and Whittier, the Atlantic seaboard from Eastport to Cape May now reckons a literature which would fill a small library if brought together, and, if fitly edited, would be a monument of enduring value. The ceramic art finds in this number a votary, Mr. Wirt Sikes, whose theme is Dutch faience, plentifully illustrated with designs. Sculpture, on the other hand, is the subject of some practical discourse (at second-hand) from Mr. J. Q. A. Ward, of whom a very spirited likeness deserves notice, if only because woodcut portraiture is so imperfectly cultivated in this country. Prof. Newcomb's "Manufactured Comet" is a singular narrative of fraud in a field where one would least expect it. The article on "Russian Literature" is well meant, but one cannot go very far in it trustingly after being told at the outset that "the groundwork of the Russian speech and character is Greek." Such spellings as Derschawin and Kostrow suggest that the writer followed a German authority; but this idea is negatived by the constant reclamations against German influence on Russia, though Catharine is praised without a hint of her nationality. This bias and the frequent use of French phrases indicate a French authority; but then we come upon the Italian orthography in Gincovschi, and our doubts begin again. We lack space to point out the writer's errors of fact and judgment, which are only too abundant.

—The proprietors of *Blackwood*, issuing a new series of tales from that periodical, in neatly-printed little shilling volumes, have opened the list with that clever little story which a few months since was the occasion of a good deal of amusement and conjecture—"The Tender Recollections of Irene Macgillicuddy"—and which has been reprinted here by the Harpers in their "Half-Hour Series." Conjecture, as we say, was lively as to the authorship of this slightly audacious *jeu d'esprit*, and at last, after indulging in a good many fanciful guesses, has attributed the thing, without contradiction, we believe, to Mr. Laurence Oliphant. It is worth noticing as an attempt, which has evidently made a hit, to portray from a foreign point of view the manners of New York. Such attempts had already, in two or three cases, been made, but the authors had not that intimate acquaintance with the subject on which telling satire needs to rest. The author of 'Irene Macgillicuddy,' on the other hand, is evidently versed to a considerable degree in the mysteries of Fifth Avenue. He might, we think, have made a good deal more skilful use of his knowledge; but it is interesting to notice what it is that has struck him as the leading characteristics of the society which chiefly congregates in that expensive quarter. The freedom and the "smartness" of the young ladies, and the part played by married men of a certain age in bringing them out, guiding their first steps in society, presiding at their début in the "German," entertaining them at evening repasts at Delmonico's—these points had been already more or less successfully touched upon. But the great feature of New York fashion, as represented in the little satire in *Blackwood*, is the eagerness and energy displayed by marriageable maidens in what is vulgarly called "hooking" a member of the English aristocracy. The desire to connect itself by matrimony with the British nobility would seem to be, in the author's eyes, the leading characteristic of the New York "great world." A corresponding desire on the part of the British aristocracy not to become so connected, appears to complete the picture. It is interesting to know how we strike the intelligent foreign observer; so much may be said, without examining the details of the picture. It has been affirmed hitherto that it is next to impossible to write novels about American society on account of the absence of "types." But it appears that there is an element in our population that has attained to the typic dignity—the class of young ladies whose chief object in life is to capture an English "swell." "Irene Macgillicuddy" is rather disappointing; it falls off sadly during the last half, and there is something rather arbitrary, rather *manqué*, as the French say, in the manner in which the author has finally disposed of his heroine. His story suggests this reflection, however, that it is possible, after all, to write tales of "American society." We are reminded that there *are* types—that there is a good deal of local color—that there is a considerable field for satire. Only, why should it be left to the cold and unsympathetic stranger to deal with these things? Why does not native talent take them up—anticipate the sneers of foreign irony, take the wind from its sails and show us, with the force of real familiarity, both the good and the evil that are to be found in Fifth Avenue and on Murray Hill? Are we then so dependent upon foreign labor that it must be left to the English to write even our "society stories"?

—Of Lord Beaconsfield's swelling phrase, the "diapason of our policy," "Jingo" remarks in *Punch* that "a music-hall metaphor is the very thing to describe a music-hall policy." In the same issue, April 27, this diapason is "described with all reserve" in a couple of stanzas borrowed without acknowledgment and altered (in disregard of all reserved rights) from Longfellow's "Arsenal at Springfield." *Punch* is doing honorable and unusual service in holding back the British Lion at this critical juncture, and any poet might be glad to be quoted by him in furtherance of

so good a cause. But it is hard to see why the old jester did not find the original as apt to his purpose as this shockingly ungrammatical parody, in which we have italicized the substitutions :

> "The tumult of *sacked town* and burning village,
> The *rush and roar that* prayer for mercy drowns,
> The soldiers *revel rout, 'mid blood and* pillage,
> The wail of *starving folk in leaguered* towns—
>
> "The bursting shell, *the houses rent* asunder,
> The *galling rifle-fire*, the clashing blade—
> And, ever and anon, in tones of thunder,
> The Diapason of the cannonade!"

—The Atlantic cable has never since it was laid been used for an odder purpose than telegraphing Mr. Anthony J. Froude's opinion that "the will of God has no longer a place, even by courtesy, in the statutes" of modern nations, that even "the bishops do not believe what they profess," but that the message of science "is not the last or the highest," and that there will be by and by a new religion adapted to the wants of society. Mr. Froude's opinions on this subject are as valuable as his opinions about Flogging Fitzgerald and Henry the Eighth, and for these the ordinary mails were held to be an adequate medium of transmission.

—The fourth volume of the *Italia* (Leipzig, 1877) is fully on a level with the previous numbers which have been noticed in the *Nation* from time to time. The object of this periodical, our readers will remember, is to make the Germans better acquainted with Italian affairs, and no one who peruses the present volume will deny that this object is honestly and frankly carried out. The lighter articles, if so we may term them, are : "The Musical Conditions of Italy," by Hans Dütschke ; "Modern Italian Lyrical Poets," by Günther von Freiburg ; and metrical translations. The first article depicts a gloomy state of things ; there is no music in Italy but opera music, which, being written to please the popular taste, is on a very low plane. The number of operas produced is appalling, and the mode of performance and behavior of the audience are severely criticised by the writer. The memory of the great Italian composers of the last two centuries is forgotten because the people have lost their taste for all music that does not, like the opera, please the eye as well as the ear. In the second article the writer, after a review of the lyrical poets before 1860, especially Giusti and Leopardi (the former very unjustly, according to the writer, compared to Alfred de Musset, and the latter to Byron), examines the new school, which includes the names of Prati, Mamiami, Aleardi, Dall' Ongaro, Revere, Zendrini, Zanella, and Carducci. The last is the rising star, and according to German critics is one of the best poets since Heine. A translation of his famous ode to Satan, by Julius Schanz, was printed in the second volume of the *Italia*, where some translations of Zendrini's lyrics have also appeared. The metrical translations in the present number comprise the combat with the Orca, from the eighth canto of Ariosto's 'Orlando,' translated by O. Gildemeister, and an Italian version of Klaus Groth's *plattdeutsch* poem "Sunday Morning," by Teza, who also translates equally well four extracts from Heine's "Nordsee."

—The heavier articles, in the order of their insertion, are the following : "What Foreigners do not notice in Italy," by P. Villari, who reviews briefly, but incisively, the social, political, literary, and religious questions of the day, and touches the root of all difficulties when he says that in Germany the religious and literary revolution preceded the political; in Italy the reverse is the case. "The Cession of the Villa Medici in Rome to France," by F. Hüffer, is an instance of French rapacity in the days when the Venus de' Medici was fruitlessly shipped to Sicily to keep her from falling into the hands of the first Napoleon, who wished, it is said, to marry her to the Apollo Belvedere, who had already found his way to Paris with other objects of Italian art. "The Gymnasium System in Italy," by R. Bonghi, former Minister of Public Instruction, gives a detailed account of the Italian schools leading to the universities, their organization, selection of professors, examinations, plan of study, etc. The chief evil in the system seems to be a want of uniformity in the whole kingdom ; but also the religious stand of the Government has resulted in the competition of the schools under the charge of religious bodies with those of the state, in which the former are successful, at least so far as numbers are concerned. "The Italian Judiciary," by O. Luchini, shows that the system, like so much else in Italy, is the result of temporary and hasty organization, and consequently incomplete and defective. "The Italian Finances," by T. P. Maurogónato, should be read in connection with Fontanelli's article in the first volume on the circulation of paper money in Italy. It is interesting to see how a country which a few years ago had an annual deficit of nearly a hundred million dollars, to-day maintains an equilibrium in her balance. It is, however, accomplished by means of a ruinous system of taxation. The reader will be astounded to learn that the Budget for 1877 called for over two hundred and seventy millions of dollars. The writer shows in detail how this immense sum is raised, and for what it is disbursed, and suggests some much-needed reforms. "The Religious Question in Italy" contains an examination of the various attempts that have been made within and without the church to reconcile it with the state, and shows how they have all necessarily failed. The writer gives an interesting account of the National Church movement (corresponding to the Old Catholics of Germany), which has not yet accomplished much, and of the Waldensian Church, which has, and is doing more every year. Enough has been said to show the unusually solid and valuable character of the present number of the *Italia*, the publishers of which announce that a new volume will hereafter appear every autumn.

THE NEW REPUBLIC.*

In order to attempt any criticism of Mr. Mallock's book it is necessary to give a slight résumé at the outset of its very clever and original plan of construction. It consists, then, of a series of conversations carried on by a number of ladies and gentlemen who meet toward the end of a dusty July to pass a quiet Sunday in the sea-side country-house of Mr. Otho Lawrence. This retreat is described as the work of Lawrence's uncle, a man of wealth and good birth, a skeptic, a cynic, and a loose liver, who has left to his nephew his beautiful villa and two volumes of reflections on various subjects, some of which will not bear loud reading. In the middle of the estate is the tomb of this singular man, left by his express directions to be carefully neglected by his heir, the rusty gate and weather-stained portico being designed to give a posthumous evidence of the justness of his evil theories as to the impermanence of human affection and gratitude. The nephew has inherited to a certain degree his uncle's skepticism, but not his cynicism. He is in the condition of mind which the author by implication attributes to the great body of the Protestant world, that of unquiet doubt, of a longing for something that is not found, but constantly yearned after. Otho Lawrence is fond of speculation, and having got a number of friends to his house, determines that their time shall be improved by a rational discussion of those topics which "society" habitually avoids, and which are yet of the deepest concern to every member of it.

His friends are no ordinary visitors. We have seen a "key" giving the real names of the *dramatis personæ ;* but there are only a few of them who are well known on this side of the water. There is the celebrated Dr. Jenkinson, representing the Broad Church ; Mr. Storks of the Royal Society, "great on the physical basis of life and the imaginative basis of God" (Mr. Tyndall) ; Mr. Luke, "the great critic and apostle of culture" (Matthew Arnold) ; Mr. Rose, the pre-Raphaelite (Swinburne or Rosetti), who always speaks in an undertone, and whose "two topics are self-indulgence and art" ; Mr. Saunders from Oxford, "supposed to be very clever and advanced" ; and Mr. Herbert, the only man in these days for whom Otho Lawrence feels a real reverence, almost the only one of the teachers of this generation who, to him, seems to speak "with the least breath of inspiration" (Ruskin). Then there is Miss Merton, a Roman Catholic convert, and Lady Ambrose, a woman "of a very old but poor family, who has married a modern M. P. with more than a million of money," and who has "lovely large grey eyes," and is "very particular about knowing the right people."

The party being assembled, it is arranged by the host that the conversation at dinner shall be devoted to certain subjects chosen beforehand and inscribed in courses on the *menu*. The "Aim of Life" comes on with the soup ; "Town and Country" with the fish ; then "Society," "Art and Literature," and so on ; "The Present" as a *pièce de résistance ;* and finally, with the *entremets*, "The Future." By this simple device (which has received an amount of critical approval and admiration so disproportioned to its merits as to cast in the shade the extraordinary cleverness of other parts of the book) a modern *symposium* is set agoing, and the various philosophical systems of the guests are unfolded. And here, in the vivid parodies, or rather almost reproductions—for they are only slightly caricatured—of the current ways of looking at life professed by the "teachers" whom the guests represent, the great strength of the book lies. The dialogue has every charm that conversation on serious subjects, now light and now grave, carried on by people of unusual wit and command of language, can have. There is enough graceful allusion and

* "The New Republic ; or, Culture, Faith, and Philosophy in an English Country House. By W. H. Mallock." A new edition. New York : Scribner, Welford & Armstrong. 1878.

wit and reflection and suggestion to furnish half-a-dozen books. To prove this by quotations would be easy enough, but would really do injustice to the author, because his "good things" are not interjected here and there by main force to make a readable book, but are organic parts and members of the whole, and need the context for their full and natural effect.

The *menu* having been discussed, the *symposium* is protracted during the stay of the party, and the discussion broadens rapidly until it covers the great subject handed down by the author of the book from which Mr. Mallock has taken his title—that of the world as it ought to be. It is here, of course, that there is the greatest play for real satire. To construct an ideal society, a perfect state, is the problem Plato left unsolved. Two thousand years have rolled away since, and many civilizations and religions have arisen and perished with them. Science has been born and mastered the world, inventions have revolutionized our modes of living. Political systems of every sort have been framed for the government of men, and philosophical systems of every hue have been invented to reconcile or dissatisfy him with life. Surely, in the full glare of the high-noon of an age priding itself on its civilization and enlightenment, we ought to be able to approach the task of reconstructing the world with more chance of success than Plato. Let us make the attempt.

To begin with, as Lawrence's friend Leslie suggests, in a perfect state all the parts will be perfect, and each part will imply and involve the others. We may, therefore, take the highest class in our state, and see what that ought to be, if it were really perfect; that is, what class the highest and most refined life consists in. Mr. Rose suggests "Art"; Mr. Saunders "Reason"; but it is finally suggested by Lady Ambrose, who, it must be confessed, gives the discussion a fairer start than ever Plato did, that the first requisite of perfect society was "the absence of dull and vulgar people"—a remark which gives occasion for what is, to our mind (though not, perhaps, at first sight), one of the best things in the book, Mr. Luke's cordial exclamation of approval, "A capital exclusion with which to begin our new Republic!" Mr. Luke then proceeds to follow this idea out, and a long discussion follows on "Culture," the meaning of which much-abused word Lawrence undertakes to illustrate to the assembled company by a comparison between the "coarse, common, rustic palate" of a farmer and that of the true epicure. This image suggests to Miss Merton the natural conclusion that a man of the highest "culture" must be a sort of "emotional *bon vivant*," an idea which, instead of displeasing, delights Mr. Luke, who thanks Miss Merton for the phrase, adding that "it may remind us all how near our view of the matter is to that of a certain Galilean peasant, . . . who described the highest culture by just the same metaphor, as a hunger and thirst after righteousness." Lawrence goes on to describe "culture" as practically a general training and cultivation of all the faculties; but his "culture" is not Mr. Rose's any more than it is really Mr. Luke's. It is agreed, however, at length that the society of the New Republic is to be as highly bred and as polished and as sparkling as it can be imagined, when Lord Allen (Lord Roseberry?) observes that *his* Utopia would need "something definite for the people to do"; without this, he says that "all life" seems to him "a mockery." On this Lawrence asks him whether he is quite sure that that is not exactly what life is, when Mr. Luke comes in with a really brilliant burlesque of Matthew Arnold. To be sure, life is a mockery, he says, if you leave out "the one thing that is of real importance"—conduct, or, in other words, morality:

"It is quite true that culture is . . . the sensitizing of the mental palate—the making it a good taster. But a taster of what? Not only of social absurdities, or love affairs, or beautiful scenery, but of morality, of righteousness, of Christianity. The really profound work of culture is to make us judges of these—judges able to tell in an instant real righteousness and real Christianity from pseudo-righteousness and pseudo-Christianity, so that we may swallow the true like the healing water of life, and reject the false like a sample of bad claret."

Mr. Luke's view of the matter, however, is not at all satisfactory to Mr. Saunders, who thinks that without some definite faith the world can by no means get along. He looks forward to the general agreement of mankind on nothing more or less important than the "utter destruction" of the "supposed inscrutable difference between right and wrong," and the substitution for them of terms based on a purely utilitarian system. With Right and Wrong will go Poetry, the "treacherous hand-maid of priestcraft," and "every other evil" as well, including "reverence, faith, mysticism, humility, and all the unclean company comprised in this one word, Religion." This is too much for Mr. Stockton, who has a religion of his own, not unlike that of many other persons of the present day:

"When the awe-struck eye gazes, guided by science, through the 'dark backward and abysm of time,' and sees that all that is has unfolded itself, unmoved and unbidden (astounding thought!), from a brainless, senseless, lifeless gas—the cosmic vapor, as we call it—and that it may, for aught we know, one day return to it—I say when we realize, when we truly make our own, this stupendous truth, must not our feelings," said Mr. Stockton, letting his eyes rest on Miss Merton's, with an appealing melancholy, "—our feelings at such moments be religious? Are they not Religion?"

So the construction of the New Republic proceeds, developing at every turn fundamental and irreconcilable differences among its founders as to what the true principles of Utopian architecture should be; until after each system is unfolded and the company involved in a maze of doubt and perplexity, the whole is brought to a rude ending by a lay sermon from Mr. Herbert, who tells the company very plainly that they have not advanced the matter a step; that they are all deniers and doubters and disbelievers, and that their world is without a God. Their religion is not pure paganism, however, for they once had a true religion. He finally advises them to "seek God earnestly," on a sort of last desperate chance of finding him. This is what Mr. Herbert is doing, it appears; for he too confesses himself a doubter and a miserable man, though not yet content with his misery. He too has said in his heart there is no God, but even that he has doubted while he has said it, and calm, peaceful doubt he will never admit.

We have been able to give only the merest hint at the general drift of Mr. Mallock's book. It suggests many questions. Does it mean that after two thousand years we are no nearer the goal than Plato was, or is there in the author's own opinion some solution of the riddle? Can the world be perfected, and can we by seeking find out God? There are no positive indications of what his own belief on the various questions raised are, but the negative indications all point to a simple solution. There is one person in the book who is not satirized; she is a Roman Catholic convert. There is one faith which is not parodied; it is that of the Church of Rome. There is no system of Protestant or positive philosophy that does not come in for ridicule, but Holy Church escapes. But we are not inclined to make any inferences at all. A satirist, it seems to us, should be judged as a satirist. In the 'New Republic' Mr. Mallock has undertaken a most difficult and ambitious task: in the first place, to create a modern representative of the ancient symposium; in the second place, to lay bare the weak spots in the current fashionable philosophies of the day. He has done both with the hand of a master. It would be rash to predict what he may accomplish in other fields, but he may fairly insist that for the present he shall be judged by what he has actually accomplished.

NARJOUX'S ARCHITECTURAL NOTES.*

M. FÉLIX NARJOUX, Architecte de la Ville de Paris, is one of those ingenious Frenchmen who heretically turn their faces from the École des Beaux-Arts, that great propaganda of architectural catholicism, and with their corypheus, Viollet-le-Duc, maintain a peculiar opposition to its tenets. Several buildings in Paris and Châlon-sur-Saône, designed by M. Narjoux, are straightforward and effective, and there is a curious little villa at San Remo, near Genoa, which bears creditable testimony to his imagination. As a writer, he is known by several studies on public buildings, relating especially to the construction and fitting-up of common and primary schools. Three years ago his name appeared, as collaborator, on the title-page of a bulky volume of engravings: 'Les Habitations Modernes.' Several of the houses therein represented are described in the 'Notes de Voyage' before us, and in it there is also frequent mention of visits to kindergartens and other schools. From this the book may perhaps be held to embody observations made while gathering material for the more important works, and it would be well if such were always published in so welcome a form.

M. Narjoux, evidently intending his book for the general reader, has made it attractive by a large number of illustrations, which not only show characteristic buildings, with their furniture and ornaments, but occasionally the costumes and belongings of their inhabitants. Holland and Denmark are countries to which writers on architecture seldom devote much attention, and the present description is the more interesting on that account. The sketches are clear, and always correct in perspective, being drawn in a manner similar to that of Viollet-le-Duc. We

* 'Notes de Voyage d'un Architecte dans le Nord-ouest de l'Europe. Par Félix Narjoux.' Paris: Morel et Cie. 1876.
'Notes and Sketches of an Architect, taken during a Journey in the Northwest of Europe. Translated from the French of Félix Narjoux by John Peto.' Author's edition, from advance sheets. London: Sampson Low & Co. 1876. Boston: James R. Osgood & Co. 1877.

have perspective sections, bird's-eye views, and diagrams of construction but little inferior to those familiar to the student of the 'Dictionnaire.' The representations of interiors and of furniture are noticeably good, and the invariable practice of accompanying the views of a building with its plans cannot be too highly commended. Yet, although we ostensibly have the contents of a sketch-book, it is to be regretted that its illustrations were redrawn with square and bow-pen before being published, for this was probably done after the writer's return to France, and must be deemed responsible not only for the loss of that immediateness and freshness peculiar to free-hand sketches, but also for numerous inaccuracies, especially the discrepancies between plans and elevations. In the drawings of the farm-houses of Northern Holland, for instance, the doors and windows are so interchanged as to render a ready understanding of the reference made by the text impossible. Then, too, the plans, though reduced to uniform scales, often show rooms with no means of access, or with no light. In consideration of the general excellence of the drawings, it seems strange that such mistakes should have gone to press; they must be attributed to that incorrigible Gallic carelessness of which M. Narjoux's text bears so decided evidence. Almost every foreign word is wrongly written—at times so much disguised as to leave a doubt as to what he really refers. Is it possible that by "la maison Presle de Nuremberg" he means the Peller'sche Haus? His dates, also, may be regarded with suspicion. The manufacture of porcelain in Berlin began in 1751, nine years before the time here stated, and Barneveldt was executed, hardly "assassinated," in 1619, not 1617.

The professional remarks of M. Narjoux on the subjects of his illustrations are almost always good, and based on the sound principles of his school. Only once does he depart from these—when he commends, on account of their lightness, those wooden imitations of vaults here and there to be seen in the Netherlands. Time has shown that the inflammability of these meretricious, or at best useless, features unfits them as substitutes for the stone ceilings they simulate. The remarks on the forms of development displayed by the dwelling-houses of different lands are particularly interesting. The sketches pertaining to the subject well show how the needs of a family are influenced by local customs and climate, and how clearly this influence is expressed in domestic architecture. It is to this that the writer's more direct attention was given; yet he has not failed to notice many churches, town-halls, hospitals, and other public buildings, as well as certain works of military engineering. The drawings, also, of various Northern antiquities lodged in the museum of Copenhagen are especially good. In short, the book is filled with hints valuable to the architect, who by it may not merely gain suggestions applicable to every-day problems, but withal quite a clear understanding of the state of building interests in the countries through which M. Narjoux has passed.

Due allowance should, however, be made for the writer's intense hatred of the conquerors of his country. The severity of his observations upon the plagiarism of German architects is entirely unwarranted. The exhibition of national feeling knows no bounds. He devotes a chapter to a fierce arraignment of Prussia for the part taken in the war of the duchies, and while giving vent to his sympathy for the Danes—those Frenchmen of the North—fondly anticipates the day when, the pressure of Prussian military despotism for an instant relaxed, the German states which are forced into that unnatural union, the Empire, will fall asunder and resume their autonomy, to the great good-fortune of France. Some of the tirades against German manners are truly slanderous. The account of the behavior of Breslau opera-goers, for example, can excite nothing but astonishment in the mind of one familiar with their habits. Ignorance of Northern tongues and usages seems unhappily to have prevented M. Narjoux from justly appreciating those he so harshly condemns.

When a professional book, not intended for consultation and not distinguished by special strength or subtlety of diction, is written in a language so well known as the French, the utility of a translation may seem doubtful. We are well aware of the fallacy of the polite supposition that everybody reads French, yet among those of sufficient literary interest to regard M. Narjoux's book as an acquisition there can be but few who would prefer to read it in this version, or can applaud its having received an honor which so many important works of reference still await. Mr. John Peto's translation, which has appeared almost simultaneously in London and Boston, is accompanied by very fair impressions of the original cuts, but the rendering of the text is at once inelegant and untrustworthy. The mechanical execution of the book, though good, is inferior to the French edition; its reduction in size causes some of the illustrations to appear crowded. The scale of the plans is given as ".039 and .078 of an inch to the yard," in place of the more correct and customary 1 and 2 to 1,000; the destination, also, of the rooms is not well expressed. The word *office* is rendered variously as "library," "private room," "closet," and "store-room," none of which terms conveys its real signification; elsewhere *dégagements* scarcely five feet broad are described as "sitting-rooms." The only acknowledged additions to the original are a few foot-notes, the most important of which is a misstatement. Queen Caroline Matilda died on the 10th of May, 1775, not in 1773. But the unavowed mutilation of the book by its translator is most inexcusable. Mr. Peto omits entirely, and without explanation, most important parts which perhaps fail to suit his personal taste, or do not appear sufficiently sycophantic. The following passage is thus ignored—it should be inserted on page 281 of the version:

"Mr. Scott is the architect of the Albert Memorial in Hyde Park; it is he who conceived the idea, to say the least whimsical, of raising a *Gothic* monument to a prince his contemporary. This monument, moreover, is so loaded with details, so covered with ornaments of every kind, with embossed, indented, painted, and gilded carvings, that it seems a reliquary, only fit to be kept under glass, and by no means a construction which, in order to perpetuate the memory of him to whom it is dedicated, should withstand the inclemency of seasons and of centuries."

Some understanding of the faithlessness of the version and of the liberty Mr. Peto has allowed himself in emasculating and perverting the original may be gained from a comparison of the following paragraphs, supposed to be parallel:

"Tout cela [l'appareil de l'église Saint-Nicolas] est bien construit, bien combiné; mais, comme il arrive presque toujours en pareil cas, ce monument est la charge plutôt que la copie de celui qui a été pris pour modèle. Puis quand on copie, le moins qu'on doive faire est au moins de bien choisir son modèle: c'est ainsi que bien des gens croient faire du *gothique*, parce que, impuissants à créer et à concevoir, ils reproduisent des formes et des profils sans comprendre qu'ils laissent de côté l'esprit et les principes appliqués par les puissants constructeurs du moyen âge."

In translation this appears as follows:

"We have a different idea in France of the architecture of the Middle Ages; yet we must admit that the Church of St. Nicholas has a grand and noble appearance, and has been constructed with the greatest care."

It is perhaps unnecessary to state that the church was designed by an English architect. Every mistake, every oversight of the original is before us in the translation, even such evident misprints as the statement that the new theatre of Copenhagen is to cost six hundred rix-dollars. Dutch and German words are as M. Narjoux carelessly wrote them, or as they may have been misprinted; except when rendered even more incorrect. The capital of Holland, the Hague, is called in that country 'sGravenhage; that is to say, the hedge of the count or counts. The 's which precedes the name, being the final letter of the genitive form of the definite article, is written in small character. Of this M. Narjoux may have been ignorant, for he writes S'Gravenhage. The translator paused at this word of strange appearance, but recollecting that S. is the abbreviation for Saint (if not in French at least in Italian), he has boldly incorporated another worthy into the already over-full calendar of the elect, and we read "St. Gravenhage"! There is no lack of similar points, but Mr. John Peto and Saint Gravenhage must excuse us from carrying the analysis any farther.

THE NEW EDITION OF HERDER.*

"THE first ingenuous work of an author is generally the best. His bloom is opening, his soul is still morning-twilight; much with him is still full, boundless feeling, that afterwards becomes subtle investigation or mature thought that has already lost its youthful coloring (*Jugendroth*). We always like the half better than the whole, the promising morning more than the noon of the sun's highest altitude."

These words, so figurative, so profound, so wanting in precision, so characteristic of Herder, have an especial adaptation to the two already published volumes of the elegant edition of his writings which is now appearing. They may, perhaps, at once lead to the reflection that Herder's day has never passed beyond the dawn. Goethe's day in German literature has been opening, at least ever since the publication of the 'Hermann und Dorothea,' and, judging from the issues of the last two years, the sun of this day has not yet reached the zenith. Herder's day has remained morning-twilight, or rather it has sometimes seemed as if

* 'Herder's Sämmtliche Werke. Herausgegeben von Bernhard Suphan.' Erster und Zweiter Band. Pp. 548 and 384. Berlin: Weidmannsche Buchhandlung. 1877.

the promise of morning had become the negation of evening. Hermann Grimm says in his instructive lectures on Goethe: "To later generations, who will from better editions of Herder's writings have made the acquaintance of the great man, it will be a riddle how such a source of light was able to emit so few rays." It has often been given as a reason for the smallness of Herder's present influence that he had little creative power. Even the 'Cid,' which was looked upon for more than half a century as offering his highest claim to poetic genius, was proved ten years ago to be substantially a translation of a French Romance version and not a genuine recomposition (*Umdichtung*) of the original. Goethe's poetic genius, on the other hand (however much he may have owed to Herder, and to Rousseau through him, for his awakening), has assumed larger dimensions every year. The sky has not been large enough for two suns of such immense disparity. The greater must rule by day; and the bitterness of Herder's later years towards Goethe, the spirit of the words quoted by Grimm from Herder as containing the sharpest censure that could fall on Goethe, "Theilnahmlose, genaue Schilderung der Sichtbarkeit," has doubtless helped to turn Goethe's admirers from Herder and to diminish his fame.

But a potent reason for the modern neglect of Herder has certainly been the want of a worthy critical edition of his writings. This want, that has by some scholars been keenly felt, is at last to be supplied. Bernhard Suphan, who has long been known as a successful student of Herder, is issuing an edition of that author of which two volumes have already appeared. The plan of the edition was approved by Moritz Haupt (no higher authority could have been found) and contemplates a chronological arrangement in three sections—prose, poetry, and the writings that had an official or ministerial character. The editor has had constant counsel from Julius Zacher and the support of the Berlin Academy. The imperial treasury has contributed to the enterprise by purchasing from Herder's descendants for Suphan's use most of the rich abundance of manuscripts which Herder left, and Herder's family have put at the editor's disposal whatever remained in their possession. Not merely did Herder leave manuscripts of many of his works—some of which, as, for instance, the collections of 'Fragments über die neuere deutsche Litteratur,' were refashioned several times—but there are also preliminary sketches and studies, books of excerpts and notes, that are of great service in leading up to the original text if the manuscript is wanting, and in showing the connection between different works. The editors of the first complete edition did not compare the printed works with the manuscripts, and there are many mistakes (some absurd ones) in that and subsequent reprints which are to be corrected in this edition. But far more than a correction of orthographical errors is given in these new volumes. Pieces from Herder's pen that were not in the earlier editions have been discovered by Suphan. *Die Königsbergschen Gelehrten und Politischen Anzeigen* and *Die Rigischen Gelehrten Beiträge*, newspapers for which Herder wrote in 1765 and later, have, under the scrutiny of Suphan and Haym (who is publishing a series of volumes on Herder's life and works), added to our inheritance from Herder.

The second edition of the first collection of 'Fragments' was not published until after Herder's death. It was, however, printed probably in the latter part of 1768. Klotz (the same writer whose criticism irritated Lessing) stole a copy from the printing-house and reviewed the revision very unfavorably in the *Hallische Deutsche Bibliothek*, January, 1769. This review so annoyed the sensitive Herder that he persuaded his publisher, Hartknoch, to suppress the entire edition of fifteen hundred copies. Suphan's edition contains the first collection in its earliest form, and this suppressed revision in all the passages (more than a hundred octavo pages) which are not duplicates of parts of the first edition. Only the revision is found in the later editions. A letter of Herder's to Nicolai, written about the time of Klotz's ill-natured review, is proof that the *second* collection also had been completely revised, and was then in manuscript form. Suphan found manuscripts of this revision among Herder's papers, and prints in his second volume parts of it from a *second* and parts from a *third* refashioning. It is well known that Herder planned repeatedly for a *third* edition and an enlargement of the scope of the 'Fragments.' Even as late as 1781 this thought was rekindled in him by Frederic the Great's memoir, 'Sur la Littérature Allemande.' Naturally then among his books at Weimar, after his death, was found a copy in which he had written marginal notes for the contemplated third edition. Heyne, the untrustworthy editor who revised the text for the Carlsruhe edition of 1821 and the Cotta of 1827, introduced modifications from this now lost copy. Suphan gives Heyne's modifications as foot-notes whenever certain that they are to be referred to Herder's own hand.

It is with more precision, though not with more beauty, than marks the words from Herder which were quoted at the beginning of this notice, that Suphan says in his careful introduction to the first volume: "In the first work of an author his literary character is presented most faithfully, with less liability to deceive in proportion as he gives more ingenuous play in it to his inclinations; the composition is richer in unfolding in proportion as the author's future course and final aims lie clear before his eyes. Of that ingenuousness, as of this certainty, Herder's 'Fragments' give evidence to a high degree."

Also of Herder's work in regard to 'Thomas Abbt's Writings' the editor publishes something new. In the complete edition this torso of a monument, as Herder named it, appeared in the revision of Joh. von Müller, and at the end of the first part the words "Die Fortsetzung unterbleibt" were printed. But in Herder's papers a second part containing matter enough to fill seventy octavo pages was found, and appears in Suphan's second volume. Thus of this volume more than half is from Herder's manuscripts, and is now for the first time printed.

Herder's influence will be increased in Germany by this publication. But also among those peoples whose literary spirit he understood (and what modern literature did he fail to study?) and did so much to popularize in Germany, this edition deserves a hearty welcome. No German library will be complete without it, and no one who has any interest in that surprising and magnificent development among the Germans a century ago can afford to be ignorant of the most fructifying genius of that time. His sensitive, receptive, all-embracing spirit, more purely theoretical than Goethe's, had less adaptation for affairs, but he preached a gospel in language, religion, and letters that found in its time a hearing. It was not, Suphan assures us, so much Lessing as Abbt and Nicolai who sowed in the 'Briefe die neueste Litteratur betreffend' the seed that ripened to a harvest in Herder's 'Beilagen.' His rhetoric had an advantage as well as a disadvantage in comparison with the clear intellectual presentation of Lessing. More truly poetic in his prose than in his poetry, he treated a multitude of subjects, and, having something to interest every friend of culture, the free, graceful range of his expression was better adapted for popular acceptance than the logical purity of Lessing. He is just as truly a German, though more receptive of French influence. If in him, as Hillebrand asserts, are to be found the germs of so many comprehensive modern movements, what a source of wealth to the investigator in these two volumes that lay bare, so to speak, the early pulsations of his literary heart!

Une Page d'Amour. Par Émile Zola. (Paris: Charpentier; New York: F. W. Christern. 1878.)—A new novel by the author of 'L'Assommoir' is certain to attract a good deal of attention; but we think it is safe to say that the volume before us is not destined to achieve the peculiar vogue of that remarkable work. (We observe, however, that at the present writing, a very short time after its appearance, 'Une Page d'Amour' has reached a fourth edition.) M. Émile Zola has evidently proposed to himself in the present case to strike a different note from that of 'L'Assommoir,' and to show that he can treat of innocence and purity as well as of misery, vice, and uncleanness. For this purpose he has resorted to radical measures—he has taken for his heroine a little girl of eleven years of age. We cannot say that, however creditable it may be to M. Zola's higher motives, the device has been successful; for 'Une Page d'Amour' has neither the power, the brilliancy, nor the extraordinary technical qualities, as they may be called, of its predecessor. It must be added that the author's attempt to show that he appreciates purity of subject is attended with some remarkable incidents. We should say, however, before going farther, that in his preface M. Zola distinctly repudiates any such short-sighted motive as a desire to throw a sop to public opinion. He prefixes to the present tale the genealogical tree of the Rougon-Macquart family, of whose various members and offshoots the eight novels of his great series already published embody a portion of the history. This history, says M. Zola, is to be unfolded in twelve more novels; and he declares that the genealogical tree in question has not been invented after the fact—at one of the later stages of the working-out of his remarkable scheme—but was completely prepared and elaborated in 1868, before a line of the first novel ('La Fortune des Rougon') was written. M. Zola publishes it now as a proof that every detail of his immense plan was settled in advance. This, to even moderately sympathetic readers, is perfectly credible; for whatever may be the author's defects, he gives us the impression of extraordinary elaborateness and patience of arrangement. This, indeed, is almost his strongest quality; he evidently sat himself down at the outset and tabulated, as it were,

the enormous contents of his twenty novels—pigeon-holed his episodes and characters as if he had been a clerk in a post-office. When the twentieth is published he will certainly have performed an almost unprecedented task; his only rival will have been Balzac, and in some respects the laborious, and, as he would allege, scientific quality of his performance has hardly been equalled in the 'Comédie Humaine.' He requests that full judgment on each of his novels be not passed until the series is complete and the individual story may be examined according to its place in the scale.

A partial judgment, however, he admits that the reader is welcome to form; and it is by the light of this partial judgment that we feel justified in saying that the present episode in the history of the race of Rougon-Macquart is both disagreeable and dull. 'L'Assommoir' was prodigiously disagreeable, but it could not, on the whole, be pronounced dull. 'Une Page d'Amour' suggests, as we read, in a much less degree the need for disinfectants and deodorizers; but neither has it, on the other hand, the really magnificent reality of its companion. An "œuvre intime et de demi-teinte" M. Zola pronounces it in his preface; but, in spite of this gracefully-sounding qualification, the story has little that is positively agreeable. The author of 'L'Assommoir' has not an agreeable imagination; and let him select from life what objects he will, the light it projects upon them is, in the nature of the case, a turbid one. He puts before us here a certain Hélène Grandjean, of the stock of the Rougons, whose childhood has been touched upon in a former story. She is young, beautiful, and virtuous, and she has been left a widow, in Paris, with a small income and a little daughter, a child of a morbidly affectionate nature, of a jealous, suspicious, and fantastic disposition, and liable to convulsions, epileptic fits, and other grievous ailments. This little girl, who, as we have said, is properly the heroine of the tale, is apparently meant to appeal to our tenderest sentiments; but we feel bound to declare that, of all unhealthy children, she is represented by M. Zola as the most detestable, the most ill-bred, the most impossible to live with. She is constantly ill, and her mother is obliged frequently to call in the doctor; the consequence of which is that the doctor (who has a wife of his own) falls madly in love with Madame Grandjean, and that Madame Grandjean (who has become a good friend of the wife) reciprocates, and very soon gratifies, his passion. On one occasion, while she is occupied in gratifying it in the Rue Taitbout, the little girl, left at home alone naturally, conceives such grief, shame, and anger at her deserted condition and her mother's estrangement that she falls into a paroxysm which proves fatal, and to which she presently succumbs. Her illness and death are minutely described (and, it must be added, very powerfully; these pages are the most effective in the volume), together with the remorse and shame of her mother, who has immediately dismissed the doctor. Afterwards, Madame Grandjean marries a former suitor, "rentre," says M. Zola, by no means ironically, "dans l'orgueil de son honnêteté," visits the grave of the little girl in the cemetery at Passy, and quite washes her hands, morally, of the circumstances attending the child's death.

The matter, the *fonds*, of M. Zola's story strikes us as very weak and common, and, in so far as the tale is a history of the guilty mother, it is strangely ineffective. To this singular figure of the exceptionally virtuous widow, who throws herself into the arms of her daughter's physician, and then gets so bravely over it, the author has imparted neither solidity nor coherency. The doctor, too, remains simply a peculiarly unpleasant shadow—something like a bad odor. As a history of the child herself, 'Une Page d'Amour' exhibits a certain quantity of the author's skill in producing a sense of reality. There is a terrible abuse of description, but much of the description hits the mark; and probably only M. Zola could have written the thirty or forty pages, at the close, describing the little girl's last illness. It is probable that everything he produces will exhibit the same incongruity—the application of a remarkably complete and powerful method, an extremely solid literary instrument, to objects meanly and, as we may say, ignorantly chosen and bathed in an atmosphere of low-class Parisian cockneyism. If, with his talent and his resolution, he had what we may call a little more horizon, his work would be tripled in value. But, such as it is, he will certainly conduct it to its goal; he will fill out his programme, and, in doing so, he will have performed one of the most remarkable literary tasks of our day.

An Outline of General History for the Use of Schools.—By M. E. Thalheimer, author of 'A Manual of Ancient History,' etc. (Cincinnati: Van Antwerp, Bragg & Co. 12mo, pp. 355.)—Miss Thalheimer's several books have been received with such well-merited commendation that all we need say at present in regard to the execution of this new volume is that it has the characteristics of general accuracy and pleasing style which its predecessors had. A few words may, however, be appropriately said as to its plan. General history is probably the most difficult subject in a school curriculum—most difficult, that is, to teach in such a way as to present at once a clear, full, and interesting view of a succession of events. Almost all books upon this subject fall into two faults—the one, common also to text-books of the history of individual nations and periods, of giving a great deal too much detail; the other, of forgetting that it is the history of the world that is to be told, not that of the several nations. This is not an indifferent point; it should lie at the foundation of any well-considered scheme of teaching general history. At every period of time—with very rare exceptions—there has been some one nation which has had, so to speak, the *hegemony* among nations, and about whose annals may be grouped all the events of that period which have more than a merely local and national importance. In the last two centuries this is less the case; the system of nations has become so wide and complicated that there have always been several streams of events of nearly equal importance, none of which can well be neglected. Nevertheless, even here, between the ages of Louis XIV. and of Napoleon, who each took the leadership in the world in his own time, if we should take the three names of Peter the Great, Frederick the Great, and Washington, there would be very little omitted which could not be well spared.

Now, the fault we have to find with Miss Thalheimer's arrangement is that there is no such continuity as that which we have been recommending. One chapter does not lead to another by a natural connection, as a part of the great current of the world's history, but each is an independent treatment of an independent topic, and the student is obliged constantly to jump backward and forward in his chronology. For example, in "Modern History," chap. vi., "The Stuarts in England," ending with Queen Anne (1714), is followed by "The House of Austria and the Thirty Years' War," ending 1648; and this by "European Colonies," which goes back to the sixteenth century; while the next chapter, "The Northern Kingdoms," extends from the Union of Calmar (1397) to the Partition of Poland, and so on. We think it impossible with this arrangement to get any consecutive idea of modern history.

Each chapter is good in itself, and the book is well provided with maps, genealogical tables, etc. We will note especially the map of the Holy Land at the time of the Crusades, p. 160. In the map of the Roman Empire, p. 96, the province of Bætica is omitted. In that of Europe in the fifteenth and sixteenth centuries Scania is given to Sweden, into whose possession it did not come until 1638. On pages 60 and 63 we find Coronæa for Coronea. On page 164 the government of Florence is said to have been given to the "Arts" or trade-guilds in 1343; this was the year of the admission of the "Lesser Arts" to the government—the constitutional change in question belongs to 1266. The illustrations are generally very good, being principally representations of costume—one of the best and most useful kinds of illustration; but that on page 86 will certainly lead most pupils to believe that the lictor (who, by the way, looks very much like a prize-fighter) attended upon the tribune, than which no more radical mistake could be made.

Fine Arts.

THE NATIONAL ACADEMY EXHIBITION.

FINAL NOTICE.

THE materials for a capital exhibition are to be found in the present gathering at the Academy, deprived of almost all effect by two causes —a relaxation of judgment which has let in a crowd of crudities, and a forcing of tedious Academicians on the eye, according to the rights guaranteed them by an unfortunate caste-system. The wary look no longer, however, at pictures hung upon the eye-line, but confine their attention to works which the hanging committee endeavor to conceal ; so that by attending strictly to exhibits placed in the second and third rows they can partly defeat the efforts of the tyrant. The exhibition, now in its closing days, has, as an exhibition, been more successful than the average for the past ten years, but, as a picture-bourse, has failed notably. The young artists of talent, therefore, who with their spirited works have lent life and attractiveness to the display, have benefited a close corporation of the fossil sort without benefiting themselves. Their genius has simply brought money to the treasury of a jealous organization that will not admit them to membership, and that could not have got up a public attraction without them. Meanwhile their works return to the studio unsold, and no practical gain is derived by them from their loans. Some productions of notable vigor which have hitherto escaped our criticism deserve notice before the exhibition closes.

We may begin with those artists, such as Homer and La Farge, whose works the connoisseur does not regard, but rather the works expected of them. It is a somewhat notable fact, for instance, that those who praise Mr. La Farge do not praise the painting he shows them, but always the next one he is going to paint. A peculiar manifestation of tendencies, of subtleties, of promises, is evident in his productions, and the coming one is always to be the masterpiece. This confident admiration of work that does not exist has never failed Mr. La Farge, and has doubtless been as comforting to him as the meed for labors really achieved. He shows three little pictures this year—a bathing girl, sincerely and sculpturally modelled beneath the folds of a clinging gown, an Andromeda, seen from behind and spread upon her rock with all the intimacy of the apothecary's blister, and a hill-top lifting its cedars into the deep pure sky, where you do seem to hear with some success the whisper of the wind in evergreens. Some commentators have discerned a miracle of fairy colors in the spray that glistens upon Andromeda, while others have discovered that the sky into which the cedars plunge is green. What matters it ? It is neither the inventiveness nor the truthfulness of these pictures that is in court ; the minds of those who stand before them are not on these trifles, but on the picture to come, towards which the fond platitude of Andromeda against her rock and the experiment for a deeper blue than nature's, though resulting provisionally in flatness and in green, may be but needful contributions to the ideally rounded nymph and the ideally azure sky. Winslow Homer, again, is an artist who interests us unfailingly, but in the presence of whose paintings we are infallibly thinking of something else. He does not belong to the class of seekers so helplessly as Mr. La Farge does. He is, on the contrary, a deliverer of positive statements. But he is a man who, in delivering his hits, is very apt to have his elbow twitched at the important moment. He shows marksmanship mitigated by little clumsy misfortunes. We always think of Mr. Homer when we feel hopeful of the uprising of a national expression in art. It is true that our century, with its spread of education that levels everything, is entirely unfavorable to the individuality of nations, and that America, born without a past, and a mere recipient of impartial influences from all the world, is rather more hapless in this respect than others amongst the civilizations. Still, in art, we do notice, although all schools must be based alike on the Italians and on the Greeks, that an individual or a group will generally arise whose studies have taken a bent so particular, and so much in harmony with race-character, as to get accepted as typical. A Munkacsy comes forward with a budget of rugged faces, in bold light and gloom, and we consent to call his style of painting Hungarian ; a Fortuny comes, and glorifies bric-à-brac, and we receive him as a Castilian ; a Holman Hunt causes Jerusalem Jews to posture in Hogarthian anecdotes, and we recognize the tendency of the English mind ; an Ingres draws the figure with cold logic and faultless etiquette, and we accept him as French ; a Pilotyand a Makart invent color-theories and composition-theories which get to be rather loosely pigeon-holed as Bavarian and Austrian. To this museum of types America has not yet contributed, but whenever we forget for a moment how very difficult it will be for her to do so, and cast about for the coming man who will represent her, we are as apt to think of Mr. Homer as of any one else. He selects purely national subjects, and he paints them with a style quite his own, a style that has never felt the style of foreign teachers to a controlling point. But, in the present exhibition, it is to neither of his six specimens that we would turn as the foundation of such a hope. Each is a canvas defaced by a distinct fault, now a singular error of composition, now an emptiness of touch and a rawness of color that can only suggest the chromo. In looking at his contributions we find ourselves opening our eyes rather on his past successes. In each of them, however, there is a note of real merit, ringing, clear, and positive. The young farmer, striding through the dew of dawn, and impulsively taking off his hat to the Te Deum of the birds ; the gypsy-girl, with a sly dark head bent over her cards ; and the negro-lad, stealing melons in fulfilment of a predatory law of nature, without sin and without conviction of sin, but with a side-long eye bent all the while towards the quarter from which the farmer will descend upon him, are all touched with energy and insight, and, what we like the best, the artist's manner of putting them forward is personal and unborrowed.

Mr. Knight sends from Poissy a scene of village water-carriers. Each of the numerous figures is a faithful study from a given model done with absolute simplicity and purity of method. The deep value of a picture like this, in which a faithful conscience has applied the most delicate nature-copying to every inch of the canvas, is somewhat lost upon the public, because the artist will not descend to the least device of claptrap. It is one of a series of large and studious "stage sets" which the painter has been sending out from under the wing, or from under the ægis, or from under the ferule, of Meissonier. Unfortunately that master, unapproached when painting figures in ordinary house-light, is one of the most atrocious landscapists of modern times; and his faithful pupil borrows from him a landscape style timid, dry, insipid, without felicity of color, and without distinctness of values.

In portraiture, there is not the least doubt that the striking work of the season is to be found among the sculpture. Heads like Mr. Warner's likeness of Mr. Daniel Cottier, and Mr. O'Donovan's similarly diminished studies of Homer and of William H. Beard, together with the heroic bust of Page by the latter artist, would attract immediate eulogy in Paris, or Munich, or any other centre. Mr. Warner's method, based to a slight extent on that of Carpeaux, is what to modellers is known as a painting method ; that is, instead of carefully tracing convolutions of form, as in the eyes and hair, to the utmost limit permissible, and thus making, as in the less inspired works of the Greeks, an imitative, cast-like copy of form, he boldly attacks his material in the way to make it shade his work for him arbitrarily : persuades a saliency to cast a shadow that will confer morbidezza; cuts out to exaggerated depths the defining traces that are to serve as outlines ; makes dark holes for the pupils, and raises sharp silky undulations at particular parts of the hair elsewhere kept in shadow ; it is a machinery of projections and hollows which persuade the natural daylight to shade a picture for us, instead of a mere effort to shape the material in every particular according to the shape of the original model. The only objection that has been made to the present work has been that of a want of definition ; the fact being that this was completely the meaning of the artist, who wanted to create the impression of a faintly-shaded and generalized head rather than a very positive one. The bronzes by Mr. O'Donovan are really marvellous. We know of nothing to approach them in American sculpture, and believe they could not have been excelled since Houdon ; one of them, a young man's head "craning" up out of a lean pair of shoulders with a veiled glance of astuteness, curiosity, and criticism, has got the very secret and look of life ; it has the telling quality of caricature with the caricature left out. The large bust of Mr. Page, represented in bronze and plaster, is stately, Phidian, completely noble ; its expression of flesh-texture and that of sparse blowing locks of hair are as happy as the facial expression and bearing. Mr. Carl Muller's bust in white porcelain, an energetic bas-relief in Trenton pottery, in the style of Tinworth, a caricature of the Crushed Tragedian by D. Richards, in over-finished bronze, and Hartley's "Whirlwind," a difficult fancy not quite in the artist's control, are all works of individual accent relieved from the reproach of commonplace.

Mr. Inness does not succeed, in his idealizations of American landscape, in impressing his work with that classic and truly poetic elevation

of style which belongs to his Italian views. He has several scenes, explained by texts that remind one of Turner's "Fallacies of Hope"; one passage, where the quick shudder of wind and light is passing over some willows in a storm, crisp and metallic as the glimmer on a burnished copper, is in his best and older style; but generally he exhibits strain without attainment. Mr. Tiffany, in "Laborious Rest," shows transparent children drawn through a transparent grove by a transparent sham of a gardener; the tone is good, but the modelling shows the simplest want of education. Any competent European teacher would withdraw Mr. Tiffany from his painting, which he is not ready to undertake, and put him through a course with life-models and Greek statues. His sketch in suburban New York, with confused lines of crushed shanties like lines in a heap of jackstraws, is better, but ill-composed or ill-selected. Mr. Wordsworth Thompson's "Review at Philadelphia" treats a grave historic theme in the silvery, natty, elegant, fan-painting manner of Le Poittevin, but his picture, however *bourgeois*, is simple, broad, and delicate—a grand historic motive most skilfully transferred to decorative painting. We must not forget how strong and overpowering must be the individuality which can hold its own so calmly in such a stimulus, and insist on doing, out of all the material of a great action, only that which it can do thoroughly well; it is of the sort of work of Shakspere's, when he selects out of the labors of Theseus only the attendance at comedies and the reconciling of fairy-plagued lovers. Mr. E. L. Henry, our best illustrator of old costumes and customs, gives a London coaching-scene, painted with his usual intense truthfulness. Mr. Eakins has a group of ancient professors forgetting college hours in a game of chess that has lasted well into the twilight. It is wholly admirable, and equally so for unity of composition and discrimination of character. Mr. Humphrey Moore, who, as a travelling companion of Madrazo's and Fortuny's, has some right to the Fortuny material, shows an Alhambra sentinel, asleep with finger on trigger, in powerfully managed water-color—a picture that Villegas would hardly blush to sign. But the whole exhibition yields everywhere such gems of execution, swamped by numbers and prevailing commonplace.

Missouri Farm Loans

Carefully made on Bond and Mortgage. Interest, 8 to 10 per cent. Perfect security. Well acquainted with local lands and values. Best references.

HARRY W. GRANTLEY, Attorney-at-Law,
Appleton City, Missouri.

Illinois Farm Loans.

Money wanted in sums of $500 and upwards to loan on improved farms in the vicinity of Elgin, Illinois, at 8 per cent. net, for three or five years. Security at least three times the amount loaned. Correspondence solicited. References given. Ten years in business. JOHN W. RANSTEAD, Att'y at Law, Elgin, Ill.

Twelve Per Cent.

Security perfect. Money wanted to loan on improved real estate in Denver, Colorado. Interest, twelve per cent., payable quarterly. Correspondence is invited, when detailed particulars and references will be furnished. JOHN L. JEROME, Attorney-at-Law, Denver, Colorado.

PATENT PREPARED

Gasolene.

The attention of owners of Gas Machines is invited to the superior quality of Gasolene that we are making.

Manufactured by a process that is patented by ourselves, it is peculiarly free from all the impurities and heavy properties commonly found in other Gasolenes.

We manufacture these goods more largely than any other house in the world, and are prepared to furnish any gravity from 80° to 90° Beaume, by the single barrel or car-load.

Orders solicited from gentlemen owning private country residences.

Hotels, Mills, and Manufactories supplied on the most favorable terms.

CHARLES PRATT & CO.,

Established 1770. 128 Pearl Street, New York.

The Nation.

NEW YORK, THURSDAY, JUNE 6, 1878.

The Week.

ALL that has come to light during the week confirms our impression that the Democratic investigation really originated not in any demand on the part of the rank and file of the party but in the inner circles of the management, and was and is intended to be not a "revolutionary" but an electioneering enterprise. In fact, the Republican cry that it was an attack on Hayes's title, combined with the blind way in which the mass of the Democratic members went into the scheme, seems last week to have frightened or disgusted so many, and the expectation of any result was so small, that by Friday, according to Mr. Nordhoff, the majority would have been glad to creep out of the undertaking. The testimony taken on Saturday, however, showed that the chiefs understood their game and had kept their secret very well, and do really believe that they have secured the means of "ruining the Republicans in public esteem and making their contest this fall and in 1880 hopeless." Much of the Republican talk that the enquiry "leads logically" to "revolution" is too naïve to be sincere. It "leads logically" to a huge and probably telling campaign document, like the Republican enquiry into the frauds in this State in 1868. The Democrats are, at this writing, so elated with their success that we have heard within a day or two of a prediction by one of the chiefs that within a month Mr. Hayes will have vacated the White House, not under physical duress, but before the weight of moral reprobation which is to be excited by the forthcoming disclosures. This is a pretty and picturesque view.

The success achieved thus far consists in the testimony of Anderson, the late Supervisor of Registration in the parish of East Feliciana in Louisiana. It shows first and foremost that he is a perjured scoundrel, who is now contradicting himself in a variety of important matters. The election found him a clerk in the New Orleans Custom-house of disreputable character and antecedents, and he was detailed to supervise registration in one of the "bull-dozed" parishes. His present performances have at last elicited from the New York *Times* the confession, which it is a disgrace to the Republican press not to have made long ago, that

"He may be set down as one of the worst specimens of scoundrels whom Louisiana partisanship has produced, and every decent Republican in the land will blush for the party management that made such a creature its instrument in any service whatever. He was a Republican appointee in the New Orleans Custom-house, a Supervisor in the Republican interest in East Feliciana, and generally in close fellowship with the Republican leaders and office-holders of Louisiana. But the fact will remain that this consummate rascal was once an active participator in Republican affairs, holding confidential communications with prominent members of the party, and sustained by them in applications for the reward of confessed dishonesty. He has sold himself to the Democracy simply because the Administration refused to pay the price he attempted to exact. This alone would render his unsupported evidence valueless; but it also increases the disgust which Republican affiliation with the man at any time must excite. He is unchanged. Bad now, he was equally bad then. And we look on him with shame as having been one of the minor manipulators of the Republican machine in Louisiana at a critical stage of the country's history."

This is true and good, but, "esteemed contemporary," why did you not say it a year and a half ago, when this gang of reprobates was beginning to drag the government of a great nation through the mire? You knew it then as well as now, or had good reason to suspect it, but you went on whitewashing these villains and representing them to simple-minded Republicans at the North as philanthropic martyrs, and you ought to "blush" yourself at least two shades deeper than the common run of "decent Republicans."

Anderson's story is, in substance, that his official protests against the returns in East Feliciana, on account of Democratic intimidation, were forged by arrangement or conspiracy, and had no foundation in fact; that he had an interview in New Orleans with Mr. John Sherman and Mr. Stanley Matthews, who urged him to stick to his fraud, and that he and a fellow-conspirator, Weber, afterwards drew a letter from Mr. Sherman, telling him that neither Mr. Hayes nor himself would "ever forget the obligations under which he had placed them should they (Anderson and Weber) stand firm in the position they had taken," and guaranteeing on behalf of Mr. Hayes that "he would be provided for" after the 4th of March. The original of this letter has not been produced, and Mr. Sherman, on being confronted with the copy, said that "he believed he never wrote such a letter"; that "he had no recollection of ever writing it"; that "if it was written it must have been about" a certain date; that "at the same time there are things in the letter that he would have written," etc. This qualified denial has taken the public by surprise and produced a bad impression, owing to the fact that some days ago Mr. Sherman challenged investigation, and alleged flatly that no such letter was in existence, and that any letter of the kind ascribed to him was a forgery. He might perfectly well have refused to make any statement before the Committee about a copy, and have asked for the original. It must, too, be remembered in judging him that he is a very cautious man, and has long trained himself to get out of difficult positions by "straddling," so that his apparent evasiveness is not incompatible with the truthfulness of a flat denial that he ever wrote such a letter. It must also be said, on the other hand, that in interpreting the letter the construction to be put on obscure phrases, such as "standing firm in the position you have taken," depends a good deal on the character of the person to whom a letter is addressed. If one found such a phrase in a letter addressed to Dr. Adams or Bishop Potter, there would be no doubt that "the position" alluded to was a respectable one; but if one found it in a letter addressed to "Dublin Tricks" or "Australian Kelly," one would find it hard to believe that what was required of him was persistent fruitfulness in good works. It is right to add that Mr. Sherman seems to have taken no pains to conciliate Anderson since the election.

Mr. Stanley Matthews, it must be confessed, the Democrats have fairly hooked and landed. He has been convicted, on the testimony of his own letters, of having kept up a protracted and conciliatory correspondence with this man Anderson, of having worked hard to get him appointments, and part of this while in possession of a fraudulent written agreement entered into by Anderson with Nash, the Congressman of the district, to "suppress evidence," so as to give the district to the Republicans in return for an office in the New Orleans Custom-house, and of having replied from the United States Senate Chamber with almost abject submissiveness to the abuse and insults and threats of this paltry scoundrel. This correspondence every respectable American of both parties will read with pain, for it means the fall of a man whom, though everybody knew him to be a somewhat foolish politician and a ridiculous financier, all supposed to be a gentleman and a man of honor.

The President does not seem to be touched by any of the revelations. He appears to have recommended Anderson for a consulship "in a warm climate," believing that he had suffered by the discharge of his duty in Louisiana, but to have refused to have any intercourse with him on becoming better acquainted with his character. But there were fatal objections from the beginning, which he ought to have perceived, to quartering these Southern politicians on the public service. Mr. Hayes must have been very guileless or very unobservant not to have known or suspected that nobody who during the last ten years had come to the surface in Louisiana poli-

tics was likely to be above reproach, or to be capable of appointment to office at the hands of a civil-service reformer without giving scandal. The other "visiting statesmen" who got offices—Messrs. Noyes and Stoughton—are, it seems, coming home to testify. The connection of Judge Harlan, of the Supreme Court, with Anderson through Mr. Stanley Matthews is also a very unpleasant feature in the affair.

The persons who believe in the "logical" approach of "revolution" are still making no preparations for it beyond warning other people (in the newspapers) to get ready for it. Now, one act of substantial anticipation would be worth two months' preaching. Let some alarmist step forward and say: "I have done this or that with my property; I have fortified my house, or I have removed my family to Canada, or I feel sad about my country in the evenings and do not sleep and have no appetite," and it will be worth any amount of "beating the long roll" in editorial articles. We have to repeat our conviction to business men that it is all an electioneering dodge, and that the notion that Tilden will ever appear as a *pronunciador* is ludicrous. A crown would not tempt him as the result of an émeute, while $1,000 as the result of shrewd management and secret intrigue would tickle him greatly. In any event, we have to repeat our prediction that it is Gail Hamilton, and not the Great Silent Man, who will command on the Republican side. If the responsibility is fairly put upon her and she is supplied with adequate means, we warrant within three months there will not be a discontented Democrat in the country outside caves and hollow trunks of trees. If she is interfered with, of course we may have failure and disaster even under her, but she will not be interfered with; our people have learnt wisdom in military matters by bitter experience.

The two Houses of Congress have agreed on June 17 as the date of final adjournment. The Senate has passed the Legislative Appropriation Bill, and the bill to provide for an additional judge for the Seventh Circuit (Indiana and Illinois). On Monday Mr. Hamlin endeavored to carry his measure to restore the franking privilege, but was unsuccessful, the vote being a tie. Mr. Blaine introduced a resolution calling for the correspondence between our Government and that of Great Britain "in regard to inviting other maritime powers to accede to the three rules prescribing the duty of neutral governments, as set forth in the sixth article of the Treaty of Washington." On Tuesday there was an animated discussion over the Brazilian subsidy, against which very effective speeches were made by Senators Kernan, of New York, and Whyte, of Maryland, the one representing a State for whose support the bill makes a bid; the other, a State whose chief commercial city will be greatly injured by the success of the bill. The House passed on Tuesday a bill to reorganize the coast life-saving service, and gratified Mr. Wood by going into Committee of the Whole on his Tariff bill, but only for the space of two hours for general debate. The Committee refused to rise at the end of that time, being evidently bent on killing the bill then and there. They were only prevented by Mr. Wood's procuring the reading of the bill in detail, and finally agreed to take on Wednesday a test-vote on the question of striking out the enacting clause.

The Senate Committee on Foreign Relations has made an excellent report on the Fisheries Award, in which, while pronouncing the award exorbitant, and possibly *ultra vires*, they do not recommend a refusal to pay it if the British Government, after hearing our representations on the subject, should "conclude and declare that it was lawfully and honorably due"; but express the hope that the interest of Great Britain in the success of the principle of arbitration may lead her to see that no settlement of a dispute can be considered satisfactory which is not based on "mutual content"—a very just observation which we trust will be borne in mind in disposing of the Geneva Award surplus. After going once more into the figures of the award by way of showing its excessiveness, the Committee recommend that the utmost care be taken to disabuse the minds of the Canadian and British Governments and people of the notion that the United States will ever accept the award as a just measure of the value of the inshore fisheries in Canadian waters, and report a concurrent resolution authorizing the President to pay the award if, after correspondence with the British Government, he shall deem that such payment is demanded by the honor and good faith of the nation. The Senate adopted this report on Saturday, with an amendment offered by Mr. Edmunds, to the effect that in the judgment of Congress Articles 18 and 21 of the Washington Treaty ought to be terminated at the earliest day consistent with Article 33.

The President, we regret to say, has signed without a word of protest the bill which partially repeals the Resumption Act, and commits the Government to the issue of legal-tender paper in time of peace by directing the reissue of the redeemed greenbacks by the Treasury. This comes in unpleasant coincidence with the reports from Washington that the machine-men make no further complaints of him as regards appointments, and that the prospects of "harmony in the party" grow brighter and brighter. The *Commercial Bulletin* of this city has, however, pointed out that it will probably not be in the power of the Secretary to obey the law, inasmuch as all demands on the Government are already provided for by the taxes, so that the greenbacks received for gold would have to lie where the gold lay, unless the revenues fell short of the expenditures and the deficit was not otherwise provided for. In the meantime we trust steps will be at once taken, if any of these redeemed greenbacks are reissued, to test before the Supreme Court the power of Congress, in times of profound peace, to make the volume of the currency an issue in every election. The question cannot be decided too soon.

The Iowa State Democratic Convention met on Wednesday of last week, but neither the work before it—the nomination of minor State officers whom the party has no chance of electing—nor the improved prospects of the party at large seemed to excite much enthusiasm. The platform is brief. On the question of Communism it says truly that "labor and capital have an equal demand upon and equal responsibility before the law." Its views on the currency do not differ from the usual party shibboleth. As regards the Electoral frauds investigation it urges that the truth should be vindicated, "and criminals punished in accordance with the law wherever found." The Alabama Democratic Convention, meeting on the same day, filled its platform with praise of the party and denunciation of the Republicans, avoiding any declaration of sentiment concerning the prominent measures and problems of the day. For the blacks it had this admonition: "While we renew the pledges of protection to all the colored people, we recognize and hold essential that, without abridging the rights of any class, these great results have been achieved and can alone be maintained by the union of the great governing race—the white people of the land." It closed with a declaration of the party's intention "to preserve inviolate its obligations to the people and to the bona-fide creditors of the State."

The importers of this city, representing a capital of $30,000,000, and paying from $30,000,000 to $40,000,000 annually in duties, have sent in an elaborate memorial to the Treasury, which, after making every allowance for exaggeration, constitutes a very formidable indictment of the whole system of *ad-valorem* duties. They say in substance that they are treated by the Custom-house officers as presumptively fraudulent in their designs, and that the local appraisers are stimulated in their hostility to them both by Treasury agents and by the home manufacturers, who look on the tariff not so much as a means of raising revenue as of repressing what they consider the nefarious practice of introducing foreign goods into this country; that the appraisers, therefore, make no allowance for purchases made under peculiarly advantageous circumstances, or with unusual sagacity, or on a large scale, and treat everybody who puts his goods down lower than the highest prices paid by anybody as a probable

knave. Some of their requests sound like the petitions which Greek merchants used to present to the Grand Turk in the old days, before the Tanzimat, such as that in test cases raised to settle values for the whole trade they may be allowed to be represented by counsel, and cross-examine witnesses, and offer explanations to enable them to protect themselves against the Treasury agents, who now attend all such investigations and act virtually as the attorney of the home manufacturer; and that the subordinate officers may be forbidden, whenever they discover evidence against one merchant, from "attacking all merchants in that particular line of trade."

The women who are most prominent in the agitation of the "Woman Question" in this city called an indignation meeting to protest against Judge Hilton's conduct in the matter of the Woman's Hotel, on Tuesday last, in the great hall of the Cooper Union, and the response must have surprised and delighted them. They never had such an audience in their lives before, and probably never will again. The room was packed. The majority were women, eager to stamp with execration Hilton's unhallowed suggestion that his hotel was left empty because he put too much restriction on the social intercourse of the sexes; but there was a large body of men, who had evidently come to enjoy the fun of hearing female orators pour vituperation on a man, and the hotter and stronger it was the more they cheered and laughed. When Matilda Fletcher, in black velvet and Valenciennes lace, warned the dry-goods tyrant that this country was no monarchy, and that if it were he could never be king of it, there were thunders of applause. The speeches were mostly "hits" and jokes, and the proceedings closed with elocutionary recitations. For those who look forward to women taking a serious part in the political business of the country the spectacle was on the whole a painful one, and as a protest against Hilton's real offence it was worthless. His failure to execute the Stewart trust is unquestioned, and it ought to receive grave criticism. It was worse than absurd to provide a luxurious hotel for "working-women," and to fix the price so high that few or none of the class could pay it, and to surround the enjoyment of the benefaction with vexatious restrictions. But none of these things seems to have brought so much wrath on him as the insinuation that his hotel failed because it was not a good place to find a husband in. It were better for him now that he had never been born, or that, instead of being a dry-goods prince, he were wandering, unencumbered with either woollens, or cottons, or linens, in some tropical forest.

The Syndicate on the last day of May took from the Treasury the remaining $15,000,000 of United States 4½ per cent. bonds necessary to complete the $50,000,000 bargained for on the 11th day of April. This ensures the Treasury $50,000,000 of gold for resumption purposes in addition to the amounts to be derived from other sources and the amount already secured. The coin-balance of the Treasury at the close of May was nearly $190,000,000 gross, against about $108,000,000 at the close of May, 1877. On the unfavorable side of the resumption account, however, is the fact that the Senate before the close of May passed the House bill to prevent further contraction of the legal-tender-note circulation, and the President, forgetful of his pledges in regard to the Resumption Act, signed the bill, so that it becomes a law before the reduction for May, which could only take effect at the end of the month, could be secured. This bill, therefore, leaves the legal-tender-note circulation where it stood at the end of April—at $346,681,016—and it fixes this as the minimum amount of these notes. Of course this bill repeals a part of the Resumption Act, just as the Silver Bill defeats the kind of specie payments contemplated by that Act. Silver in London has ruled at 53¼*d.* to 53⅜*d.* per ounce, and at the close of the week the bullion value of the new silver dollar was $0.9010 gold. The gold value of a United States legal note for one dollar at the close of the week was $0.9925 gold. Investment securities were in strong demand during the week, notably railroad investments.

A formal official announcement that the Congress will meet has at length been made, and the invitation has been issued. It proposes to the Powers who were signataries of the Treaties of 1856 and 1871 "to meet in Congress at Berlin, to discuss there the stipulations of the preliminary treaty of San Stefano concluded between Russia and Turkey," and assumes that in accepting it each Power consents to admit the free discussion of the whole of the contents of the Treaty of San Stefano. On this basis England and all the other Powers have accepted; but it is difficult to see in this what the concessions are on either side which have made the Congress possible, and if they exist, they are probably concealed in a private understanding to be produced at the Congress. Russia agreed from the first to a discussion of the whole Treaty, but reserved to herself the right of deciding how much of the results of the discussion she would accept. This right she apparently reserves still, for no Power engages to accept the decision of the Congress as binding, nor does any Power pledge itself to go to war to enforce it. In fact, the Congress, as far as appears on the surface, is to be an occasion for an interchange of views and an opportunity for coming to terms, but is not to be a tribunal before which Russia is to appear as an "orator" in equity. When the talk is over, each Power will have that liberty of action which Prince Gortchakoff demanded in the beginning—that is, the liberty of fighting if it is not willing to concede what the others demand. If some preliminary arrangement between Russia and England does not reveal itself at the Congress there has been much negotiation about nothing. Lords Beaconsfield and Salisbury are both to represent England.

Another characteristic scandal has overtaken the English Ministry in the appointment of Colonel Wellesley, a young officer of the Guards, to a diplomatic position at Vienna over the heads of ninety civil members of the regular service. He was military commissioner at the Russian headquarters during the war, and while there the freedom of his criticisms on the Russian staff led to a quarrel with the Grand Duke Nicholas, which was afterwards patched up, but this is all that was remarkable in his career. The defence of the appointment by the Ministry was simply that his close knowledge of the recent course of events rendered him very valuable just at this juncture; but this is too flimsy to bear examination, and it is freely acknowledged in London, even by the friends of the Government, that the appointment is a case of "connection" and Court influence—or, in other words, "a job"—and, at the same time, a slap at the Liberal civil-service system.

The second, and nearly successful, attempt to assassinate the Emperor of Germany, which has caused such a deep sensation in Europe, will probably precipitate some very violent repressive legislation against Socialism, that will convert open agitation into secret plotting. But it will also, like the Paris Commune, spread a good deal of uneasiness through the whole of Germany. The fear that many of those among whom one lives have thrown aside all restraints of religion and custom, and care nothing for legal penalties, and are seized with a kind of madness, is horrible, and this is the fear that Socialism inspires. The uselessness of killing an old emperor, like the uselessness of burning Paris, does not trouble these maniacs; what they seek is to startle the busy and happy and civilized, and make them heed them. The Berlin correspondent of the London *Times*, who is an exceptionally careful observer, maintains that the appearance of the Red Spectre in Germany is due to Bismarck's folly in starting universal suffrage in a country wholly unprepared for it by education or traditions, in order to set off the working-classes against the middle-class Liberals, who had opposed him so vexatiously prior to 1866. If this be true, he has probably raised the devil and will not see him laid in his time. The Emperor appears to have had a wonderful escape, having received a charge of small shot or slugs at close range. The perpetrator is a Ph.D., and apparently a desperate adventurer. He has attempted to commit suicide and is reported dying.

DEVELOPMENT BY SUBSIDIES.

IN their public-land policy the people of the United States have usually acted upon the idea that it was incumbent on them to "develop" all the unsettled country between the two oceans during the period of a single generation. The fertile acres, rich mines, and teeming forests of the West were sufficiently tempting to private cupidity, and might have been safely left to individual and corporate enterprise without other stimulus. The pressure of population in the Old World was sure to bring immigrants in large numbers and capital in increasing volume to so inviting a territory. But the ordinary processes of development were too slow. At first the public lands were offered at the minimum price of $1 25 per acre—a very moderate figure considering the fruitfulness of the soil, the abundance of water-ways, and the advantages which a settled government and almost entire freedom from taxation afforded. The plan of giving away lands to private corporations did not lay hold of the public mind suddenly. It was preceded by a system of limited donations to the new States to aid in the construction of canals and for the establishment of schools and universities. Next came the system of bounty-warrants to soldiers, resulting in an immense land speculation at the close of the war with Mexico. Only an insignificant part of the public domain, however, could be got rid of in this way. The era of railway construction by donations of land came next. It commenced about the year 1850, and was confined at first to sections or tracts which had been for a long period surveyed and in vain offered for sale at the minimum price fixed by law. Such lands, it was argued, could never be sold at any price without means of communication, and the Government could be made whole by giving one-half of the lands to railroad companies and charging double price for the remainder. The scheme was so far successful that the lands were got rid of. The railroad companies went forward with such eagerness that they generally attained bankruptcy before the adjacent country was settled. The alternate sections were bought largely by speculators who eventually reached the same goal.

These untoward results did not disturb the minds of the "developers." On the contrary, the rule which had been first applied to lands that had been in the market and remained unsold for twenty years or more was extended to all public lands whatsoever, surveyed and unsurveyed. Any company brave enough to undertake a railroad anywhere could have as much land as it wanted. Then the Homestead Act was passed, giving a farm to any settler, upon condition of occupancy and improvement. Even this was not enough to satisfy the rage for development. Sundry millions of acres were voted in a lump to establish agricultural colleges in all the States, and the scrip representing this land was vigorously hawked and advertised, while agents of immigration spread themselves all over Western Europe and Eastern America. The mad race was checked by the panic of 1873, which will be for ever associated with the attempt of the Northern Pacific Company to turn some forty-seven million acres of unexplored and unknown territory into cash fast enough to keep down the interest on some twenty-seven millions of bonds. The failure of this huge enterprise turned the thoughts of enterprising men like Col. Thos. A. Scott toward the national Treasury as a means of still further converting lands into legal tender. The Northern Pacific fell with so violent a crash, its chief promoters were so paralyzed, and the whole scheme so exposed to derision, from the business man's point of view, that an appeal to Congress for aid in the way of subsidy to it had no chance of success. The Texas Pacific had not dragged its thousands of investing clergymen, deacons, and country school-teachers to ruin. Its 7.30s had not become a butt of ridicule alike to Wall Street and the rural cross-roads. It might, therefore, appeal once more to the public passion for compelling all unoccupied lands to be settled immediately; and, since the ordinary courses of settlement had been interrupted and immigration practically stopped, a money subsidy in addition to an existing land subsidy might possibly be obtained. Congress is expected to pass upon this question during the few remaining days of the present session, notice of intention to call it up having been given in both houses, and Senator Lamar, of Mississippi, having invoked the wandering attention of the country to it by a speech of considerable length and ingenuity.

The salient features of this scheme, and the obvious mischiefs which it drags in its train, both political and economical, have been frequently set forth in these columns. We propose to address ourselves now to the supposed need of opening up new lands to cultivation and settlement by artificial means and governmental assistance. If it be a desirable thing that all the remaining territory of the United States available for tillage and pasturage should be speedily occupied, it can be shown that the conditions favorable to such a result are now in full play, and that not a dollar of public money or a guaranteed bond is needed to stimulate the movement of population toward the unsettled regions of the West and Southwest. It is a marked feature of all our financial crises that after a period of stupefaction, despondency, and stagnation, more or less protracted, the men of small savings and good habits, who have been living on diminishing wages, and have seen the avenues of employment narrowing around them in the towns and cities, begin to contemplate agriculture as a resource capable of furnishing a home and the means of independent livelihood under all circumstances. A movement to the unoccupied portions of the public domain then sets in. The displaced artisans and mechanics either buy out small farmers in their own neighborhood, who are thus pushed westward to new lands, or migrate themselves to the most fertile and accessible districts of which they can obtain any knowledge. This was the distinctive course of social and industrial development shortly after the panic of 1837. The same symptoms had begun to show themselves after that of 1857, until the outbreak of the war turned the public energies into a new channel. The same movement has commenced again in full force; and Texas, having the largest amount of new land of all the frontier States, has derived the greatest advantage from it. There are no statistics available to show the extent of the westward migration from year to year, but all accounts represent that it is heavy, continuous, and of extremely good character at the present time, extending from Dakota on the north to Texas on the south. The land sales of railway companies having land grants to dispose of have been large and remunerative, and the only portions of the country that can be called really prosperous are those which Congress is urged to "develop" by subsidies—that is, by taxing the less prosperous portions.

Is there any need, however, of peopling all the unoccupied domain, and ploughing all the unsubdued acres, during the lifetime of this generation? We know that population will increase, and that new lands will be brought under cultivation according to certain economic laws, as long as there are any new lands to be cultivated. We know, too, that our own public domain is not an unlimited quantity; that after Texas and the belt between the base of the Rocky Mountains and the present limits of settlement in Kansas and Nebraska (which may be roughly fixed at two hundred and fifty miles beyond the Missouri River) are filled up, there will be nothing left for migrating populations except the thinly-tenanted South. For when Texas is once fairly filled, Virginia will have some chance of development by means of a thrifty immigration. Our purpose, however, is not to show what will happen after the unoccupied area is settled, but to point out that the process is going on with sufficient rapidity, that its full consummation is not far distant, and that especially it does not need the stimulus of appropriations from the public Treasury to urge it into greater activity. Little enough room has been left for the next generation to expand in. If we cannot rightfully set bounds to the roving, peopling, and subduing tendencies of the Anglo-American, we may be sure, when we look back one hundred years and when we look forward twenty, that the last thing needed to bring Texas under fence and plough is a guarantee of railroad bonds by the Government of the United States.

Senator Lamar looks upon Colonel Scott's railroad enterprise rather as a means of developing the South generally than of Texas

in particular. The South, he says, has cotton in practically unlimited quantity, and water-power in like abundance. What she needs to become a great cloth-manufacturing country is a railroad to the Pacific coast, furnishing a short route to China, Japan, and the west coast of South America. Statistics showing the amount of cotton goods manufactured in the South and sold to countries accessible without any Pacific Railroad—the West Indies, Central America, Brazil, the Argentine Republic, etc.—implying a surplus not to be disposed of in the ordinary way, would have made Mr. Lamar's argument more telling. Information touching the quantity of cotton goods shipped from New England, where there really is a surplus, *via* the existing Pacific Railroad, to China, Japan, and the west coast of South America, would have been even more satisfactory. The South has, indeed, some marked advantages for the production of cotton cloth, and the growth of her manufacturing industry since the close of the war excites the commendation and good wishes of the North and East; but to tell us that a railway of two thousand miles or more through an uninhabited and largely uninhabitable cactus desert, to carry such a bulky article as cotton-cloth for transhipment by steamer to still more distant lands, is the special desideratum of the spinning industry—that the want of such a railway is a drawback and incubus upon the growth of that industry at the present time—is something we had not expected from so independent and grave a Senator. We take leave to pronounce it sorry stuff, and to hold it in even less respect than the argument based upon the need of rapidly colonizing and settling the few scraps of valuable public domain not yet occupied.

VOLTAIRE IN POLITICS.

THE application of Bishop Dupanloup to the French Ministers in the Senate, the other day, to prohibit the proposed public celebration at Paris of the one hundredth anniversary of Voltaire's death, coupled with the formation of a committee containing some of the best-known names in French aristocratic and religious society to raise funds for the purpose of exposing the philosopher (*le faire connaître tel qu'il est*), is a striking illustration of the power his name still preserves in his own country. But it is a more striking illustration still of the way in which the Catholic Church adapts its action in all matters relating to politics to the latitude in which it is working. In no other country in Europe would so considerable a man, and on the whole so sensible a politician, as Bishop Dupanloup have asked the Government to prevent the admirers of a great writer from dining and perorating in honor of his memory; and the reason is that in no other country would he come so near being listened to as in the very one in which Voltaire made his mark on political and religious thought. That the bishop should have seen nothing absurd in the application is easily understood when one reads the controversy which has just been raging between Prince Napoleon and General Türr on the one side and the Duc de Gramont on the other, in the *Revue des Deux Mondes* and in the daily press, touching the reason why Italy took no part in the war of 1870 on the side of France. It appears to be clearly proved by the prince and the general that a treaty of alliance, offensive and defensive, with special reference to Germany, had been all but concluded between France, Italy, and Austria when the war broke out, and that the sole or main reason why the negotiations failed and France was left to act alone was the refusal of the Imperial Government to yield the evacuation of Rome and the overthrow of the temporal power, which Italy, with the support even of Austria, insisted on as the price of her aid. It was not, of course, the clerical influence exclusively which brought France to grief—the amazing ignorance and *insouciance* of the military men of the Empire had much to do with it—but this influence was mainly instrumental in depriving her of allies which would almost certainly have overpowered Germany, and probably made the map of Europe something very different from what it is, and have left France in the enjoyment of unprecedented influence and authority.

The effect of the catastrophe is heightened by the fact, to which good Catholics are loudest in calling our attention, that the loss of the temporal power has not diminished by one iota the power of the Church over the consciences of her worshippers. If France had saved religion, and prevented a break in the line of Apostolic Succession, by flinging herself singlehanded on the German hosts, she would have something to show for her splendid folly that would command even the admiration of sceptics; but, as far as one can see, the loss of Rome has not in the smallest degree deranged the machinery of the Papacy, or deprived its dicta of a particle of weight in the forum of faith. And yet France, even in the first moments of Republican enthusiasm after 1848, had no hesitation in setting up the temporal sovereignty with her bayonets, and for twenty years maintained it with "blood and iron"; and then, at the very last, there was probably no feature in the Imperial programme which met with more approval in 1869 than M. Rouher's passionate declaration that "Italy should never have Rome—never, never." It is not surprising, therefore, that seven years later a Catholic bishop should see nothing absurd or vain in asking to have Frenchmen forbidden to render public honor to the memory of one of the most famous Frenchmen, because he was one of the Church's most ferocious enemies.

Nor is it surprising that the Catholic Church, either in France or elsewhere, does not pardon or forget Voltaire. Many of the things which lead lay politicians, both Catholic and Protestant, in our time to look on him with more respect than was the fashion fifty or sixty years ago, can have but little weight with a body which claims the possession of infallible authority with regard to the unseen world. Voltaire has recovered from the discredit which for a while covered the memory of everybody who contributed conspicuously to the French Revolution, under the influence of the calm study which the state of things that preceded the Revolution has received since the peace of 1815, and the renewed ascendency of liberal opinions. Most enlightened men for the last fifty years, whether religious or sceptic, have felt that were they face to face with ecclesiastical and political organizations such as church and state were in France in the middle of the last century, they would attack them themselves, and be thankful if they could attack them with Voltaire's ferocious wit and dauntless courage. Ridicule, too, which was Voltaire's greatest weapon, and which in his time was, as against dignified and sacred or long-established men or things, something inexpressibly shocking and monstrous, has come to be a favorite and most effective means of bringing about political and religious changes. It has made its way into every kind of controversy, and is resorted to by every kind of writer and orator. In fact, Voltaire may be called the inventor of the mode of discussion now most common in the periodical press—that is, the quick *reductio ad absurdum*, and light satire, which plants its darts as it flies. Before his time, and long after it, controversialists assailed each other by laboriously constructed approaches, the design of which, if it ever appeared at all, appeared only near the close of the fray. The letters of Junius are now very dull reading. Very few first-class newspapers would be willing to admit them to their columns, and hardly anybody in public life would fear his attacks; the preparations for them are so ponderous that nobody's attention would wait to see the blow fall. But Voltaire would make the fortune of any "great journal" in our day, and would be pestered to death by the editors of monthlies and bi-monthlies, and would prove an invaluable champion of any "cause" he took up, because he would make its enemies the laughing-stock of the civilized world.

His social and political ideal, too, if one can construct an ideal out of the things a man hates, was very much the social and political ideal which a large part of the world has now reached, and is avowedly striving after—that is, a state of things in which people are sensible, moderate, tolerant, and good-humored, neither racked by great fears nor strung by high hopes, and in which the schoolman's rule, "de non apparentibus et non existentibus eadem est ratio," is rigidly acted on. Among the comfortable classes—the French bourgeoisie, for example, whose social philosophy Voltaire has done much to frame—this ideal produces no very alarming or startling results, but the Church derives a good deal of justification for its

horror of it and of its author from its working in the lower strata of modern society. To say that Voltaire was the father of Communism would seem at first sight absurd, and yet the notion that this world is not only the best of all possible worlds but the only world, that the good things of this life are all the good things we can ever hope for, that it is the business of a wise man to get all he can out of it while he is in it and not to trouble his head about what comes after, and that religion is a cunning device of the fortunate and their friends the priests by which they get the poor to go without their rightful share, which lies at the basis of Communism, is certainly the Voltairean philosophy in clumsy hands and thick heads. It makes such headway that it is not surprising that the Church does not get over its horror of him as readily as lay reformers, many of whom fancy they would enjoy seeing his sharp and glittering axe laid to the roots of some venerable trees in our own day.

AMONG THE REVOLUTIONISTS.

WASHINGTON, June 3, 1878.

WASHINGTON has never justified more thoroughly its reputation as a capital of sensations and surprises than within the past forty-eight hours. Down to Saturday the prevailing impression here, not merely among Republicans but Democrats as well, was that the Electoral conspiracy investigation had failed before it had begun. The despatches in the *Herald* reflected accurately, as they usually do, the general feeling. Mr. Potter had been persuaded into taking the leadership of an investigation the results of which were known in advance. When the enquiry was first proposed, Mr. Proctor Knott, the Chairman of the House Judiciary Committee, had been asked to take it in hand, and had very naturally insisted before doing so on knowing what it was expected to prove. The proofs were laid before him, and he refused to have anything to do with it. Mr. Sherman had been interviewed, and he had emphatically denied writing any letters at all to anybody in Louisiana during the recanvass of the returns of that State in 1876. Anderson, the principal witness for the Democrats, was a low rascal, discredited already in one investigation, in which it had been shown that he had offered his services for a consideration to both sides. Day before yesterday the Republicans were looking forward to the investigation almost with pleasure; certainly without fear. On Saturday evening, however, their feelings had undergone a sad change. Anderson had been examined, and, strange to say, notwithstanding his remarkable admissions of guilty complicity, appeared well as a witness. This is not denied by the Republicans themselves. Sherman had gone before the Committee and denied, in a qualified manner, having written the letter a copy of which was produced; and yet his denial did not carry conviction with it. The whole story of Anderson, his doubts, fears, and temptations, his relations with his "pal" Weber, his negotiations with Sherman and Stanley Matthews, his memorandum from the President to Mr. Evarts suggesting that his was a "special case," and recommending him for a consulship in "some warm climate"—all hung together, and made, to say the least, a story difficult to upset. On Saturday night the Democrats were jubilant. The "boys" manifested that migratory disposition which in times of political excitement always makes Washington a lively place, while the Republicans were correspondingly depressed and crestfallen.

But Anderson's testimony, if we are to believe the inferences drawn from it here, has not merely accomplished all this; it has produced more permanent and far-reaching results. It has carried the next House for the Democrats; it has made "fraud" the only living issue between the two parties; it has galvanized anew the vital current in the veins of the distinguished Democratic candidate, vituperated by his quondam followers as "the Mummy of Gramercy Park"; it has made Mr. Clarkson Potter next governor of New York, Mr. Tilden the nominee of the Democrats for President in 1880, and General Grant the candidate of the Republicans. Anderson may certainly congratulate himself on his success. Never before did a corrupt supervisor of elections accomplish so much in so brief a space of time.

It may be said that this political horoscope is premature; but all horoscopes in politics are; and what I shall endeavor to present to you in this letter is not the real probabilities, but the probabilities as they present themselves to our minds here. We are, you must remember, excited. We are nervous over the events with which the future is big. The mountains are in labor, and, instead of an absurd mouse, behold a terrible and corrupt conspiracy against all our liberties is what they have given birth to. Suppose yourself a Republican (a "stalwart" Republican) politician, and ask yourself what your feelings would be. You begin by a dislike, not unmingled with something like contempt, for Mr. Hayes. He has made up a Cabinet without real party strength; he has destroyed his influence by his preposterous notions about civil-service reform; he has not nominated (until very recently, since he has been frightened into it) the men you recommended for office; he has disorganized the party without building up a new one. Finally, he has got himself into a disgraceful mess with his "visiting statesmen" and their Louisiana count, and, instead of doing anything to get himself out of it, has made exposure certain by quarrelling with the leaders of his own party who were in possession of many of the facts. In such a slough of despond as this where is help to come from? There is one quarter where it has never yet failed. There is one man who has not merely saved the Union, but the Republican party as well; there is one man who knows how to drive Democrats off, either from the "tented field" or from the "political arena," like frightened sheep. From Fort Donaldson to Appomattox Court-House it was always Democrats that General Grant was beating. When the war was over, it was General Grant who stood by Congress in its efforts to reconstruct the South. It was Grant who carried out the Congressional policy from 1868 to 1872. When the reformers held their convention in Cincinnati, and gave the Democrats their nominee in 1872, it was again Grant who swept the country for the "grand old party"; and it was Grant again who by his judicious use of troops while the count was going on, and his magnanimous return to peaceful methods after the Electoral Commission had been decided on, enabled the party to triumph as far as it did triumph in 1876. And who else is there to turn to? What is Conkling, with all his beauty and eloquence? The States he can carry in a convention can be counted on one finger of one hand. What is Blaine? He is beaten and out of the race. There are no others. It is flying in the face of Providence not to try the third term and Grant—the patient, silent man who has stood so much obloquy and abuse, and has never flinched or played the reformer.

Now look at the situation as it presents itself to the Democrats. Oaths and imprecations fill the air when Mr. Tilden's name is mentioned. It is not only Mr. Mills, of Texas, who dislikes him; half the Democratic members of Congress would hugely enjoy the spectacle of his final consignment to private life, and if you had asked any one of them on Friday of last week what his chances for 1880 were, he would have told you that they did not exist. To-day he would tell quite a different story. Anderson has changed the face of politics. Yesterday I asked a strong anti-Tilden Democrat, a prominent man in the House, what he thought of the situation. He declared that the investigation, if successful, would give his party the next House of Representatives, and make it almost impossible to nominate any one against Tilden. The origin of this belief is not difficult to trace. In 1876 the party was triumphantly carried through the campaign under Tilden's leadership, and since that it has been trying to get on without him. It must be confessed that it has failed lamentably. It has no union and no strength and no policy. Its platform in 1876 pledged it to repeal the Resumption Act, and also to bring in measures better adapted to secure resumption. It has produced since nothing but wild schemes of inflation and repudiation. It has undertaken to deal with the army question, with the tariff question, with the tax question; and thus far it has accomplished nothing. Meanwhile it has been steadily assured by its "lost leader" and his organs that there was only one path open to it—to make the frauds of 1876 its *cheval de bataille*, to drive the Republicans completely out of power by exposure of them and the shame and disgust sure to follow exposure, and finally to put the reins in the hands of the only man who knows how to guide them.

Such is the situation as it appears to Democrats and to Republicans. It may be worth while to add a few words as to the way in which it might fairly strike the members of that third party which has played such a curious rôle in politics since the close of the war. In the first place, it is probably entirely safe to assume that the "revolution" of which the newspapers have been talking for some time is indefinitely postponed. If Anderson's evidence can be corroborated, the investigation will seem to be justified, and all talk of its being a sinister attempt to upset Hayes's title will cease. As the member of Congress already quoted cynically observed to me in speaking of this: "We don't want to do anything to his title. If this evidence is true, his title is the best thing there is about him." The revolution, too, is rendered highly improbable by what may be almost called the material obstacles in the way. It is impossible for the Democrats to do anything to attack Hayes's title until they are in control of

both Houses. The Senate does not become Democratic until next March; and even if the next House is overwhelmingly Democratic, the new Congress does not meet until December, 1879, six months away from the campaign of 1880. Supposing the present state of affairs to continue, it would for those six months obviously be better for the Opposition to have Hayes in the White House than to make an absurd disturbance which would enable the Republicans to cry revolution and call in General Grant and "troops." With Hayes in office during those six months, and a Democratic Senate, the civil service, which is the most effective means of keeping a party in power, will be rendered to a great extent useless, and the Democrats, with both branches of Congress in their control, would have a far better chance at the Presidency by peaceful than by revolutionary measures. Leaving the revolution out of view, we are, therefore, confronted with the strong probability that in 1880 we shall once more see the Democrats and Republicans facing each other without any third reform party intervening to draw off votes.

THE LONDON EXHIBITIONS—THE ROYAL ACADEMY.

LONDON, May 11, 1878.

I BELIEVE that every year the Academy is pronounced "rather worse than usual"; but I suspect that there is little doubt that the exhibition of 1878 is decidedly weak. It is not an exhibition from which it would be agreeable to the indigenous mind to think that a Frenchman, a German, even an Italian, should derive his ultimate impression of contemporary English art. There is a great deal of vulgarity, of triviality and crudity, and of that singular "goodness," as one may say for want of a better word, with a certain dose of which the average English painter appears to have discovered it to be needful to flavor his picture in order to make it palatable to the average English purchaser. Even if the pictures were better at the Academy, there would, to a visitor from another country, be something more interesting than their technical merit: I mean the evidence they should offer as to the English mind and character—the English way of thinking and feeling about all things, art included. M. Taine has often been quoted as to the *moralizing* character of English art; not that he is the only person who has ever noticed it, but because he appears, in his very suggestive 'Notes sur l'Angleterre'—a book which was, I believe, the result of a very short visit on the author's own part, but which a long stay on the part of a foreign reader only seems to render more pregnant—to have expressed it better than any one else. At all events, I never go into an exhibition of English pictures without being strongly reminded of M. Taine; I put on his spectacles; I seem to see so well what he meant. With M. Taine's spectacles you immediately see that the exhibition is only in a secondary sense *plastic;* that the plastic quality is not what English spectators look for in a picture, or what the artist has taken the precaution of putting into it. The artist must tell a story or preach a sermon; his picture must not be an image, but, in some fashion or other, a lesson; not a reproduction of form and color, but of life and experience.

The only strongly "plastic" pictures I can think of in the present Academy are the charming "Nausicaa" and "Winding the Skein" of Mr. Frederick Leighton, both representations of antique figures, of which the interest is in attitude and outline. It is impossible to be more graceful and elegant, and more keenly artistic, than Mr. Leighton; he strikes me as one of the few English painters who have had an artistic training that would be considered thorough by a high French standard. His taste and discretion are infallible, and he has a love of purity and clearness of outline which it does one good to encounter. But in Mr. Leighton's plasticism there is something vague and conciliatory; it is as if he thought that to be more plastic than that would not be quite gentlemanly. He may, however, I think, be said to be the one painter of eminence who bridges over the gulf existing between French and English art. He has an exquisite sense of form, and he has, in addition, the merit of being what I have called gentlemanly to a degree that is rare among the devotees of form on the other side of the Channel. His "Winding the Skein" (two Greek girls, on a terrace, against the sky) is quite the most strictly beautiful—indeed, I think the only very beautiful—work in the Academy.

In any exhibition in which Mr. Millais appears, Mr. Millais is always the strongest genius present; though his pictures on particular occasions may be by no means the best. But it is interesting to see how he, rich and strong in the painter's temperament as he is, shirks, as it were, and coquets with, the plastic obligation, and plays into the hands of the public desire for something more amusing or more edifying. Mr. Millais always knows throughly well what he is about, and when he paints very badly he is certainly aware of it, and of just how it serves his turn; indeed, I may say that to paint so badly as Mr. Millais occasionally does a great deal of knowledge must be brought to bear. Of course, in his portraits there is less begging of the question—less of a tendency to solve the problem on side-issues—than in his "subjects"; but even in his portraits it is amusing to see the tendency crop up, as in the case of the sketch of the beautiful Mrs. Langtrey—the lady whose photographs, in every possible attitude and costume, are in all the shop-windows, and who appears to be, with the London public, in the remarkable position of a person whose beauty has become legendary—become a household word, even in her lifetime. Mrs. Langtrey's admirable beauty is quite of the antique, classical, formal, and, to return to the word I began with using, plastic order: but Mr. Millais paints her as if he meant to make her pass for the heroine of a serial in a magazine, and, to carry out the impression, calls his picture "A Jersey Lily"—the lady being a native of that fortunate island. A much better, indeed, a very fine, portrait of Mrs. Langtrey is contributed by Mr. Poynter, who has rendered admirably the serene, un-modern character of her beauty, and has given her a costume which helps her to look like some splendid human flower of the Renaissance, or of some other period at which there were no serial novels.

Mr. Millais's best thing, by far, is an admirable portrait of Lord Shaftesbury, of whom there is another excellent portrait by a young painter of solid promise, Mr. John Collier. "Painted for the Bible Society," says the catalogue; and there could not be an image more perfectly in harmony with such a label. If the great thing for a painter is to lay his hand upon a characteristic model, Mr. Millais has been most fortunate in his sitter, and he has shown himself quite worthy of his luck. It is an admirable piece of really psychological painting. Lord Shaftesbury's face is an excellent example of the British countenance as, in nine cases out of ten, this immitigable mask presents itself to foreign observation—that "biblical" countenance which has the privilege of irritating the lively perception of the Latin, the Slav, and other Bohemian races; very dry on one side, but on the other inspiring unlimited confidence. Mr. Millais has rendered with remarkable skill both the dryness and the cleanness. He has also a landscape—"St. Martin's Summer," a wild Scotch brook in a tangle of autumnal foliage—containing some admirable painting, but with a curiously motionless and photographic quality. Then he has the "Princes in the Tower," who are of course very much noticed—two charmingly pretty boys, in black velvet, with an impromptu turret staircase behind them. This is a sort of thing which Mr. Millais sometimes does admirably; of how well he is capable of doing it "The Bride of Lammermoor," now on exhibition by itself, is this year (just as the "Effie Deans" was last year) a very brilliant example. In these things the artist attempts to be subtly dramatic, to represent the finest shades of expression of the human face. The attempt is perfectly legitimate, and, as I have mentioned M. Taine, I may recall the tribute that he pays to the wonderfully delicate skill of which English painters are capable in these experiments, which he considers their strongest point. "The Princes in the Tower" is a fair specimen of this skill, but the scene from Scott's novel is a really extraordinary one; I wish I had more space to speak of it. It represents Lucy Ashton, in a forest glade, leaning on the arm of her lover after he has saved her from the aggression of the wild bull. Her face—an exquisite piece of painting—is a marvellous study of girlish agitation, and that of the sombre young Master of Ravenswood is not less remarkable. Mr. Millais is, by the way, almost always greatly to be congratulated on his models; he evidently has his "pick" of handsome people. It would be hard to find a lovelier specimen of English girlish beauty than his Lucy Ashton, or a more magnificent young man than her companion. But, as it seems to me, he makes figures of them, and nothing more; he does not make pictures, in the sense that Mr. Burne-Jones does. The figures are lighted anyhow, or not at all; they are not seen in relation to the rest of the canvas, which looks as if it were rubbed in, after the fact, in the most perfunctory manner.

In one of the rooms at the Academy there is a dense crowd of people, pressing closely together, under the rigid surveillance of a policeman, who beseeches them to "move on" in tones which resound the livelong day. Is it, then, so difficult to detach one's self from the work of Mr. Frith, after one has caught a happy glimpse of it? I can hardly answer this question on the evidence of the "Road to Ruin" (the title of his present contribution), for, thanks to the crowd and the policeman, I saw very little of it. I perceived, however, that it consists of five small pic-

tures, which form a kind of contemporary edition of Hogarth's "Rake's Progress"—the downward career beginning with a card-party at college of a young man about town. At the end, with a livid face and bloodshot eyes, he is locking the door, preparatory to an operation indicated by a suicidal-looking pistol on the centre-table. I could see also that Mr. Frith had apparently lost nothing of the peculiar ability which formerly made a policeman the indispensable adjunct of his "Derby Day" and his "Railway Station." But it would take M. Taine to speak properly, and, as it were, scientifically, of Mr. Frith. I have not pretended to speak of many of his fellow-contributors, and I can think of no other work that it is a serious wrong not to mention. M. Alma Tadema has a great piece of flesh-modelling, and one of his consummately-skilful "restorations" of Roman costume and antique interiors. Mr. Boughton, Mr. Orchardson, and Mr. Marcus Stone are very charming; Mr. Long, representing a large workshop of Egyptian girls, in the Ptolemaic time, making up little effigies of Isis and Osiris, is very brilliant; Mr. Pettie paints portraits of gentlemen in ancient doublets and tartans very bravely. Of some of the elder Academicians—Sir Francis Grant, the president, Messrs. Horsley, Cope, Hart, O'Neil, etc.—it is but common humanity not to speak. Their contributions, raggedly and cruelly squaring themselves upon the "line," must be seen to be believed in. American art (and American nature, I may add), are represented in a large view of Colorado scenery by Mr. Albert Bierstadt. The picture is unfavorably hung.

Correspondence.

HOMES FOR WORKING-WOMEN.

To the Editor of The Nation:

Sir: The Young Women's Christian Association of this city maintains a Home for Working-women with *restrictions* similar to those which are given as chief causes of failure in the Stewart Hotel for Women; where they differ, the Home here is more strict. The house is closed at 10 P.M. instead of 11 P.M. No visitors are received on Sunday until evening. Visitors are received in reception-rooms, no boarder being allowed to take company to her room without special permission. Opportunity to use sewing-machines is given in the sewing-room, as at the Stewart Hotel. Members of the household are even required to have excuse from superintendent for absence from church! This Home has accommodations for a family of two hundred and twenty-five, and *advertises for additional rooms* in private families, overflowing in numbers. Few of our working-girls can pay from six to ten dollars a week for board. We grade prices to their wages; we are careful in no way to impress our work on them as a charity. They pay all that they are asked; we consider our building as an *endowment* for this class; they are in no sense objects of charity more than the students of Harvard College are such. But they have far more than is furnished in families for the same price. The building has steam radiators in every room, gas, hot water, baths in every part. The price for room alone is $5 50 per week; for two the cost is usually about $3 each per week. We pay expenses entirely, and have something over for repairs, improvements, etc., and have no debts even through all the hard times. No unions of numbers of men or women are more honorable in meeting all their obligations, more conservative, discreet, and reasonable.

No one familiar, practically, with this kind of "charity" will for a moment receive Judge Hilton's interpretation of the failure; but unseemly words about women are perhaps only human nature, under the circumstances. To succeed in anything, character and needs must be studied. All our prosperous homes have had small beginnings, and have grown as needs have been understood. They have seemed to be growths from their inmates' nature and wants. May the good heart and bountiful mind of Mrs. Stewart lead her to try again! He who most helped the helpless lived among them—knew them by the most intimate and comprehensive sympathy. In no other method can one begin to know the struggle and need, the worth and worthiness of working-girls.

Harriet N. Noyes.

Boston, Mass.

Notes.

J. B. LIPPINCOTT & CO. will publish immediately Ouida's new novel, 'Friendship,' and 'Seaforth,' a new story by Florence Montgomery.——Lord Dufferin's ever-fresh 'Yacht Voyage: Letters from High Latitudes,' has been published in a third edition by R. Worthington, of this city. It contains an ingenious preface for the author's American readers, a previous preface for the Canadians, and a good portrait of Lord Dufferin.——Mr. F. Leypoldt, of the *Publishers' Weekly*, has hit upon a device of real utility, as it seems to us: a weekly Bulletin of the latest publications, in the form of a neat placard for bookstores. It is divided into three columns, of which the broadest, in the centre, shows in conspicuous type the titles of the books, with the authors' names and prices affixed: the two side-columns contain brief descriptions of the books, or literary announcements and notes. We can hardly imagine a bookseller refusing to subscribe to this Bulletin because of any doubt as to its effect in stimulating buyers.——The Ninth Annual Report of the Massachusetts State Board of Health is, like its predecessors, to be recommended to all State and municipal officials responsible for the sanitary well-being of the community. Papers on scarlet-fever and other contagious diseases; on drainage and health (with special reference to the Housatonic and Hoosic basins in Massachusetts); on the sanitary condition of Cambridge; on cottage hospitals; on dangers from color-blindness; on the filtration of potable water, etc, form the chief contents, and are as usual freely illustrated with maps, plans, and cuts. New-Yorkers overcome by the vile stenches that hover over the island can learn from the preliminary general report how successfully the great Brighton abattoir has been rendered inodorous and innoxious to the neighborhood. It appears that by special vote last November five considerable cities of Massachusetts declined the authority offered them to appoint indepen dent boards of health. Five others would not even vote on the question. ——A Portland physician, favoring the use of the Latin names of drugs, writes a small book to teach the Latin, very little in amount, necessary in writing prescriptions ('Prescription Writing: Designed for the Use of Medical Students who have never studied Latin,' by Dr. T. H. Gerrish. Portland, Me.: Loring, Short & Harmon. 1878). It is only a matter of a few verbs in the imperative and a few terminations, and this elementary instruction is very well presented. There are also general suggestions about prescriptions which seem to be very useful and careful. Dr. Gerrish does well to censure the common practice of having a prescription, which has been used once, repeated at another time at the patient's own risk. The prescription, of course, was given for a special state of his system, and medicine is not treated as a science if the patient does not allow the physician alone to decide whether at another time the state of his health demands the same remedy.——Next year a monument to Giordano Bruno is to be erected at Rome, and in preparation for this event Signor De Sanctis, of the Italian Ministry, has charged Professor Fiorentino with the compilation of a complete edition of the martyr-philosopher's works.

—The American Social Science Association held its Fourteenth Annual Meeting on the week before last in Cincinnati. The time was not well chosen, as the great musical festival had just closed, and the population was quite exhausted with excitement, the leading gentlemen especially looking as if they had had a fit of sickness. There was, however, a fair attendance at the sessions, and a good degree of interest manifested, with a gratifying increase in the list of members. There seems to be in the Western cities a greater disposition than in the East for the discussion of political and social problems from a general point of view, even though that discussion may be less profound. The Association has a chronic difficulty to contend with, in the impression that its work is connected with socialism, instead of dealing with the science of society. The range of the latter again is so extensive, that it seems as if no practical result could be attained, and complaint is made every year that the topics selected cover so much ground. Immediate practical effect, however, is not the object. It is to bring into personal communication men who are engaged in different professions, and who bring special knowledge to the work of social reform. That such contact does give them fresh strength and encouragement is freely acknowledged by those who attend the meetings. The publication of the papers, too, by the press and in the journals of the Association, commands an audience which individuals could otherwise hardly hope to reach; and besides these essays, which can be read at a distance, the debates, which reach only those present, are often of considerable interest and value. Even if nine out of ten of the papers fall without visible effect, they are a record of contemporary thought upon the subject, and a single instance of practical success is a justification of the work. Thus a discussion upon homes for the people, continued through several years, has spread abroad a knowledge of the principles of the Philadelphia building associations. It led to the introduction of a

bill in the Massachusetts Legislature which, though strongly opposed by the savings-banks, after three years, and mainly through the efforts of Mr. Josiah Quincy, became a law. During this time the bill was brought, through constant revision and correspondence with Philadelphia, as near to perfection as possible. Under it something like twenty companies are already in operation, and, though as yet an experiment, the system promises quite as well as any of the numerous attempts to ameliorate the condition of the honest working classes. The very slight degree in which Congress, as well as the State legislatures, responds to any expression of public opinion, points to the importance of having some agency for concentrating and giving voice to that opinion, but at the same time explains the want of practical success which has attended the efforts of the Association, in common with many others, towards reform. It is the desire of maintaining a basis of principle, outside of party struggles, which has sustained the managers in contending with many difficulties, of which the financial is the most important.

—We have room for only the briefest summary of the proceedings at Cincinnati. The opening address, on May 18, was by Prof. Benjamin Peirce, of Cambridge, one of the founders of the Association, who ably set forth the Importance of Social Science in the United States. General John Pope's paper on the Indian Question consisted mainly of an historical review. His suggestions for amendment were perhaps somewhat vague, but it may be said that the most definite and well-considered would have little better chance of attention. On Tuesday, the 21st, three papers were read having reference to the silver question. Mr. Wm. S. Groesbeck declared the policy of remonetization to be an accepted fact, and that an international convention would doubtless before long restore the injured metal to full standing throughout the world. He was followed by Mr S. Dana Horton, the well-known advocate of bi-metallism, who thought the United States should have used their position to enforce, and made their action dependent upon, the general adoption of silver, and expressed doubts about an international convention. Mr. Horace White, in a very clear and concise paper upon resumption, declared that silver is not yet remonetized at all, explained why the dollar has not fallen in relation to gold, and was decidedly skeptical as to the meeting of a convention. Mr. Gamaliel Bradford read on Wednesday his usual plea for the admission of Cabinet officers to Congress, and this time found an ally in the person of Mr. Perry Belmont, who read a paper on the same subject. His position as the son of Mr. August Belmont, of this city, gives him a great advantage, and his subject affords an abundant field for work to a young aspirant for political success. No less than three papers were read on local and State taxation, and all of them, as well as that on the elective franchise, by Prof. Kent, of Michigan, showed a leaning towards restriction of the suffrage. It is curious to note how from all parts of the country comes up the same cry as to difficulties in municipal administration. Practical suggestions for reform, however, do not appear as yet to be equally plentiful. A paper on American coinage and currency, by Gen. Durbin Ward, of Ohio, took strong ground upon the necessity of convertibility, and advocated the English system of the separation of banking and currency, which many of the first English economists believe to be peculiarly suited for the adjustment of our paper issues. A debate in the jurisprudence department on an elective judiciary, while it produced several advocates of that system on the ground of successful practice, found hardly one to defend its theoretical merits.

—The French *opéra bouffe* company which has been singing at the Park Theatre are now giving a supplementary week at Booth's, where they are to perform several times the new *opéra comique*, the "Cloches de Corneville" (the "Chimes of Normandy"). It was suggested some years ago, in we forget which optimistic newspaper, at the time when Offenbachian opera was all the rage, that the fancy for *bouffe* was not altogether as lamentable as it seemed to purists, inasmuch as it might prove the germ of comic opera of the sort which reigned before Offenbach was. We never could see precisely how this was to be, as the *bouffe* school is hardly of a sort to pave the way to anything higher. But it now looks as if the prediction was likely to work itself out in another way. *Bouffe* opera appears to have exhausted itself, and the public taste has fallen back on the comic school, not because it was prepared for the change by Offenbach and his allies, but because their school has stretched the sense of humor and fondness for extravaganza till its elasticity is gone, and out of sheer lassitude it falls back on something better. Good music, combined with a pretty story, is a relief after the burlesque music and inverted moral and social world of the "Grande Duchesse" and the "Belle Hélène"; and, besides this, a comic opera is one to which, as the matter has been very well put for this latitude, a girl "may take her mother." The "Cloches de Corneville" and the "Dragons de Villars," notwithstanding one or two somewhat questionable songs and situations, are operas to which anybody may go. Indeed there is such a thing as being overprudish in opera. There is less real harm in either of those than in "Traviata," which has possessed a moral passport for a generation. The music of both is very pretty, and the acting of Aimée in the second is, for any one who has only seen her in *bouffe* characters, quite a revelation. Her part in the "Dragons de Villars" is a poetical part. She is a simple peasant girl, keeping watch in the fastnesses of the mountains over a company of proscribed persons, of whom Villars' dragoons are in pursuit. At the critical moment she rescues and gets them across the border, but the device by which she accomplishes this feat is so clever a ruse that it deceives not only the dragoons but her friends as well, including her lover; and the result is that she is suspected by him of having betrayed the very persons she has saved. This misunderstanding occurs on the day fixed for her marriage, and before the escape of the fugitives leaves her at liberty to exculpate herself. Her acting of this not easy part was a marvel of delicacy and refinement, and to those who have only seen her hitherto in operas like the "Cent Vierges" or "Barbe Bleue," it could not but suggest the possibility of her even yet taking to something more like legitimate drama than anything she has attempted. Her voice is, of course, not powerful enough for classic opera, but her acting is good enough for anything.

—Her company also contains another member who is altogether above the parts for which he is usually cast. M. Mezières, formerly with the French troupe that acted at the Lyceum Theatre, is an admirable comic actor, and why he should be engaged in playing *Calchas* and other rôles of that sort we cannot imagine. In the "Cloches de Corneville" he plays the part of a treacherous steward who has betrayed his trust and turned miser with his ill-gotten gains. He is surprised in counting over his hoard, in the ruined castle where he has stored it, by the legendary chimes of Corneville, which announce the return of its master, who, in fact, makes his appearance, with his followers, as the bells begin to ring. Mezières' acting of the mingled terror produced by his guilty conscience, and his passionate avarice contending with it, was unusually powerful, and the delight with which it was received by crowded audiences showed that the taste for good acting is by no means extinct. If some of our own theatres would only take a lesson from this company, representing the lowest form of comic art known to the stage, no harm would be done. We venture to say that in the short month during which Aimée has played here, and during which she has played mostly in parts compounded of buffoonery and burlesque, there has been more good acting at the Park than at all our theatres put together. Almost every one of the troupe is good in some particular way, and none of them acts the smallest parts without showing a definite conception of the character to be represented. It is not an elevated *répertoire* in which Aimée appears; but of its kind it is so much better than anything we have of our own that we are tempted to repudiate morality itself, and, if it is to be attained at the expense of the peculiar æsthetic pleasures for which we go to the theatre, beg for a little more good acting and music instead.

—Six years ago a German physician, Dr. Liebreich, brought consternation into London art circles by some pathological criticisms of Turner's later works. He endeavored with lens and screen to demonstrate that certain (assumed) peculiarities in Turner's pictures after 1831 were explainable on the theory of astigmatism in the painter's eyes. This exposure has had no appreciable effect on the market for Turners, and the cool reception which artists gave to Dr. Liebreich and his apparatus has, perhaps, deterred other scientists from revealing their secret thoughts in the picture galleries. Since then, to be sure, M. Marey's beautiful demonstrations of animal locomotion have been cited in criticism of Miss Elizabeth Thompson's "Roll-Call," with the result of confirming in the main the accuracy of her drawing of a horse in motion. But Mr. J. Norman Lockyer really takes up the parable of Dr. Liebreich, and confesses that he has for years been criticising the pictures in the Academy "with the most intense pleasure from the scientific point of view," but he only now ventures to free his mind publicly about them on a pretext furnished by Lord Beaconsfield. In *Nature* for May 9 he begins to pass in review the landscapes in this year's Academy, limiting himself to the sky-color as the best mode of indicating what, in his belief, "will be the influence of the study of optics in the future on art." Here it may be remarked, parenthetically, that he might have supplemented directly Dr. Liebreich's criticism of Turner, who, with all his acknowledged mastery

of atmospheric effects, was not particular whether they accorded with the time of day indicated by his favorite luminary; who would even put the rainbow at right angles with the sunbeam, a liberty at least as great as that which Mr. Lockyer ridicules in "an eminent artist now living who had painted a rainbow practically inside out," and charged £20 for restoring it to suit the dissatisfied purchaser.

—Mr. Lockyer first enumerates fifteen landscapes in which cloud and sky-color are correct, one of these being Mr. Albert Bierstadt's "Estes Park, Colorado":—"Very fine atmospheric study. The vapor rolling down the valley leaves its effect on the picture marvellously." Then follow fourteen examples judged inaccurate in color. In the first series the epithet "perfect" is frequently bestowed; in the second, "impossible" is the commonest. In neither series, however, does the criticism obviously proceed from a scientist, or derive peculiar authority from the fact that the critic is one of the foremost workers in spectrum analysis. Any good observer of nature might hold this language: "Notice the effect of the atmosphere laden with aqueous vapor on the color of the hill in the background"; "A red sunset, nearly perfect in color from top to bottom; if the yellow had faded into green it would have been better"; "The softness and color of the [pea-soup shadows] suggest that Mr. Riviere has never studied moonlight"; "Impossible color of water under sky conditions given"; "Sky colors impossible with so high a sun," etc. The astronomer, however, breaks out occasionally in side remarks like these: "Moon nearly right, which is wonderful. (This by the way)"; "Perfect sunset (poor moon!) (again by the way)"; the truth being that artists treat the moon as recklessly as do novelists. And in his second paper (May 16) Mr. Lockyer shows with diagrams how the moon and sun are misrepresented not only relatively to each other, but with reference to the scale of the picture. In spite of their enlarged appearance near the horizon, "both sun and moon steadily subtend an angle of half a degree," and this furnishes a measure of the salient features of a painted landscape. An American astronomer applying it to the pictures exhibited in 1876 and 1877 has found the average height of our mountains to be 43⅔ miles. One mountain "reached the respectable elevation of 105 miles." "There was only one artist who had got a hill into his picture less than 13 miles high; but he only succeeded in doing this once." Mr. Lockyer is still writing on the general subject, and deserves to be read by everybody.

—The world of wonders opened up by the telephone and the phonograph is already vastly enlarged by a third discovery called the microphone. Professor Hughes, of Kentucky, the inventor of the type-printing telegraph, now residing in England, has added this fresh laurel to the American genius. It is difficult to give an intelligible description of his instrument, but what he does is to place in the circuit of an electric battery a substance in a fine state of subdivision (as mercury in the pores of carbon), which he calls the transmitter. This substance is found to be extraordinarily sensitive to sounds which to the ear are almost or quite inaudible; and when connection is made with a telephone, these sounds may be heard with great distinctness a hundred miles away. In some recent experiments made in the presence of Professor Huxley, and reported in *Nature* for May 16, "the delicate rubbing of a fine camel's-hair pencil over a smooth wooden surface, . . . although of course inaudible in the ordinary way, was rendered evident in the telephone by a crackling noise, of which the intensity was almost painful to the ear." In like manner the footsteps of a fly have been betrayed to the sense. Further account of the microphone cannot be given here. The *Scientific American* for June 8 shows how closely parallel Professor Hughes's experiments are with those of Mr. Edison when on the track of the carbon device in his peculiar telephone.

—The British Royal Commission on Copyright has at last made its report, a brief summary of which has been telegraphed to this country. From this it appears that England, tired of being less liberal than the United States, proposes to become as liberal as France. The important points of the report for us are the fixing of the duration of copyright for the life of the author and thirty years thereafter; the reservation to the novelist of the exclusive right to dramatize his own work; the putting of works of art and of dramatic and musical compositions on the same footing as books, and the according to all foreigners publishing books in British dominions the same rights as British subjects. The report, which was unanimous, suggests that some "arrangement might be made with the United States in regard to the printing of copyright works"—a rather ambiguous phrase, which we can better understand when we have the full text before us; it further discountenances any retaliation upon American books in case the United States fail to respond to British advances. It will be seen that the report is in every way satisfactory. If its recommendations are embodied in a bill and become law, England, besides benefiting her own literature, will have taken the first and most important step toward international copyright.

—In the Augsburg *Allgemeine Zeitung* we find a comparison of the various half-years as regards attendance at the new Strassburg University. The number of matriculated students has been as follows, the double numbers indicating the winter half-year: 1872, 212; 1872–3, 390; 1873, 467; 1873–4, 564; 1874, 621; 1874–5, 674; 1875, 649; 1875–6, 649; 1876, 674; 1876–7, 707; 1877, 626; 1877–8, 627. These figures would perhaps seem to indicate that the gloomy predictions made a couple of years ago by one of the *Nation's* foreign correspondents as to the prospects of the Strassburg University were not unfounded. There is, however, another explanation which seems very plausible. During the five years of growth and prosperity students were attracted not only by the great excellence of the professors, but by the interest attaching to the recently-recovered German territory, so that for a time Strassburg drew more largely, perhaps, than any German university from the more remote portions of Germany, and the local supply of students was disproportionately small. It is very probable that this disproportion has now begun to adjust itself, and that the more recent lower figures indicate not a wasting away, but an approach to a permanent number, after what was really only an apparent prosperity—a sort of university fever. There seems to be an impression that German students run about a great deal from one university to another, and that the universities themselves are in no sense local. It is true that the German system permits a change of universities, that such a change is much commended, and that many make it for at least one semester—some for more; yet the universities are really much more local than is generally imagined. Not only do the universities of North Germany draw from the north and those of South Germany from the south, but each university draws very largely from the little country or province just about it. A few figures will make this plain. For convenience we shall call Baden, Würtemberg, and Bavaria "South Germany."

—Berlin, for example, in 1872, and again in the summer of 1874 and the winter of 1874–5, drew from 52 to 58 per cent. of its *matriculated German* students from its own more immediate neighborhood, and less than 1½ per cent. from South Germany. The catalogues of Leipzig for the winters of 1872–3, 1874–5, and 1877–8 show that the most cosmopolitan German university draws from 45 to 52 per cent. of its German students from the immediately-adjoining countries or provinces (38 per cent. from the little kingdom of Saxony), and only 4 per cent. from South Germany, even with Bavaria so near. The University at Göttingen drew in 1874–5 and 1877–8 from 65 to 73 per cent. from the province of Hanover and the adjoining districts, only about 1 per cent. coming from the South. During the same period the Bonn University drew from 82 to 95 per cent. from its own neighborhood, and less than 1 per cent. from the South German States. We have no catalogues of the other, smaller universities at hand, but there is every reason to suppose that they would demonstrate this local character even more strikingly. A brief comparison of these figures with similar ones for Strassburg, in the summer of 1874 and in the next winter, semesters of growth, will make the above explanation clear. At this time only 37 to 40 per cent. of the German students matriculated at Strassburg came from those parts of Germany which can fairly be termed its feeders, and 60 per cent. came from Prussia and other states of North Germany—a disproportion that can hardly remain permanent. It is reasonable to expect that the number of Prussians grows less in proportion, but it is to be borne in mind that the presence of numerous Prussian officials in Strassburg, and the fact that the university catalogues usually give the students' birthplace, would render a fair comparison of figures more difficult.

—Dr. G. M. Thomas, whose studies in Venetian history we have recently noticed, calls attention in a recent number of Sybel's *Historische Zeitschrift* to a proposition of the Venetian Academy of History, the *Deputazione sopra gli studi di storia patria*, to publish the Diary of Marino Sanudo. He shows at considerable length the historical importance of this enterprise. The diary consists of fifty-eight folio volumes, extending from 1496 to September, 1533, with daily entries touching events in all parts of the world, and of the highest authenticity—inasmuch as Sanudo was a man of wide experience and sound judgment, possessing the entire confidence of the government of his city,

which allowed him to make full use of even the most secret documents, and everybody knows the sagacity of this government, and the accuracy of the information it received from its diplomatic corps. The historian Ranke made large use of this Diary, and Dr. Thomas himself possesses a copy of everything which it contains upon the Reformation in Germany, which he hopes at some time to publish separately. Meanwhile, the *Deputazione* will begin with the first twelve volumes, in the hope that there will be encouragement for the publication of the whole. It is a work which ought to be secured by the leading American libraries.

LAVELEYE'S PRIMITIVE PROPERTY.*

M. DE LAVELEYE'S 'Primitive Property' consists of some papers published by him in the *Revue des Deux Mondes* several years ago (1872), with considerable additions. The present English translation is very materially enlarged and altered from the original French edition, being, in fact, "in the form in which it is about to appear in the new French edition." To persons interested in the line of investigations to which Sir Henry Maine introduced the English public in his 'Village Communities,' the present volume will be very acceptable. While not by any means superseding Sir Henry Maine's work, it contains, probably, much the most complete account that there is of the various forms of collective property in land existing in different parts of the world; partly supplementing the works of other writers, and partly presenting the substance of their several contributions side by side, so as to show their relations to one another. It is to be regretted, however, that the new and the old materials were not more thoroughly digested and worked over into a completer unity. The old chapters—which are in every respect admirable—are left in the main as they were originally, and the new material added in the form of new chapters. This is all very well for a considerable part of it, but there is much of the new matter which might better have been incorporated in the old chapters. There is, therefore, a great deal of repetition, and the effect of much of the book is of disconnected essays brought between the same covers, rather than of a systematic treatise. Chapter xxi., for example, "The Mark in Holland," would properly follow chapter vii., "The Germanic Mark."

While, therefore, the material is abundant, and the several chapters are, in most cases, all that could be desired, the book as a whole—as a treatise upon the history of collective property in land—is disappointing. Perhaps this is in the plan of the work. Perhaps it was not the author's purpose to trace out the historical evolution of the institution, but simply to describe the several phases it has taken in different times and countries. We hardly think this to be the case, however, inasmuch as the single topics are generally treated historically, and such titles of chapters as "Origin of Inequality in Landed Property" and "History of Landed Property in England and China" show that the historical aspect of the question was distinctly present in the author's mind. We are inclined to think, therefore, that the economic aspect, the consideration of the practical questions involved, pressed itself upon his mind so earnestly as to cast the historical view wholly in the shade. For this book is not merely a scientific treatise, like Sir Henry Maine's, but is a *Tendenzschrift*—a book with a purpose. It is conceived in the spirit expressed by Mr. Mill, in his review of 'Village Communities' (Dissertations, v. p. 156), where he suggested the right on the part of society to reconvert "individual property into some new and better form of collective." M. de Laveleye is an ardent admirer of the Russian *Mir* and the Swiss *Allmend*, and believes that a fatal mistake was made by the modern world in borrowing from the Roman law the idea of "quiritarian ownership" in land—an idea wholly alien to the Germanic peoples and the source of great demoralization of society, as he maintains. His views on this subject are urged forcibly in the introduction and also in the closing chapters, and they well deserve study. The American people have lavished their public lands upon speculators and corporations in full property; in view of the rapid growth of crude communism among us it deserves consideration whether some measure of "social reform" in disposing of the public lands yet remaining may not meet this spirit halfway and forestall violent changes by rational concessions.

Turning to the detail of the work, it must be admitted that M. de Laveleye is rather economist than historian, and does not treat historical questions with the firm and accurate touch of Sir Henry Maine. A notable example of this is found in chapter xiii., "Family Communities succeed to Village Communities." The treatment of family communities as a distinct form of collective property apart from village communities is a somewhat new thing, and marks an important step in the analysis of these institutions; and the chapters treating of this subject are very valuable ones, especially the interesting details in regard to France in chapter xv. But, in the first place, they are foisted in, without any clear continuity, between the chapters upon the ancient world and those that treat of the development of inequality in property; and, in the next place, the very title of chapter xiii. indicates a fundamental error. It cannot yet be maintained positively that village communities (as in Russia) and family communities (as in the Danubian Provinces) formed two successive stages of development in the same people, rather than two independent phases in different peoples; but if it is to be assumed that they were successive, it is almost certain that the order of succession was just the opposite to that here indicated. Surely the village is an organization further removed from the primitive type than the joint-family or family (or house) community; and this is the view also of Sir Henry Maine, who says, in his article in the *Nineteenth Century* (December, 1877, p. 809), that there is "little doubt that the natural development of the house community would be into the village community." M. de Laveleye supports his own view by an interesting remark (p. 198) in illustration of the process of development here assumed: "As the family community was the unit for the periodical partition, it naturally followed, when this partition fell into disuse, that the communities were owners of the soil, and they continued to exist in obscurity, resisting all destruction, until they attracted the attention of the jurists, about the end of the Middle Ages." This suggestion is very instructive in regard to the course of events in France, where house communities were a common institution, but village communities can hardly be proved to have existed at all. Still, it does not necessarily follow that this "periodical partition" was by the *village*, nor is this view supported by what is known of the Slavic house communities. Thus Mr. Evans, in his 'Bosnia and Herzegovina,' says of the allotments of land in the military frontier: "The single families of those backwoodsmen could not grow into villages all at once, and so it would happen that the mark—as we may call the allotment—reverted to a very primitive stage, being held in common, not so much by a village-community as by a single household" (p. 46). And the passage in Cæsar cited in support of the view in question—*gentibus cognationibusque hominum attribuunt* (vi. 22)—is far more likely to refer to public magistrates than to village officers; the passage merely proves—what is universally assumed—that the German village communities rested, in their origin, upon kinship.

A few other rather unaccountable errors have slipped in. On page 119 it is stated that "the word *gau* had nearly the same import as *mark*." It is very true the word *gau* (district) may be used for *mark*, but the reverse is not the case; and as used here in connection with the *Gaugraf*, the *Gau*, a public district, was a totally different thing from the agricultural *Mark*. On page 134 *bokland* is defined as "land inrolled in the book"! On page 234 we have the *cow* Apis. This is probably a mistake of the translator, as also where, in the note on page 132, Mr. Morgan's valuable treatise in the Smithsonian Contributions is cited as "Morgan Smith's *Contributions*, etc." The economic constitution of the manor is curiously confused on page 247; after speaking of its division into demesne and tenement lands, the author goes on to enumerate the tenants on the demesne (*de dominico*) as consisting of, first, the *villani*, then the free tenants, then the *cotarii*, with no mention at all of tenants on the *tenement lands*, although there are said to have been tenants on the waste. On page 219 we read: "Among the Anglo-Saxons they [females] ultimately obtained a portion of the *Bokland*, but no *Folkland*." But *Bokland* and *Folkland* do not exhaust the categories of Anglo-Saxon land; as to the question under consideration the *family land* or *Ethel* was the most important class. Of course women held land by *bok* or deed, as well as men; of course they were not likely to hold tracts of *Folkland*, which were granted something after the manner of benefices to the king's followers; but for family land—the *hyde* in the village community—there is no question that the old Kentish law of gavelkind prevailed, females succeeding, but only after males. Very surprisingly, too, we have Trimalchio's estate in Petronius cited (p. 172), as if it were not a burlesque, to show the extent and value of an Italian *latifundium*—thirty boys and forty girls born in one day on one estate at Cumæ, and 500,000 bushels of corn taken up from the threshing-floor!

M. de Laveleye has collected in the tenth, eleventh, and twelfth chap-

* 'Primitive Property. Translated from the French of Emile de Laveleye, Member of the Royal Academies of Belgium, Madrid, and Lisbon, Corresponding Member of the Institute of France, of the Institute of Geneva, of the Academy *Dei Lincei*, of Rome, etc. By G. R. L. Marriott, B.A., LL.B. With an Introduction by T. E. Cliffe Leslie, LL.B., of Lincoln's Inn, Barrister-at-Law.' New York: Macmillan & Co. 1878. 8vo, pp. 356.

ters a considerable number of facts bearing upon the question of collective property in Greece and Rome. We wish he had pursued this interesting but difficult enquiry further, as it as yet is far from having been exhaustively investigated. So with the fruitful question of the landed institutions of the Hebrews, which he only touches upon incidentally.

UPTON'S ARMIES OF ASIA AND EUROPE.*

IN July, 1875, Brevet Major-General Emory Upton, Lieutenant-Colonel Fourth Artillery, United States Army, was ordered by the Secretary of War to proceed with two junior officers on a tour of eighteen months to India, China, and Japan, and the camps of instruction and military schools of Italy, Germany, Austria, Russia, France, and England, in order to examine and report upon the organization, tactics, discipline, and manœuvres of the armies in the countries mentioned. Additional instructions from the General of the Army direct special attention to "Afghanistan, Persia, Khokand, Bokara, Toorkistan, etc., the lands whence came our civilization." It was not, perhaps, possible to obey literally the latter instructions, as naught resembling our present civilization has ever been known in the lands indicated. The only interesting military information that the most sanguine could expect to procure in the whole of that region was, as to what cavalry once was before the sabre and lance had been condemned by our highest cis-Atlantic authorities as useless encumbrances. Improvements in firearms have classed even the modern bayonet with the ancient sword in harmlessness, inasmuch as in our late civil war but 1 in 279 of the wounded suffered from either sword or bayonet, and in the Franco-Prussian campaigns but 1 in 300. An inspection of the mediæval armor in the Centennial Exhibition would, therefore, have been quite as useful for antiquarian research, more expeditious, and far less expensive than the long overland Oriental jaunt from Bushire *via* Shiraz and Tiflis to the Caucasus, even when the Khyber Pass route was perforce abandoned. Accordingly, to report the result of that part of the expedition required but 8 out of the 455 pages of the volume.

Careful perusal of this work suggests the doubt whether very much was gained by the author's personal examination in the localities visited. Numerous works, official and popular, regarding the present military state of all the European governments, are accessible here, and if that is not equally true concerning Japan and China, it is of little consequence, since the Mikado's troops are simply receiving theoretical and practical instruction from a detail of French officers, and the Chinese service is pronounced utterly worthless, in only twenty pages, which, if strictly accurate, might as well have been comprised in twenty words. Since this last-mentioned report was made, however, some evidence has appeared tending to invalidate its conclusions. Last December a Chinese army invaded and reconquered Eastern Turkestan with speed and energy. As a part of the campaign it in twenty-one days marched four hundred miles, captured three cities, and won a pitched battle, co-operating in excellent style with a flanking force and exhibiting the very qualities of strategy in the commanders, and endurance and courage among the soldiers, which Gen. Upton denies to them. Making all allowance for the unscientific resistance of the rebel Ameer of Kashgar, the operations of the Celestial regulars in the distant and difficult country south of the Tian Shan have surely in some measure restored the prestige once gained by the armies of Kanghi and Keen Lung.

The merit of General Upton's work does not consist in exhibiting the results of original investigation, or in such vivid description as might have been hoped for from his actual inspection, but he presents in one well-arranged volume what before to the American reader could only be culled from numerous reports, lists, and treatises in several languages. The compilations, in their several divisions and in their summation, are accompanied by reflections and suggestions which, from the author's distinction in the studies of his profession, should and doubtless will be attentively considered. His most condensed recommendations are as follows:

"1. The three or four-battalion system for infantry regiments.

"2. A system of detail whereby our officers may serve alternately in the staff and in the line.

"3. A system of personal reports, by means of which the Government may be informed of the character, capacity, and qualifications of all its officers.

"4. Examinations previous to promotion.

"5. Schools for enlisted men.

"6. Schools and qualifications for officers preparatory to receiving commissions.

"7. Schools for officers in the art of war and the higher branches of their profession, subsequent to receiving commissions."

The second recommendation, elsewhere called "a vital and interchangeable relation between the staff and the line," is so strongly and persistently insisted upon as to demand particular attention. It is true that a staff officer requires more general, as well as special, ability, and more comprehensive training, than one in the line. He should be familiar with most of the details of line duty, as well as those of his own branch of administration; but his efficiency in the latter is not essentially improved by repeated exclusive employment on the subsidiary details after a certain and limited amount of time has once been devoted to them. If there is anything in military science worthy the name it requires differentiation as well as integration. A valuable staff officer, as an adjunct to command, should be a specialist, and cannot afford much heterogeneity. The specialization in our corps of ordnance and engineers, of the quartermaster and commissary departments, has made them admirable, some of them more efficient than in any other service among the armies of the world. It is difficult to see how a frequent recurrence of guard-mounting and company drill at scattered isolated posts would improve the officers of those branches of the staff in their special duties, while it is certain that the work of the staff would not be so well performed by a raw beginner detailed from the line; and if the latter is to remain during all his career, excepting the period of his temporary staff detail, in the cavalry, infantry, or artillery, what he may have learned during that detail will not often be utilized. While the staff should understand the limited and speedily-learned duties of the line, it is not so essential that the latter should be familiar with the more comprehensive administration or with special scientific branches. For absolute and universal official perfection it might be well that every medical officer, who must deal with malingering soldiers, should have passed through the trials and responsibilities of a company command, and also that every captain should have pursued a course of surgery; but while such an interchange would be repelled as a violent illustration, it is not much more unreasonable than that a newly-appointed captain of engineers or ordnance who had once, at West Point or as a subaltern in the line, learned and practised infantry and cavalry duties, should go straightway back to them again for several years instead of improving himself in the branch of his profession for which he had been selected; yet that is precisely what General Upton desires. That the staff should be recruited from well-qualified officers of the line is most important, and that the latter should serve in the staff on probation before appointment in it is highly desirable, but that, after decision as to fitness for permanent position and consequent selection, there should continue to be an interchange, could only be endured as part of a systematic plan of educating a large number of officers in duties of a higher character than they can fill in any existing peace establishment, with the view to its large and prompt expansion for the emergencies of war. The arguments for such a system, potential in other countries and circumstances, will not probably be favorably received here and now. An emperor, depending on his army not only for ascendency among rivals, but for internal peace and the security of his dynasty, may ensure judicious selections and details with the minimum of favoritism. Here, however, politicians care only for the next election affecting themselves, and, to conciliate those who can assist their selfish interests, will press and prevail in all changes of duty or station once opened to executive selection by law or custom in place of the present established routine. If the status of any large proportion of our military officers shall be made fluctuating, the evils of our present civil service will be entailed upon the army by the same partisan politics that obstruct true reform everywhere. An approach to degradation of the service is already shown by the repeated action of Congress in ignoring the once-conceded life-tenure of military office, except as affected by misconduct or inefficiency, and in so crippling all professional progress by destructive changes as to reduce commissions to the level of temporary clerkships, perhaps ere long to lower the high standard of honor now proverbial to the suspicion popularly entertained against Indian agents, and explained by like low salaries and like uncertain tenure. The height of inconsistency is attained when a section to turn over the Indian Bureau to the War Department, on account of frauds in the former, is included in the same bill that, by disintegration and diminished pay, demoralizes the latter.

Members of Congress, relying on our territorial exemption from formidable neighbors, and with blissful confidence in a perpetual force latent

* 'The Armies of Asia and Europe. Embracing Official Reports on the Armies of Japan, China, India, Persia, Italy, Russia, Austria, Germany, France, and England. By Emory Upton, Brevet Major-General United States Army.' New York: D. Appleton & Co. 1878.

in republican institutions ever ready to respond with irresistible might and always for the public good, generally consider that the army should only be barely sufficient to tide over immediate troubles, whether with Indians or Mexicans, and seldom concern themselves about any national future beyond the year for which appropriations are doled out. The momentary adequacy of the service is the main consideration in Congressional debates, though some eloquent representatives protest against any regular, or, as they phrase it, "standing," army whatever; but, as they rely upon a non-existent militia, without using or suggesting any means to create such all-sufficing force, their speeches are probably calculated for communistic constituents rather than for rational men. Views of adequacy are, however, diverse. Mr. Kimmel, of Maryland, lays down the proposition that "in peace the only use for soldiers is to care for the forts. If 25,000 soldiers are necessary to care for the forts, then there are none for the field, and the Indians may depredate unchecked unless the militia be called out. If from 25,000 men troops can be spared for the field, then there are too many for the forts, and the excess ought to discharged" (*Congressional Record*, May 22, 1878). This view seems to be tinged with the archaic idea of a fort as a mere place of defence, whereas our structures so-called, which are occupied by the cavalry and infantry whom the bill under debate chiefly concerned, are generally mere barracks in localities convenient for the effective distribution of troops where most needed for active operations. Instead of the soldiers keeping the forts, the forts keep the soldiers and their necessary stores—out of the rain and snow on desolate frontiers where, without such buildings and provision depots, life could not long be sustained.

Some few statesmen have sufficient length of vision to contemplate a "skeleton" organization, adapted to expansion when necessary, as was shown when Calhoun, in 1820, said that we ought to have an army so organized and disciplined that when a sudden emergency should come upon us it could be expanded by mere enlistment to double or quadruple its size, with nothing in the way of organization to new-model or create. This, though a long stride in the right direction, does not reach the scientific conception of an "elastic" system, combining proportion and preparation with constant adequacy, proposed by General Upton, and legislators will be surprised to learn that, instead of agreeing with them that the army is over-officered, he advocates with much force a plan in which the number of its enlisted men may be safely reduced by 2,000, while it will at the same time be necessary to increase the officers by 210. It should be noticed that the lessons taught by improved firearms have revolutionized tactics even since our civil war, and scientific ability in grades below corps commanders is more needed than of yore, while mere masses of soldiery are less employed. "In the new system, a major (of infantry) often assumes the functions of a brigade commander, a captain requires the knowledge and skill of a colonel, a lieutenant performs the duty of a captain, a sergeant takes the place of a lieutenant, and a corporal, no longer required to simply fire his musket, takes command of a squad or section." Much also is now needed from the private soldier besides his momentum and ability to pull a trigger. A part of the plan mentioned provides for what is styled "National Volunteers," partly officered and wholly instructed and disciplined by details from the regular army at regimental depots, where there would always be a nucleus of veterans to assist in the training. This suggestion to popularize and utilize the army contains much that is useful to prevent the commencement and prosecution of future wars with raw troops whose officers and men must both be taught in the costly school of actual conflict, and should be studied at length in the author's "Conclusions."

The Life of His Royal Highness the Prince Consort. By Theodore Martin. Vol. iii. (London: Smith, Elder & Co.; New York: D. Appleton & Co.)—Mr. Theodore Martin had expected to terminate with the present volume the elaborate and painstaking work of whose two previous instalments some account was duly given in these columns. But with the third volume he had entered into a phase of his subject which at the present moment—from a court-biographer's point of view, at least—there were various cogent reasons for not passing over rapidly; the consequence of which has been that it will take another five hundred pages to exhaust the materials with which he has found himself so liberally supplied. This third volume of the 'Life of the Prince Consort' has had the privilege, in England, of provoking a good deal of discussion. Its appearance has, on the one side, been cordially welcomed by the numerous and boisterous advocates of an anti-Russian crusade; and, on the other, it has been denounced as a "party pamphlet," and an unbecoming contribution by the sovereign to a discussion into which the sovereign is not supposed to throw her weight. And, indeed, no small part of the interest of this third volume is that it emanates directly and avowedly from the Queen. So much, practically, Mr. Theodore Martin affirms in the prefatory letter to her Majesty, where he also declares, in a very ingenious passage, that the subject of his biography was without a single one of those human failings—Mr. Martin had searched for them in vain—which would serve to give the portrait conveyed in the pages "the relief of shadow," and that degree of verisimilitude required by people acquainted only with their more or less defective fellow-mortals. The book is a royal manifesto—a declaration of personal feeling upon the matters at issue between Russia and Turkey. Finding the Crimean war in his path, the biographer was enabled, thanks to the analogy between the situation of England in 1854 and her position to-day, to plead a cause while he seemed to be writing a history.

It must be added that Mr. Theodore Martin pleads his cause very creditably, and tells this part of his story with the well-ordered abundance and the fulness of illustration which has marked its progress hitherto. He has had to consult an immense number of documents—the Prince's correspondence alone was most copious, and a large portion of it has had to be translated from the German—and he has suffered from that *embarras de richesses* which is the affliction of the contemporary historian, and which he would doubtless often willingly exchange for the hardly more serious obstruction of evidence reduced to conjecture. The trouble with Mr. Theodore Martin's book continues to be the same that we formerly noticed—the fact, namely, that the Prince Consort, in spite of his amiable character and cultivated intelligence, had no personal history that was particularly worth relating; and that to make up his book the author is obliged to place before us the various events of Queen Victoria's reign, at which her royal spouse assisted merely as witness. It is true that in the present case—at the time of the Crimean war—the Prince Consort was a witness so vigilant and sympathetic, with so much to say about everything that happened, that, more than elsewhere, he appears to come into direct relation with events. He was an eager advocate of the league against Russia, and a vehement partisan of the policy vulgarly known as "bolstering up" Turkey. On this latter point, indeed, he has in his letters a warmth of tone which contrasts strikingly, and in a certain sense even favorably, with his usual somewhat too judicial frigidity. Mr. Martin's volume offers a detailed sketch of the Crimean War in so far as it was conducted in England, where the Prince might have been numbered among the active combatants. The Prince abounds in views upon the manner in which it should be carried on—in suggestions, theories, Memoranda. Whatever occurs, he usually writes a Memorandum on the subject, which is laid before a committee and duly considered. Some of his ideas were evidently excellent, and they were all carefully elaborated. When the break-down of the English military arrangements in the Crimea became complete he drew up a plan for the entire reorganization of the army, and his biographer is able to offer distinguished military testimony to the fact "that it has been the aim of military reformers since to embody all its suggestions, and that all have been put into practice."

Of the vicissitudes, blunders, depressions of the Crimean War, as they were felt and resented in England, Mr. Martin's chapters present a vivid and interesting record. The sense of mismanagement and incompetency at last, in the country, reached the point of exasperation, and the Prince, who had already known what it was to be used as a scapegoat, was called upon again to shoulder some hard responsibilities. He was accused of being the source of the errors and delays at the seat of war; but Mr. Martin is able to show that the accusation was most unjust. The Prince's attitude here, as before, was excellent, and he easily outweathered the storm. He was of the war-party to the last. Late in the spring of 1855 he produces a Memorandum with regard to a "general European defensive league for Turkey as against Russia." "Can such a coalition be obtained?" he asks; "I think it can"—although his disgust and resentment at the manner in which Prussia had held off from the Allies had hitherto been extreme and constant. Many of these pages are devoted to the personal relations established between the Queen and Prince and the Emperor of the French, apropos of the Alliance; and we may frankly declare that they are not the most agreeable in the volume. The Queen has published a great many of the entries in her own diaries descriptive of the visit of the French Imperial couple to England, and of her own and the Prince's visit to France in the summer of 1855. If many of those expressions of feeling to which she has here given her sanction are indiscreet, this record of the remarkable exuberance with which she condones the irregularities of the successful adventurer, whose eager wish was to borrow respectability from her approval, is not the

least so. Indeed it makes, with the rest of Mr. Martin's volume, a sufficiently odd and incongruous mixture. Her Majesty would seem to have taken the Emperor of Russia a little too hard and the Emperor of the French too easily. These things make Mr. Martin's third volume extremely noticeable. It has been construed as the germ of a new and unexpected attempt on the part of the Crown to exert an old-fashioned pressure upon the Government; and while it pleads on the one hand for a policy whose accordance with the honor of England is greatly questioned, it recalls on the other an episode which cannot be viewed with complacency.

U. S. Geological Exploration of the Fortieth Parallel. Vol. II. Descriptive Geology. By Arnold Hague and S. F. Emmons. XXVI. Plates. (Washington. 1877.)—The present volume, with that of Mr. Clarence King on Systematic Geology, which is expected shortly, comprise the final geological results of this important exploration, the most extensive ever undertaken by this country, or we might say by any country, in the interest of geology, covering as it did a belt of country more than 100 miles wide, and extending from the 105th to the 120th meridian, or from the eastern base of the Rocky Mountains to the California boundary, and thus affording a complete geological section of one of the greatest mountain systems of the world. It is the joint production of Messrs. Hague and Emmons, and gives a detailed description in geographical order of the whole region explored, its physical characteristics, the different rocks and minerals and their manner of occurrence, the structure of the mountains and their peculiar forms of upheaval. It is divided into five general chapters to correspond with the five large geological atlas sheets which have just made their appearance. Their titles are: I. Rocky Mountains. II. Green River Basin. III. Utah Basin. IV. Nevada Plateau. V. Nevada Basin. The first embraces the northern portion of the Colorado range, which may be regarded as typical of the whole front range of the Rocky Mountains proper, or the eastern portion of the Cordilleran system; the Great Plains which lie east of the mountains; the Laramie Plains, and the great, enclosed mountain valley of the North Park. A large portion of this chapter is devoted to a description of the Archæan, geologically the earliest rocks, which form the core of the Rocky Mountains, and prove the existence of a western continent of America contemporaneous with the Laurentian continent of Northern New York and Canada. The second chapter describes the interesting Tertiary deposits of Wyoming, from which have been obtained enormous collections of the remains of extinct animals, said by Huxley in his recent visit to this country to be the most important contributions to this branch of science made since the collections of Cuvier in the famous Tertiary basin of Paris. It also describes the remarkable east and west range of the Uinta Mountains, allied both physically and geologically to that of the Caucasus, as described by the German geologist, Abich; and the great cañons which the Green River has cut to a depth of 3,000 feet through its very heart, typical of the well-known cañons of the Colorado River, as this same stream is called on its further progress southward. In the third chapter are described: 1. The Wahsatch range, the great central elevation in this latitude of the Cordilleran system, which also dates back to Archæan times, and presents a remarkably complete series of the various geological formations down to the most recent. 2. The Great Salt Lake and its former bed, the Great Desert which stretches to the west of it, forming a vast enclosed basin with no drainage to the sea, which the beach-lines along the bounding mountain slopes and other evidences prove to have been once occupied by an immense fresh-water sea. The two remaining chapters, which describe the narrow north and south ranges of Nevada, its desert valleys, abundant hot springs and saline deposits, are interesting to the geologist as involving the description of a most remarkable variety of volcanic and other eruptive rocks, and proving this portion of the continent to have been in former geological ages the scene of the most violent terrestrial convulsions.

The volume is accompanied by a copious classified index which adds greatly to its value as a book of reference. The illustrations are lithographic copies of photographs taken by the photographer of the exploration, and, though not equally distributed, present a graphic picture of the most interesting geological peculiarities of some portions of the region explored. The Atlas is a magnificent specimen of topographical and geological cartography.

Lewes on Actors and the Art of Acting.
12mo (Amateur Series), $1 50.

Single Famous Poems.
Edited by Rossiter Johnson. Sq. 12mo, gilt, $2.

LEISURE-HOUR SERIES.
(16mo, $1 per vol.)
The Honorable Miss Ferrard.
Auerbach's Landolin.

HENRY HOLT & CO., NEW YORK.

"*There is no other book in American or even English Literature, so far as we know, which might take its place.*"—Scribner's Monthly.

Lubke's History of Art.

A New Translation from the Seventh German Edition. Edited, with Notes,

By CLARENCE COOK.

Two vols. 8vo, nearly SIX HUNDRED ILLUSTRATIONS, cloth, gilt tops or uncut, $14.

DODD, MEAD & CO., Publishers,
NEW YORK.

J. SABIN & SONS,
84 NASSAU STREET, NEW YORK,

Have the largest Stock of Fine and Miscellaneous Prints and Portraits in the country. They solicit correspondence, and will pay best attention to lists of portraits and views required for the illustration of books.
They have on hand the following superb Prints:

Rembrandt's Three Crosses.

The large Plate, one of Rembrandt's most vigorous and impassioned etchings, and in a remarkably fine condition, with full margin, brilliant and sound. It is rarely that so fine and desirable a Rembrandt is offered for sale. The present copy is from Cambridge University. $350.

REMBRANDT'S MILL. A fine impression, offered remarkably cheap. Paper somewhat damaged but complete. From a private collection. $55.

REMBRANDT, DESCENT FROM THE CROSS. *Brilliant.* $100.

REMBRANDT, MAN READING—"Manière Noire." $20.

A superb copy of DURER'S MELANCHOLIA; a fine copy of the HUNDRED GUILDER PIECE, by Rembrandt, and many choice and valuable prints.

NEW BOOKS.

SWINBURNE'S NEW BOOK. Poems and Ballads (Second Series). Cloth, gilt top, $1.75.
LORD DUFFERIN'S YACHTING in HIGH Latitudes. Cloth extra, $1 50.
RUSSELL'S PRINCE OF WALES IN INdia. With illustrations. Gilt top, $3.
THE NOCTES AMBROSIANÆ (Comedy of). Edited by John Skelton. Cloth extra, $1 50.
KNIGHT'S POPULAR HISTORY of ENGland. 8 vols., cloth, $10.

R. WORTHINGTON, 750 Broadway, N. Y.

Lately Published.

INTERMEDIATE WORLD. By L. T. Townsend, D.D. Cloth, $1 25.
VOYAGES AND ADVENTURES of Vasco da Gama. By George M. Towle. Cloth, $1.
VOYAGE OF THE PAPER CANOE. By N. H. Bishop. Cloth, $2 50.
HISTORICAL STUDENT'S Manual. By Alfred Waites. Cloth, 75 cents.
*MOTHER GOOSE MASQUE*rades. By E. D. Kendall. Boards, 75 cents.
READING CLUB NO. 5. Edited by Geo. M. Baker. Cloth, 50 cents. Paper, 15 cents.
PRIMER OF DESIGN. By Charles A. Barry, Supervisor of Drawing, Public Schools, Boston. Cloth, 75 cents, or sent by mail, post-paid, for 90 cents.

NEW NOVELS.

AGAMENTICUS. By E. P. Tenney. Cloth, $1 25.
HIS INHERITANCE. By Adeline Trafton. Cloth, $1 50.
BLUFFTON. By Rev. Minot J. Savage. Cloth, $1 50.
ROTHMELL. By the author of 'That Husband of Mine.' Cloth, $1 50.
SEOLA. An Anonymous Romance. Cloth, $1 50.
A YEAR WORTH LIVING. By Wm. M. Baker. Cloth, $1 50.
AN AMERICAN CONSUL Abroad. By Professor Luigi Monti. Cloth, $1 50.
THE FALL OF DAMASCUS. By Charles Wells Russell. Cloth, $1 50.

*** Sold by all booksellers, and sent by mail, postpaid, on receipt of price.

The Nation.

NEW YORK, THURSDAY, JUNE 13, 1878.

The Week.

THE Republicans have recovered slightly from the first shock of Anderson's testimony given a week ago, and if it had not been for the Oregon election their position might be said to have improved. It now begins to be seen pretty clearly that everything is going to turn on the election of the new House this fall. In the present House the Democrats have a majority of only a dozen or so, and though the Senate after March 4, 1879, is certain to be Democratic for the first time since the South seceded, this is the effect of old victories, while in the most recent popular elections (those in which the members of the present House were elected) the Democrats lost heavily. This looked like a turn in the tide, and if it continued to flow it would give the Republicans the lower House this fall. But now the question is, Is it flowing or ebbing? There is certainly no reason to look to the South, for there the few seats the Republicans hold (some half a dozen) must be lost this autumn. The loss of these seats makes the Democratic majority to be overcome between twenty and thirty, and the means of overcoming it must be provided by Northern or Western States. On this account the shrewder politicians have been looking to the result of the Oregon election with mingled dread and hope. If it had gone Republican, the result would have been regarded as the first ripple of a "tidal wave" which might be expected to sweep over the North and West in the fall. But it has gone Democratic, or, to adopt the metaphorical language appropriate to subjects of this kind, the "first gun" of the campaign has not only missed fire, but has exploded at the same time, scattering destruction among the ranks of the hard-pressed Republican garrison. The loss of Oregon in 1880 is, of course, a severe blow. From Missouri and Ohio, both of which States have been redistricted, the Democrats expect, apparently with reason, to get increased strength, so that the question of the Republican control of the House narrows itself down to the problem of securing at least twenty-five seats next fall. It is evident at a glance that this will be difficult to accomplish, and an appreciation of the difficulty is at the bottom of much of the present Democratic confidence as to the future. According to the Democratic view, these twenty-five seats are not likely to be obtained in any case; how are they to be secured with an investigating committee at work publishing campaign documents like the Anderson confession from month to month?

The Committee has during the week heard the story of Judge Levisee, one of the Louisiana Republican electors, about the way in which an attempt was made to bribe him either not to cast his vote or to vote for Tilden. He appears to be a humorous and respectable old gentleman, who fully recognized the wickedness of Louisiana politicians and the difficulty the Committee would have in believing that a Louisiana elector had refused a large bribe. He told how he had been called on at his boarding-house by an excited man named Johnson, who let the ladies of the house know before he saw him that he was likely to get $100,000 as a bribe; how he was taken to a lonely part of the city; how he was then offered from $30,000 to $40,000 not to accept his appointment as elector; how he said it was not enough, and in order to find out what Johnson was after and who was backing him, and at the same time to protect his own virtue, he put his price at $200,000; how, after other interviews with Johnson's confederates, on its appearing that only $100,000 could be raised, the matter was dropped. In this condition it looks badly for the Democrats, who say, however, that the offer was made in the interest of gamblers who had laid heavy odds on Tilden and were afraid they were going to be ruined. One other thing Mr. Levisee also testified, namely, that he did not sign his name to one of the certificates sent on to the President of the Senate by the Louisiana Republicans. The first certificate was informal, and was sent back to be corrected, but time was pressing and Mr. Levisee and other electors could not be found, so "the boys" forged his name eight times themselves. This did not really affect the validity of the count; but it is useful as illustrating the reckless and unscrupulous state of mind of the Louisiana politicians.

The response made by the President to the request of the House Committee of Investigation for the correspondence relating to Anderson's appointment shows that the latter was strongly recommended for a foreign consulship by the Republican delegation from Louisiana, backed up by Mr. W. P. Kellogg; that when a vacancy occurred in the important post of Callao, Peru, Mr. Stanley Matthews "specially requested" that he (Anderson) might have it "for important reasons"; that this application of Mr. Matthews was "respectfully referred" to the Secretary of State by the President, and was fortified by another letter from Mr. Matthews, in which he said that "the circumstances in which he (Anderson) had been placed gave him very strong claims on the Administration in the public interests," and Mr. Matthews "most earnestly urged" that "some satisfactory employment might be found for him in the public service at once." At this stage in the process Anderson was appointed Consul at Funchal, and then charges against him of general rascality began to reach the White House. The President then directed that his commission should be withheld until further enquiries were made about his character. The result was he got nothing, and was compelled in justice to himself to "squeal" on his distinguished "pal," Mr. Stanley Matthews. The President has thus, considering some things, come out of the affair very well, but considering other things not so well. It was hardly, for instance, becoming in a civil-service reformer, nominated on the Cincinnati platform, to appoint to a consulship a man of outrageously bad character on the urgent solicitation of Congressmen. The enquiry about Anderson which led to the rescinding of his appointment ought to have preceded the appointment.

Mr. Sherman seems to be laboring under a curious error about the part which he now plays in the House investigation. He has sent in a formal offer to prove that there was great and operative intimidation in certain parishes in Louisiana, and has submitted the names of fifty witnesses whom he proposes to have summoned in support of his charges. But it is no part of the duties of the Secretary of the Treasury to prove before a House Committee intimidation at an election in a distant State of which he is not a resident, and at an election at which he was not present. This can be done far more effectively, we are sure, by Louisiana politicians. What the public and the Committee want to know of Mr. Sherman now is, whether he really wrote or did not write that Anderson letter of which a copy was shown him, and what he was doing down in Louisiana during the count, and particularly whether he encouraged anybody to "stand firm" in unlawful conduct. It is to these things he should direct his attention, and on these he should be frank, bluff, and categorical, and liberal with his witnesses.

The House Committee invited Mr. Stanley Matthews to appear before them to explain his correspondence with Anderson, and the public supposed that he would not need to be invited. He appears, however, to have made up his mind at a very early period that this was the last thing he would do, looking on the Committee doubtless, like Mr. Blaine, as a lot of "Confederate brigadiers." So he moved for the appointment of a Committee of the Senate to investigate him, and then wrote to the House Committee that they could not see him. Whereupon, on the motion of the indignant Butler, they

ordered him to be subpœnaed, but it is more than doubtful whether they can subpœna a Senator while Congress is in session, and we shall probably have a conflict of jurisdiction. Mr. Ferry displayed no such caution, but appeared and told all he knew about counting the vote with the greatest alacrity. Mr. Matthews has made an explanation of his position to the newspaper correspondents; which is, that he tried to get Anderson an office to avoid scandal, but without any knowledge of his guilty practices. The advantage he hopes to gain by giving his testimony before the Senate Committee is, doubtless, that he will not be severely cross-examined. We would advise him now to dismiss the whole subject from his mind, and plunge into finance once more. There are several curious bills he might still introduce.

The report of the proceedings of the Florida sub-committee is nearly as voluminous as that of the main investigating body sitting at Washington. They have been examining three worthies who made the canvass of Baker County that gave the State to Hayes by forty majority, and prevented it from going for Tilden by ninety-five majority. County Judge Driggers, one of the local board of canvassers, found to his surprise that the clerk and one Dorman, a justice of the peace, had, without waiting for his assistance, canvassed the votes and reported a Democratic majority. Feeling sore at this treatment, he concluded he had a right to get up a board of his own without either, so he made one Bill Green a justice of the peace *ad hoc*, and called in Sheriff Allen, and together they secretly got access to the ballots, made a recanvass, and "figured what would be the result" if certain precincts were thrown out. The result was that two were thrown out—one, on the ground of "intimidation" (the *fact* being that some man told Driggers his vote had been refused, and promised an affidavit to that effect), and the other because of illegal voting (the fact being that half a dozen names on the list were those of non-residents, but they were not necessary to the Democratic majority). Testimony was also given as to ballot-stuffing in Leon County, at Precinct No. 13, by Inspector Bowes, "who now holds a position in Washington." He put in 73 or 74 "jolly jokers," and made his count to correspond, and boasted that he had saved the State to Hayes. Finally, McLin testified that there were several returns from Baker County, but that he presented to the State Canvassing Board only the Driggers return, "because it appeared to be properly attested, and was most favorable to the Republican party." The others he did not think it necessary to read to the Board.

The active branch of Congress during the week has been the Senate. The Army Bill was passed on Saturday, much improved; for the total strength was fixed at 25,000, the transfer of the Indian Bureau was stricken out, and the section prohibiting the use of the Army as a posse comitatus was so modified as to make its insertion of very little consequence. The Senate also passed the River and Harbor Appropriation Bill, much inflated, and the bill to execute the Fisheries Award, gave Captain Eads the modification of his contract which he prayed for, postponed the Texas-and-Pacific Subsidy Bill till the next session, and granted Mr. Stanley Matthews a committee to investigate his acts as a "visiting statesman." The committee consists of Messrs. Edmunds, Allison, Ingalls, Davis of Illinois, Whyte, and Jones of Florida. The House has passed the General Deficiency Bill; but its principal achievement has been the disposing of the Tariff Bill by a vote of 134 to 120, which took place on Wednesday, the 5th inst., when the enacting clause was stricken out. The nays were all Democrats, with six exceptions. Mr. Wood's defeat was brought about by the votes of high-tariff Democrats from Pennsylvania, New Jersey, Iowa, Maryland, West Virginia, and Wisconsin.

Mention should be made of the speech of Mr. Herbert, of Alabama, who surprised the House on Thursday by an assault on the Texas-and-Pacific subsidy scheme which for vigor and thoroughness has seldom been surpassed. It is to be hoped that some Southern member will perform the like office for the Brazilian mail subsidy when that impudent piece of log-rolling comes to a vote in the House. In the Senate Mr. Christiancy characterized it without contradiction as a bill to appropriate public money for the benefit of John Roach, and not to secure a mail service with Brazil, that having been already secured at the moderate cost of $1,200 per year. Senator Wadleigh showed that it was in direct conflict with the platforms of both political parties of his State. Senator Whyte, of Maryland, made an almost piteous appeal to his brother Senators not to transfer to other ports by an act of legislation a line of trade which the city of Baltimore has built up by the diligence and sagacity of her merchants, extending over a period of fifty years. Senator Kernan dealt some heavy blows at the measure, but it passed by a vote of 26 to 18, the affirmative vote consisting chiefly of New England protectionists and Senators from the Gulf States, who had been hooked by the proviso for a subsidized line from New Orleans and Galveston. The Virginia Senators were brought in by an amendment requiring the New York steamers to put in at Norfolk, 500 miles out of their way. The only valuable amendment fastened upon the bill was one offered by Mr. Eaton, of Connecticut, limiting the duration of the subsidy to five years.

The House Judiciary Committee has had the good sense or the political shrewdness to report against the Maryland Memorial and the Kimmel Bill impugning the President's title. It declares that the Forty-fourth Congress was the only body authorized to count the vote for the President for the term now pending; that no other Congress has any power to revise its decision or set it aside, or to confer authority on the Supreme Court to do so. This of course is the law, and if it were not, would have to be made the law if the Government were to last. It is little short of lunacy to suppose that the Government could last if the majority in each Congress had the power to declare who was President and who was not, or, in other words, to keep the count open for four years and to turn the President out of office on the discovery of anything in an election held in forty different States, which could be called "fraud." This would be the introduction of the English parliamentary power over the Executive, with changes and modifications adapting it to a community of cracked philosophers or turbulent Central Americans. How little danger there has ever been of the toleration of any such political gimcracks here has been shown by the promptness with which the Democrats have had to repudiate all thought of it. Even Tammany Hall has had to resolve that it would have nothing to do with any such folly.

The boarding of a crowded street-car at ten in the evening by five robbers, who soundly thrashed and robbed one of the passengers, and made their escape with his money, has been one of the curious incidents of the week. They owed their success in part to the fact that, as the passengers were mostly returning from a picnic, they thought the affair was a private row, until it was all over, and the oddity of it is heightened by the fact that two militiamen in uniform, though unarmed, were in the car. In order to heighten the effect of it, the reporters at first represented these two as eleven, fully armed and accoutred, and made them run like hares when they saw the thieves. The affair is called unprecedented, but it is not so. About seven years ago the assistant librarian of the Astor Library was seized and his pockets rifled, on the platform of a Third Avenue car, at two o'clock in the afternoon, and when he made an outcry had his head punched and was thrown into the street, and we believe never got any redress. More recently a man had his watch taken on the same line, and pursued the thief round and round the car, the confederates of the latter holding him back by his coat-tails, and the passengers looking quietly on, thinking that some bad characters were having a lark. In fact, a promis-

cuous body of persons is peculiarly exposed to surprises of this kind, and the wonder is that the thieves do not avail themselves more freely of the fact.

The week has not been notable for any very important financial or commercial event. Both here and in London the rates for loans have fallen to figures that mark extreme dulness; three months' discounts in London are as low as 1⅛ per cent., and short loans have been reported as low as ½ to ⅝ of 1 per cent. (per annum). This condition of the money market makes a great demand for interest-bearing securities that are believed to be safe. The sales of U. S. 4 per cents here were large, and the Treasury notified the holders of $5,000,000 more 6 per cent. bonds that they will be paid off; which makes $20,000,000 of 6 per cents notified for redemption since the Syndicate contract of April 11 was signed. The large subscriptions to the 4 per cents creates a demand for gold sufficient to keep the price at about 101. Silver has been steady during the week, and at the close the bullion value of the new silver dollar was $0.9029 gold.

The Congress is at last to meet in Berlin, as originally proposed, with Prince Bismarck as president; but no more is known than before about the nature of the preliminary arrangement between England and Russia. Lord Beaconsfield and the Marquis of Salisbury appear for England, and it is reported that Prince Bismarck has drawn up a memorandum of the points to be discussed, which contains also something in the nature of an outline plan of his own. The arrangement between England and Russia, whatever it may be, has apparently not had the effect of conciliating Austria, which is reported as more distrustful and suspicious than heretofore. But this is in part, at least, based on her continued military activity, which may be due to the expectation that she will be called on by the Congress for something in the nature of an occupation of some portion of the Turkish provinces. Troubles, too, are brewing in other quarters, which show that the Congress will not meet a day too soon. The hostility between the Russians and Rumanians grows steadily, and the former has at last taken the extreme course of forcing the Rumanian army out of positions on its own soil and substituting her own troops. The Bucharest Government has, too, made it known, though, we believe, not officially, that whatever may be the decision of the Congress about Bessarabia, it will not be surrendered by Rumania except to force. In fact, all things considered, no Congress since that of Vienna in 1815 has had such a job before it as the present one, with the difference, too, that the Vienna Congress was dealing with nations that were utterly tired of fighting, while this one has to pacify some which are longing for the fray, or, at all events, would be nothing loath to try their hand in one.

The German Emperor, whether luckily or unluckily for the Socialists it is hard to say, is recovering from his wounds, a wonderful proof of the vigor of his constitution. The would-be assassin, Nobiling, has been examined, but his condition is such that little or nothing has been extracted from him beyond a story that the task of killing the Emperor had been imposed upon him by lot, and that he was the agent of some kind of association. The investigation set on foot in consequence of this, however, has revealed nothing to confirm it, and the opinion gains ground that he was an isolated lunatic, with Socialist views and relations. The incident is none the less being used by Prince Bismarck to strengthen him in his efforts after repressive legislation. The bill which has just been defeated gave the Government almost discretionary power for three years over publications or meetings or societies having "Socialistic tendencies," and making the police the sole judge of the fact. Of course, this would have placed every newspaper in the country at their mercy. He now proposes to dissolve the Reichstag and trust to the prevailing horror caused by the attempt on the Emperor's life to give him a good majority, which will enable him not only to carry the Socialist Bill but the other changes in the Federal machinery in which he has recently been defeated. The preparations talked of to resist Socialism thus far seem to be wholly material except the offer of aid from the Pope, which comes curiously enough, it is said, as a *quid pro quo*—that is, he will operate against Socialism with the armory of the Church if Germany will modify the Falk laws; as if the Church was not always bound to work against evil.

An interesting decision has just been made by the English Master of the Rolls on the application of an English clergyman, Mr. Besant, the husband of the now well-known "advanced thinker" who, with Mr. Bradlaugh, was convicted some months ago of having published and circulated an indecent and otherwise immoral book. Mrs. Besant separated from her husband some years ago, owing to religious differences, retaining by common consent the custody of their only child, a daughter, during eleven months of the year. Since then she has "progressed" so rapidly that she has not only discarded all religious belief, but holds such extreme opinions upon marriage and other social arrangements as to exclude her from the society of nearly all the well-behaved and respectable portion of her own sex, and is educating her daughter in her own views; but there is no doubt of her sincerity and conscientiousness. Under these circumstances the father has asked the Court of Chancery to pronounce her unfit to have charge of her child, and the Court has given judgment in his favor on the general ground that a parent has no right to bring up a child in such a way as to inflict on it permanent social disability or disgrace. It has, however, been pointed out that, apart from Mrs. Besant's share in the publication of the indecent book, her general system of training is almost precisely that adopted by Mr. James Mill in the education of his son John Stuart, and the question consequently arises, Would the courts, if applied to by one parent, take away a child from the custody of another for bringing it up oddly, or in a manner to make it peculiar and out of harmony with the society in which it was to live? Whether it will be well for the courts to have such discretion may be doubted, but there can be little doubt that there is no more odious form of oppression than that sometimes inflicted by a queer, eccentric parent in bringing up a sensitive and shy child to hold the same relations to the world as he himself holds.

Probably nothing produces more bad blood among "esteemed contemporaries" than disputes about their comparative circulation. Every now and then one of them publishes a self-laudatory article in which it shows by some process, which the others pronounce utterly delusive, that its edition is vastly greater than that of any of the others—sometimes than that of all the others put together; there then follows much recrimination, and a solemn challenge on one side or the other to leave the whole matter in controversy to some very partial authority, which is of course not accepted, and the disputants separate with mutual maledictions. Here this usually excites the merriment of the public; in France it is a serious matter. Under the French law, to give a disparaging account of an "esteemed contemporary's" circulation, either by putting it lower than it really is, or by representing it untruly as lower than your own, is to commit an offence known as "concurrence déloyal," and makes you liable to pursuit before the Tribunal of Commerce. Accordingly, the *Figaro* having copied from the New York *Herald* the other day an account of the circulation of the *Univers*, which the latter pronounced incorrect, it was cited before the Tribunal, which found it guilty, not of "unfair competition," but of having unjustifiably excited a prejudice, and accordingly fined it $100. What materials such a judgment would furnish here for comments on the force of human envy and baseness, and the vastness and beneficence of the work done by at least one journal for the country and for humanity!

THE ELECTORAL SYSTEM AND THE PRESIDENTIAL COUNT.

TWO subjects connected with Presidential elections have occupied the attention of the present Congress during the past eight months—the electoral system itself and the electoral count. Both became in 1876 the objects of much interest, and the extraordinary difficulties which Congress met in 1877 in deciding the results of the Presidential election of the year before fully justified the popular anxiety. Since the present Congress met, discussion has chiefly concentrated itself on the supposed defects of the electoral system, and little has been heard of the count. With regard to the former, the objection raised is that through the instrumentality of the Electoral College the results of the popular and of the secondary elections do not necessarily correspond; that a candidate may be elected by a minority of the popular vote. To this it is replied that the object of the framers of the Government was not to secure a popular machinery, but to have the President represent a majority of the States; that this object obviously cannot be attained except by making the State in some way the electoral unit, and that any change in the direction of a purely popular vote would be merely a blow at the independence of the States. To this it may be replied with considerable force that whatever the object of the framers of the Constitution originally was, the actual result of the system they introduced has been a thoroughly popular election, in which everybody practically casts a direct vote for President and Vice-President, supplemented, however, by an antiquated and obsolete device known as an electoral college, but really a mere clerical registration board, which, instead of registering the result of the popular election, records a totally different result, by which the former may be actually upset. In other words, we have popularized the method of reaching the result, but this popularization has no effect on the result itself. Long reflection on this hardship, produced by the inflexibility of the constitutional provisions on the subject, brought the late Senator Morton, in one of his more thoughtful moods, to the conclusion that the framers of the Government hated the people and popular government, and that their absurd device of an electoral college was a sort of last asylum in our system of the "aristocratic" principle.

Several means have been suggested for rooting out this anti-popular feature: election by districts; election by States, with the added safeguard of a minority representation after the vote; the abolition of the electoral college—all of them being based on the idea of securing as nearly as possible a direct popular system. Of course there is no certain way of obtaining this short of a total abolition of State lines, and a direct vote by the whole people; even the introduction of the electoral system by districts would not absolutely secure it; for, although the districts are geographical divisions based solely on population, they are merely smaller units than States, and it is possible to conceive without much difficulty of a political situation in which enormous party majorities in a minority of districts might be pitted against slight majorities in a majority of districts, in which case a President might be elected by a popular minority as now. Indeed, so long as the "solid South" continues to be opposed in Presidential elections to a "solid North," this result is not unlikely, whether the electoral units be States or districts. Besides this, there is another serious objection to the district system, which the history of the various State governments ought to suggest—the danger of gerrymandering. As long as State lines are preserved this danger is reduced to a minimum. The established States with fixed boundaries cannot be tampered with, nor can a new State be carved out of an old one without the consent of both; here and there a territory may be erected into a State for party purposes; but this occurs so seldom that it may be called a small danger. But, the district system introduced, gerrymandering begins at once. The dominant party will necessarily in its own interest begin to "fix" the division lines so as to give itself as many districts as possible, and we should probably soon be confronted with an "apportionment" scandal on a national scale, similar in kind, but incomparably greater in degree and more disastrous in its results, than that which we have witnessed during the past few years in this State. Among Congressional districts the ravages of the gerrymander may always be seen going on. Within the past fortnight the Republican newspapers have been raising a cry, probably well justified by the facts, over the "redistricting" by the Democrats of Ohio and Missouri; and we may be certain that redistricting will become an even more active form of political activity the moment it is found that Presidential elections may be made to hinge on it.

But, whatever may be thought of these reasons, there is the insuperable difficulty in the way of a radical change that it must be introduced through a constitutional amendment, which there is no reasonable probability of getting adopted by the requisite number of States. The present system throws enormous power into the hands of the large States, and no change could recommend itself generally which threatened to curtail this. In 1876, for instance, the possibility of having all the electoral votes of New York counted in favor of the Democratic candidate was the pivot on which the election turned. There is every reason why the politicians of such States as New York, Pennsylvania, Ohio, or Illinois should bitterly oppose any scheme which has for its express object the reduction of their political influence and the equalization of it with that of other smaller, poorer, and less powerful communities.

We may, therefore, on the whole, dismiss from our calculations as to the last degree improbable all the proposed alterations of our electoral system. That will probably continue to go on as heretofore. There remains, however, the other branch of electoral reform—that relating to the count of the electoral vote by Congress. With regard to this there has been no difference of opinion for some years. The provisions of the Constitution were proved two years ago, as they had been long known to be, entirely inadequate. In fact, beyond the existence of a provision that the votes are to be "opened" and "counted," there may be said to be no provisions whatever. Accordingly, we were confronted in 1876 with all sorts of startling and revolutionary theories on the subject—among others that the President of the Senate was vested by the Constitution with all the powers of a returning board, and could determine, without possibility of interference, the result of a disputed Presidential election. Even with the machinery of an electoral bill devised for the express purpose, the questions raised after the election of 1876 were so numerous and intricate that the count was protracted until the very eve of a new term and the country threatened with all the dangers of an interregnum, if not of anarchy. The upshot of the discussions of that year settled it that the votes were to be counted by the two houses of Congress, and the Electoral Bill made minute provisions for all questions of disputed returns and differences of opinion during the count between the two houses. But the bill was a mere temporary device, and no permanent measure has yet been passed. This is the more remarkable inasmuch as it is a solitary *casus omissus* in our electoral system. In all the States there are minute legislative provisions for the determination of election disputes over the meanest offices; where statutes do not exist, the courts deal with the subject by *quo warranto*. It is only when we reach the highest office in the country that we find a total absence of precautionary measures. Every step relating to a Presidential contest is left vague and uncertain, as if to invite and to ensure trouble.

Here, too, there is no great difficulty in providing a remedy, and the present Congress has undertaken to provide one. Both houses, we believe, have referred the matter to committees, and Senator Edmunds, from the Select Senate Committee on Presidential Elections, has recently reported a carefully-drawn bill to provide against the recurrence of any troubles like those of 1876. It requires the appointment of electors in each State on the first Tuesday of October (a month earlier than under the present law); prohibits the appointment of any Senator, Representative, or person holding an office of trust or profit under the United States; directs the electors of each State to meet and cast their votes on the second Monday of

the January next following; allows each State to provide by laws (which must be enacted prior to the day fixed for the appointment of electors) for "the trial and determination of any controversy concerning the appointment of electors before the time fixed for the meeting of the electors in any manner it shall deem expedient." Every such determination so made, and made prior to the time of meeting of the electors, "shall be conclusive evidence of the lawful title of the electors" so determined, "and shall govern in the counting of the electoral votes" by Congress. Section five requires the executive of each State to make out and certify three lists of the electors thus ascertained, and to deliver them to the electors on or before the day fixed for their meeting. Other sections provide that Congress shall be in session, on the second Monday in February succeeding every meeting of the electors, in the Hall of Representatives (the President of the Senate presiding), and shall proceed to count the votes by tellers. The President of the Senate is to open the certificates and hand them to the tellers. Further provision is made for objections "to the certificates." These must be in writing, duly authenticated, and are to be submitted to each house separately. In the case of single returns, no electoral vote is to be rejected except by an affirmative vote of both houses. In the case of double returns, the determination of the State tribunals is to govern the count; but in case of a conflict between the State tribunals, only those electoral votes are to be counted which come from the electoral college decided by a concurrent vote of both houses to have the support of the lawful tribunals of the State; in case no determination has been made by the State, then also for any counting a concurrent affirmative vote is required.

This measure is a wise one, and deserves to pass. It probably comes as near settling the great question of double returns as is possible for a human political device. In the first place, every State has three whole months between the elections and meeting of the electors to determine by means of its own tribunal all such questions as arose in 1876 in the three disputed Southern States; and every State may pass what laws it pleases providing for such a contingency. The difficulty in such a State as Florida in 1876 was that no conclusive proceedings to test the title of the rival electoral bodies were possible. In case of the passage of this bill, all Florida will have to do will be to pass a law making it possible for the courts, or some other tribunal, to decide any questions that may arise. The decision of the State is also made binding on Congress in the case of double returns. In the case of double returns where there has been no determination by the State, the practical effect of the bill will be that the vote will not be counted at all, and it cannot be said that after such a natural result of a total neglect of opportunities this would be a very great hardship. It is practically the case of no election in the State.

"MEXICANIZATION."

THERE was much not unnatural alarm before the last election about the "Mexicanization" of our Government, apropos of the Southern practice of carrying elections by intimidation. To carry elections by intimidation is undoubtedly a Mexican practice, but it is nevertheless true that the English constitution, which may be called the progenitor or model of all free governments now in existence, and in many ways the most successful of them, has either been built up by or grown up in spite of elections carried through influences which were intimidation in some form or another—that is, the coercion of tenants by landlords and of laborers by employers. So that, though the Mexicans resort to the practice, it is not a distinctively Mexican practice, nor does even the prolonged use of it necessarily cause the "Mexicanization" of a government or the destruction of either liberty or security. True "Mexicanization" consists in the spread among the voters of both parties of the belief that the Government can only be carried on by one party, and that if the other party gets into power it ought to be resisted as a foreign invader and driven out by force of arms if necessary. Any man who thinks this may feel sure that he is a Mexican; any politician who preaches it is a Mexican; the black broadcloth and prunella gaiters and stovepipe hat cannot disguise him. If by party government in a free country he means government by one party only, and treats the other party as a public enemy, whose advent to power would ruin his country, he might as well put on embroidered breeches, silver spurs, and a sombrero, and go cockfighting on Sundays.

The application of this to the present situation is not difficult. The Democratic party, both as regards its composition and its policy, in so far as it can be said to have a policy, is as obnoxious to us as it can be to any of our readers—is more so to us, indeed, we have little doubt, than it is to most of our readers. But it comprises very nearly, if not quite, one-half the voters of the Republic. It cannot be disfranchised; it cannot be expelled from the country; it cannot be kept for ever in opposition. The American Government is a party government, which means that it is a government which either of at least two parties can carry on, and which any party that can get a majority on its side, whether it be as virtuous as we should like or as safe as we should like or not, has a right to carry on. To believe in this thoroughly, and to be willing to act on it under all circumstances, is American; to deny it and declare that unless one party, composed of the good and wise—the "bien pensants," as the French Legitimists call them—retains constant possession of power our institutions cannot last, is Mexican, and is a constant incentive to civil war. Mexicanism is not civil war; it is not any overt act whatever; it is a state of mind, a way of looking at political affairs, which makes civil war always possible and prevents all internal reform. Internal reform is not possible, no genuine progress is possible, in a country in which every election, or every unpleasant move, however legal, on the part of the other party is treated as the probable beginning of a revolution or as a fair excuse for armed resistance. We have for these reasons scouted and ridiculed the cry raised by so many Republicans that the Democratic investigation now pending was a revolutionary move and might call for civil war. It is this, and not the investigation, which is Mexican, for the investigation is perfectly legal and constitutional. Says a usually sensible paper, the Philadelphia *Bulletin*:

"The *Nation* attempts to prove the insincerity of those persons who profess to apprehend revolution by the fact that in spite of all their expressed fears they have not begun to barricade their houses. This is a powerful argument, coming from a journal that assumes to have the destinies of the country under its guardianship. A good many wise people believed in 1860 that a great revolutionary movement was impending, but if any one of them filled his parlor with loaded double-barrel guns and had iron armor put upon his front door, the fact has not yet been revealed."

A "great revolutionary movement" *was* impending in 1860; there was no concealment about it. Many States announced openly, Mexican fashion, that if a certain election went against them they would throw off their allegiance to the Government and make another republic, and they believed they would succeed. They failed, however, miserably, and after awful loss and suffering. If that experience had had no effect on them, and they were now ready to revolt again, it would be not Mexican, or even Caffre, but something still lower, say Comanche. It would show that their mental processes and ideals were below those of the higher order of savages. To keep declaring that it has had no effect on them, and that they are ready for another war, is Mexican talk; it is not Anglo-Saxon talk.

But what the Democrats are doing now, however foolish or mischievous, is strictly legal. The majority of the House are carrying on an enquiry into the conduct of certain high officials in a Presidential election. This is a constitutional proceeding; it is as constitutional and as safe as what the Tories are doing to-day in England. Anybody who thinks it will lead to revolution, and keeps calling on his neighbor to prepare for it, ought to set an example of preparation himself, if he is sincere; for a conflict between the Democrats and Republicans now would not be, as in 1860, a sectional war; it would be a county and town war, a war in which neighbors and friends all over the country would be arrayed against each

other. Anybody who believes that this is impending either believes the American Government has totally failed already, and is, therefore, a very silly pessimist, or is a true Mexican, who believes that civil war is a proper or but slightly objectionable accompaniment of every election. He ought in either case to "fill his parlor with double-barrelled guns and put iron armor on his front door"; he is foolish enough for either precaution.

But, it will be said, since the Democratic party is, as you admit, a dangerous and mischievous party, what is the harm of working on people's imaginations about it and frightening them with pictures of dreadful things that will happen if it gets into power? The first objection is the one we have already set forth: that it helps to Mexicanize the public mind and prepare large bodies of thoughtless persons for remedies outside of the law and the Constitution. Made up as our society is now, such talk is very pernicious and may greatly increase the difficulties with which we have already to contend. The second is, that this plan of suppressing the Democrats has now been tried for ten years, and has proved a total failure. Many Republicans talk—some doubtless think—about the Democratic majority in the House, which is now so troublesome and menacing, as if it had been created by some trick or *coup de main*, as if Potter and Randall and the rest of them had obtained their seats and their power by rushing into the House when no one was looking and declaring themselves representatives of the American people. The unpleasant truth is, however, that they are there because they got majorities in their districts, and they are formidable because they have about half the American people at their back, and for no other reason. When the Republican Congressional Committee sends out a circular asking the Government clerks for $12 75 apiece to prevent the election of a Democratic House, which they say "would precipitate upon the country dangerous agitations," what they fear is not that the Democrats will seize the House, but that a Democratic majority will be elected by the voters. It is among the voters, therefore, that the Democratic majority is to be attacked; and on them the Republicans have been trying their present tactics ever since 1868—that is, trying to keep possession of power by describing the dreadful things that would happen if the Democrats got into power. Here is the result, which is worth studying, and it is to be observed that it has been gradually brought about with "the machine" in full activity, with General Grant in the White House as a "saviour of society," and with "the bloody shirt" waving freely—with, in short, all those instrumentalities in use which we are urged to keep on trying:

REPUBLICAN STRENGTH IN CONGRESS.

1870—Majority in Senate	50	1874—Senate	27
" " House	97	House	105
Total	147	Total	132
1871—Senate	40	1875—Senate majority	11
House	35	House *minority*	74
Total	75	Minority	63
1872—Senate	30	1876—Senate majority	17
House	25	House *minority*	77
Total	55	Minority	60
1873 (after the Greeley farce)—Senate	25	1877—Senate majority	2
House	103	House *minority*	13
Total	128	Minority	11

Nothing could show more clearly than this that the bulk of the voters are not afraid of the Democrats as a mere Mexican bugbear, and do not believe they will overturn the Government or reduce us to the level of Mexico, and nothing can therefore be more futile than renewing this now familiar cry and relying on it. The Democrats must be attacked in the minds of the people, on the assumption that the majority desire good, orderly, and progressive government and by a party which is itself united, and has a programme of its own which commends itself to the intelligence and social aims and ambitions of the industrious classes, who after all are the supreme bestowers of power, and who cannot be permanently humbugged or frightened. This country cannot be governed very long by any party by working on people's fears; something must be done for their hopes. The generation which was shocked by the war and still looks for the rebels in every bush is passing away or growing old. The new one cannot be led to the polls by the Hales and Blaines and Gorhams and Conklings in heavy marching order, and they are the worst enemies of the Republican party and of good government who keep pretending that they hear the cannon every time the Democrats make a foolish use of constitutional power.

LODGINGS FOR SINGLE WOMEN.

IT would be a great pity if the flippant rant of the speakers at the Cooper Union last week, denouncing Judge Hilton's abandonment of the working-women's hotel, were allowed to divert attention from the real merits of that remarkable performance. It is admitted that Judge Hilton—he nominally acts in Mrs. Stewart's name, but so nominally that in discussing the matter she may as well be left out of sight—was not legally bound to build or carry on a hotel for the use of working-women. He was, as his action has shown, perfectly free not to open the building to women exclusively at all. He might have made it what it is now on the very day it was finished, and might have tried the experiment of the women's hotel in any manner he pleased. The gorgeous furniture, the fine library, and the general elaboration of the fittings—all the things, in short, except the building itself, which made the enterprise expensive, were of his own contriving. He might have made the furniture very simple, and the accommodation of all kinds so plain that he need not have charged six dollars for rooms and board. He might, too, have put closets in the rooms and have run a rail round the cornice, on which the inmates could have hung pictures without damaging the walls, and have allowed them to have sewing-machines and birds and flowers, and even have permitted "visiting around" among guests of the hotel without any restriction. The whole matter was within his control. So that when he opened the kind of establishment he did open, and fixed the price so high that the community could not furnish enough female boarders who could pay it, and made the rooms in one way or another so inconvenient that even those who could pay the rent were not willing to live in them, the conclusion is not unfair that he never intended that the experiment should succeed. In short, he doomed it to failure from the beginning. If it had been entered on as a business enterprise, his abandoning it and converting the building to another use would be so completely his own affair or the affair of the Stewart estate that the public would have nothing to say about it. But the building was begun for a charitable use in Mr. Stewart's lifetime. What this use was his representatives have since his death explained to the world, and that Mr. Stewart imposed the execution of his designs on them as a *moral* trust, their opening of the hotel is a sufficient acknowledgment. That their opening it under such conditions that the persons for whose benefit it was designed either would not or could not avail themselves of it, would of itself raise a presumption that the executors meant to evade this moral obligation, they being unquestionably well acquainted with the habits and needs of the working-women who were expected to fill the hotel. This would be true, even if the hotel were now turned over to some other kind of charity—if, that is to say, Judge Hilton were to deal with it under what the lawyers call the *cy-près* rule, which directs that when a charitable bequest cannot for any reason be applied to the object to which the testator directs its application, it shall be applied to some object as nearly resembling it in character as possible. But when all pretence of using the building for any charitable object is given up, and it is converted to purely commercial uses, the presumption rises into positive proof of perversion—not legal perversion which can be corrected by the courts, but moral perversion which the public ought to visit with condemnation. When a man proclaims himself the holder of property left in his hands by a deceased person for a public use he virtually pledges himself to the public to execute the trust, if not in the manner the testator had in mind, in the best manner he can. He has no right to say that the testator was a visionary, and that he is going to use the money in trade; if the bequest were a legal one made in a will, the courts would not allow him to do this; when it is a mere moral legacy the community ought to see that he does not do it with impunity.

But Judge Hilton's refusal to do anything at all ought not to blind us to the difficulties of what he undertook to do. There has been a great deal of abuse heaped upon him for attempting to impose *any* restrictions on his female boarders except such as he would impose on the inmates of an ordinary hotel, and a large part of the time of the meeting at the Cooper Union the other night was devoted to showing that it was ridicu-

lous to ask women to submit to any restraints on their liberty to which men are not usually asked to submit, and that nobody *would* ask it but a conceited and tyrannical man. To this he has made an easy answer by producing the rules of the boarding-houses carried on by the Young Women's Christian Association in this city, which are in fact more stringent than his, and a correspondent showed in the last number of the *Nation* that similar rules are in force in the very successful boarding-houses of the Young Women's Christian Association of Boston. That is to say, the best women, and those who are the most anxious to help the less fortunate ones of their own sex, agree with heartless and greedy and obtuse men, such as Judge Hilton is charged with being, in thinking that if you set up a lodging-house for women exclusively, you must, in order to make it effective, conduct it in a very different manner from a lodging-house designed for men exclusively.

When one comes to enquire the reason of this opinion one finds himself treading on some very hot embers of controversy, or rather the hot embers of several controversies. One finds himself at once in danger of collision with the friends of the political equality of the sexes, and with those who think women ought to pursue all callings in common with men, and with those who think boys and girls ought to be educated together under exactly the same régime in all schools and colleges. Working-women who come to the cities now to earn their living, and for whose relief these charitable enterprises are designed, and do live now in vast numbers in cheap lodgings, have to submit to no such restrictions. The very fact of their supporting themselves furnishes them, it is said, with a valid title to decide what is necessary for their physical or moral welfare—that is, for the preservation of their health and reputation—and any attempt to supersede their discretion in the matter is an odious bit of petty tyranny on the part of those who try to help them. But the fact that women lead wholly independent lives (that is, lives exempt from surveillance) who come to great cities to earn their bread, is one of the reasons why the benevolent of their own sex are so anxious to provide them with lodgings where some sort of surveillance would be exercised. That is to say, most thoughtful women, as well as most thoughtful men, recognize that women, in their efforts to be independent and self-supporting, are weighted in the race by two very unpleasant facts: one is that a woman's reputation is a far more delicate thing than a man's, easier to damage, and if damaged, harder to restore; and that, therefore, everything that makes it easier for her to take care of it—such as the possession of a well-ordered home and the society of friends—is an invaluable aid to her under any circumstances, and if she is called on to earn her own living, it must inevitably relieve her, if she is a right-minded person, of much heavy care and trouble. By living in a properly-regulated boarding-house, and submitting to a few restrictions on her liberty, she not only obtains a very useful certificate of character, but is relieved of all sorts of small precautions, the provision of which would otherwise devolve on her. The other is, that not only is her reputation a more delicate thing than a man's, but that it is the object of persistent and yet disguised attack on the part of men; in other words, it is assailed by persons whose society is naturally and properly agreeable to her, through emotions and affections which are in themselves not only harmless, and even praiseworthy, but which constitute part of what is best and noblest in her nature. Her position, in fact, somewhat resembles that of a young man whose enjoyment of another young man's society constituted a constant temptation to commit theft which both of them had great difficulty in resisting, and, indeed, surrounded theft with an atmosphere of poetry and romance, and associated it closely with what was most beautiful and attractive in nature and art, and made music and painting and fine scenery in some sense an incentive to it. If men were tempted in this way to courses which worked either moral ruin or led to the loss of public confidence in their rectitude, there would be no more objection to their receiving aids to virtue in the shape of domestic restraints on their liberty than there is now to their being held to strict accountability through book-keeping and vouchers in money matters; and the aids would be offered, and by the wise as cheerfully accepted as an upright man now accepts the obligation to keep accounts of his dealings with other people's funds.

The growing disposition and growing competence of women to earn their own bread, even if it involves leaving their homes to seek their fortune in the world, have been undoubtedly accompanied by some modification on the part of the public in the laws of what is called "propriety," but there has been no such modification as to make the position of a working-woman earning from three to ten dollars a week in a great city, and living in such private lodgings as her means bring within her reach, anything but perilous and uncomfortable. Those who know most of the experience of women in this plight paint it in the darkest colors. That any good discipline, any preparation for better things, is to be got out of it is a delusion, and the very things that make city life attractive, the temptations to dress and amusement which it constantly offers, aggravate its evils. There could, therefore, hardly be a better use for the money and labor of the philanthropic than the provision of homes for such women, such as it was generally supposed Mr. Stewart was about to offer. Every large city ought to contain them in abundance, but they ought to offer nothing in the shape of luxury to those whose wages put luxury beyond their reach. At the same time it is not necessary that the rates of board should be high enough to pay for all that is given. There is no doubt that the only sound basis for such establishments is the commercial basis, but the basis would be sufficiently commercial for all purposes of moral training if every woman paid what her wages enabled her to pay, and if all that she received in return, over and above what she paid for, was order, care in sickness, advice and protection in difficulty, and the comforts which come from good organization and purchases on a large scale. That such a sum as has been put into the Stewart Hotel should be diverted from such an object as this, and used to add another "first-class hotel" to the large number of bankrupt or poorly-patronized concerns of the kind which the city already contains, cannot but be regarded as a great public misfortune, and it certainly calls for more serious treatment than the silly abuse heaped on Judge Hilton at the indignation meeting.

THE SOUVENIRS OF DANIEL STERN.

PARIS, May 17.

IT is quite true that few books can be as interesting as good memoirs. Truth is always, or often at least, better than imagination. I confess that I have but a limited admiration for the works of Madame d'Agoult, who wrote under the singular name of Daniel Stern. I doubt if many have read her 'Essay on Liberty,' her 'Florence and Turin,' her 'Nélida,' her 'Jeanne d'Arc.' Her 'History of the Beginning of the Republic of the Netherlands,' 1581 to 1625, shows a vigorous mind, as well as her 'History of the Revolution of 1848'—a book which is truly masculine in its accent, and is not without merit, though it hardly deserves to be ranked among the historical works of our time.

I began almost with reluctance, and certainly not without great diffidence, the 'Souvenirs of Madame d'Agoult,' and I was very agreeably surprised to find that the true woman at heart appeared in this last work. How different was this Madame d'Agoult, who lived from 1806 to 1833, from the Daniel Stern whom we have all seen, if not known, from the friend and associate of some of our most *advanced* littérateurs and politicians, who spent her last years in the society of Louis de Ronchaud, to whom the 'Souvenirs' are dedicated, of Nefftzer, the editor of the *Temps*, of Charles Dollfus, of Émile Ollivier, who tried to reconcile the Empire with liberty. Few women were seen in the salon of Daniel Stern, though she had become old, though her hair had quite turned grey, and though she never allowed the tone of her house to be anything but solemn and almost severe. Alas! she had not governed her life after the ordinary rules; she had wandered far from the paths of ordinary life; she had sinned against the laws of the world; and, as she says in her preface, "when a woman has made for herself her life, and when that life is not governed after the common rule, she becomes responsible for it—more responsible than a man—in the eyes of all. When such a woman, by the effect of chance or of talent, ceases to be obscure she contracts at once masculine duties."

Daniel Stern conceives that one of these duties is to write an autobiography. In the volume which is before me, however, the author does not attempt to explain the errors of her life. I suspect that Madame d'Agoult was not in the same mood as so many men and women who take pride in their errors; she did not triumph over the world like Madame Sand, like Jean Jacques Rousseau. Though she has a somewhat masculine style, she was after all a true woman; she was weak, or, at any rate, she knew that the world was strong. How she allowed herself to leave the paths of conventionality seems almost incredible to us; she must have been acting as in a dream, and when she woke up she found herself quite miserable. She longed for all that she had lost with an incredible longing; her whole being suffered acutely—her innate sense of decency, her intense aristocratic vanity, her family pride, her love of admiration. She felt like a queen in exile, who has lost her rank; she kept her queenly manners among the people who surrounded her, but they were not those among whom she had been born and bred. She could not conceive why

the world had been more severe towards her than towards other great ladies who had broken the ties of matrimony; she wanted the boldness of some sinners, their quiet assurance; she wanted also the support of a powerful family, as her family had turned against her and abandoned her. It is necessary to keep in mind this dramatic state of the author's mind in order to enjoy fully the reading of these 'Souvenirs.' They are, so to speak, the "super flumina Babylonis" of a wounded soul, which is looking for solace and comfort in the memories of a past and distant youth, and which is studying another and better self. A severe critic might ridicule the affectation with which this author of the 'History of the Revolution of 1848' explains the origin of her family. How she delights in saying that she can find traces of the Flavignys in an old poem of the thirteenth century, in the Bible of Guiot de Provins! The Flavignys are mentioned with the Courtenays, the Duchastels, the D'Aspremonts, the Joinvilles; they bear "échiqueté d'argent et d'azur, à l'écusson de gueules en abyme."

Her father was an officer in the French army. When the Revolution broke out he followed his brother-officers to Coblentz. Prince Louis de la Trémoille gave him the brevet of colonel in the army of the Princes, and M. de Flavigny was sent to Frankfort-on-the-Main, with the mission of organizing a regiment. He there became acquainted with the Bethmann family, and a young widow of this family became enamored of the French officer, and, after much opposition on the part of all the Bethmanns, married him. Flavigny and his wife remained in Germany till the year 1809, when they bought an estate in Touraine. They had three children, two sons and a daughter, who was born in 1805.

Madame d'Agoult tells with much charm the history of her early years in Touraine. At the age of ten, when Bonaparte returned from the island of Elba, she was taken to Frankfort, and she describes the Bethmann family, "die alte Frau von Bethmann," her grandmother, her uncle Moritz, the hospitality of the Baslerhofs, the Hollweggs. One day she was in the garden with some young friends, and saw an old man, who was accompanied by the whole family with much respect. Her cousin told her, "Es ist der Herr von Goethe." Goethe spoke to her a moment and caressed her flowing hair.

In 1816 she returned to France, and the work of her education began in earnest. This education was ended in the famous Convent of the Sacré Cœur in Paris, which is still as Madame d'Agoult describes it, though it is threatened on all sides by the new streets and boulevards of Paris. She left the convent almost with reluctance; her father was no more, she was sixteen years old, she was very handsome, she was an heiress. This is how she describes herself: "Tall, slender, with a natural nobility in all my movements, a complexion as brilliant as snow, great blue eyes, limpid, fair and abundant hair, a thoughtful smile, I looked like a princess of the legends of the Rhine or of the ballads of Schiller." Madame d'Agoult had the vanity of beauty with an intensity and a simplicity which are almost touching; the consciousness or the memory of her beauty seems to have filled all her life. But I agree with her, "that some fondness of past beauty is the most natural and the most inoffensive sentiment in the world." This young Princess of the Rhine had not yet "what was French in her—the precision in the lines of the forehead, of the nose, of the mouth, the proud walk, the easy laugh"; this came afterwards. Such as she was, she had to make her *entrée* in the world under the auspices of an adoring mother. She did not herself adore her mother. "Her presence," she says, "was not agreeable to me, though she was for me nothing but indulgence. I would not have thought of opening my heart to her. I obeyed her in all my actions; she had no hold on my thoughts." The smell of the convent was not gone yet; the young beauty had a very exalted piety, and she suffered in the thought that her mother was a Protestant. She little thought at the time that her mother would afterwards become a Catholic, and that she would herself renounce all forms of Christianity and adopt philosophy as her religion!

She was married, as she says, "à la française": she was chosen, she did not choose. I will not enter here into the theoretical question of the "mariage à la française." It is enough to say that Madame d'Agoult, if she was the victim of an unfortunate fashion, could only accuse herself. She herself says that in the world where she lived she had remarked and preferred a peer of France, General Count de Lagarde, though he was forty-five years old. The general admired her and loved her without declaring his love. He came one day, on the eve of his departure for the waters of Gastein.

"When I entered the room M. de Lagarde was taking leave of my mother. I advanced towards him, and giving my hand to him—'I am going,' said he, and I felt tears coming to my eyes—'Yes,' said he, looking intently at me; and as I was silent, 'I am going,' said he again, and he added with a trembling voice, 'I go . . . unless you order me to stay.' Stay! . . . this word so short, this word which decided all my existence, it came, as rapid as thought, to my lips; I felt it there vibrating and trembling, . . . and there it expired. It died in an incredible suicide of love and of will. . . . Somebody came. M. de Lagarde went out. I went back to my room. I heard the carriage roll slowly under the archway; all was said. I put my head in my hand and sobbed."

And in consequence of this little incident, the beautiful Mademoiselle de Flavigny, after having looked with indifference on hundreds of adorers, was conducted to the altar by a man who was chosen by her family, by Count Charles d'Agoult, Colonel of Cavalry, nephew of the first Equerry of Madame la Dauphine, allied to the ancient houses of Castellan, of Sabran, of Simiane, of Forbin-Janson, etc. The King, Charles X.; the Dauphin, the Dauphine; Marie-Caroline, Duchess of Berry; the Duke of Orleans, the Duchess of Orleans, Madame Adelaïde, signed at her contract.

The best chapters of the 'Souvenirs' are the descriptions of the society of the Faubourg St. Germain just before the Revolution of 1831, and the presentations of the young countess to the little circles of the court. They are like those charming pictures and engravings of the end of the eighteenth century, in which a forgotten world seems to revive. It was the rule that the newly-married ladies should be presented in great ceremony. They were assisted by two *marraines*, and generally took lessons from M. Abraham, the dancing-master of the court. M. Abraham gave three lessons to Madame d'Agoult; he taught her to make the proper courtesies with the court-mantle. I will not attempt to describe the toilette; Madame d'Agoult, by special favor, was first presented in the *petits appartemens* to the Dauphine. "Coming straight to me, the Dauphine looks at me from head to foot, turns to the Viscountess d'Agoult, 'She has not enough red,' says she with a trenchant air; and, without saying a word more, she goes out as she had come, with a thundering rapidity. 'How did I not see it?' says the viscountess, looking herself at me, without showing the least astonishment at the singular reception of the Princess." There was no remedy; the apartments of the King were opened, and the young Countess, with the Viscountess d'Agoult on one side, the Duchess of Montmorency on the other, in one line made her low, profound, slow, and triple courtesy to His Majesty, Charles X. "Charles X., though he was seventy years old, had a certain *air de jeunesse*, with the indescribable *je ne sais quoi* of the French gentleman, when he has been much admired by the ladies. He was thin, slender, straight. Neither in the long oval of his face, nor in his oblique forehead, nor in his vague eyes, nor even in his white hair, was there anything which spoke of beauty or true authority; but the ensemble of it all seemed noble and graceful."

The soirées of the Dauphine, to which the young viscountess was admitted, were very solemn affairs. The Dauphine used to work at some tapestry; on both sides of her chair ladies were seated according to their rank. They only spoke to their neighbors, and in a very low voice. The Princess occasionally spoke loudly, and put a question; the answer was short, and the silence began again. The Dauphin invariably played at chess with the Viscountess d'Agoult, his old friend of Mitau. In another corner Charles X. played silently at whist with three of his gentlemen; when he retired, the whole company retired. Madame d'Agoult describes admirably the daughter of Louis XVI.; the stern Duchess d'Angoulême; the Duke d'Angoulême, the hero of the Trocadero; the Duke and the Duchess de Berry (the mother of the present Count de Chambord); her relations were such pure *ultras* that she was allowed to see little of the Palais Royal, where the Duke d'Orléans received the Liberals of the Restoration. The *salons* where she lived chiefly were the *salons*, now forgotten, of the Princess de la Trémoille, of the Marchioness de Montcalm, of the Montmorencys. She was allowed to go to Madame de Duras, to the Duchess de Narbonne, to the Duchess de Maillé, and to Madame Récamier.

The Revolution of 1830 ended this first act of an existence which was so different in its beginning and in its end. The fondness with which Madame d'Agoult has described her life when she was engaged in the regular hierarchy of society, shows how she remained always attached to the world with whom she broke with so much *éclat*. She is almost spiteful in her last chapters towards Madame Récamier and Madame de Staël, forgetting that Madame Récamier, though she was always courted, led the purest of lives, and that Madame de Staël, besides being a woman of genius, was always supported by a powerful family; she offended the

world, but never left the world, which is the offence the world will not and cannot forgive.

On the whole, these "Souvenirs" are, like most souvenirs, a melancholy book; it is painful to see the best gifts of nature, beauty, fortune, eloquence, wit, thrown away at the feet of some unworthy idol. But some chapters of this last work of Daniel Stern are really worthy of preservation, as minute and exact copies of the best French society in the later parts of the Restoration.

Notes.

THE author of a 'Life of Poe,' Mr. Eugene L. Didier, has in preparation a 'History of American Publishers,' full of gossip about men and books, anecdote, and biography, for which he invites suggestions and information. It will be illustrated with portraits. Mr. Didier's address is Monumental Library, 185 Madison Ave., Baltimore.——A 'Life of John Fitch, the Steamboat Inspector,' is in the press of J. B. Lippincott & Co. ——Alfred Martien, Philadelphia, will shortly publish 'The Law of Marriage, Divorce, Breach of Promise, and Rights of Married Women in the United States.'——The Society for Photographing Relics of Old London announces as the subjects of its fourth year's series Temple Bar; Gate and Courtyard of 102 Leadenhall Street (demolished in 1875); Houses in Gray's Inn Lane (demolished 1878); Shop in Brewer St., Soho; The "Sir Paul Pindar," Bishopsgate Street; Houses in Holborn. These views are permanent, in size 10 in. by 8 in., and may be had for the annual subscription of 10 shillings sixpence by addressing Mr. Alfred Marks, Long Ditton, Surrey.——We have received the first volume of Dr. F. Ratzel's work on the geography of the United States—the physical section—and are informed that the author requests for use in preparing his second volume (on social geography, or *Culturgeographie*) any late and fresh statistical information upon population, railroads, trade, commerce, industry, education. It may be sent him direct, at the Technische Hochschule, Munich, or through Prof. Adolph Werner, at the College of the City of New York. In the *Academy* of May 25 may be found some account of another work of Dr. Ratzel's, published three years ago, and not without its interest for Americans, on Chinese emigration (*Die chinesische Auswanderung*).——A very fair portrait of Mr. Edison, showing also distinctly his phonograph, is given in the June number of the N. Y. *Revista Industrial*. Mr. Edison's latest invention—an ear-trumpet for carrying on conversations at a distance of two miles or more in the open air—he calls a telescopophone. The achievement, wonderful as it is, seems less so than the name.——American engineers who attend the Paris Exposition have a strong inducement to visit Germany also, where a cordial reception awaits them at the hands of the Society of German Engineers and the Prussian Minister of Commerce. In Paris itself the Society of Civil Engineers of France offers "a hospitality worthy of our American colleagues." A circular of particulars has been issued by Mr. Thomas S. Drown, of Easton, Pa., Secretary of the American Institute of Mining Engineers.——It appears that the cable was in error in representing the report of the British Copyright Commission as unanimous. A number of minority reports have been made.——All of the late George Cruikshank's books, a great part of his prints, and a portion of his drawings and sketches were sold at auction last month and brought high prices. Some tiny Falstaff water-color drawings brought separately as much as $150 in two instances. The oil paintings fared not so well. There will be additional sales next winter. Cruikshank's pension has been continued to his widow.——A Platt-deutsche gathering has been held this week at Stuttgart with a view to raising the sum yet required to erect a monument to Fritz Reuter at Neu-Brandenburg. The *Athenæum* states that the subscription has been dragging for four years—— In *Polybiblion* for May M. J. Vaesen begins a series of papers on the public libraries of the United States, based on the Centennial volume of the Bureau of Education.——The second number of Georg Ebers's 'Egypt Illustrated and Described' ('Ägypten in Bild und Wort') has just appeared. The work is to comprise about thirty-six numbers and be enriched with some seven hundred illustrations. We may also note the appearance of the first number of the second volume of J. A. Vullers's edition of the 'Shahname' (Leiden), and a treatise by M. Schneidewin, 'Homeric Naïveté, an æsthetic-culture historical study.'

—The centennial celebration of the establishment of the first academy incorporated in this country was observed last Wednesday and Thursday, 5th and 6th of June, by the Phillips Academy, of Andover, Mass. Though Master Moody's famous Dummer Academy at Byfield was opened to pupils in 1763 it was not incorporated till 1782; and the act of incorporation of the Phillips Exeter Academy in New Hampshire followed by three years that granted to the Andover school. Phillips Academy was founded in 1778 by Judge Samuel Phillips, a graduate of Harvard College in 1771, for a time one of its overseers, and for twenty years the president of the Massachusetts Senate. His purpose was to establish a school fitted to instruct youth "not only in English and Latin grammar, writing, arithmetic, and those sciences wherein they are commonly taught, but more especially to learn them the great end and real business of living." Of such a purpose the history of the school has been worthy. Its students have numbered more than nine thousand, and three thousand of them have entered college. A large proportion of its graduates for the last thirty years it has sent to Yale, as the Exeter school has constantly sent the majority of its students to Harvard. In the list of its alumni are fifteen college presidents, and one hundred professors in colleges and professional schools. Among them are President Woods of Bowdoin, Stearns of Amherst, Kirkland and Quincy of Harvard, Professor Young of Princeton and Marsh of Yale and Churchill of Andover. Many of its students have also become distinguished in literature. N. P. Willis was a member of the school in 1821, and Oliver Wendell Holmes in 1824-25. Of such a history the anniversary exercises of last week were abundantly worthy. The oration of the Rev. Alexander McKenzie, of Cambridge, was mainly historical, but also considered the relation of the academy to the college. The poem of Dr. Holmes was a picture of school-life on Andover Hill fifty years ago; and, although pitched on a lighter key, deserves to be placed side by side with Mr. Longfellow's "Morituri Salutamus." Dr. Holmes also delighted his audience, at the dinner, by the reading of a brief translation made when, a boy of fifteen, he was a member of the school. An alumni association was organized; and the sum of $50,000 was raised towards an endowment fund, one half of which, continuing the liberality of the family whose name the school bears, was given by Mr. John C. Phillips, of Boston.

—Theodore Thomas's concerts at Gilmore's Garden began a fortnight ago, but it is perhaps too soon to judge of the probable success of this second attempt to attract popular audiences by thoroughly good music. The attempt has been made under different conditions from those which surrounded the first experiment at the Central Park Garden. There the place of amusement was a good way off, while the hall was small and adapted to concert music. Now the building is in the centre of the city, but it is of vast capacity; it must be tolerably well filled every night to pay, and it is not well fitted for hearing stringed instruments. This difficulty has been partly got over by railing off a considerable space in front of the orchestra, where it can be easily heard, and filling it with reserved seats for those who come to hear rather than to look on. Outside, however, go circling round and round the throng who come primarily to see what is going on, and the noise which their promenading makes is not a particularly good accompaniment for the music. A screen of moderate height erected behind the band would be worth trying. The music was announced in advance as of a popular character, and in a certain sense the promise is being fulfilled. Liszt's "Préludes," Wagner's "Tannhäuser March," Gounod's "Funeral March of a Marionette," are all popular with those whose ear has been sufficiently cultivated to know good music from bad; but we greatly fear that the musical education of a majority of the audiences which go to Gilmore's Garden has not carried them farther than the appreciation of "Home, Sweet Home" and "Champagne Charlie." In deference to popular taste Mr. Thomas has wisely secured the services of an able "cornetist," M. Shuebruck, who is certainly a capital player, and whose execution of variations on well-known airs always meets with great approval. As formerly at Central Park Garden, Mr. Thomas's Thursday evening programmes are quite classical; and it is to be hoped that the evident drawbacks of the present garden will not prevent really musical people from giving a hearty support to the enterprise.

—One of the minor compositions with which Mr. Thomas has this season pleased his audiences was a minuet by Boccherini, a composer of the last half of the eighteenth century whose name is now seldom seen on programmes. It is perhaps not generally known that he wrote no less than three hundred and sixty-six instrumental works, among them twenty symphonies and one hundred and thirteen quintets for two violins, viola, and two 'cellos. Better known are the facts that Handel wrote about fifty operas, all of which are now dead, and that of Haydn's one hundred and eighteen symphonies only about a dozen are occasionally played now. Schubert wrote more than six hundred songs, about one-half of which are

unknown or forgotten. Rossini manufactured thirty-eight, and Donizetti more than sixty, operas, of most of which scarcely the names are preserved; and other similar instances could be given by the score to show that of making compositions, as of books, there is no end. Now, why is it that of these compositions so many perish, like butterflies, after living a very short season? Partly because music, being the most subjective of the arts, is therefore the most progressive, and keeps altering with the changing intellectual and social phases of society and the growing complexity of our emotional life; but still more because of the reckless over-production of which most creative musicians are guilty. Their conduct is excusable in those cases where there is or was a pecuniary motive for it, but this pecuniary motive rarely existed, as composers are the worst-paid producers in the world, and many of the works of those who were most prolific were either not published at all or only long after their departure. Nor can they have hoped by such a course to improve their chances of immortality. On the contrary, it is evident that they would have greatly improved them by writing less and making that little richer in ideas and more finished in form. Had Handel written six operas instead of fifty, some of them would now perhaps be as popular as his oratorios; and, instead of having two hundred good Schubert songs, we might have at least one hundred more if that prolific writer had made better use of the doubtless great number of valuable ideas which he threw away in the remaining three hundred songs.

—Modern composers must be supposed to be familiar with these statistics and the lessons which they teach. And yet they do not seem to heed them at all. What is apt to strike one most in looking over the new catalogues of foreign music publishers is the rapidity with which the leading musicians produce their works. Their highest ambition appears to be to get as soon as possible beyond Opus 200. The *Neue Zeitschrift für Musik* recently asked pertinently, What is posterity to do with all these piles of music? It calls attention to the fact that there are now in Germany alone at least fifty composers whose names are generally known. Among these are twenty-nine opera composers, who, however, setting aside Wagner, have not in the last twenty years produced a single opera that will live. The list of German composers is headed by Wagner, Brahms, Raff, Franz, Rheinberger, Goldmark, Bargiel, Jensen, and we may add Rubinstein, and Liszt, who, though not Germans by birth, are yet thoroughly German as musicians. France adds to these Saint-Saëns, Gounod, Deliles, Joncières, Maillard, Massé, Masseult, Mermet, Offenbach, Thomas, and a host of others whose names usually disappear as quickly as they have come into notice. Of Italians only two, Verdi and Boito, deserve mention, although the smaller opera-writers who furnish all the "one-day flies" are countless in number. Belgium contributes about a dozen, Holland 11, Sweden 10, etc. The *Zeitschrift* points out that if the chances of immortality among composers of the past were 10 per cent., of the living only about 5 per cent. can have any rational hopes that their works will be played in the next century. This consideration certainly ought to make them hesitate in their course, and induce them to elaborate their ideas more carefully. Like their literary cousins who write for our best periodicals, these musicians must sooner or later learn to express themselves always neatly and concisely, to write only when they have something new to say, and to stop short when they have said it. The slovenly form and absence of polish and directness which often affect one so disagreeably in the literature of the Germans is no less conspicuous in much of their music; and it is to be regretted that more of them do not follow Chopin as a model in this respect. Heretical as it may sound, we must add that Mozart has too long been held up as a model of musical elegance by the critics. Nothing could be more aimless often than his cold formalism; nothing more slovenly and wearisome than his constant repetition of meaningless cadences at the end of every short musical phrase.

—Gen. A. A. Humphreys, Chief of the Engineer Department, has addressed a letter to the Chairman of the House Committee on Levees and Improvement of the Mississippi, in opposition to a scheme for surveying the Mississippi from St. Louis to the Gulf, preparing plans to improve navigation and prevent disastrous overflow, and carrying the same into effect. Four of the proposed commission are to be taken from the United States Corps of Engineers, but the fifth from civil life, though he is to be president and to control the decisions of the commission, even as to what projects, plans, or estimates shall be submitted to the President or Secretary of War. General Humphreys thinks this in the interest of Capt. J. B. Eads, who has recently proclaimed his ability to deepen the low-water channel of the Mississippi to twenty feet, and would naturally like to get to work at it as director-in-chief. Not only, however, does he encroach upon the proper province of the Engineers, who are actually engaged upon the survey of the river for the objects contemplated, but he challenges anew the Department's opinion of his capacity and of his success as shown in the working of the jetties at the South Pass. Gen. Humphreys denies the practicability of the canalization which he contemplates, or that there is any information on which to base an estimate of the extent and cost of works necessary for a twenty-feet low-water channel. As for the jetties at the South Pass, he asserts that the Department's prediction has proved true already, and that the bar-growth formed under their action is more rapid than the old, and can only be kept down by the indefinite extension of the jetties (which is both difficult and extremely expensive in deep water) or by dredging. Dredging has, in fact, been resorted to, as at Southwest Pass—or, in other words, the very thing which Congress sought to dispense with by making the Eads contract. These are serious representations, and should be duly weighed before Captain Eads is allowed the relief on his contract which he has already persuaded the Senate to grant him, and still more before any consideration is given to the larger scheme above described. To get the Mississippi River out of politics is a pressing economy; the getting of it in has cost us nobody knows how much.

—The first number of *Brain*, "a journal of neurology," which is to include in its scope "all that relates to the anatomy, physiology, pathology, and therapeutics of the nervous system," has lately made its appearance in London (Macmillan & Co.) It is to discuss mental phenomena only so far as these are correlated with their anatomical substrata, and mental disease is to be studied "by the methods applicable to nervous diseases in general." It is edited by Drs. Bucknill, Crichton-Browne, Ferrier, and Hughlings-Jackson, and the long list of English and foreign contributors seems to be a sufficient guarantee for the fulfillment of its programme. The first number, however, is somewhat disappointing. The different states of the pupil as symptoms of disease, muscular sense, the rôle of the dura mater in cerebral traumatism, the symptoms of organic brain-disease, the structure and distribution of cortical cells, and skull-mapping, are by no means subjects as yet "inadequately represented in existing medical and scientific serial literature." The only article which is not less indicative of a new departure than the prospectus is that on "Brain Forcing," by Dr. Allbutt. He regards all mental activities from five strictly neurological points of view. The best *quality* of brain is "that structure of cell and fibre which corresponds more widely or intimately with outer conditions, so that by virtue of such relation the individual more readily apprehends things and conceives them. This is genius in the stricter sense." *Quantity* is "the volume of nerve force given off by the brain," without regard to quality. *Tension* is "the power in the nerve action to overcome inner and outer resistance." *Variety* is "the congregation of different centres, and the weaving of mediate strands which gives the possessor not higher or wider, but a greater number of relations with outer things. In common life this is usually called versatility." *Control* is due "subordination of one centre to another, which, if of the lower to the higher, results in obedience to the more permanent order of the universe." Goethe, for instance, it is said, had all these faculties. Schiller "had high quality, tension, and control, but was defective in endurance and in variety. In Keats we recognize quality, tension, and variety in high degrees; control in less measure, and quantity in defect." Of these quality is highest, latest, and (consisting, "as it probably does, in added ganglionic and commissural structure") is least developed, though it is most easily injured by wrong methods of education. Quantity is most—tension, which is dependent on the "tides of the blood-vessels," is least—dependent on physical vigor. Variety is chiefly innate; control is mainly the creature of education. This bold nomenclature—when compared, *e.g.*, with the Cartesianism of Professor Huxley, who prefers to express matter in terms of mind rather than the reverse—is of great significance as indicating how far physiology has come to assume the arbitration of all psychological questions. Hence, as was urged in a late number of *Pflüger's Archiv*, physiology is fast becoming, like "philosophy," too wide and comprehensive a department to be advantageously included in its whole scope by individual workers. Analogies with and possible modes of mental action which are constantly suggested already lend great interest even to the details of the microscopic anatomy of brain-structure as described by Meynert, Flechsig, Luys, and many others. We earnestly hope that the editors of *Brain*, no less than Dr. Allbutt, are fully alive to the vast problem which has made and defined the department of physiological psychology—viz., to determine how far the philosophy of mind can be restated and new-dispensed in terms of neural structure and function.

—Every number of *Nature* since its enlargement has been remarkable for its contents, but the issue for May 23 possesses a peculiar interest. Mr. Francis Galton's paper on "Composite Portraits" gives the latest result of his very original study of the laws of consanguinity and descent. By a process intelligible to any one who understands the first steps in photography he takes upon one and the same plate faint successive images of several card-portraits, arranged in a pack before the camera, and so "registered" (to use a printer's term) that the eyes of each portrait are on a line, and equidistant from an imaginary vertical line between them. For the rest the portraits must have a general similarity in attitude and size, "but no exactness is necessary in either of these respects." What follows can shrewdly be predicted from these conditions: the features which are common to all the portraits will by dint of longest exposure make the strongest impress on the negative, while the different peculiarities will leave little if any trace of themselves. The "composite" thus obtained, when printed, shows a face that would not be suspected of being other than an individual likeness, and which yet bears a resemblance to every one of the members of which it is composed. It is, in short, an abstraction or *type* of these members. Mr. Galton has had engraved, to accompany his paper in *Nature*, a "composite" derived from three components borrowed from the British "rogues' gallery." He remarks in a descriptive note:

"To the best of my judgment the original photograph is a very exact average of its components; not one feature in it appears identical with that of any one of them, but it contains a resemblance to all, and is not more like to one of them than to another. However, the judgment of the wood-engraver is different. His rendering of the composite has made it exactly like one of its components, which it must be borne in mind he had never seen. It is just as though an artist drawing a child had produced a portrait closely resembling its deceased father, having overlooked an equally strong likeness to its deceased mother, which was apparent to its relatives. This is to me a striking proof that the composite is a true combination."

—What are the uses of this discovery? They are many, says Mr. Galton. "They give us typical pictures of different races of men, if derived from a large number of individuals of those races taken at random;" or of strongly-marked selected types, as from the criminal classes: Stranger still, however, we may by means of components obtain "a really good likeness of a living person"—not simply a phase, or an expression, but the essential characteristics. In like manner, portraits of historical personages might be produced from contemporaneous coins, medals, statues or other effigies. In both these instances, however, the likeness known or presumed to be the best should "weight" the most—*i. e.*, should be allowed a longer exposure before the sensitized plate, and this is particularly the case when attempting, as Mr. Galton next proposes, "to compare the average features of the produce with those of the parentage." For example, "I should 'weight' each parent as 4, and each grandparent and each uncle as 1; again, I should weight each brother and sister as 4, and each of those cousins as 1 who inherited any part of the likeness of the family in question, etc." Finally, not only can men and women thus forecast the results of marriages, but breeders of animals may do the same for any proposed union. Mr. Galton solicits "sets of family photographs all as nearly as possible of the same size and taken in the same attitudes," and suggests as the proper size for them "that which gives one-half of an inch interval between the pupil of the eye and the line that separates the two lips." He shows how one may, by using the stereoscope, obtain the effect of two superimposed images; we can vouch for the striking results of this simple experiment.

—A correspondent writes to us from London, under date of May 18: "It is still something of an event in London when Mr. Henry Irving undertakes a new part; and I hope I shall not seem to speak brutally if I say that it is a good deal of an event when he undertakes it successfully. This happened several weeks ago, and the interval has proved the success. Mr. Irving appeared as *Louis XI.*, in an English 'arrangement,' of which I believe the perennial Mr. Boucicault has the credit, of Casimir Delavigne's rather dull and dreary drama of that name. It makes, as now performed at the Lyceum, quite what is called on the English stage (where alone the monstrosity is known) as a "one-part play." But Mr. Irving plays his one part very well, and it is probably his most satisfactory creation. In this elaborate, picturesque representation of a grotesque old tyrant, at once passionate and cunning, familiar and ferocious, he has the good fortune that some of his defects positively come to his assistance. He is an incongruous *Hamlet* or *Macbeth*, but he is a very consistent *Louis XI.* The part was a favorite one with Charles Kean, who played it with more delicacy, and, at the same time (according to my recollection), with more *rondeur*, as the French say; but certainly, in the actual state of the English stage, there is no actor capable of doing the thing so cleverly and picturesquely as Mr. Henry Irving—in spite of his always saying 'gaw' for *go*, 'naw' for *no*, etc. Mr. Irving's eccentricities of utterance, however, are very numerous, and on this point the auditor must make a large concession at the outset. Apropos of the actual state of the English stage, I may add that it has just been very oddly illustrated by the remarkable success, at the Court Theatre, of Mr. Wills's play of 'Olivia,' a pathetic drama extracted—violently extracted—from the 'Vicar of Wakefield.' The idea of making an effective play, adapted to the modern appetite, of Goldsmith's delicate and humorous masterpiece, whose charm is almost wholly the exquisite narrative style, could have originated only with a playwright desperately at a loss for a subject. Yet 'Olivia,' with all Goldsmith's humor and delicacy left out, is a great success—a success rivalling that of the cleverly-played 'Diplomacy,' at the Prince of Wales's, of which a report was some time since given in your columns. It seemed to me at the Court Theatre that the success could only be accounted for by an extraordinary apathy of taste on the part of the public, and a good-natured disposition in the well-fed British playgoer who sits in the stalls after dinner to accept a pretty collection of eighteenth-century chairs, and buffets, and pottery, with which 'Olivia' is elaborately equipped, as a substitute for dramatic composition and finished acting. The play is tame, dull, and puerile, and the acting can hardly be condemned in a piece which offers such meagre opportunities. The only opportunities, in fact—and they are singularly few—are those of Miss Ellen Terry, as the heroine. Miss Ellen Terry, whom it is greatly the fashion to admire, has a great deal of charm and an interesting, pathetic, even beautiful countenance. But, whether it is the amateurship of the piece or not, the representative of the Vicar's erring daughter seems amateurish. The goody-goody, namby-pamby element in 'Olivia' is its most striking feature, and, combined with the extreme thinness of its interest, it really makes a thoughtful spectator revert longingly to those skilful productions of the French theatre in which, if the moral tone is loose, the dramatic texture is of the finest. It provokes him to declare that the highest morality, for a play, is that it be very well made. It would be interesting to hear the judgment of a first-rate French critic—of M. Francisque Sarcey, for example—upon such a drama and such a performance as 'Olivia.'"

HUGO'S HISTOIRE D'UN CRIME.*

WHY does Victor Hugo's last volume leave on the mind even of admirers a sense of unmistakable failure? The greatest of living French writers undertakes to denounce the vilest political crime of the nineteenth century. We expect one of those immortal diatribes by which indignant virtue has three or four times within the world's history branded successful vice with eternal infamy. Æschines will for all time writhe under the eloquence of Demosthenes. Catiline and Antony will never get rid of the insults hurled at them by Cicero. No historian, charm he never so wisely, will ever persuade mankind that Nero and Tiberius were not the monsters they are painted by Tacitus. The heroes of the Reign of Terror have found their followers, their admirers, and their apologists, but no skill of advocacy has availed to heal the wounds inflicted on their reputation by the combined insight, passion, and rhetoric of the 'Regicide Peace.' Victor Hugo might, we had hoped, have left as his last legacy to his country a picture of the *Coup d'état* which should throughout all generations cover Napoleonic Imperialism with infamy. If such was the aim of the greatest living genius who has ever devoted his talents to the service of republicanism, we are forced most unwillingly to admit that he has failed of his end, and to ask again what is the cause of the failure.

The causes—for there are more than one—are not far to seek, but they are worth consideration. The most obvious is that Victor Hugo's genius, great though it undoubtedly is, is not the genius of an orator of the first class. To attain perfection in the eloquence of invective, as in every other kind of eloquence, a writer or speaker needs (in addition to passion and imagination) self-restraint and rationality. Each of these qualities Victor Hugo, in spite of his transcendent powers, lacks. An orator must be passionate, but he must not write in a passion. Throughout every page of this volume the reader feels that Victor Hugo is angry, but the rage of the writer conceals the justice of his anger. No actor (and every orator or rhetorician is to a certain extent an actor) ever

* 'Histoire d'un Crime. Tome ii. Par Victor Hugo.' Paris: Calmann Lévy; New York: F. W. Christern

carried away his audience unless he himself was cool enough to act. How great is the effect of this perfect coolness may be seen by comparing Victor Hugo with an English author as much inferior to the Frenchman in genius as he is superior to Victor Hugo in the one gift of sending his rhetorical blows right home to their mark. This author is Junius. It is safe to conjecture that the masked assailant of George the Third and his ministers was a man of no great intellectual power, of narrow sympathies, and of limited imagination ; but in the force which arises from coolness and self-restraint he ranks with the most powerful of satirists. We are no admirers of George the Third or his court, but George the Third was, we do not hesitate to assert, in comparison with Louis Napoleon, a high-toned patriot. The Duke of Grafton was not the ideal either of a man or of a minister, but even the vindictive hatred of Junius would draw a distinction between the ordinary vices of the duke and the astounding crimes of the scoundrels who planned and carried out the treacheries and atrocities of the *Coup d'état*. Yet Junius has made the men whom he denounces the objects of lasting contempt, and the secret of his success lies in the astonishing adroitness with which every blow is aimed exactly at the right point, and the equally astonishing art with which, in the midst of the most telling invective, Junius lets it appear that the crimes which he has revealed are as nothing to the unknown depth of turpitude which his indignation will, when fairly aroused, unveil for public execration. To Victor Hugo such reserve is totally unknown. He pours out an amount of abuse which under the circumstances is fully deserved by its object, but which makes it impossible to suppose that as far as Victor Hugo's knowledge goes we have not learnt the very worst which can be said of the President and his court.

The bad effect produced by a want of self-restraint is much increased by a marked want of rationality. The horrors of the *Coup d'état* hardly, it might well be thought, admit of exaggeration. Told simply and calmly by Tenot, and as they are, we must in fairness add, by Victor Hugo himself in some chapters of his last volume, they revive all the feelings of mingled hatred and contempt with which in 1852 every Liberal throughout the Old and New World regarded the President. But even the iniquities of the 2d of December provoke something like a smile when narrated in such epigrammatic bombast as this :

"Suddenly a window was opened.

"Upon Hell.

"Dante, had he leaned over the summit of the shadow, would have been able to see the eighth circle of his poem ; the funereal Boulevard Montmartre.

"Paris, a prey to Bonaparte ; a monstrous spectacle.

"The gloomy armed men massed together on this Boulevard felt an appalling spirit enter into them ; they ceased to be themselves, and became demons.

"There was no longer a single French soldier, but a host of indefinable phantoms, carrying out a horrible task, as though in the glimmering light of a vision.

"There was no longer a flag, there was no longer law, there was no longer humanity, there was no longer a country, there was no longer France ; they began to assassinate.

"The Schinderhannes division, the brigades of Mandrin, Cartouche, Poulailler, Trestaillon, and Tropmann appeared in the gloom, shooting down and massacring.

"No ; we do not attribute to the French army what took place during this mournful eclipse of honor.

"There have been massacres in history, abominable ones assuredly, but they have possessed some show of reason ; Saint Bartholomew and the Dragonnades are explained by religion, the Sicilian Vespers and the butcheries of September are explained by patriotism ; they crush the enemy or annihilate the foreigner ; these are crimes for a good cause ; but the carnage of the Boulevard Montmartre is a crime without an ostensible reason.

"The reason exists, however. It is hideous.

"Let us give it.

"Two things stand erect in a State, the Law and the People.

"A man murders the Law. He feels the punishment approaching, there only remains one thing for him to do, to murder the People. He murders the People.

"The Second of December was the Risk, the Fourth was the Certainty.

"Against the indignation which arose they opposed the Terror.

"The Fury, Justice, halted petrified before the Fury, Extermination. Against Erinnyes they set up Medusa.

"To put Nemesis to flight, what a terrifying triumph !

"To Louis Napoleon pertains this glory, which is the summit of his shame.

"Let us narrate it.

"Let us narrate what History had never seen before.

"The assassination of a people by a man."

The quotation is a little long, though it is but a fragment of the rhetoric which fills the 'History of a Crime.' But it is well worth attention. Of the exaggerations which it contains little need be said. We yield to no man in our hatred of the *Coup d'état* and its authors, but the simplest knowledge of history makes it impossible to admit that the world has never seen darker scenes than even the massacre of the second of December. What is better worth note is the strange irrationality which suggests that the slaughter of St. Bartholomew or the butcheries of September (perhaps the most cowardly series of crimes on record) admit of a kind of palliation because they arose from popular fanaticism or passion. Here we come to the very root of Victor Hugo's weakness. At bottom he adores passion. Hence insurgents or a mob have a certain half-sacredness in his eyes. At the worst, they have the inspiration of passion, even if they derive their inspiration from the devil. Hence again, and not from any meanness or want of courage, Victor Hugo, with all his daring and genius, cannot vigorously denounce the worst faults either of the people or of France. The *Coup d'état* was an infamous crime, but it never could have been crowned with success but for the apathy of Paris and the selfish cowardice of France. Yet throughout Victor Hugo's diatribe Paris must be treated as a sacred city, and the President and his co-conspirators must be made (deservedly enough, as far as they are concerned) a scapegoat which may carry off the guilt and responsibility that rests on the generation of Frenchmen who condoned the crimes of the President and admired the success of the Empire.

The same cause which weakens Victor Hugo's denunciation of popular errors accounts for the curious element of lawlessness apparent in his political views. He stood forth against the President as the righteous asserter of the law, yet you can hardly feel that he himself respected legality. He dramatically announced to his friends that come what would the President's head should not fall. To spare the life of the greatest of criminals was, he argued, to abolish capital punishment. The simple reflection that whether the President should, if vanquished, suffer death or not, depended solely on the fact whether he had committed a crime which the law punished with death, never seems to have occurred to a leader the strength of whose position lay in obedience to law. To support the law and to override it is conduct quite in keeping with the character of a man who most righteously excited the artisans to take up arms in defence of the Republic, and at the same time most absurdly refused (though risking his life) himself to fire a shot.

The want of reasonableness which runs through Victor Hugo's character has marred even the literary effectiveness of his last volume. But a second cause of that work's comparative failure is, that Victor Hugo has undertaken a task difficult in itself and singularly ill-suited to his genius. The Republican historian of the plot which destroyed the Republic must be not only the assailant of the President but also the apologist of the Republicans. A calm and candid writer would admit that the Republican leaders were, from the fall of Louis Philippe to the second of December, 1851, in a false position, and that no one of them showed anything like the statesmanship which might possibly, in 1848, have achieved the great feat, which has been achieved in 1878, of bringing over the nation to the support of the Republic. But of the calm apology which admits the faults, and errors even, of men who ultimately defended the cause of freedom and legality against lawless despotism, Victor Hugo knows nothing. The Republic is in his eyes a government by divine right. The Republican leaders are faultless heroes and immaculate martyrs. He hardly sees, and therefore cannot properly apologize for, the errors of his party. Yet, that the very success of 1848 placed the Republicans in a false position must now be patent to every impartial observer. To put the Revolution of February on the same level as the plot of December is to confound a grave error with an atrocious crime. Nevertheless, it is impossible to deny that the party who overthrew a legal government by means of the Paris mob did not stand on strong ground when four years later they attempted in vain to protect the legal government against the army of Paris. Add to this that in their dealings with the President the sincere Republicans exhibited the utmost political incapacity. Suspecting treachery, they took no single effective step for their own protection, and, though they must have foreseen that an armed attack was highly probable, never arranged any course of proceeding in case the attack should take place. But to these and the other errors committed by himself and his friends Victor Hugo is blind. Hence his narrative of the contest in which he and his associates were overpowered by force has a false ring, and the tragedy reads far too much like a melodrama. You see striking scenes, you have pictures of heroic exertion and of heroic self-sacrifice, but no part of the drama is clearly connected with the other, and you find it difficult to understand how it

happened that men inspired with genius, resolution, and self-devotion received no support from the people.

It must also be added that a narrative which does not make prominent the errors and faults committed by the Republicans in 1851 inevitably fails to suggest the lesson which those errors ought to convey. The true moral of the 'History of a Crime' is that a set of reckless desperadoes overthrew the Republic of 1848 because the nation had not been gained over to the side of the Republic. In 1878 the Republicans have shown that they are strong enough to resist a president at least as powerful and possibly not much more scrupulous than Louis Napoleon. But in 1878 the Republic has become the government not of a party but of the nation. If the historian of a crime could have told calmly the story of the *Coup d'état* he might both have covered the criminal with infamy and have shown the strength of the Republic of 1878. Victor Hugo, however, who is still at heart the Republican of 1848, if he has revived the memory of Louis Napoleon's crimes, has also recalled to the recollection of the world the follies of the Republicans which made possible the triumph of the President. One object of the work has been missed, and the book will remain for ever a monument of the failure to which even genius is exposed when attempting tasks unsuited for its powers.

Charlotte Cushman. Her Letters and Memories of Her Life. Edited by her friend, Emma Stebbins. (Boston: Houghton, Osgood & Co. 1878. 8vo, pp. 308.)—It is fit that the memoirs of Charlotte Cushman should thus early appear, succeeding at no great interval the biographies of William Charles Macready and Edwin Forrest, the two great actors from whom she learned much, and with whom for more than a quarter of a century she shared the sovereignty of the stage. Miss Stebbins's book is a better biography than Mr. Alger's ponderous 'Life of Forrest.' It brings before us distinctly the keen intelligence, the loving disposition, the faculty of making and keeping friends, the unchanging cheerfulness, the self-reliance, the clear common-sense, and, above all, the stalwart strength of will which made Charlotte Cushman what she was—in spite of trouble and trial, in spite of loss of voice just when success as a singer seemed within her reach, in spite of want of money when she was working her way along as an actress, in spite of insidious disease when at last she had gained fame and fortune. Miss Stebbins devotes most of her first chapter ("Genealogical Sketch of the Cushman Family") to a showing of the actress's descent from Robert Cushman, one of the two financiers and managers of the adventurers who set out for these shores two hundred and fifty years ago in the *Mayflower* and the *Speedwell*, and all through the book there is ample evidence that Charlotte Cushman had inherited the sturdy soul of her ancestor, and that she had her full share of Yankee grit. It is in this presentation of the character of her subject that the author has been most successful, and in her description of the life in Rome during those years when Charlotte Cushman's apartments were the centre of a choice circle—and in but little else. The interest of the reader in Charlotte Cushman arises from her having been a great actress. From this biography there is much to be learned about her as a woman. There is nothing—indeed, less than nothing—to be learned about her as an actress.

Miss Stebbins's memoir is, in fact, the least theatrical of all theatrical biographies. We rise from the reading of Davies's Life of Garrick or the 'Reminiscences' of Macready with a distinct and heightened impression of the merit of each as an actor. From this book we get what we know to be a false view of Charlotte Cushman's ability as an actress. Not that Miss Stebbins does not praise her acting; the praise is not discriminating, it is even ignorant. The author has plainly but little knowledge of the stage either internally or externally. Her book is full of blunders in theatrical history and in dramatic criticism. Here, for instance, is one of Miss Stebbins's assertions (p. 24): "Beyond the due expression and feeling given to the words, which she could never wholly omit even in study or rehearsal, the acting was left to the inspiration of the time and place." If this were so, Miss Cushman's career would hardly have called for a biography, for she would never have risen above mediocrity. No one who knew anything of the principles of the art of acting ever saw her act *Queen Katharine* without being sure that the whole conception of the part had been thoroughly thought out, and its mechanism wholly mastered. The stage is the last place where happy-go-lucky "inspiration" is likely to succeed, and this was certainly known to the writer of the letter (p. 142) which thanks a friend for speaking "approvingly of my beloved art, and all that it takes to make an exponent of it. . . . But no one knows better than myself, after all my association with artists of sculpture or painting, how truly *my* art comprehends all others and surpasses them, in so far as the study of mind is more than matter."

This very letter from which we have just quoted cites a speech of *Tisbe's* (a character in Victor Hugo's "Angelo"), which Charlotte Cushman frequently played; but no mention of the fact is made here, nor of her appearance in the spectacular play of the "Naiad Queen," in which she led an Amazonian march, marshalling her fair warriors with great success. Doubtless there are other parts in which she was successful, or which she at least attempted, not recorded by Miss Stebbins. It is impossible, for instance, to ascertain from her volume the date of the famous first performance in New York of that meretricious bauble, "London Assurance," in which Charlotte Cushman played *Lady Gay Spanker*. Dates are all too sparingly inserted; a few more of these and a full list of all parts played are greatly to be desired. Such a list would have shown Miss Stebbins that so far from Charlotte Cushman and Edwin Forrest never having played together, she supported him for two seasons at the Park Theatre, and not entirely, it is said, to his satisfaction—which was perhaps the reason why, when he brought out the "Lady of Lyons" for the first time in this city, she was cast for the comparatively insignificant *Widow Melnotte*, which she, however, succeeded in raising into prominence. It would also show us how many absolutely new parts she undertook—"created," in the French phrase. We are told here that Talfourd promised to write a play for her, and the unfortunate fate of Chorley's "Duchess Eleanour" is here set down. Charles Lamb declared that John Kemble thought all the good plays had been written, and it seems as though Charlotte Cushman agreed with him. Certainly we owe fewer additions to dramatic literature to her than to any other actor of her prominence of late years; Macready and Forrest, and even Charles Kean, have left behind them plays of which they were the exciting cause. Charlotte Cushman has left none, unless we take account of the galvanizing again into a spasmodic existence of the wretched version of 'Guy Mannering' in which she was *Meg Merrilies*. Miss Stebbins gives 1841 as the date of her first performance of this part, which is at least four years too late. The story of Braham's having been greatly astonished and delighted by her acting it seems rather apocryphal, inasmuch as she had made a success in it years before he first visited America. These things show again that Miss Stebbins has done little or nothing for the student of the stage; she knew and admired Charlotte Cushman off the stage, and it is only off the stage that she can appreciate her and makes us appreciate her.

The book is beautifully printed, and has a sufficient index. It is adorned with three permanent photographs—one of Miss Cushman's villa at Newport, another from the author's portrait-bust of her, and the frontispiece—a firm and striking photograph of late date by Gutekunst.

Dictionary of English Literature. Being a Comprehensive Guide to English Authors and their Works. By W. Davenport Adams. (London and New York: Cassell, Petter & Galpin. 1878. Small 4to, pp. iv.–708.)—The aim of this work is to present in alphabetical order the most prominent English writers, their leading works, the various pseudonyms adopted by writers, the leading characters in poetry, drama, and fiction, and a large number of familiar quotations. Biography is mainly confined to dates; but little first-hand criticism is attempted, the opinions of others being quoted freely. There are special articles on the drama, newspapers, novels, which compose the most original part of the work. The articles on the English Drama and the dramatic notices are particularly full and generally well done. The author is evidently more familiar with the later English literature than with that of an earlier period, and sympathizes with the sensuous school of which Swinburne is the most conspicuous example. Tennyson and Swinburne occupy more space than Milton and Dryden; Pope and Swift together five times as much as Chaucer; Walt Whitman as much as Mrs. Browning or her husband. In some respects the plan is faulty, and in many respects its execution is defective. Especially not worth while was it to cumber the pages of a Dictionary of English Literature with familiar quotations, many of them repeated three or four times by cross references, for but a small portion can be admitted, and there is at least one Dictionary of Familiar Quotations which makes competition hopeless. Moreover, the attempt to introduce them alphabetically gives rise to the most ludicrous inversions—*e.g.*, "Full was there! O what a"; "Human face divine, Or"; "Ripe and Ripe, We"; "Difference to me, Oh, the."

A want of fulness and general accuracy is observable throughout the work: we have made the following memoranda in a cursory examina-

tion. As regards American literature, no place has been found for Henry N. Hudson, George P. Marsh, Lewis H. Morgan, or Henry C. Lea (to mention no others), of living scholars and writers. Dickens's 'American Notes' are stated to have given great offence in America, but no reference whatever is made to the courteous note of apology which Dickens wrote after his last visit, and which he ordered printed in every subsequent edition. The London *Athenæum* is admitted, but not the *Academy*. Dodsley's 'Old Plays' is cited with no mention of the edition except in the last half of the book, where Carew Hazlitt's is referred to. The various editions of this standard collection vary so much that the mere description of "Dodsley" is wholly insufficient. Hazlitt's edition contains Dodsley's original ten volumes, his two supplemental volumes, Dilke's 'Old Plays,' Hawkins's 'English Drama,' and the plays given in Collier's 'History of the English Drama.' The lines "Apollo from his shrine Can no more divine" are referred to Milton's "Il Penseroso," when every school-boy knows that they are from the "Ode on the Nativity." Thos. Heywood's 'Apology for Actors' is called a *poem!* It is prose, and prosy enough, too, not to be mistaken for poetry. The Shakspeare Society's edition, to which reference is made, is preceded by certain commendatory poems, which the writer evidently mistook for the body of the work. The Anglo-Saxon poem of Beowulf "was edited by T. Arnold in 1876." This is a half truth that carries a falsehood, no allusion being made to the fact that there are several older and better editions. Thorkelin, a Dane, issued the first edition in 1815, and since that date editions have appeared in England by Thorpe and by Kemble; in Germany by Ettmüller (in part), Grein, Heyne, and several translations. Arnold's is the latest, but unquestionably not the best edition. Heyne's is probably the best; it contains the text, with notes and a glossary; it has recently passed to a second edition. Mr. Adams refers the 'Court of Love' to Chaucer, without any hint of the fact that the best critics do not consider it his. The Coventry Plays are referred to as being in MS., yet they were published by the Shakspeare Society in 1841. "From Dan to Beersheba" is said to be "an expression used by Sterne in his 'Sentimental Journey'"! Did the author never meet this expression in a book much older than the 'Sentimental Journey'? "'Ecclesiastical History of Great Britain,' by the Venerable Bede, translated by King Alfred, and first published about 1473." This is too gross an error to be due to mere ignorance; it is probably a misprint. Printing was not introduced into England until 1474, according to the generally received accounts. The first edition of Alfred's translation of Bede was that of Whelock in 1643; the next was that of Smith in 1722. The "Octavia" is a play said to be "adapted from the *Greek* of Seneca," and the same statement is repeated as to the "Thebais" and the "Thyestes." The writer's library must be unique if it contains a copy of Seneca in Greek.

There are numerous misprints, not a few of which are attributable to sheer carelessness. Dr. Johnson's sarcasm on Bolingbroke is turned into a bull of the first water: "Having *discharged* a blunderbuss against morality and religion, he had not the courage to fire it off himself, but left half a crown to a beggarly Scotchman to draw the trigger after his death." The quotation, moreover, is silently mutilated, though the omitted words contain the gist of the charge. Moore's song is given as "Come, rest in this bosom, my *young* stricken deer." For "young" read "own." The motto of the *Edinburgh Review* is given as "Tenui musam meditamur *avera*." Charles Fenno Hoffman appears as Charles Fenn Hoffman. Bell's edition of the poets is quoted as "Bell's *Annotationed* Edition." The old English song, "Somer is ycomen in," is shockingly misprinted, while Spenser's lines on Chaucer are thus made ridiculous:

> "Dan Chaucer, well of English undefyled,
> On Fame's eternal bead-roll worthie to be *pyled*."

For "pyled" read "fyled." Finally, foreign authors whose works have been translated into English are very arbitrarily inserted. Thus, one looks in vain for Mérimée, Manzoni, Fritz Reuter, Turgeneff, Tegnér, etc.

Synoptical Flora of North America. Vol. II., Part 1. *Gamopetalæ after Compositæ.* By Asa Gray, LL.D., etc. (New York: Ivison, Blakeman, Taylor & Co. 1878. Pp. 402, imp. 8vo.)—At length we have a first instalment of the long-looked-for continuation of Torrey and Gray's 'Flora of North America.' Forty years ago these two botanists, *par nobile fratrum*, began what was intended to be an approximately complete Flora of America, "north of Mexico." Five years and more were spent, Europe was visited to study the original specimens upon which very many American species were founded, all the active botanists of every section of the country were united in procuring new material, and two volumes of over 1,200 pages were issued between the years 1838 and 1843, carrying the work through the *Compositæ*, and leaving still a half to be done. Glancing at the list of coadjutors in that work, as given in the preface to the first volume, we can but note how they belonged to a generation that has now passed away—Nuttall, Oakes, Hitchcock, Dewey, Sartwell, Beck, Bailey, Eaton, Darlington, Durand, Schweinitz, Curtis, Elliott, Le Conte, Leavenworth, Riddell, Short, Peter, Rafinesque, Sullivant, Lapham; only here and there is the name of one who may still be seen among the living. Bigelow, Tuckerman, Barratt, Chapman, Buckley, these alone remain of the eighty or more to whom acknowledgment is made for aid received. So too of the foreign botanists mentioned—Brown, Hooker, Lindley, Arnott, Don, Lambert, Boott, Fraser, Jussieu, De Candolle, Endlicher, Fenzl, Martius, Zuccarini, Schlechtendahl, Kunth, Trinius, Bongard, Lehmann—all have joined the majority, save alone Bentham and Decaisne. Of the two at the head of the former work one has gone to his rest, honored and beloved, while the other, still in the full vigor of his intellect, unwearied and unworn by his many years of busy and fruitful toil, holds firm to his early purpose, and has given us to-day the earnest of a completed task.

The conviction that the time had not come for such an undertaking interrupted the early attempt, and the progress of events has justified that conviction. Our borders were soon afterwards extended to include Texas, Utah, and all the region westward to the Pacific. This political enlargement was followed by a gradual development of our knowledge of the flora of this vast region through the collections made by Lindheimer and Wright in Texas, by Fendler in New Mexico, and afterwards by the botanists connected with the surveys for a railroad route to the Pacific and for the location of the Mexican boundary. Later still, the State Survey of California, under Prof. J. D. Whitney, has gone far towards completing the botany of the Pacific Coast. Clarence King's survey of the 40th parallel has done the same for Nevada and Utah, while private collectors and the Government surveys under Prof. Hayden, Lieutenant Wheeler, and others, have made familiar the flora of the Rocky Mountains and, though to a less degree, that of New Mexico and Arizona. Through these means many hundreds of species have been added to those before known, and the increase still goes on at the rate of nearly a hundred each year. But at a still more rapid rate has grown the need of a systematic descriptive work that should include all that are already known. What was a want forty years ago has now become a necessity, for what was then simply confusion is now a comparative chaos.

Upon Dr. Gray the hopes of all botanists, at home and abroad, have been centred for the performance of the task, and as an acknowledgment that the fulness of time has come when such a work may rightly be expected and asked for, we have the present volume. And it is such a volume as would be looked for from the author's hands; in its typography, its arrangement, its style, as a whole and in its minutiæ, showing the care and scientific skill of a master. It does not become the raw recruit to criticise the veteran soldier, but he may call upon his comrades to note and imitate the dextrous handling of his weapons, the perfectly executed manœuvre, the entire subordination to rule. So the botanist, or any scientific man in fact, while he may not hope for that keenness of insight, that power of delicately balancing conditions and quick judgment which characterize the man, may wisely study the principles and methods which he follows in a matured work like this.

The part now published completes the gamopetalous division of the dicotyledons, beginning where the original work ceased. The remainder of the volume, in two similar parts, will include the other phænogamous orders and the higher cryptogamia. The first volume will be given to a complete revision of the ground gone over in the earlier volumes, which are not only now out of print but have long been out of date. Thus well begun, a few years will doubtless see the whole completed—complete in itself, but still only the first division of a still greater work that shall include the whole of the essentially one and continuous flora occupying the northern temperate and arctic zones. For the parts relating to Europe and Northern Asia, American botanists are in no way responsible; but it will be to the credit of American science that in its own finished portion it will furnish a model from a master's hand, worthy of imitation.

READY ON SATURDAY.

MRS. BRASSEY'S

Around the World in the Yacht "Sunbeam."

With Chart and Illustrations.

The history of this leisurely and luxurious cruise of the Brassey family and a few friends, in their own Yacht, is given in such easy and familiar style as to make the reader feel almost one of the party.

The London *Spectator* says:

"It is altogether unlike all other books of travel. . . . We can but faintly indicate what the reader may look for in this unrivalled book. Mrs. Brassey writes delightfully of men and cities, and has a faculty for seeing and acquainting herself with the conditions of human life everywhere unsurpassed within our knowledge of travellers."

The London *Times* says:

"Mrs. Brassey's delightful cruise in the *Sunbeam* is the very romance of adventurous yachting; it is the voyages of the rough old circumnavigators translated into the picturesquely luxurious. . . . Wherever they went, whether at the Government-house in the colonies, at the residences of the English consuls or of rich and hospitable foreigners, they seem to have been invariably entertained with equal cordiality. They saw wild horses lassoed and broken by the guachos; they climbed to the glowing craters of volcanos; they made pilgrimages to the most commanding points of view; they went botanizing and butterfly-hunting in tropical forests; they got up picnic parties in the cocoanut groves of the South Seas, where the dessert was gathered from the tree overhead; they went shopping everywhere in the bazaars and markets, to come back laden with curiosities living and dead; they even did a passing stroke of trade with naked Patagonians, who put off in canoes in the Straits of Magellan. . . . There was variety enough in the voyage, and Mrs. Brassey has made the very most of it. The great charm of her style is in its being so perfectly easy and unstudied; she faithfully reflects the shifting impressions that struck a lively and versatile mind. She tells you just what you care to hear, changing the subject before it has begun to bore you; she has quick artistic perceptions, with a subdued sense of humor; and there is a freshness even in the descriptions of the scenery that has been made familiar to us in the writings of innumerable travellers."

HENRY HOLT & CO., NEW YORK.

"The only work of its kind from which those who aim at general culture can obtain a sufficient idea of one of the broadest fields of human activity concerning which everybody nowadays is expected to know something." — CHARLES C. PERKINS, in the "Literary World."

Lubke's History of Art.

A New Translation from the Seventh German Edition. Edited, with Notes,

By CLARENCE COOK.

Two vols. 8vo, nearly SIX HUNDRED ILLUSTRATIONS, cloth, gilt tops or uncut, $14.

"OUIDA'S" NEW NOVEL

JUST READY.

A STORY OF SOCIETY.

FRIENDSHIP.

By "OUIDA,"

Author of 'Strathmore,' 'Idalia,' 'Under Two Flags,' 'Tricotrin,' 'Puck,' etc.

12mo, 492 pages, extra cloth, $1 50.

☞ For sale by all booksellers, or will be sent by mail, postage prepaid, on receipt of the price, by

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

NEW TEMPERANCE CANTATA.

"House of Rechab."

By A. C. GUTTERSON.

DEDICATION:

"To the Temperance Organizations which are striving to reform the dissipated."

In two acts, and not beyond the reach of amateur talent. The scene is laid in Jerusalem. The incidents are derived from the Bible, and present the most powerful and striking argument in favor of total abstinence. The music is replete with sprightly effects and haunting melodies.

Full directions accompany the work.

Single copies, $1. Circular, with full particulars, free.

JOHN CHURCH & CO.,
Cincinnati, O., and 805 Broadway, N. Y.

A Trip up the Volga

TO

THE FAIR OF NIJNI-NOVGOROD.

By H. A. MUNRO BUTLER-JOHNSTONE.

Illustrated, 12mo, cloth extra, price $1 25.

The great interest now taken in everything pertaining to Russia and the manners and customs of her people makes the publication of this work very opportune. Under the title of 'A Trip up the Volga,' with the fair of Nijni-Novgorod, which is described in detail, as his ultimate object, the author takes a comprehensive glance at the vast empire of the Russias, its trade, its resources, and its mingled subject-races. We know of no other work of the kind that contains in such small compass so much valuable and entertaining information.

PORTER & COATES, PUBLISHERS,
PHILADELPHIA.

G. P. PUTNAM'S SONS,

182 FIFTH AVENUE, NEW YORK,

Have ready this week:

A Course in Arithmetic.

By F. W. BARDWELL, Professor of Engineering and Astronomy in the University of Kansas. 425 pages, 12mo, cloth, $1 25.

Specimen copies sent to teachers for examination on receipt of half the published price. If the work is introduced, or the copy returned, the amount paid is refunded.

Second edition, WITH SIX NEW MAPS of the United States.

The Library Atlas

OF MODERN, HISTORICAL, AND CLASSICAL GEOGRAPHY, comprising 106 maps, with descriptive letterpress of Modern Geography by James Bryce, of Historical Geography by Wm. F. Collier, and of Classical Geography by L. Schmitz; and Indices containing 50,000 names. Quarto, cloth extra, $10.

PUTNAM'S SERIES OF ATLASES now contains fourteen volumes, and is the most comprehensive and economical series in the market.

"The maps are well executed, and the works are convenient for reference."—*N. Y. Tribune.*

"Maps of exquisite clearness and beauty."—*Christian Union.*

LECTURES

ON SUBJECTS CONNECTED WITH

Modern English Literature.

By JAMES T. FIELDS,

Of Boston, author of 'Yesterdays with Authors,' and former Editor of the *Atlantic Monthly*.

These lectures on Authors and Books, consisting largely of Personal Recollections, will be delivered as a course of fourteen, twelve, six, or four, as may be selected, or as separate lectures. The whole of, or selections from, the course have been given, among other places, in Boston, at the Lowell Institute and Boston University; in Baltimore, at the Peabody Institute; in Philadelphia, New York, Washington, Providence, Cambridge, Newton, Wilmington, Cincinnati, Chicago, Hartford, Springfield, Andover, Exeter; and at Amherst, Williams, Dartmouth, Swarthmore, Wellesley, Tufts, and several other colleges.

SUBJECTS.

INTRODUCTORY. The importance of a more earnest regard for and study of English Literature. Method of Study recommended.
ALFRED TENNYSON, the Man and the Poet.
SYDNEY SMITH AND HIS WORK IN LIFE.
WILLIAM WORDSWORTH, with Recollections of the "Lake Country" of England.
CHRISTOPHER NORTH, with Personal Recollections.
THOMAS HOOD.
CHARLES LAMB AND HIS FRIENDS.
WILLIAM COWPER, and his Peculiar Influence on the World.
DE QUINCEY, the English Opium-Eater.
KEATS AND SHELLEY, with the Story of their Lives.
THOMAS CAMPBELL.
NATHANIEL HAWTHORNE.
LONGFELLOW, the Poet and Scholar, with Personal Sketches.
FICTION—Old and New—and its Eminent Authors.
LITERARY AND ARTISTIC SOCIETY IN LONDON TWENTY-FIVE YEARS AGO.

Mr. Fields's address is No. 148 Charles Street, Boston, where applications for the next Autumn and Winter may be made to him.

NEW BOOKS.

Visions: A Study of False Sight

By the late Dr. EDWARD H. CLARKE, author of 'Sex in Education,' etc. With an Introduction by Dr. OLIVER WENDELL HOLMES, and a Portrait. 1 vol. 16mo, $1 50.

A book of great interest, especially to all who believe in ghosts and spirit manifestations; and to those who do not believe in them, but think, as Dr. Clarke thought, that these apparitions can be explained scientifically by a more exact knowledge of physiology and psychology.

Hammersmith: His Harvard Days.

Chronicled by MARK SIBLEY SEVERANCE. 1 vol. 12mo, 524 pages, $2.

Like 'Tom Brown at Oxford,' this book is devoted to a description of student life, its sports, friendships, mistakes, and successes Like that, it is a thoroughly manly book, and tells a deeply interesting story in a vigorous, engaging style, which must make it largely popular.

Michael Angelo.

Volume 8 of "Artist Biographies." By M. F. SWEETSER. 18mo, cloth, 50 cents.

This is one of the most interesting volumes of this interesting series. The Boston *Gazette* says: "All of these works are remarkable examples of a rare skill in condensation."

British Poets

RIVERSIDE EDITION. THE POETICAL WORKS OF POPE AND COLLINS. Complete in two volumes, with Memoirs and Portraits. Crown 8vo, $3 50.

*** For sale by all Booksellers. Sent, post-paid, on receipt of price, by the publishers,

HOUGHTON, OSGOOD & CO., BOSTON.

To Summer Tourists.

The Nation.

NEW YORK, THURSDAY, JUNE 20, 1878.

The Week.

As we go to press, Congress is still in session, having twice put off the day of adjournment from the impossibility of despatching business. The completed measures are the General Deficiency Bill, which passed the Senate as it came from the House without debate; the River and Harbor Appropriation Bill; the important bill to reorganize the Life-saving Service; and the Army Bill, which emerged from the conference committee substantially as the Senate amended it, but with the posse-comitatus clause restored to suit the temper of the House. The penalty for violating it was put back, and so was the word "expressly" with reference to the authority of the Constitution or the laws for using the army as a police. Unquestionably this provision will operate as a check on abuses like those which marked the last days of carpet-bag government at the South, but events alone can test its capacity to impede the collection of the revenue or the suppression of communistic disturbances. By the happy failure of the Post-Route Bill in the House the John Roach subsidy and the franking privilege have been effectually disposed of for this session, for which the country's thanks are chiefly due to Speaker Randall.

One of the measures whose fate is uncertain as we write is the bill which passed the Senate on Thursday by a vote of 45 to 19, and which authorizes the sale of United States 4 per cent. bonds for legal-tender notes, and makes the latter receivable for import duties after October 1. The immediate effect of this bill would, of course, be to relieve the pressure in the gold market which has been caused by the large demand for gold in settling for United States bonds sold by the Treasury. But after October 1 it would wholly deprive the Treasury of its coin revenues, and if the interest on United States bonds is to be paid in coin the Treasury would be forced to go into the market and buy not far from $100,000,000 each year. Moreover, if when Congress reassembles in December the Resumption Act is repealed (and it has already been emasculated), the public finances will not then be on even a silver basis, and we shall have an irredeemable silver-paper currency, which will be a worse condition than any during the long years of trouble since suspension. Perhaps the most shocking feature of this whole business is that the bill is only the embodiment of suggestions made by the Secretary of the Treasury himself, ever ready as a politician, for the sake of harmony, to make concessions of the most dangerous character. To him more than any other public man do we owe the silver curse.

The House on Friday last settled the question of the President's title by two votes. Before the Judiciary Committee reported their resolution on the subject, Mr. Burchard of Illinois, from the Republican side, introduced one reciting the electoral count of the two Houses of the Forty-fourth Congress, and declaring, as a consequence, that

"No subsequent Congress, and neither House, has jurisdiction to revise the action of such joint meeting, and any attempt of either House to annul or disregard such action or the title to office arising therefrom would be revolutionary, and is disapproved by this House."

This rather took the Revolutionists by surprise, and, after some hasty deliberation and consultation in the lobbies and aisles, they determined to support it, and the vote stood 215 to 21. Shortly afterward, Mr. Hartridge, of Georgia, brought in the Committee's resolution, that

"The two Houses of the Forty-fourth Congress, having counted the votes cast for President and Vice-President of the United States, and having declared Rutherford B. Hayes and William A. Wheeler to be duly elected President and Vice-President, there is no power in any subsequent Congress to reverse that declaration, nor can any such power be exercised by the courts of the United States or any other tribunal that Congress can create under the Constitution."

And this was adopted by a vote of 234 to 14. Whether the minority will carry on the revolution any longer seems to be doubtful.

The way the pessimists now dispose of their alarm about "the revolution" is very amusing and somewhat cool. After telling the whole world for some weeks that an enquiry into the Louisiana and Florida frauds would "logically" result in an attack on President Hayes's title, and that this would "necessarily" lead to an attempt to displace him by force, and this again to a general civil war, in which the Republican farmers all over the country ("in every school district" one of them said) would stab and shoot the Democratic farmers, and the Democratic farmers the Republican, and after reproving severely the levity of those who ridiculed this crazy stuff, they now turn round and call the whole thing "a farce," and say that the scheme roused such indignation among the people that the Democrats had to disavow it promptly. But, brethren, your whole prophecy rested on the assumption that the scheme would not disgust the Democratic voters, and that when the rank and file of the party were told by the Congressmen to rise and fight to put Tilden in the Presidency they would promptly obey. The Democratic Congressmen could not themselves make a civil war. Your notion was that half the American people would begin to skewer the other half on a signal from Washington, and all about half a Presidential term. You now see that you were either grossly mistaken or have been engaged in a piece of humbug. The mere accusation from you that the Democratic Congressmen thought of an attack on the President's title has been sufficient to procure from them a full repudiation of it. And now, after having given the civilized world this deplorable account of the politics of your country and the prospects of its Government, ought not the most prominent of you to go to Europe or some place of retirement until the affair is forgotten? Is it decent for you to turn round and laugh and say you never meant it, or to change the subject and pretend with a far look in your eyes that you do not remember much about it?

The enormous mass of testimony taken by the House Committee on Naval Affairs relating to Mr. Robeson's administration of the Navy Department has resulted in a report recommending the indictment of the ex-Secretary and three of his subordinates. There does not appear to be any distinct proof of actual corruption on the part of Mr. Robeson, but for maladministration, waste, reckless disregard of law, and a system which seems only to have been designed to furnish opportunities for corruption there has been no such evidence since Tweed's accounts were overhauled. During Mr. Robeson's administration $182,000,000 were expended on the Navy; between $40,000,000 and $50,000,000 which should by law have been turned into the Treasury were expended on the Navy Department; "every protective and prohibitive enactment" made to guard the public purse was steadily violated—contracts, for instance, for $20,000,000 having been made by three heads of bureaus "without any regard to the requirements of the law in the manner of making them." The prices paid for supplies were, in consequence, in many cases "enormously excessive"; competition in bidding was always "discouraged and resisted by the department"; vast quantities of unneeded and useless stores were bought; vessels costing $26,000,000 were sold for less than $1,000,000; in the case of the *Puritan*, a volunteer proposal of a contractor, without plans or specifications of any kind, "to build an undescribed vessel for a stipulated round sum of money" (this is the language, not

of the Committee, but of the report of two naval officers on the subject) were accepted on the spot, "without enquiry, competition, or any provisions guarding the interests of the Government"; to keep up the supply of money, Government property, though sound and fit for use, was sold for prices far below its value; and, finally, a vast system of illegal "barter and exchange" of stores was kept up, which led to a general confusion of accounts, while, as a result of all this, the Navy is in the worst possible condition. A great deal of the evidence has been furnished by Mr. Thompson, so that it is to be hoped that the report, though the Republican members of the committee refused to join in it, will be followed by indictments. Mr. Robeson has found himself so occupied with professional duties that he has not been able to appear before the committee.

The Potter investigation is at its anti-climax, and the little it has accomplished during the week is hardly worth recording. The principal witness was C. B. Darrall, Republican ex-Congressman from Louisiana, who, like most of his class, thought the country owed continuance in the public service to politicians who could no longer command a constituency. Darrall's ambition was to get the collectorship at New Orleans, and although Packard was aiming for the same place, they were on such good terms that Packard declared there was no one except himself whom he so much wanted to have it as Darrall. Accordingly, as the hopes of the one were chilled those of the other were kindled; but, not feeling sure that Packard's endorsement would have due weight with the Administration, Darrall conspired with Anderson to "cause Senator Matthews to render efficient assistance" by threatening him with the terrible documents whose contents are now known to everybody. Subsequently he learned through Mr. Matthews himself that Anderson was negotiating for the sale of these documents to Tilden and his friends, and that under these circumstances it was idle to look for efficient assistance based on their proposed surrender or destruction. That was the nearest that Darrall came to his collectorship. The notary before whom the Anderson-Weber agreement was executed and the two witnesses to the signatures agreed in identifying the paper which Anderson disavowed as a counterfeit, but they could not decide which was the first to sign, or whether Weber was really present or only a substitute. The Florida sub-committee returned simultaneously with the arrival from France of Gov. Noyes, who tells the reporters that had he been better informed as to the nature of McLin's testimony he should have thought it unnecessary to come over to vindicate himself. On the Committee's motion, the House has formally asked the Senate's leave for Senator Matthews to attend before it.

Republican conventions have been held in Ohio and Michigan. In the former State the platform was read by a gentleman referred to as "Mr. Richard Smith," whom we take to be no other than the "truly good deacon" whose struggles with his "wicked partners" the *Sun* follows with such care. In this case he seems to have obtained, if the platform is indeed his composition, a less complete victory over them than usual; the concessions to their wickedness of which traces are observable here and there must, however, have been made only after a terrible struggle. The platform first "reaffirms" everything that ought to be reaffirmed, and leaves unreaffirmed everything that ought not to be reaffirmed. Secondly, it acknowledges an eternal debt of gratitude to the soldiers (we must observe that no mention is made of the sailors), and denounces the Ohio Legislature for an act of unusual baseness, described in rather vague terms, but which was "intended and calculated" to drive soldiers' orphans out of an Orphan's Home, or else to rob soldiers' families of their pensions. We think this law should have been given in full. Third, it opposes all "further agitation" of the financial question as likely to produce "evil results." Fourth, it "cordially greets" such citizens of the South as have accepted the results of the war, and have treated the electoral count as a finality. Fifth, it demands a revenue tariff, incidentally protective, and "sufficient appropriations" to carry on the work on "all public buildings," and condemns the governor of the State for "prostituting" to a "mere partisan purpose" the "mining interests of Ohio." Sixth, it denounces the Democrats for their Mexican attempt at revolution, and endorses Mr. Hayes's Administration in an unqualified manner. Seventh, it "points," but not "with pride," at the present Legislature, as an awful "warning," the members having "subordinated" the welfare not only of the able-bodied citizen, but of "the blind, the mute, and the orphans to the interests of the Democratic party." Eighth, it denounces the redistricting of the State.

The Michigan Republicans begin by declaring that "after twenty years of unbroken control of the State government" they "invite the most rigid scrutiny" into the manner in which they have discharged the trust, and "point with satisfaction and pride" to the faithful regard shown for the public faith and the general happiness and prosperity. They resolve further that among the sacred obligations of a government founded on such principles as those of the Republican party is the duty of securing a free and untrammelled suffrage, and of protecting every citizen who leads "an honest life"; that the country is to be congratulated on the revival of business and on the immediate prospect of specie payments; that what is now needed is "stability upon which to build confidence"; that the early adjournment of a Democratic Congress is a matter for public congratulation. It denounces "repudiation"; insists on convertibility of Government paper into gold and silver; declares that the doctrines of the Greenback party, the socialists and the communists are deadly to public safety and honor, and must be opposed uncompromisingly by Republicans; that the count cannot be reopened, and that the State administration entitles the governor to the confidence of the people.

The question of convention or no convention continues to agitate the Republican press and politicians of New York. The Albany *Express*, with great candor, admits that the "pivot" this year is, "Shall Roscoe Conkling be returned as U. S. Senator from the State of New York?" or, still more narrowly, "Whether an Assembly shall be elected that shall be favorable or unfavorable to return Roscoe Conkling to the United States Senate." It further admits that there are some Republicans, "or at least men who call themselves Republicans," who will prefer to vote the Democratic ticket in order to defeat Mr. Conkling. But it expresses its belief that, whatever these traitors may do, "enough honest and intelligent Democrats, knowing that Mr. Conkling is an able and faithful representative of his State in the United States Senate, will vote for candidates for members of Assembly who are pledged or will vote for him in the caucus, to upset all the disaffection there may be in the Republican ranks." This is pretty plain language. The number of honest and intelligent Democrats who are in the habit of casting their votes to keep a Republican Senator in his seat is, as a general thing, small; in fact, we have never known a single honest and intelligent Democrat to do it, unless it was expressly ordered by those having the care of his political soul, or because he was cheated into doing it. The prediction of the *Express* may, therefore, be taken to amount to an admission of an understanding between the Conklingites and Tammany Hall. The machinery on the Republican side is now all in the hands of Conkling, and his friends maintain that whether a convention is held or not it will remain so. Curiously enough, on the Democratic side, Tammany Hall is opposed to a convention, but according to the Brooklyn *Eagle* there must be one, because last year's convention ordered one; a fact which it says will be found on the minutes, "if the minutes were properly kept," though it adds reflectively that, "by the way, they rarely are." The order appears to have been not an affirmative one, "but a negative vote "refusing to entertain the proposition not to hold" a convention. A judge of the Court of Appeals is the only officer to be nominated.

The price of gold, as expressed in United States legal-tender notes, fell during the week to 100⅜; in other words, the gold value of the Government's promise to pay one dollar advanced to $0.99375. The price of silver in London was steady at 53½*d.* per ounce, and about $1.16½ per ounce 1,000 fine in New York, making the bullion value of the 412½-grain silver dollar $0.9010. Little progress has been made in getting the new silver dollars out of the Treasury; in due time, however, they will be forced out, and their appearance will as certainly drive out gold dollars as legal-tender notes have driven gold out of use in the last sixteen years. The demand for Government bonds has not abated, and there are as ready buyers for them as at any time in the last three months. At the Stock Exchange there was a fall during the week in railroad stocks, owing to the breaking up of the "pooling arrangements" between the Western roads which gather up the Eastward freights for the trunk-lines. The relations between the trunk-lines themselves are said to be critical, and another open war is not improbable. The crop outlook is on the whole excellent for wheat, the estimate being that the crop will reach four hundred million bushels. The prospects for corn are not so good. General trade continues dull.

The selection of names for the commissioners who are to represent this country at the International Silver Conference is most extraordinary. General Francis A. Walker is in every way qualified for the place, but ex-Senator Fenton's title to fame consists simply in his having long been the head of the anti-Conkling faction in this State and being a very shrewd and dexterous politician. Mr. Groesbeck's knowledge of finance was never heard of until he was put on the Silver Commission, and he has since identified himself with the worst greenback inflationists. He has never given the slightest sign of fitness to discuss coinage questions with European experts. The worst of it is, as the *Commercial Bulletin* has pointed out, that Mr. Fenton probably owes his nomination to a desire to dispose of him as an applicant for the Collectorship of this port.

The Congress has at last met at Berlin, after the publication by the London *Globe* of a surreptitiously-obtained copy of the preliminary agreement arrived at between England and Russia. The agreement as it stands shows a substantial maintenance of the Treaty of San Stefano, and has consequently been received by the Conservatives with something like consternation, and by the Liberals with a chuckle, to meet which the Duke of Richmond announces that the published copy is inaccurate. We have commented elsewhere upon its leading provisions. There is every variety of rumor about what has happened at the meetings up to this writing, the principal one being that Lord Beaconsfield had opened the proceedings by demanding the withdrawal of the Russian troops from the neighborhood of Constantinople, which Prince Gortchakoff had vehemently refused. Another is that the first question coming up for discussion will be the propriety of admitting a representative from Greece, which is advocated by England and Austria, but will probably be opposed by Italy and France, as Mediterranean powers not relishing the prospect of a revived Greek empire in the Levant; but it is safe to say that none of these rumors is or will be worth much attention. It is unfortunate that the two principal antagonists at the Congress, Lord Beaconsfield and Prince Gortchakoff, are old and infirm men, each having the discomfiture of the other the highest object of his personal ambition, and neither expecting to live to see the Eastern question finally settled. The English Liberals are making a strong point of the fact that the presence of the two principal members of the Cabinet at the Congress will prevent those who remain at home from assuming any real responsibility on any subject, so that for the time being England will really be governed from Berlin.

Although Count Andrássy has declared in a vague way that it is the interest of Austria that Turkey should continue to exist, it is less and less likely that she will find any warm defenders in the Congress, owing to the course of things at Constantinople, where "politics" seems still to consist in harem intrigues. A desperate but unsuccessful attempt, headed by an adventurer named Ali Suavi, to extract Murad, the late Sultan, from his retirement, threw the present one into a panic, and caused him to break up *à la Francx* the new-fangled ministry which he had established a couple of months ago, dismiss Sadyk Pasha from the Presidency of the Council, abolish the office, and restore the old Vizirat in its stead, with Mehemet Rushdi Pasha as Vizir, and Mahmoud Damad, the Sultan's brother-in-law and an ignorant old Turk, as Minister of War. This is going straight back to the old régime, and shows that there is nothing to be hoped for in the way of policy from the Pashas, and that if Turkey is to be maintained, even in Asia, it must be by close European supervision. There is apparently not even enough fanaticism left among the Mussulmans for a successful revolt and the trial of a new sultan. The financial condition at Constantinople grows worse and worse, but the Asiatic Turks still continue to be drafted into the army, and a force of 200,000 men is now again said to be collected and respectably armed in the capital and its neighborhood. It is curious and suggestive that the talk of a "protectorate" of Asiatic Turkey, originating probably in the Foreign Office, begins to be heard in London; but the Liberal papers have no difficulty in showing that a "protectorate" would speedily impose the alternative of assuming the direct government or else supporting the pashas in massacre and pillage, which are their favorite instruments of government when times become at all troublous.

The strike in the English cotton districts seems near its end, and with the usual result of strikes in times of depression—the submission of the operatives. What made this strike more than usually hopeless was that it aimed at not merely a rise in wages or resistance to a lowering of wages, but at the control of the employers' general business policy by the operatives. Submission to this pretension might have been possible, though by no means probable, on a rising market and with bright trade prospects; but in times like these, when manufacturers are threatened with ruinous foreign competition, it was useless to put it forward, and the riots and destruction of property by which it was supported have made it ridiculous. If the masters' account of the apparent future of British cotton industry be correct, there is only one remedy for low wages, and that is emigration. The recovery of the markets now lost through low wages is, of course, the most dismal possible plan for the working class, and this is all the employers have to suggest. Improvement in processes may help, but this is a mere possibility, the effect of which at best would be only temporary.

The fact that the Senate which will be in existence when the Constitution comes to be revised and definitively settled will be elected in the fall of this year and that of 1879 is once more causing a perceptible revival of apprehension among the French Republicans and of activity among the various sects of Monarchists, and the Republican organs have begun to give warning of the necessity for extraordinary calm and moderation in the Republican ranks. The efforts of the Monarchists, as the *Temps* points out, will be more than ever directed to showing that the Republic is "an impracticable régime, full of agitation and menace," "unstable in its policy, unjust in its procedure, at the mercy of intriguers, and without compass or helm," and for this purpose they will seek to create the facts of disorder on which they will rely. As usual under such circumstances, the army and its commander, the Marshal, begin to be studied carefully, and the selection of generals for the great commands to be closely watched. Some alarm has already been excited by a slight change of tone on the part of the Minister of War in the Chamber towards the Left, and Gambetta's organ, the *République Française*, openly denounces the recent appointment of a General Wolff to the command of the Thirteenth Corps, as a defiance of the Legislature and "an aggressive movement in the direction of personal government."

THE INTERNATIONAL MONETARY CONFERENCE.

THE acceptance by France of the invitation extended by the United States to the countries of Europe to join in a monetary Conference having for its purpose the establishment of international bi-metallism, makes the Conference possible. Without France it would have been a foredoomed failure and mockery. Any number of countries under an indefinite suspension of specie-payments, like Russia, Austria, and Italy, must have failed to give weight or even seriousness to its deliberations, while the petty nationalities of Switzerland, Greece, and Holland would have cast but a dim light on the momentous problem to be discussed. France, on the other hand, is the great storehouse and reservoir of metallic money in Europe, and she is again upon a specie basis. Her voice and her vote in a conference of the kind proposed will be more potent than the combined influence of all the other countries that have yet accepted the invitation. Her accession makes the presence of England in the Conference not improbable, although there is no likelihood that she will come there with any view to secure bi-metallism for the British Islands. Her Asiatic possessions furnish sufficient reason for her presence in any conference whose deliberations are likely to affect the value of silver. France, and France only, can give importance enough to the Conference to make it worth England's while to send delegates to it.

The Conference being now a fixed fact, its action will be closely scrutinized by the civilized world. It may be assumed that the European delegates will be men who have given their lives to the study of monetary science—perhaps the most intricate of all the sciences—and who will know at a glance what will be the effect upon their own and other countries of every proposition laid before them. It is to be regretted that this country is not to be so represented. The three delegates nominated by the President are Reuben E. Fenton, of New York; W. S. Groesbeck, of Ohio, and Francis A. Walker, of Connecticut. Mr. Fenton is a weather-beaten politician, accomplished in all the arts of the caucus and the custom-house, and triumphant on those fields until a superior artist appeared in the person of Mr. Conkling, when he was driven into private life by the loss of patronage. He has been in want of "recognition" of some sort for a long time, and, the International Monetary Conference being the only thing available, the chairmanship of the American delegation has been allotted to him upon the same principles of catch and toss which governed in the original assignment of the English and German missions. As minister resident at some second-rate capital where deportment is the only requisite of any consequence, Mr. Fenton would perhaps be above the average of American representatives abroad. In any place where ends are to be gained by pipe-laying and log-rolling he would be a master-mind; and if the Conference turns out to be a game of "beggar-my-neighbor," or an exhibition of the art of imposing one's own silver on other people, Mr. Fenton might be useful if he had ever had any training as an economist. In an assemblage composed of such men as De Parieu, Léon Say, Feer-Herzog, Jevons, and Malou he will be simply lost, and his votes and acts will be governed by the sole consideration of gaining temporary popularity at home.

Mr. Groesbeck will appear to scarcely better advantage. A year or two ago he was put upon the Silver Commission because he had no ideas upon the subject, and was therefore, like a good juryman, perfectly unprejudiced. The kind of ideas he has picked up in the interval may be gleaned from his recent discourse before the Social Science Congress. It appears from this exposition that Mr. Groesbeck considers bi-metallism mainly a legal question, and that, silver having been remonetized in this country, it is the prime condition of a sound monetary system that everybody should bow to the decision of the majority! As regards the International Conference, he considers that well enough in its way, but holds that its action is not necessary to the success of our experiment. In his opinion we are sufficient unto ourselves. We are "strong enough to uphold and maintain any policy intrinsically sound and just." This must mean, if it means anything, that we are strong enough to hold silver and gold at par with each other at the legal ratio of sixteen to one. Being strong enough to do this, he throws out a caution against entangling alliances with foreign countries, but concludes upon the whole that there is no great danger to be apprehended from the Conference if it confines itself to "a few simple recommendations that can be adopted without embarrassment." These conceptions will be deemed excessively novel by the majority of the delegates, coming from the mouth of a representative of the country at whose solicitation the Conference is assembled, and whose legislative action limiting the coinage of silver meanwhile is based upon the idea that no country is alone strong enough to hold silver and gold at par with each other at any legal ratio whatever.

The third member of the Commission, Mr. Francis A. Walker, is not only unobjectionable but has special qualifications for the position. He belongs to the class of professional economists; he is already known abroad by his labors in this field of enquiry; and he seems inclined to bi-metallism, and is therefore entitled to represent a country whose recent legislation requires the assistance of other countries to prevent fatal results to itself. In truth, our position is that of the fox in the fable who lost his tail. Our only escape from silver depreciation and silver mono-metallism is international bi-metallism; and, accordingly, every delegate from this country should not only believe in it but be able to discuss intelligently the various methods and ratios for obtaining it which may be brought before the Conference. Probably the Conference will result in nothing at all. Probably the countries that have any legal-tender silver will aim to "unload" it without loss, and will direct their efforts in the Conference to plans having that ultimate purpose. Unless a ratio can be adopted something near the present commercial ratio of the two metals, say 17½ to 1, it will be extremely hazardous for such a country as France to open her mints to free coinage, even with the concurrence of her specie-paying neighbors and the United States thrown into the bargain. At the old French ratio of 15½ not only the silver of Germany but that of Asia would hasten to Paris to be exchanged for gold, and the same thing would happen at the American ratio of 16. It is not impossible that a new ratio approximating very closely the relative market values of the metals might be made permanent and safe. In the event that such a plan is proposed by France or accepted by her representatives, it would not be edifying to see the American representatives contending for the ratio of 16 on grounds of constitutional law, or through fear of "entangling alliances" or loss of popularity at home. The fact, however, that such a ratio would be hateful to nearly all the remonetizers in this country adds another element of discord and uncertainty to the task of the Conference, whose conclusions can be put in force only by the subsequent action of the governments represented. It is not to be supposed, in any event, that our ratio of 16 will be adopted by the Conference, since it represents neither market value nor the law and custom of the silver-using countries of Europe. If any agreement is reached it will be something different from the ratio of 16. To commend to this country a new and useful departure in its monetary system, the very best talent and learning on the part of the commissioners will be required. To set a bad one going, any disabled politician will answer; Mr. Evarts can find plenty such in this State. But to explain ratios and produce the reasons why a change of ratio is necessary, if necessary it be, some reputation gained in the particular department of learning to be brought in requisition would have been desirable, not in one merely but in all the persons charged with duties of such importance.

THE AGREEMENT OF ENGLAND AND RUSSIA.

THE understanding arrived at between England and Russia, and which it is positively asserted, and not denied, has taken the form of a written agreement, has been published, though probably in an inaccurate form, and seems not unlikely to have an important effect, not only on the deliberations of the Congress, but on the domestic politics of England. To estimate its importance correctly one has to bear in mind that the Treaty of San Stefano, between Turkey and Russia, was expressly styled

by the Russians themselves a "preliminary treaty"—that is, an outline of arrangements which Russia acknowledged would have to undergo revision by the Powers, and some details of which, such as the conditions of the passage of the Dardanelles, were expressly left wholly to the Powers. The objections to it were formulated by Lord Salisbury in an elaborate despatch, which opened by a sort of précis of the negotiations relative to the submission of the Treaty to a European Congress. From this it appeared that, so early as the 25th of January, immediately after the Turkish collapse, the Russian Government gave a formal assurance that "it had no intention whatever of regulating separately the European questions raised by the peace." The British Government then gave notice that it could not recognize as valid any arrangement between Turkey and Russia "in so far as it modified European treaties or touched English interests, unless it was submitted for the formal concurrence" of the signataries of the Treaty of Paris. To this Prince Gortchakoff replied that "the bases of peace then agreed on were only preliminary, and not definitive, in what concerned Europe," and "that the questions affecting European interests would be debated and settled with the European Powers." It was then proposed to hold a conference, and Lord Derby asked whether each article of the Treaty would be submitted, not for acceptance, but for examination, to which Prince Gortchakoff replied that "the Treaty would be communicated textually to the great Powers before the meeting of the Congress, and that in the Congress itself each Power would have full liberty of appreciation and action." He explained afterwards that he would only accept discussion on the parts of the Treaty which touched European interests, but that every Power would have its full and entire liberty of criticism and action, and Russia could not be expected to surrender this when the others claimed it. Lord Derby again said that "the articles of the Treaty must be submitted, not necessarily for acceptance, but to see what articles needed acceptance and agreement on the part of the other Powers, and what articles did not need it." Russia was then asked what she meant by "liberty of appreciation and action," and Prince Gortchakoff defined the phrase in the following terms: "Russia leaves to the other Powers the liberty of raising in the Congress such questions as they shall think it desirable to discuss, and reserves to herself the liberty of accepting or not accepting the discussion."

When one considers what a Congress is, it is impossible to see in what particular this definition was defective. A Congress of the Powers is and always has been a meeting for the purpose of *coming to an agreement* by discussion. It is not a tribunal, as Lord Beaconsfield and the *Pall Mall Gazette* tried to make out, before which one Power appears as a suitor. It is an assemblage of equals seeking concord, in which a decision to be binding has to be unanimous, and in which the majority has no right whatever to impose its will on the minority. If the majority determines to do so, it does so not as a part of the Congress but as an armed alliance determined to carry out its wishes through war. When Russia submitted the Treaty, and agreed to listen to discussion of it, she fulfilled the whole duty imposed on her by usage. She was no more bound to accept the decision of the majority on any one point than England was. She was not to appear there as suitor or petitioner, but as an equal member of a council. This seems so plain that when the British Ministry refused to be satisfied with the Russian answer, and began to make extensive warlike preparations and declare themselves the "defenders of European law," Europe was greatly puzzled. Lord Derby resigned in March, partaking, as he confessed, of the general bewilderment, and Lord Salisbury's circular was sent out about the 1st of April; but from that time until now all efforts to get the Ministry to explain what it was they wanted Russia to do have proved vain. Troops were brought from India, the reserves were called out, the "Jingo" excitement rose higher and higher, and the vituperation of Russia became more and more bitter; but nothing could induce Lord Beaconsfield or any of his colleagues to say precisely on what point they had broken with Russia, or what they would seek in the impending war. If their aim was to make her bring the Treaty to the Congress and accept the decision of the Congress on it, whatever it might be, it would, of course, have been easy to say so; but such an aim would have been absolutely unprecedented. No first-class power has ever been called on for such a concession through deliberation. An invitation to a Congress is, and must from the nature of the case always be, an invitation to come and see whether we cannot agree. An invitation to come and abide by my will is a declaration of war, and has never been offered except as such. The Liberal accusation, therefore, that the Ministry were seeking war and standing in the way of settlement by negotiation, was really justified by the facts of the case—that is, both by what was known of the situation and by the failure to communicate anything more.

The revelation which is now made of the new and separate agreement between Russia and England points to one of two conclusions: either the Ministry have been worn out by the Russian refusal to surrender, and have gradually come to see the untenableness, even in the eyes of the English public, of the position they took in April about the terms on which Russia was to come into the Congress, or this position was really a mere arrangement of stage scenery, in preparation for Lord Beaconsfield's great *coup de théâtre* in bringing the Indian troops into Europe, and, the fumes of excitement caused by this having passed away, he has betaken himself once more to the plain routine work of diplomacy. The latter is the hypothesis which will probably find most favor among those of his enemies who have studied his history and character most carefully. He was not long in office before he made it apparent by his bestowing the title of Empress on the Queen, and sending the Prince of Wales to India, that that region had secured a powerful hold on his imagination, and was looked on by him as furnishing admirable materials for startling effects, and there is certainly nothing violent in the supposition that he arrested the settlement of the Turkish complication for three months in order to show the world how with a wave of his wand he could fill the half-empty British *cadres* with swarms of what his organs call "dusky warriors," and go to the Congress with the reputation of a first-class wizard.

This supposition, too, derives a good deal of support from the reported terms of the agreement which, in the last resort, he has had no difficulty in entering into with Russia in advance of the Congress. Lord Salisbury complained of the Treaty that it erected a powerful Slav state with ports on the Black Sea and in the Archipelago, which would give Russia a preponderating influence in the two seas, and would swallow up a considerable population which is Greek in race or in sympathy. For this England agrees to substitute two principalities, one north and one south of the Balkans, but both are to be permanently freed from Turkish rule and the presence of Turkish troops, and the creation of them is fatal to the Turkish Empire in Europe. How they are to be kept free from the preponderating influence of Russia, to which they will owe their existence, it is hard to see, though doubtless the southern one is expected to provide for the non-Slavic population of Rumelia. The Treaty of San Stefano stipulated that the organization of the new Bulgaria, as well as the introduction of reforms in Thessaly and Epirus, should be conducted under Russian supervision, but there was not the slightest reason for supposing that Russia would insist on retaining this supervision exclusively, if the Congress show any wish to divide it. Lord Salisbury complained, too, that the new Bulgarian state would cut the Turkish Government off from the remaining Greek, Albanian, and Slavic provinces of the West, and render the administration of them difficult or impossible; if so, a similar result will follow the division of Bulgaria into two principalities. He objected to the retrocession of Bessarabia as likely to strengthen Russian influence on the Danube; he now agrees to this retrocession. He protested against the proposed annexation in Armenia for analogous reasons, and also to the magnitude of the indemnity, but there never was any good reason for believing that Russia would not have abandoned her pretensions in both these cases in the Congress; nay, there was good ground for supposing that she made these demands for the purpose of having something to yield. The most important stip.l.-

tion of the treaty for her on the Asiatic side was the port of Batum, and this it appears is now to be conceded to her. Finally, Lord Salisbury declared that the combined effect of the provisions of the treaty would be "to diminish the political independence of the Government of Constantinople, and almost to make it a vassal." The effect of the proposed arrangement will be the same. In short, it is by no means surprising that the English Liberals are entirely satisfied with the turn things have taken, but it will not be very surprising if the "Jingo party" do not conclude by the time the treaty is ratified that they have been the victims of an immense mystification, and that they have been singing their war songs and clashing their tumblers at the command of a juggler with no higher aims than the production of a brilliant *mise en scène*.

EDUCATION AT THE NAVAL ACADEMY.

THE report of the Superintendent of the Naval Academy at Annapolis, recently issued, is interesting as showing one phase of the contest between the "practical" man on the one side and the spirit of the age on the other. In the present case the contest is modified by being a triangular one, in which no two of the three contending parties have any common ground on which they can unite. First, we have the progressive party, who recognize the fact that the great revolution now going on in the methods and appliances of naval warfare necessitates a corresponding revolution in the education and in the intellectual qualifications of the men who are constantly to judge and use them, and who, therefore, desire to see all young officers subjected to such a course of intellectual discipline that they may be able to make themselves masters of any situation that may arise. They also hold the view that the naval officer of the present and future has many other than military duties, and that a liberal education is both necessary for these duties and perfectly consistent with his entire efficiency as a naval or military officer. Second, we have the old naval party, the "practical" sailors, whose views are set forth so strongly in the Report of the Board of Visitors for 1866 that we cannot do better than quote them:

"After mature deliberation upon this subject [that of the higher branches of education], which engaged a large share of our attention, the Board finds itself unable to subscribe to the opinion that it is the chief or even a considerable part of the work of the Naval Academy to perfect the education of its pupils in literature or in theoretical science. Its business is, in our judgment, to supply to the naval service practical seamen, men who can navigate our ships and fight their guns. . . . If, in addition to this, they could also be sent forth as gentlemen, qualified by their culture and polish to shine in the foreign circles in which they may represent the intelligence and worth of our nation, we should welcome the achievement. In our opinion, however, it is impracticable to effect this, even in a very moderate degree, within the limits of a course of four years, without doing injustice to the strictly professional branches which are indispensable for practical seamanship."

Finally, we have the political party, if we may call it so, of which the nucleus is formed by the friends and relations of the young cadets who have failed to get through the Academy, and who besiege Congress and the Navy Department to have them reinstated. The object aimed at by this party is necessarily a popular one, to a greater or less extent, because every one would like to see as large a proportion as possible of those who enter get safely through. So it naturally draws in all who think the discipline unnecessarily strict, the requirements too severe, and the subjects taught too foreign to the duties of a naval officer, and all who are in any way dissatisfied with the general management of the institution.

Of the three parties we have mentioned, the second, or old naval party, has during the past ten years so waned in numbers and influence that it may be doubted whether it will be worthy of being counted hereafter. Indeed, we may safely say that the public at large has very little knowledge of the improvement which has taken place in the intellectual standard of the Academy, as well as in its scientific spirit since 1865, when Admiral Porter acceded to the superintendency. From causes not necessary to consider in detail, the Academy had fallen into disrepute with both the naval and the popular parties. The former asserted that cadets graduated at the Academy without knowing the duties which young officers were expected to perform on shipboard, and without having learned the elements of the sailor's profession. The latter complained of the severity of the examinations, and raised a general outcry against the professors. There was no one to complain of any deficiency in the scientific instruction; on the contrary, both parties agreed that there was too much of it. Admiral Porter was appointed to make things right generally, and commenced with a radical change in the organization of the establishment. Several of the leading professors were removed, and their places filled, not with other professors, but with officers of the line, most of them of the rank of lieutenant-commander, who were expected to fill them for the usual term of shore duty, and return to sea again, to be replaced by others. By thus placing all the departments of instruction under the direction of sea-going officers it was expected to do away with the complaint that sea duties were neglected in the course of education, and at the same time satisfy the popular party that there would be no more dismissals on account of failures in "high science."

It was while these ideas were in the ascendant, and were supposed to be those of the superintendent, that a Board of Visitors took the strong ground against attempting to give the cadets anything like a scientific or liberal education which we have already pointed out. To make the new policy permanent, a law was passed prohibiting further appointments to the grade of professor in the Navy. The contest over staff rank in the Navy now commencing was not without its influence at this juncture. The party which looked upon officers of the line as alone entitled to military rank, and considered education outside the Navy as entitled to no recognition, were very naturally pleased with the plan of placing all the departments of academic instruction under line officers, while permanent professors appointed from civil life represented the ideas of those who desired that the quasi-military rank of surgeons and other officers educated at their own expense should be recognized.

All efforts to make the new system permanent proved unavailing. The heads of the departments of instruction were chosen from the best educated young men of the Navy, and were themselves among the first to recognize the superiority of permanent instructors and the difficulties attending a system which required frequent changes of all the heads of the departments of instruction. Before Admiral Porter's term expired it was concluded to extend the term of an officer's service at the Academy to four years, nominally because he could then see one class through the entire course, but, we conceive, in reality that changes might be less frequent, for the classes changed every year, and no one head of department had a class more than one or two years of its course. Admiral Worden succeeded Admiral Porter in 1869, and it gradually became understood that he favored the idea of returning to the old plan of permanent heads of departments. All active opposition to this course slowly died away, and the revolution which discussion failed to effect went on of itself with scarcely an effort. In 1873 the appointment of naval professors was again authorized, and the heads of departments became once more permanent officers of the institution. In the following year the superintendency was assumed by Rear-Admiral C. R. P. Rodgers, whose whole policy has been to elevate the standard both of education and morals. Measured by the merely scientific standard of the curriculum it may still fall somewhat short of West Point, but if we take account of the development of the spirit of originality among the pupils we should not be surprised to find it fully abreast.

One of the most suggestive results of the new order of things is a discovery which has lately been made in other branches of technical and practical education, viz., that the workshop is not the best training-school, and that familiarity with the details of the profession of seamanship can be best acquired by a course of training which bears the same relation to the profession that the studies of a law-school do to practice in a lawyer's office. On the old-fashioned system the midshipman was put aboard a cruiser and trained for no emergencies except those which might chance to arise during his voyage. With fair weather the voyage might be completed without his learning any more than the ordinary fair-weather routine. On the new system he is not sent to make a cruise, but to learn every possible manœuvre which may be necessary in the various accidents to which a ship can be exposed. Though the training-ship remains near the coast, the cadet can thus learn more about her management in all emergencies during a single season than he could in ten years of actual sea-life on the old plan.

As a result of the new plan a complete revolution is being effected in the intellectual tone of our Navy, which can now boast of officers who are equally at home on the quarter-deck of a ship, in the chemical or physical laboratory, or in the astronomical observatory. But the problem of keeping up this standard is beset with more than one difficulty. One of these arises from the fact that the Academy graduates more officers than are really necessary to supply the losses from death and resignation. During the last twenty years this annual surplus has been spent in filling up the lower grades to the number authorized by law, and, this being now done, future graduates must remain midshipmen through a course of years be-

fore attaining even the grade of ensign. Of course this does not interfere with the higher education at the Academy, but it does prevent the Navy from getting the benefit of that education, because the better class of officers will not remain in the service if they have to wait many years for their first commission. The result in prospect is that only those who have not the capacity to make a living outside the service will remain in it, and its average will thus be lowered. The only apparent remedy is to retain no more graduates than are necessary to fill vacancies, selecting them, of course, from the top of the list. Those who are dismissed will certainly have no cause of complaint, because, whether their stay at the Academy be two or four years, they will have the advantage of a most thorough discipline and education free of cost, while the Government on its part will dismiss only those whom it does not need, and will, therefore, be no sufferer. The question how far the Government may find it advantageous to become an educator is of course left open—we have to take the existence of the Naval Academy for granted, and can only enquire in what way it can best dispose of its surplus cadets. If it receives a class of sixty or eighty every year, and only needs thirty for its own service, it must lose some of them, and the only question is whether it shall lose them by dismissal or by resignation. By dismissal of the surplus from the bottom of the list it retains the best of the class ; by attempting to retain all it loses the best by resignation. A simple raising of the standard has not effected the weeding-out which will be required, for statistics presented by Admiral Rodgers show that the proportion of graduates is as high under the higher standard as it was under the lower one. So, unless the heroic process is adopted, and it is understood that only a given number of each class are to be permanently retained in the service, our Navy must hereafter be recruited rather from the lowest than from the highest of the graduates of the Academy.

THE LOUISIANA CERTIFICATES.

WASHINGTON, June 15, 1878.

THE Republicans have already begun to recover from the effects of Anderson's testimony, and to assume a more confident tone as to the results of the investigation. The somewhat inconsecutive character of the examination has tended, too, to produce the impression that the Democrats are not meeting with the success they expected. The evidence, however, they have brought out with regard to the forged Louisiana certificate is curious, and may hereafter become important.

In Louisiana, in 1876, there were two sets of electors, one Republican and the other Democratic ; one known, it will be recollected, as the Kellogg electors (Kellogg being at the head of the list) and the other as the McEnery electors. There were necessarily, therefore, in the case of this State "double returns," one set for Hayes and the other for Tilden. But it appears from the testimony already taken that Mr. Ferry, the President of the Senate, received four sets. Of these the fourth was a burlesque return which was opened and read, but may be dismissed as of no further consequence. The remaining three are those on which the case turns. Of these the first, called No. 1, is a Kellogg certificate, received by mail. Of course there was a duplicate of this sent by messenger ; but it appears from Mr. Ferry's testimony that this was returned to the person who brought it (Thomas C. Anderson). The explanation of this is that Mr. Ferry, who seems to have acted with great caution during the electoral proceedings, finding before he had received many of the returns that there were likely to be informalities in the outside certificate and the sealing, determined in all cases to call the attention of the messenger to any irregularities that might exist. This being done, if the messenger chose he could take the returns back to have the irregularities remedied ; if he insisted, however, on their reception, Mr. Ferry received them. In the case of Louisiana, the messenger, on his attention being called to the fact that on the outside there was no certificate by the electors, took his package away, and it was never seen again. Its duplicate, however, which had come by mail, of course remained in Mr. Ferry's hands until the count. The disposition of this set of certificates, which we may call Kellogg No. 1 (and which there is no question were the only *bona-fide* Republican returns in the case), was as follows : one certificate may be assumed to be deposited in the official archives of the State ; one was brought to Washington and taken away by the messenger who brought it ; one was received by mail (the postmark showing that it was mailed from New Orleans on the 9th of December, 1876), and, when the State was reached on the count, was opened by Mr. Ferry and went to the Commission. Now, this certificate is defective in two respects. It does not contain as required by the Constitution (12th Amendment) distinct lists of the persons voted for as President and Vice-President, and on the outside there was merely an endorsement signed by Kellogg as to the contents, instead of a certificate signed, as the Revised Statutes require, by all the electors. The second (Democratic) set of certificates, which may be called McEnery No. 2, came in duplicate by mail and messenger, were opened by Mr. Ferry, and went to the Commission. The third set, which may be called Kellogg No. 3, came by mail and messenger. It is on the difference between these last certificates and the Kellogg No. 1 certificates that the evidence recently taken turns. There is no doubt that the last set were forgeries. It is to be observed that No. 1 were defective not merely by reason of the absence of "distinct lists," but because there had been no distinct voting for President and Vice-President on separate tickets, on which distinct lists could be based. Therefore no revision of the certificates was possible without a new meeting of the Louisiana electors and a recast of the vote. But no meeting of all the electors was ever held, and the signature of A. B. Levisee, one of the electors, proves to have been forged on the No. 3 certificates—in all eight times. Formally, however, these certificates were in strict conformity with the Constitution and laws. The mailed duplicate of the last set did not reach Mr. Ferry till January 3. The documents which went to the Commission, therefore, embraced the original but defective return, and the formally correct but forged return; and the decision of the Commission, sent to Congress, expressly rests on what are referred to in it as "Nos. 1 and 3."

So far all is simple enough. Anderson, the first messenger, on finding that the first set of certificates were irregular on the outside, put them again in the possession of Kellogg. Not being able to withdraw the mailed duplicate, he determined to remedy the defects, and so the No. 3 certificates were prepared and sent to Washington. The defects in No. 1 appeared to be covered by No. 3. But now comes a curious piece of evidence. The two sets are totally unlike, so that it would be impossible to compare them without discovering the dissimilarity at once; and the Commission, in its decision just quoted, refers to them as two different papers. Notwithstanding this the printed record of the proceedings of the Commission makes them identical. There are two volumes containing the proceedings, one in octavo, known as the 'Electoral Count,' and the other in quarto, in the form of the 'Congressional Record.' In both these are printed what purport to be copies of No. 1 and No. 3, but they are duplicates, and duplicates of No. 1, the defective but genuine certificate. Now if both sets were really considered by the Commission, it is very singular that no one ever heard of the discrepancy between them at the time. The Democratic theory appears to be that the Commissioners, following their usual practice, sent all the papers to the printer without examination ; that after being printed a substitution was made by some person or persons unknown ; and that then No. 1 was kept back, and two papers went to the Commission which were in reality the No. 3 duplicates. The conspirators, however, not liking to have the suppression of No. 1 appear in the record, had the genuine certificates printed there, this time making Nos. 1 and 3 duplicates of No. 1. The Republicans, on the other hand, pooh-pooh this theory, and say the whole thing is the result of the carelessness of the printer or custodian of the papers. The testimony of Orlando H. Brewster, one of the electors, and of Clarke, Kellogg's private secretary, have not materially affected the case as to the count, one way or the other.

This is as much as has been actually proved, and I think it is a mistake to assume that the object of the testimony with regard to these certificates is to lay a foundation for an attack on Mr. Hayes's title. Although one of the sets of certificates is partly forged, and the other irregular, there is no question that the Republican electors did actually cast their votes for Hayes and Wheeler ; and to make any real flaw in their titles, it is necessary to go much deeper. The object of the testimony, as far as it has gone, is rather to show that the whole management of the election and of the count was in the hands of a gang of desperadoes, who hesitated at nothing. Manufacturing bogus election returns is an offence of a rather serious character, and the further history of Kellogg No. 3 certificates will probably be interesting.

RENAN'S "CALIBAN."

PARIS, May 31.

RENAN has composed a sequel to Shakspere's "Tempest," under the title of "Caliban." He himself calls it a philosophical drama. He was inspired to write it at Ischia one fine morning, "when the vines were covered with dew, and when the sea was like a whitish silk." He had left Paris, its noise and its quarrels, and was able to enjoy the silent beauty

of light and form. But his mind could not divest itself of the problems of the time. "Caliban" is, after all, but an idealized ".Rabagas." It is a philosophical study of democracy.

Democracy has always appeared to me like a huge body without any nervous centre. You can prick it, and try satire and irony against it; it does not feel. It opposes to all your efforts its portentous ignorance. It works, it digests, it consumes, it produces, it has appetites, it has instincts; but where can you find the *nodus vitæ*, the point which, touched, suffers acutely? Where is the seat of conscience? Where is responsibility lodged? A despotism has a nervous centre in the person of the despot, in his pride, in his vanity, in his personal and traditional sentiments. It is possible to wound even a Louis XIV. or a Napoleon. Those who do it do so at the risk of their life's happiness, sometimes at the risk of their lives. Fénelon had to pay by a long exile at Cambrai for the timid advice which he dared to give Louis XIV. Chateaubriand was never pardoned for throwing up his diplomatic post after the assassination of the Duke d'Enghien. Despots do not like reproach. They see it sometimes even in the most trifling objects. A Russian of my acquaintance told me that he was for a week in mortal fear of disgrace and of exile because the Emperor Nicholas, just before the Crimean war, met him in the Nevskoi Prospekt dressed in an English pea-jacket. Still, it is a joy and a consolation to think that you can go and seize the powerful and wicked man on his throne at the height of his glory, and that you can tell him the truth and force him to hear it. From his island of Jersey Victor Hugo hurled forth his "Châtiments" on Napoleon III., and did not Napoleon feel the shaft when he heard such verses as these:

> "Ah! tu finiras bien par crier, misérable!"

Despotism, wrapped up in all its magnificence, surrounded with its armies and battalions, affects to ignore the existence of the intellectual worm; but the pen is, in the long run, mightier than the sword. Then, your despot is not always a moral monster. He is often—too often—a very weak man, and in this very weakness there is a resource, if he can be approached by good, moral, high-minded advisers. The influence of man over man is nowhere so great as in countries governed by traditions, with monarchical and aristocratic institutions. It is almost painful to see in the immense collection of the letters of Richelieu how much care this great minister had to take in order to preserve the confidence of his young king, to give him truly royal ideas, and to separate him from low, debasing, selfish influences. He succeeded, however—at least, to a great extent. The poor and sickly king, so proud and so shy, so brave in battle, so timid in his court, so afraid of his best friends, and so willing to abandon them, was, nevertheless, what I have called a nervous centre. His qualities as well as his defects afforded a definite ground for the exercise of the faculties of a master mind like Richelieu.

But how are you to direct democracy? You can only do it in an indirect manner, by education, by changing the current ideas of a generation. But so long as this educational work is imperfect you must feel quite helpless. It is with democracy as with parties: you can only lead parties by following them. The general comes behind. The general is the man who feels most keenly, and who can express with the greatest force the most popular notions and ideas.

Renan supposes that *Prospero*, triumphing by his magic art over all his enemies, is replaced on his throne at Milan; he goes back to Lombardy with *Ariel* and *Caliban*. In his philosophical drama *Prospero* represents the aristocratic spirit, the dilettante, fond of art, of science; he inhabits the Certosa of Pavia, where he continues his experiments, caring but little for his subjects. *Ariel* represents pure idealism, the Hellenic spirit of love, of beauty. *Caliban* represents the democratic spirit, or rather the democratic instinct; he embodies the longings, the brutality, the inexperience, the strength of the masses. He is the same *Caliban* who says in the "Tempest" to *Trinculo*, speaking of *Prospero:*

> "As I told thee before, I am subject to a tyrant;
> A sorcerer, that by his cunning hath cheated me
> Of this island."

He says no more to *Trinculo:*

> "I'll show thee the best springs; I'll pluck thee berries;
> I'll fish for thee, and get thee wood enough.
> A plague upon the tyrant that I serve!
> I'll bear him no more sticks, but follow thee,
> Thou wondrous man."

Caliban has found out that he has the same rights even that *Trinculo* has; he complains of his bondage. "*Prospero* is an usurper; I was the first occupant." *Ariel* tells him in vain that he is happy at Pavia, that he has plenty of good wine. "Yes," says he, "but I am exploited. Vile valet, don't you see that to be exploited by another man is the most insupportable thing? Have you no honor? No mortal has a right to make a subaltern of another. In that case, revolt becomes the holiest of duties." *Ariel* explains in vain that *Caliban* owes everything to *Prospero*—the faculty of articulate language, even his human form; *Caliban* answers that it was a folly to teach him to speak, since he can use the faculty of speaking against *Prospero*. He has been deceived long enough; the monsters with which his master frightened him were inventions, lies; he will serve no more.

In the second act we are in the gardens of the Palace of Milan; the court is assembled, and the courtiers exchange their views on all sorts of matters. Some want reform, and some laugh at reform; they are all happy and amiable and highly polished. *Caliban* is a witness of the feast behind a bush, and he asks himself why he was not invited. "Is it just that I should not be one of them? The rights of men are the same for all men." The feast begins in earnest when *Prospero* arrives with *Ariel;* he shows his guests the "gods of the future." Immense giants appear, all in polished steel. Their joints are formed and moved by powerful mechanical articulations; the oil flows in each joint; an incandescent tube is their soul. They seem to eat coal. In another part of the garden a table is spread round which sit the gods of flesh—the Olympian gods. The gods of steel attack the gods of flesh, kill them, smash them. An immense confusion ends the scene.

Prospero is delighted, but his prefect of police tells him that he ought to remain for the night in Milan, that the city is in a state of fermentation. *Prospero* disdainfully returns to his laboratory in the Certosa. The revolution takes place after his departure. *Caliban* is proclaimed the head of the government, and carried in triumph to the palace. He immediately discovers and tells the people that "Order is necessary. Leave your arms, return to your houses; crown your victory by your moderation and by your respect for property. Vive Milan!" The revolution is ended. *Caliban* finds himself in *Prospero's* bed; he is kept awake by his own triumph. In the deep silence of the night he thus soliloquizes:

"No, I would not have believed it could be so sweet to reign. I would not have believed that reigning makes men so mature. In the journey from the communal square to this palace I have changed more than during the rest of my life. Ten hours have passed since the people brought me here in their arms, and I don't know myself. I was unjust to *Prospero;* slavery had embittered me. Now, lying in his bed, I can judge him as colleagues judge each other. There was some good in *Prospero*, and in many things I feel disposed to imitate him. Is there anything more odious, for example, than this inopportune impatience of the people, this succession of impossible petitions with which they annoy me? What avidity for enjoyment! what subversive pretensions! . . . A government ought to resist. I will resist. After all, the established people and myself, we have common interests. I am established as they are; this ought to last. Property is the ballast of society; I feel in sympathy with the proprietors.

"Then, after the useful comes the brilliant. The brilliant is necessary. I will repair my wrongs. I was jealous at the feast yesterday, because I was there uninvited. Well! feasts, the fine arts, palaces, courts are the ornament of life. I will favor the artists. The men of letters are the distributers of glory; I will not neglect them. Who was the centre of this fine assembly of yesterday night? It was Imperia; I will court Imperia. . . . Ah! if I were only beloved I would be good and happy. A new world opens. The good exists. I see it for the first time. *Prospero* always spoke of making the happiness of humanity. It was not his destiny to do it. If, perhaps, it were mine. . . . "

Here *Caliban* goes to sleep.

Prospero has left Milan after his great feast and returned to his dear Certosa. A friend comes the next day and brings him the first proclamation of *Caliban*. *Caliban* gives himself out as a moderate. The men of order in Milan, frightened at first, already group themselves round him, and call him the saviour of society. Some of them call him the great citizen. *Prospero* comes out of his scientific dreams; he laughs heartily; he cannot even hate *Caliban*. He calls *Ariel;* the time has come for *Ariel* to show what he can do. They must get rid of this brute of a *Caliban*, so as to be free to pursue their noble researches. *Ariel* goes forth, and he soon comes back; he falls from heaven heavily, like a bird blown by a hurricane. "Oh! my master, our art is vanquished; it is powerless against the people." Where *Caliban* can do every thing *Ariel* can do nothing. In the enchanted island of the "Tempest" *Alonzo* was accessible to *Ariel's* charms. Now all is different; the revolution is realism. What is ideal, not substantial, has ceased to exist. "When the people says 'this does not exist,' all is finished. I tremble for the day when this terrible method of reasoning shall touch God. He will be summoned, and if the Eternal stays proudly behind the clouds he will be struck off the catalogue of existences. As for kings and dukes, we know

what will become of them. The people is positivist." While *Prospero* is discoursing with *Ariel* and a few friends on the triumph of *Caliban*, on the moderation of *Caliban*, on the best way of dealing with the people, enters *Fra Agostino*, of Ferrara, who reads an indictment of the Holy Inquisition accusing the Duke *Prospero* of heresy, calling him to account for his impious experiments, his witchcraft, and finally ordering him to follow him into the prisons of the Holy Office. The Milanese friends of the Duke become very angry, and one of them, *Gonzalo*, says to the Duke, "You see, Monseigneur, *Caliban* has one more quality: he is anti-clerical." *Prospero* laughs, and says: "Well! Vive *Caliban!*"

We come now to what may be called the moral of the piece. *Caliban* makes a visit, as Duke of Milan, to the Certosa; he is received by the friars. The organ prays for him, as he is sitting in the choir on the *sedes dueis:* "O eternal, Thou whom nothing can trouble, irritate, or console, pure and holy being, crystalline light which goes through the world without a stain, we praise Thee with our voice, and proclaim Thee just, perfect, and good. Those who believe, those who hope, those who love, are those alone who do not err." The legate of the Pope denounces the dissolute *Prospero*, "the mortal enemy of your Highness," but *Caliban* feels now equally proud and generous. He refuses to deliver *Prospero* into the hands of the Inquisition, and says: "I am the heir of the rights of *Prospero;* I will defend him. *Prospero* is my protégé. Let him work at his ease with his philosophers, his artists, under my patronage. His labors will be the glory of my reign." He calls those who have the tradition of government, and names *Gonzalo* member of the Council of State. *Gonzalo* says: "Sir, I have counselled all my lifetime: I will die counselling; I thank your Highness."

The ceremony is finished. The prior of the friars is in his cell; he prays, and says:

"The world, which I did well to leave, is an eternal illusion, a comedy composed of acts without an end. What happens proves, what nobody would believe, that *Caliban* is susceptible of progress. Yes, all civilization is the work of aristocrats. Aristocracy has created the grammatical language (how many blows have been necessary to make grammar obligatory!), laws, morals, reason. . . . Well-combed, well-washed will become presentable. There will, perhaps, some day be medals 'to Caliban, protector of sciences, letters, and arts.' *Prospero* can live, at least for a while, under this régime, and he may even take the direction of it with prudence. . . . As for the extreme delicacy of tender souls, moved by a personal sentiment of loyalty, it has not much place left in this order of things. Such souls have nothing to do but to disappear. 'I have loved justice and hated iniquity,' said a great pope. You can still love justice; but to hate iniquity! . . . It is easier said than done. Where is iniquity? The best minds search for it, and in the end are much embarrassed."

Ariel dies, and *Prospero* hears from his cell the last accents of his ideal friend:

"*Prius mori quam foedari.* . . . This human life is strong but impure. I want chaste kisses. Every idealist will be my lover. I will be the virgin snow on the neck of the young girl, the fairness of her hair. I will bloom with the rose; I will be green with the myrtle, perfumed with the pink, pale with the olive-tree. Adieu, my master. Remember your little *Ariel*."

Correspondence.

"AUDI ALTERAM PARTEM."

To the Editor of The Nation:

Sir: Will you, in the cause of truth and right and justice, insert in your next number an explanation of the following, which appears in your number 676, page 380, dated June 13, 1878?

"Testimony was also given of the ballot-stuffing in Leon County, Florida, at precinct No. 13, by Inspector Bowes, who holds a position in Washington, D. C. He put in 73 or 74 'jolly jokers,' and made his count to correspond, and boasted that he had saved the State to Hayes."

The 73 or 74 small tickets ycleped "Jolly Jokers" found in the ballot-box at precinct No. 13, Leon County, Florida, were legitimate ballots for the Presidential election of 1876, cast by legal voters, and proven to be legitimate at the counting of the ballots, and which can be truthfully proven again if the Committee will summon Inspector Bowes—by no means a difficult task, for he is in Washington, D. C. The difficulty experienced at elections by the colored voters in Florida, partly owing to large area, sparse population, and poor roads, has been to obtain true Republican ballots to vote with, and for that purpose many devices, such as designated colors, have been adopted, but always counterfeited by their active, unscrupulous, and alert enemies, notwithstanding the secrecy which Republican leaders had heretofore adopted. On this last occasion a very small-sized ballot was adopted as the Republican device, and the ballots were sent by safe messengers to the several districts. Knowledge, however, being obtained during the night before the election by the Republican leaders that their last device, a very small-sized ballot, had again come into possession of the enemy, through the leakage of a boy employed in the printing-office, it was deemed necessary to recall the whole of them and issue other ballots, which was accomplished except in one outlying district (twelve miles distant), which could not be reached during the night, and consequently those Republican voters voted the small-sized ballots ycleped "Jolly Jokers."

The above statement was corroborated as true at the time of the election, and can be truthfully proven so again whenever an "Investigating Committee" or the country wishes to hear the truth of the Florida Presidential election for 1876. Very respectfully,

Thomas W. Lion,
222 Second St., N.W., Washington, D.C.

[We merely summarized the evidence taken during the week.—Ed. Nation.]

Notes.

G. P. PUTNAM'S SONS announce 'Sibyl Spencer,' a novel, by James Kent; 'Six to One: a Nantucket Idyl'; and 'The Crew of the *Sam Weller*,' by John Habberton.——Harper & Brothers have met vigorously the cheap competition in the fiction market, of which the "Seaside Library" is perhaps the best example. Their "Franklin-Square Library" offers in the first four numbers Trollope's 'Is he Popenjoy?' Hugo's 'History of a Crime' (complete), 'The Russians of To-Day,' and Harwood's 'John Knox, Pitman.' These numbers are quarto in form, composed in triple columns, and clearly printed, without covers, and sell at ten or fifteen cents according to the number of pages. They ought to clear the field of all rivals, as well as check the demand for the baser sort of literature. Another new enterprise of this house is its "Library of American Fiction," in the regular novel form, with an appropriate and taking cover.—In Prof. Baird's 'Annual Record of Science and Industry' for 1877 (Harper & Brothers) the wise plan has been adopted of omitting the abstracts of papers in scientific journals, and of making the volume consist wholly of summaries of progress in the several departments by recognized authorities. The bibliography and necrology, and of course the index, are retained.——Prof. Baird's Report as U. S. Fish Commissioner for 1875-1876 has issued from the Government Printing-Office. It is principally devoted to a history of the American whale-fishery, for which the illustrations have been borrowed from Capt. Scammon's authoritative work. From the Engineer Department, United States Army, we have received Vol. ii. of the Report of the Wheeler Survey. It relates to astronomy and barometric hypsometry, and is illustrated by plans of the observing stations, and by the usual tables of barometric curves.——It may be doubted whether the excessive cost of Dr. Russell's 'Diary of the Prince of Wales's Tour in India' was a damper on would-be readers of the work in this country; but they can now get an inviting reprint of it in one moderate octavo volume for a correspondingly moderate price, and with cuts that at least give a great many aspects of the Prince (New York: R. Worthington).——Macmillan & Co. have brought out a second volume of the *Daily News* war correspondence from the fall of Kars to the conclusion of peace. It will be long before critical history overtakes and supersedes it. Place may well be made on the same shelf for C. B. Norman's 'Armenia and the Campaign of 1877' (Cassell, Petter & Galpin), of which the specially-prepared maps and plans of battles will partly supply the only defect of the *Daily News* volumes.——'The Hand-book of Mount Desert' (New York: T. Whitaker) challenges comparison with a Portland guide-book to the same fortunate isle; and if it lacks the rather elegant typography and photographic illustrations of the latter, it is worth adding to it both for its matter and its sketch-maps.——The second edition of 'Harvard and its Surroundings' (Cambridge: Moses King shows an improved arrangement of the heliotype views, some substitutions not always for the better, and some valuable additions, like the interior view of commons in Memorial Hall.——The cartoons in the last number of the *Harvard Lampoon* (June 7) are unusually ambitious as designs, and fairly fulfil the desire of this journal to serve as a comic review outside the range of college interests.——The second number of the *Ameri-*

can Journal of Mathematics will appear about the first of July.——The promised portrait of William Harvey appears in *Nature* for May 30. The engraving is by Jeens after the painting in the Royal College of Physicians.——The Haarlem Society of Sciences has awarded its biennial medal for exceptional distinction in some branch of science during the past twenty years to Prof. Simon Newcomb as an astronomer.——The Rhode Island Medical Society, as trustee of the Fiske Fund, offered a prize of $200 for an essay on any one of four subjects, and it has been awarded to a layman, Col. George E. Waring, Jr., who wrote incognito on "The Causation of Typhoid Fever." The paper will be printed by the trustee.——One of the twenty scholarships recently established in the Free School of Political Sciences in Paris has been allotted to the University of Virginia.——M. Henri Martin, the historian, has just been elected over M. Taine as Thiers's successor in the French Academy; and M. Renan over M. Wallon, as the successor of M. Bernard. The vote was alike in the two instances.

—Prang & Co., the Boston chromo-lithographers, have issued two parts of "an important, popular, and low-priced work on 'The Native Flowers and Ferns of the United States,' by Prof. Thomas Meehan, of Philadelphia"; the plates printed in colors from designs by Alois Lunzer. The issue is to continue fortnightly, in parts containing four plates and sixteen pages of letterpress, in imperial 8vo. The announcement from which we have quoted rightly characterizes the work. With Sprague's 'Wild Flowers,' published by Houghton & Co., we could find no fault, except with the price. The present publication is remarkably low-priced, and therefore it would be ungracious to complain that the plates, though sufficient for the purpose and generally good, are not exquisite. The artist shows capabilities which are not yet fully developed, and the lithographers are doing their share well, wonderfully so for the price. So that the enterprise is really hopeful, as to the illustrations; and the typography and paper are excellent. Mr. Meehan is the very person to conduct the undertaking, having a genius for popular exposition, knowing enough of the technical botany, everything about cultivation and the habits of plants, being acute in observation, quick to philosophize, and with a gift for ready writing which may be equal to the demands of the rapid issue promised for this work.

—An important change in the composition of one of our leading publishing firms was announced last week. Mr. Andrew C. Armstrong, who for more than thirty years has been connected with the house of Scribner, and who thus links together the original firm (1846) of Baker & Scribner, the subsequent Charles Scribner & Co. (1850), and the late Scribner, Armstrong & Co. (1871), has disposed of his interest to the senior partner, Mr. J. Blair Scribner, and his brother, Mr. Charles Scribner, who assume the firm name of Charles Scribner's Sons. Mr. Armstrong's interest is also extinguished in the associated firms of Scribner & Co. and Scribner, Welford & Armstrong. The book-loving public must view with favor the maintenance of the business from generation to generation in the same family; but Mr. Armstrong's friends may also express a hope that his long experience and ability as a publisher will not be lost.

—Mr. T. W. Higginson's "Some War Scenes Revisited," in the July *Atlantic*, confirms what the candid have long known about the material progress of the blacks in the seaboard States, and the changed attitude towards them of their white fellow-citizens. It even draws a contrast between the degrees of equality secured the colored people in South Carolina and Virginia and in Rhode Island and Connecticut, to the decided advantage of the late slave States. The personal interest of Mr. Higginson's narrative lies in the fact that he viewed after an interval of fourteen years localities and persons familiar to him during the war as a colonel of colored troops. He traces the career of several of his subordinates, like Corporal McGill, who is "de most populous man in Beaufort," being proprietor of a well-equipped livery-stable. He "rarely met an ex-soldier who did not own his house and ground, the enclosures varying from five to two hundred acres," and he adds that "it will hardly be believed that the men of my regiment alone sunk $30,000 in an impracticable building association, and in the purchase of a steamboat which was lost uninsured." Mr. Moncure D. Conway has a pleasant paper based on one of our countrymen's, Col. Joseph Chester's, genealogies, and entitled the "Romance of a Family." The family in question is that represented by Mr. P. A. Taylor, the well-known radical member of Parliament, and Mr. Conway quotes freely from the family letters reproduced in the volume. Nothing is more unexpected and amusing than Rebecca Taylor's account of a spiritual séance in London in 1762, with one knock for yes and two for no, quite in the modern fashion. The performance was a lame one, and Rebecca remarks in a postscript: "I was much pleased with one clergyman who sayd it was a Damd Lying spirit." This reminds one of the lady who said "Thank you" to the gentleman who swore at the train they had both missed by half a minute. Mr. Henry James, jr., begins a new story in this number, and whereas he has just shown us "The American" in Europe he now shows us "The Europeans" in America. But we imagine his subject is still his countrymen, whom he prefers to describe in contact with foreigners, rather than in their common action and reaction upon each other. The difference now, therefore, is mainly in the change of scene, and here Mr. James has to draw from memory at a great distance in time and space. His local color in consequence seems to gain in charm without losing in realism. The story opens in a room at the Tremont House in Boston, twenty years ago, and we need only say that those who begin it will take a new dislike to the practice of continued stories.

—The *Portfolio* for May (J. W. Bouton) gives a large, spirited etching by Richeton after Luke Fildes, the artist who came into sudden prominence with the "Casual Ward"—remembered by every visitor to the Centennial with the sensation that Dickens was somehow still alive, and that one of his chapters of London life had just appeared. Mr. Fildes has been visiting Venice, and his contribution to the *Portfolio* represents "Marianina," a water-carrier. This picture of a robust but dreamy girl is Dickensish too—conceived from an inveterately foreign standing-point, painted with strong light and shade, but in English idiom—one of the "Pictures from Italy," in fact. Other plates are a reproduction by Durand of one of Dürer's etchings—those rare and precious forerunners of the art—and a bad copy in aqua-fortis from Piloty's "Galileo" by a German etcher. Mr. Atkinson's papers on "Modern Art in Germany," which this last plate illustrates, would be improved by the infusion of a little criticism in the place of obvious remarks about Cornelius being classical and Piloty a colorist. Mr. Hamerton's page on Turner fills its place in the series merely in a perfunctory way, and the number altogether gives signs of editorial lassitude.

—William Cullen Bryant died on Wednesday of last week, in the 84th year of his age, in consequence of exposure at the unveiling of the Mazzini monument in Central Park, of which occasion he was the orator. He leaves behind him a great reputation earned in the not generally connected fields of poetry and daily journalism. It is as a poet that Mr. Bryant's fame is likely to be most enduring. He will stand in the history of American letters as the first of our poets who secured what could be properly called a national reputation, and who succeeded in expressing in verse thoughts and feelings with which great numbers of his contemporaries were in sympathy. When he began to write he had no rivals, for Mr. Dana, though some years his senior, was of too fastidious a temperament to produce enough to win that prolonged popular attention which his genius might otherwise have claimed. America was longing for distinction in letters, and Mr. Bryant's verses could be cited as performances that were free from provincial limitations, and that would deserve respect even in England. He had studied good models; he had learned early much from Wordsworth. He expressed simple thoughts in plain and elevated language. His poetry made up for what it lacked in imagination by a pure moral tone. He put into verse reflection and sentiment which were distinguished only by form from those which were common in the best circles of New England. If he never stirred the passions, he at least moved the gentler feelings. Men who read his poetry were the better for it. It was full of a pensive optimism which suited the fireside. He had no great skill in narration of human interests, but he could describe the external aspects of nature in sonorous and decorous verse, and connect them with familiar associations of human life. His eye for nature was not keen; he had no greater insight into her moods than into those of man. For him Cole was a great painter whose canvas was "glorious." He was a moralist in verse much more than a poet, and as the great majority of readers care little for poetry, but much for well-expressed moral feeling, his popularity had a sure foundation. The most remarkable feature of his long career is the equality of his verse at every stage and the unity of feeling and of style that pervades it all. His "Thanatopsis" happened to be one of his earliest instead of one of his latest pieces, but between that and the "Thirty Poems," published more than half a century afterwards, there is an evenness of sentiment, expression, and finish very rare in the history of any poet. Occasionally Mr. Bryant reached in his later years a freer swing than in his earlier productions. His "Robert of Lincoln," for example, has a true charm of unconcernedness for aught but

the bird itself. Still, the poems which will be most read and most esteemed hereafter doubtless belong to his early manhood. Among these should be named "The Waterfowl," "The Hurricane," the "Forest Hymn," "The Prairies," the "Hymn of the Sea," and, what may be thought to outrank them all in beauty, "June," with its prophetic

> "—thought that when I came to lie
> At rest within the ground,
> 'Twere pleasant that in flowery June,
> When brooks send up a cheerful tune
> And groves a pleasant sound,
> The sexton's hand my grave to make
> The rich green mountain turf should break."

Mr. Bryant's editorial connection with the *Evening Post* covered a period of fifty-two years, and thus, though he was not the founder of the paper, his removal from it has for the public of to-day the same significance that the death of Raymond, or Bennett, or Greeley had. It is some years since he laid aside the real editorial burden, but as a more or less frequent contributor of political articles down to the last days of his life, he may fairly be said to have died in harness. For the rest, his career as a journalist was, like that of all journalists, uneventful. Yet, in a period when journalism was at a low ebb, his paper was invariably respectable, and he stood uncompromisingly by free-trade when it had few other advocates at the North, and by anti-slavery doctrine when it was most denounced and despised.

—The ingenuity of managers has been tasked for several years to devise some means of filling the Grand Opera House with paying audiences. The late James Fisk, jr., was, as the inhabitants of New York have reason to remember, a devotee not merely of commerce, manufactures, and transportation, but of art as well, and it is no wonder that his plans for the development of New York should have embraced them all. If the licentious press and addle-headed reformers had not stopped him it was, we believe, his intention to have developed Twenty-third Street into a great transverse highway—a sort of East and West Broadway—the ferries at either end (possibly converted to bridges or tunnels) making it the great viaduct between the grain-fields of the West and coal-fields of Pennsylvania and "tide-water," the dwellings converted into busy stores and warehouses, while overtopping all were to be the offices of the great broad-gauge double-track Erie Railroad and Opera House, run and managed by those two well-known impresarios, Jay Gould and James Fisk, jr. It was a magnificent idea, and as it could not be all carried out at once, the Opera House was first bought, as a home for art, around which were to cluster gradually afterwards commerce and manufactures. Transportation was already represented in the person of Fisk, whose private stairway enabled him to seek refuge from the cares of railway management in the proscenium box of the theatre, where the present generation of New-Yorkers will long remember him sitting and encouraging his imported company of players with signs of benevolent satisfaction. The hand of the assassin, however, struck down the enterprising Fisk, and his untimely death nipped in the bud his plans for the development of the city. The new managers of the Erie Railway had no taste for art, and moved back to their old offices; the great highway remained what it was before, and the Opera House sunk into a melancholy decline, which manager after manager depleted his pockets in vain attempts to relieve. It is still the best house for comic opera in the city, and its failure has been solely due to its situation.

—The Hess English Opera Company have at last succeeded in filling it. The "Chimes of Normandy" is a pretty literal translation of the "Cloches de Corneville," and for any one interested in music or the stage this opera is well worth hearing, if only for the sake of comparison with the French version of the Aimée troupe. There can be no question that the musical resources of English singers are much greater than those of the French. They have finer voices, sing with greater accuracy, and fill the large theatre easily. Indeed, the Aimée troupe had hardly a voice among them, Aimée making hers do its work only by the most delicate and careful management. The English company, too, act better than any English troupe that we remember to have seen, Miss Melville and Mr. Peakes being particularly good. And yet there could be no question after hearing both versions as to which was the real thing and which the imitation. In the French version everything was in good taste from the beginning to the end, and if it was not precisely an opera suited for Boston in Anniversary Week, there was nothing vulgar or clownish in it. The tenor, for example, was a fat fellow, who off the stage would probably not present nearly as fine an appearance as Mr. C. H. Turner, and his part was one in which there were neither graces nor virtues. Nevertheless M. Mollard made it a pleasing part, while Mr. Turner makes it that of a circus-clown. The acting, though good, is immeasurably inferior to French acting. It may fairly be doubted, we think, whether a race which, like the Anglo-Saxon, has entirely abandoned gesticulation in private life, can do much for the theatre, where gesticulation is an absolute necessity for expression; and it is curious to see in this respect the awkward attempts of the Hess company. Miss Melville is a born actress, but the rest of the troupe have little more idea of the connection between feeling and gesture than if they did not know there was any such connection. Mrs. Seguin, for instance, whose beautiful voice made the part of *Germaine* musically almost perfect, has a favorite gesture which consists in extending her arms with a sinuous motion and then turning the palms upwards. It looks like a feminine attempt to imitate the feathering of a pair of sculls, but what it means we confess we do not know. You might go to the French opera for months without seeing a single unmeaning gesture. On the other hand, you might go there for years without hearing such a voice as Mrs. Seguin's; and you might, if you confined yourself to the English stage, wait for a generation before you would see again as good English opera as her company is now giving.

—The entertainment now given at the Park by Mr. Horace Lingard and Miss Alice Dunning consists of a legitimate comedy, succeeded by "sketches" of the Concert Hall variety. Mr. Lingard is, it seems, going through a natural process of evolution from the concert-hall level to that of the real stage, and to realize the progress he has made it is only necessary to see him in *Perkyn Middlewyck*, in Byron's "Our Boys." The part is low comedy of a rather delicate kind, and is acted in too broad a way by Mr. Lingard, who does not bring out any of the nicer shades in the relations between the vulgar, hot-tempered, but good-hearted butter-man and his educated son. Mr. Lingard's *Middlewyck* is simply a comical figure. His acting, as far as it goes, however, is genuine comedy, which is more than can be said for Miss Dunning, whose histrionic abilities are of the slightest. The play is one of Byron's best, abounding in witty and bright dialogues, but with the usual amount of slowness in the development of the plot. It depends greatly for its success on the skill with which the actors bring out the play of character and make their "points." It is very much above the range of Miss Dunning, and slightly above that of Mr. Lingard; but the latter is evidently *lancé* in the legitimate drama, and his progress in the last four or five years has been so great that there is no saying what he may accomplish in the future.

—As railways are extended, and railway travel becomes more a daily matter, the inconvenience of the differences of time at different places becomes more strongly felt. So far as the traveller is concerned, any system by which the same time was used on every road would remedy the evil. But we are here met with the requirement that railway and local time shall correspond, at least in the principal cities, and it is too much to expect that a whole community will abolish local time in the ordinary avocations of life. The only practical way out of the difficulty seems to be to establish two recognized measures of time: the one railway time, corresponding to some one meridian, say that of Washington, and the other the local time of each place, and to construct clocks and watches so as to show both times, either by having two pairs of hands or two dials. The former would be used on all the railways, the latter in domestic and business life. An ingenious modification of the standard or universal time has recently been proposed by Mr. Sandford Fleming, Engineer-in-Chief of the Canadian Pacific Railway, which is worthy of at least a thought. Instead of having the hours counted from noon or midnight of some one meridian, he proposes to designate them by twenty-four letters of the alphabet. Hour A might be made to commence at Greenwich noon, then hour B would mean one o'clock P.M., Greenwich time, C two o'clock, etc. F would then mean Washington noon, and the relation of the lettered hours to the local time of any place would be readily acquired. Ingenious as this suggestion is, we doubt whether the plan would be so readily introduced as would that of adopting the time of some standard meridian. The great drawback would be that the number of hours before a train started could not be so readily determined as by the numbered hours. If, for instance, a traveller was told that a train was to leave at V hours and forty minutes, and found it to be now N hours and fifty minutes, he would have to turn his letters into numbers before knowing how much time he had for business. In justice to Mr. Fleming we must say that his letters are intended partly to do away with the troublesome division of the day into A.M. and P.M., but we cannot help thinking that a continuous numbering of the hours from 0 to 24 would be found more convenient.

WILLIAM FRANCIS BARTLETT.*

THE careers of the professional soldier and of the volunteer generally arouse quite different feelings in our mind. From the days of Sidney and Bayard to those of Havelock there are no finer or more interesting lives than some of those furnished by the profession of arms; in them the interest, as time goes on, is generally heightened by the fact that the military service is not a brief episode of an otherwise peaceful career, but is chosen with all its heavy responsibilities from the outset; that these men face death as others face life, as part of their daily duty. The volunteer is the hero of an hour; he takes great risks for a great occasion, and for his gallantry he is well rewarded in praise that rarely overtakes the professional soldier who merely does his duty from day to day, and he generally is able to retire, after his service is over, to private life with memories of his adventures which grow into pleasant reminiscences as time goes on. Now and then, however—and it was frequently the case in our civil war, which lasted so long and was waged in so deadly a manner as to make veterans of its rawest recruits—we find the two lives of volunteer and professional soldier mingled in one career; the impulse which drives citizens into the trenches being discovered in some one who has by nature the professional temperament and ambition of the soldier. Such a union of qualities ought to produce results of no ordinary character, and in General Bartlett's life they did produce results which no one who is familiar with his short but memorable career will soon forget.

The story told in Mr. Palfrey's pages is a deeply interesting one. The outbreak of the war found General Bartlett a mere boy—a junior at college, not twenty years of age; not fond of hard work or ambitious of college honors; probably, from his biographer's account, regarded as a young man more likely to amuse himself with life than to enter into it seriously for several years to come. On the 17th of April, 1861, he had joined the Fourth Battalion of Massachusetts Volunteers, and by the end of June he had been offered a commission in the Twentieth Massachusetts, then under command of Colonel William Raymond Lee. Early in July he was appointed captain. It was not long before he justified this selection by his coolness and admirable management of his men in the bloody affair at Ball's Bluff, in which his regiment was nearly cut to pieces. Out of twenty-two officers engaged thirteen were reported by Bartlett (as senior officer of those saved) killed, wounded, or missing; out of three hundred and eighteen men, one hundred and forty-six killed, wounded, or missing. The action is graphically described in a letter from Bartlett to his mother. The position attacked was on the further side of the Potomac, and must have been nearly impregnable, being protected by a high, precipitous bluff, washed by the river at its base. The end of the fight he thus describes:

"The field now began to look like my preconceived idea of a battlefield. The ground was smoking and covered with blood, while the noise was perfectly deafening. Men were lying under foot, and here and there a horse struggling in death; coats and guns strewn over the ground in all directions. I went to the colonel, and he was sitting behind a tree, perfectly composed. He told me there was nothing to be done but 'surrender and save the men from being murdered.' Most of the men had now got down the bank. I thought it over in my mind, and reasoned that we might as well be shot advancing on the enemy as to be slaughtered like sheep at the foot of the bank."

He called upon his men for one last rally, and as they reached the top of the bank they came upon two fresh companies of the enemy that had just come out of the woods.

"Both sides were so surprised at seeing each other—they at seeing us coming up with this handful of men, we at seeing these two new companies drawn up in perfect order—that *each side forgot to fire*. And we stood looking at each other (not a gun being fired) for some twenty seconds, and then they let fly their volley at the same time we did."

This fire was too hot to stand against, and they were driven back again down the bank, when he ordered all who could swim to take to the water and escape as they could, while he stayed with those who could not swim, and, expecting rather more to surrender than to escape, started up the river with some eighty men and their officers. On the edge of the river they found a boat under water, which had been already passed by as worthless by a party of officers shortly afterwards taken prisoners, and on this skiff, carrying five at a time, were ferried slowly across to Harrison's Island, whence they made good their retreat to the camp. From the time of this bloody engagement Bartlett's rise was very rapid. The battle had cost his regiment in killed, wounded, and missing its colonel, major, adjutant, assistant-surgeon, four captains, five lieutenants, and a hundred and fifty non-commissioned officers and privates, and left Bartlett the second officer present for duty, in which position he continued during the following six months, while he remained with the regiment in the field. In these six months he made himself "a most efficient and accomplished second officer." As an instance of his conscientious and minute thoroughness at a time when conscientious officers were few and far between, his biographer mentions that he learned even to sound the infantry calls on the bugle.

In 1862 he went through part of the Peninsular Campaign, and on the 24th of April received a wound from a sharpshooter's rifle which cost him his leg. It was amputated four inches above the knee, and he was forced to go home; but on the 6th of September he had so far recovered that he was offered the command of a nine-months regiment, the Forty-ninth Massachusetts. It is a strong proof of the impression which his character made on every one with whom he came in contact that his hold on the men of this regiment, in which the colonelcy was elective, seems to have been as strong as in the Twentieth, where no right of election was recognized. He soon had a larger and more responsible command, being put in charge of a force of several thousand men left behind in New York when General Banks sailed for New Orleans. On the 24th January, 1863, the regiment sailed for New Orleans, and early in the spring the march toward Port Hudson began, a march distinguished for disorder and plunder. There is no more trying position for a good officer than to take part in a campaign in which discipline is not generally enforced, but in which he feels obliged, by a sense of duty, to enforce it on his own men. If he insists on discipline, he is looked upon for the time, not merely by his own men, but by his fellow-officers, as a martinet; if he does not, he knows his force will suffer for it. Colonel Bartlett had little trouble, however, probably because he let it be understood that it was his intention (as he says it was, in a letter) to shoot the first man he found doing it.

On the 27th of May the first disastrous assault on Port Hudson was made. By this time the loss of his leg had caused him a great deal of suffering, but with the aid of an artificial leg he was able to lead his regiment on horseback, and in this ill-fated attack against impregnable fortifications he was obliged to take part, in his own words, mounted "or not at all." From the description of the field, consisting as it did of abattis of felled trees, among which it was almost impossible to move, the attacking troops were doomed to slaughter from the first, and there was certainly little reason to hope that he, the only mounted officer in the assault, would come out of it alive. It will be remembered that at the time the newspapers published a story that the gallantry of a mounted officer slowly leading his men against the works under a pitiless storm of bullets so impressed the Confederate officers that they ordered their men not to fire at him. An extract from a letter from a staff-officer confirms this; but though the orders were no doubt given, the fire was too hot to permit anything like complete safety, and Colonel Bartlett fell from his horse, wounded in the wrist and right foot. He suffered greatly from one of these wounds, but was able when his regiment was mustered out at Pittsfield, in August, to ride at its head with his arm in a sling. Early in 1864 he took command of the Fifty-seventh Massachusetts, in what proved to be his last campaign. With the Ninth corps he crossed the Rappahannock on the 5th of May, and on the next day his regiment went into action and lost two hundred killed and wounded. Notwithstanding the short time he had been in command, his control over his regiment was already established. A regiment was lying in front that would not move. General Hancock ordered him to charge over it. The order was obeyed, he says, "in perfect line." In this fight (the second day of the Wilderness) he was wounded above the right temple, and was forced to go back to Washington. While there he was promoted, at the age of twenty-four, to the rank of brigadier-general. On the 19th of July he went to the front, taking command of a brigade. On the 30th the mine in front of Petersburg was exploded, and his division stormed the enemy's works. The first and second lines were carried, but our troops were driven back from all their positions, leaving Bartlett and a small party of men in the crater of the mine, the two flags flying within seven feet of each other. Here this little remnant of the attacking party fought on, the ammunition on both sides being reduced to bayonets and glass bottles, which were finally resorted to as missiles, until, seeing it was hopeless to continue the fight, and his wooden leg having been crushed to pieces by a lump of earth, he surrendered to General Mahone. Ill and greatly suffering, he was taken to Danville, and thence to Libby Prison, in Richmond, where he remained during the summer. His fate seemed to spare his fortitude no tests, and in Richmond he was subjected to the cruel disappointment of being taken

* 'Memoir of William Francis Bartlett. By Francis Winthrop Palfrey.' Boston: Houghton, Osgood & Co. 1878.

down to the landing to be exchanged, and being brought back a prisoner at night. It was not till the end of September that he was finally exchanged, so ill, as he says in his diary, that he could hardly stand. This was the end of his active service, though he remained in the army until July, 1866.

The wounds which he had received, and particularly the loss of his leg, had already begun to cause him great pain, and the remaining years of his life, though brightened by a happy marriage and the devotion of his friends, was a constant struggle with ever-increasing suffering. His indomitable spirit enabled him to go through, without murmur or complaint, what would to other men have been unbearable. It is gratifying to know that his services and character attracted the attention that they deserved. Office after office in his own State was offered to him; and his excellent speeches and letters on public affairs made his name familiar to the whole country. It is not often that a born soldier has the gift of eloquence, but when he has, the effect of it is more moving than the speech-making of civilians. There was eloquence in the mere presence of General Bartlett, and we doubt whether any one ever heard him make one of his short addresses from the time when, on taking command of the Fifty-seventh Regiment and receiving the colors, he replied to Governor Andrew, "I hope, sir, we shall do the flag more credit in action than we can do ourselves in speech," to his speech at the New England Society's dinner in 1875, without feeling his blood stirred by it.

But his death was already decreed, and was, indeed, probably hastened by his own generosity in giving up a fortune bequeathed to him by a relative and which would have enabled him to abandon work and give his health the care it needed. Reverses in business added to his anxieties, and his suffering from his wounds slowly but surely undermined his constitution. He died on the 17th of December, 1876, at the age of thirty-six.

Among all the officers of the Volunteer army to whom the war brought early distinction and rapid promotion, General Bartlett is conspicuous by his coolness and gallantry, and the beauty of his character. The fatality which attended his military career, as his biographer points out (he was disabled in every action but one in which he took part), prevented his having any opportunity of showing what he could do with a large command; but there can be no doubt that the same qualities which stood him in good stead at Ball's Bluff would have made him an excellent general officer. The major-general's uniform in which he was buried was far more than earned. It is a satisfaction, too, to think that, as time goes on, his name will probably become more rather than less familiar to his countrymen. As the noise and confusion produced by the war dies away, and we think more and more of what we really gained and what we lost by it, the lives of the men who, on the field or in civil life, showed themselves equal to what the occasion demanded will more and more strongly present themselves as the most priceless possessions we can hand down to our children; and among these, if we are not mistaken, General Bartlett's name will hold a very high place. The grief of those who knew and loved him cannot but be tempered by the pride that comes from the conviction that, as long as unflinching courage and modest devotion to duty are respected in America, there is no danger that oblivion will overtake the name of the boyish lieutenant who saved the retreat at Ball's Bluff, or the general officer who led his regiment against the works of Port Hudson on horseback because otherwise he "could not have led it at all."

Walks in London. By Augustus J. C. Hare, author of 'Walks in Rome,' etc. 2 vols. (London: Daldy, Isbister & Co. New York: Geo. Routledge & Sons. 1878.)—Mr. Hare, in attempting to do for London what he had done for Rome, has produced a book that will be found very useful, and that, without having the charm of coloring of the 'Walks in Rome,' will yet appear entertaining and readable even to persons not consulting it on the spot as a guide-book. We must add, however, that the exercise of a little finer sort of art might have made this lively compilation something better than a mere modified itinerary. Mr. Hare's descriptive powers are rather meagre, and he gives his readers fewer pictures by the way than might have been expected from a writer at once minutely familiar with London and addicted to observing the pictorial aspect of things. The author writes, indeed, as if he were but partially familiar with the great city by the Thames—as if, in fact, he had not been much of a walker there. His book has a rather perfunctory and done-to-order air—a quality much less apparent in the volumes of Messrs. Peter Cunningham and John Timbs, whom one feels to be genuine Londoners as well as antiquaries. But if Mr. Hare has "got up" his London, he has got it up very well, and to those American tourists who, on the long spring days, emerge from the by-ways of Piccadilly with an oppressive sense of long distances, accumulated cab-fares, and historic associations, he may be recommended as an edifying companion. About a place that has been so enormously lived in as London there was plenty to be said; the only thing was to gather it together. Mr. Hare has been able to make a great many quotations, for though London has not figured so largely in literature as Rome, yet most English writers, at least, have paid their respects to it in some shape or other. Mr. Hare divides his walks into districts, beginning with Charing Cross and moving thence Cityward. It is in the eastward direction, of course, that associations and memories are thickest—along the line that stretches from Charing Cross to the Tower—and Mr. Hare's first volume, which covers this large expanse, is accordingly the more interesting, though the second contains two very copious and detailed chapters upon Westminster Abbey.

We have not the space here to tread in our author's footsteps, and we are afraid, we confess, that even the very appreciative American sight-seer, proposing to himself to grapple with the great commercial Babylon, will sometimes find his energy failing him. The modern tumult and uproar of the City, the daily press and jostle, are sadly hostile to contemplation. The spirit of historical enquiry is merged in the baser instinct of self-preservation. The love of research must be mighty within you to enable you to hold your ground for the purpose of staring at the front of a house in which a British Classic was born, when a death-dealing hansom-cab is bearing straight down upon you. It is only on Sunday, as Mr. Hare says, that you can really look at the City, and give yourself an idea of what it contains. Then, indeed, in the blank, empty streets, among the closed shops, with only the tall policemen stationed at intervals for landmarks, you may discover how much curious and interesting detail lurks amid the general duskiness and ugliness. It must be added, however, that no one will have a right to accuse you of bad taste if you succumb to the depressing influence of Sunday-morning street scenery. A Sunday's worth of London City vistas is not an entertainment to be lightly recommended. Among other discoveries, on such an occasion, you come to a sense of the very large number of the City churches, and of the fact that some of these structures have a good deal of architectural merit. Most of the time, with the great human tides surging in front of them, and their steeples lost in the week-day smoke and fog, you are hardly aware of their presence. During the Great Fire (in 1666) there was an immense destruction of places of worship, and in the course of the next thirty or forty years there went forward a wholesale building and rebuilding of churches. Sir Christopher Wren alone built more than a hundred. The best that can be said of most of these buildings is that they are of varying degrees of badness. Here and there, however, is a success, as in the case of the beautiful steeple of St. Mary-le-Bow—the famous tower of Bow-bells—which is such an odd mixture of the *baroque* and the conventional, and yet is so light and graceful. Within, some of the older churches—those that escaped the Fire—are rich in curious monuments. It is worth the long pilgrimage from the West End any day to visit such a museum of quaint sepulchral records as St. Helen's, Bishopsgate, or to examine so grand a relic of Norman architecture as St. Bartholomew the Great. We should rank this latter edifice, which forms a part of the mass of buildings of St. Bartholomew's Hospital (itself, in its well-ordered antiquity, well worth a visit), as second only in impressiveness to the Abbey and to St. Paul's. Empty and desolate, yet magnificently solid, it suggests to the visitor, once he stands within it, that he is a hundred miles away from the vulgar industrial bustle of the modern Smithfield on the other side of the door.

Mr. Hare reconstructs in a measure "the great palaces of the Strand"—the noble residences of immense proportions that once edged the water-side of the great westward thoroughfare. As regards the destruction of the last-removed of them (Northumberland House, at Charing Cross), he indulges in something like an imprecation. The present aspect of Charing Cross is certainly most discreditable; but we hardly agree with Mr. Hare that Northumberland House was a great architectural honor to London. It must have seemed to foreign visitors a sad proof of architectural poverty that this low, plain, meagrely-Jacobean structure should have been counted as a gem. The stiff-tailed little lion on top was always amusing; but the building itself did hardly more than contribute its part to the incongruous ineffectiveness of "the finest site in Europe," as Trafalgar Square has been properly enough called. The thought that in the Strand there were once other palaces as large as Somerset House, and that at Whitehall there was a great royal residence, only increases

the shame of what modern London has contrived to make of her naturally magnificent river front. Temple Bar has gone the way of Northumberland House; but it must be confessed that Temple Bar was practically rather a nuisance. It was incontestable that, so far as you could ever stop to look at it—a difficult achievement, in the force of the current beneath it—it was a rather "thin" and unbeautiful piece of antiquity; and at present, in compensation for its disappearance, rises beside its site the mighty pile of the new Inns of Court, which bids fair to be, in mass and general effect, one of the most splendid and imposing modern buildings in Europe. No real lover of London—and London may be sturdily loved—can fail to take satisfaction in the thought that his swarthy metropolitan Dulcinea is at last waking up to some sense of the desirableness of beautifying herself.

That some such process is greatly needed we are vividly reminded as we turn those pages of Mr. Hare's book which treat of the West End. The author is very fond of the adjective "frightful," and in speaking of these regions—regions in which a Baker Street and a Harley Street have become possible—he has frequent opportunity to use it. There is, however, every reason to believe that in regard to architectural dreariness London has touched bottom and done its worst. Harley Street and Baker Street cannot, in their own peculiar way, be surpassed, and it is not likely they will be imitated. London is the most interesting city in the world, and is wonderfully well adapted for becoming the handsomest. The climate, the atmosphere, the manner in which a population of four millions reacts upon the natural local conditions, all contribute to the picturesqueness of the place. Nowhere is there such a play of light and shade, such a confusion of haze and cloud and smoke, such a mystery and variety of perspective. If all this is striking in an ugly London, what would it be in a stately and beautiful one? It will be seen that we speak appreciatively; our appreciation has been quickened by Mr. Hare's full and agreeable volumes

---

The Invention of Printing. Illustrated. By Theodore L. De Vinne. Second edition. (New York: Francis Hart & Co. 1878.)—The success of this work is a good sign, for the common art of printing is still an entire mystery even to some of those who most profit by it. The corrections on authors' proofs show incredible ignorance or obliviousness of the fact that the thickness of a type cannot be compressed, and that the width of a line, of a page or column, cannot be expanded. It is not, of course, with matters like these that Mr. De Vinne concerns himself; but any one whose interest he succeeds in awakening will probably desire to see how types are cast, how composed, how stereotyped, and how printed from, and in gratifying himself will learn what it is very useful to know. The present history, however, though thoroughly popular in conception and literary execution, cannot be sold cheaply because of its bulk and its typographical beauty. It is more bulky than it need be to convey all the essential facts, or than it ought to be to make a clear and sharp impression on the memory. But its diffuseness and its elaborate consideration of all the legends that obscure the origin of printing convey at once an idea of fairness and of thoroughness which is certainly captivating to the purchaser, already charmed by the abundance of fac-simile and other illustrations of early printing and printers. Mr. De Vinne's task was in the main a candid compilation from the best authorities, but his conclusions are sometimes legitimately determined by his practical knowledge of the art. In disposing of the Coster legend he rather rashly argues that its falsity "is abundantly established by the dissimilarity of the many engraved likenesses which from time to time have been presented as portraits of Coster"; forgetting that this test would make a myth of Columbus, to cite no other instance.

Mr. De Vinne has revised away a number of doubtful or erroneous statements which disfigured the first edition, but the text still falls somewhat behind the typography in point of accuracy. For example, on p. 89, he adopts unsuspectingly Ottley's translation of an Italian document, which imposes a fine and orders that "one-third shall go to the state, one-third to Giustizieri Vecchi, to whom this affair is committed, and one-third to the accuser." From this the unlearned reader would infallibly infer that "Giustizieri Vecchi" stood for a man's name, instead of meaning a particular tribunal (literally the "old judges") before whom the information was to be laid. As it happens, Mr. De Vinne exposes on p. 91 a blunder the reverse of this, by which a man's name has been confounded with that of his craft. On p. 121 Col. Henry Yule's 'Marco Polo' is ascribed to Henry *Vale*. On p. 233 the title of the block-book 'Ars memorandi notabilis per figuras evangelistarum' is rendered "How to Remember the Evangelists"; but "How to Remember" simply, or "Aids to Memory," is the correct version. Compare the equally famous 'Ars Moriendi,' p. 235. On p. 254, "Donatus pro *puerilis*" is an obvious misprint. On p. 265 there is a reference backwards to "the illustration at the beginning of this chapter," which really stands on the succeeding page; and in the description of it the compartment on the left is spoken of as being on the right. These are trifling blemishes in a work on the whole so acceptable to English readers.

Memorial and Biographical Sketches. By James Freeman Clarke. (Boston: Houghton, Osgood & Co. 1878. 12mo, pp. 434.)—The nineteen essays, articles, sermons, and addresses which make up this volume are marked by the sterling qualities, the common sense, manliness, earnestness, and tenderness which have given Dr. Clarke his enviable reputation in his native city and State. The volume, as might be expected of an eminent clergyman, is of special interest to the author's own denomination; nearly half the papers are devoted to memorials of prominent Unitarians, such as Dr. Freeman, Dr. Gannett, Dr. Channing, Theodore Parker, Dr. S. G. Howe, and Gov. Andrew. There are also some interesting personal reminiscences of his residence in Louisville—George Keats (brother of the poet), Dr. Breckinridge, the elder Booth, and Geo. D. Prentice; and three articles upon subjects of more general interest, Washington, Shakspere, and Rousseau. The best piece in the volume, as it is the longest, is that upon Gov. Andrew, a parishioner and intimate friend of Mr. Clarke. It is after all but a brief sketch, but it brings back to the mind most sadly what we all felt at the time of his death, and what his pastor expressed in his funeral sermon—that he was "the one man whom it seems as if we *could not* spare, because the *one man* to whom this whole distracted, divided, betrayed nation could look in any coming hour of danger as a leader in whom all might unite, North and South, East and West, Radicals and Conservatives" (p. 56). And this because he occupied and would have continued to occupy a middle position—not of compromise, but of harmonizing; because more than any other man he united the strength and calmness of conservatism with the sympathetic ardor of radicalism. The closing paper, upon William Hull, the grandfather of the author, is a pleasant sketch of the life of a man whose name will always be associated with disgrace, but whose career as a whole is here shown to have been an honorable and even in some respects a brilliant one. Whether he can be fully exonerated from blame in his surrender of Detroit or not, it is well to be thus reminded of his earlier services. This first disaster of the war, coming with a shock upon the overweening confidence of a young nation, impressed itself upon the popular imagination far more than any subsequent defeats; just as Bull Run, in the war of the rebellion, for a time covered a meritorious soldier with something akin to disgrace.

Elements of Geology: A Text-book for Colleges and for the general reader. By Joseph Le Conte. (New York: D. Appleton & Co. 1878.)—Nearly all that can be said in favor of a text-book may be said of this, for in it the author has given us a laborious compilation of the well-established facts of the science of which it treats, as well arranged as such heterogeneous matters can be, the whole informed by the broad spirit of a naturalist who has done that share of personal research which is necessary to give a writer the capacity for judgment in such matters. There is, moreover, throughout the work a certain stamp of individuality which without often giving it too much personality yet relieves it a little of the dictionary flavor which is the common quality of most such works.

In the details of this text-book, as in all such works, each special student will find abundant ground for criticism. Many matters which are still in debate are given with a little too much affirmation, and a good many important opinions are not presented at all. In the account of glacial motion, for instance, no reference is made to the important hypothesis of James Croll concerning the cause of such motion. The phenomena of erosion and deposition are treated with rather less completeness than their importance justifies or the good work of investigators would seem to require. These slight defects are, it is fair to say, more than compensated by the really admirable way in which some important matters that have hardly had a place in such books are presented. The accounts of Sorby's researches into the microscopic structure of rocks, of geyser action, of earthquakes, and of many other matters, are very models of condensation, completeness, and accuracy. The part of the book devoted to palæontology is less satisfactory than that which concerns the physical history of the globe. This defect is common to all the best text-books on the subject, as it in good part arises from the difficulties that beset all efforts to make a brief presentation of any subject depending as much

on matters of detail as do these relations among animals of successive periods.

The illustrations are abundant, and more than usually original, or from books not hitherto drawn upon. The only objection that can be raised against them is that in certain cases the illustrations of physical geology are neither diagrammatic nor entirely graphic, but mix the two qualities so that the student would be puzzled to say how much was from nature and how much interpretation.

It may be fairly said that this work makes the third of the really good manuals of general geology in the English, or it may even be said in any, language; for, while filling a place of its own, it is up to the level of Dana's great manual or the third edition of Jukes's admirable book. But when he has said this, every well-wisher of geology who knows its best interests will be inclined to protest against that over-use of such books which their very excellence is sure to bring about. Neither learning nor literary skill will serve to relieve them of the disproportion, the want of perspective, the coarse sense of certainty, which they inevitably give to the facts of the science. They cannot be otherwise than great heaps of facts which may be learned to the letter without giving the student the very least of the true good of the science. Unless used with great care—with a care that is almost never given—they lead the student straight away from the road of enquiry which is the only true scientific path. They tend to fill our schools with teachers who, knowing absolutely nothing of research, sit with their fingers between the leaves of a *good text-book* and confidently expound the universe. Half a hundred years of experiment with such farcical teaching of science will do more to set the world against it than all the resistance that ancient beliefs can arouse. If it is used only as a *vade mecum* by the student who seeks the body of the science in the facts themselves, or in monographic works, such a book can be of great help. We regret that the one before us does not contain references to original authorities on the various subjects treated in its pages, for they would, to a certain extent, help to lead the student into the science by suggesting the real breadth of the field that has been tilled by investigators in this department.

Behaving; or, Papers on Children's Etiquette. By the author of 'Ugly Girl Papers.' (Boston: D. Lothrop & Co.)—This is a sensible and honest little book, which exhorts young America to decency and depicts his (and her) barbarisms of behavior vividly. There is hardly anything in the book to find fault with, save some provincialism of language and uncomfortably vague views on the use of the verb *come, e. g.*, "walk right away," "*come* to think," "no ribbon *come* untied." The chapter on "Little Gentlemen" is very good, but one stands aghast at the condition of things implied by such directions as are here given. It is as if in a book addressed to practical builders the author should affectionately urge them to get the walls of a room as nearly as possible at right angles with its floor, or should beg them just to try once and see what advantages there are in building chimneys hollow. An active and permitted resistance to the simplest principles which make human society possible is implied as the normal condition of American children.

Fine Arts.

MÉRYON AND HIS WORK.

MR. FREDERICK WEDMORE, whose interesting book, entitled 'Studies in English Art,' has been reviewed in these columns,* contributes to the current number of the *Nineteenth Century* an article entitled "Méryon and Méryon's Paris." This is just so far a misnomer that little is to be found in it about the beautiful and the picturesque buildings which the Second Empire thought itself bound to sweep away, and which Méryon lamented and tried to commemorate. But the article otherwise is interesting, and contains valuable information. The author has felt himself more free to relate the sad and strange incidents in the life of his hero than previous writers have been. When Mr. Philippe Burty published in the *Gazette des Beaux Arts* his well-known essay and catalogue, Méryon was living. He had recently left Charenton; his friends hoped and believed that he was restored to perfect reason and health and to years of happy work. When Mr. Hamerton was printing 'Etching and Etchers,' in 1867–8, Méryon was once again an inmate of the asylum, and his sad life was nearly at an end. These admirers and critics could hardly write freely of his character and life, and, although he had long been dead when Mr. Hamerton's second edition was published, two years ago, there was no sufficient reason for changing the nature of the previously published essay, which had to do chiefly with the characteristic merits of the etchings, and only indirectly with their author. Mr. Wedmore writes more fully and more freely of the man; he is familiar with his more important work as well, and enthusiastic in his admiration of it, so that his paper is well worth reading. But it is to be regretted that a biographical and critical essay, otherwise so good, and in spite of all so useful, should be nearly spoiled by being written in a most unfortunate style; in the worst of styles—that which lacks simplicity and directness. It is perhaps not affected, though it seems to be. Perhaps the peculiarities that annoy us so much are natural weeds, and need only plucking up, instead of carefully-nurtured exotics.

Charles Méryon was born in 1821, and died in 1868, in the *maison de santé* at Charenton, leaving behind him about one hundred etchings as the chief, and perhaps the only, result of his splendid gifts and of his forty-seven years of life. It is very probable that some drawings remain never used in his engraved work; but what a lover of art means when he says *Méryon* is a little lot of small etchings, of which about twenty-five are much more important than the rest. All but one or two of these twenty-five are architectural studies, the greater number being views in Paris, first drawn in 1850 and the next year or two, and engraved soon afterwards. He entered the naval school at Brest at an early age, and there received some instruction in drawing. He was commissioned in 1842, and sent on board the corvette *Le Rhin*, which had been detached for a long cruise in the Pacific to protect French commerce and whale-fisheries there, and perhaps to explore and to make scientific observations. At New Zealand, New Caledonia, and other places the young *enseigne de vaisseau* had opportunities for making drawings of scenes and objects which interested him. These opportunities he improved, and twenty years afterwards a few of these drawings reappeared in etchings. In 1847, soon after his return to France, he resigned his commission and undertook the formal study of art. In 1848 there was exhibited in Paris a cartoon of his for a large painting. At about the same time he learned the technical processes of engraving, and it seems that he became aware that he could not hope to excel as a painter, that he was even deficient in the power of judging aright of color; that his work as an artist must be in form, or in light-and-shade, or in both. So that, in 1853, when his first important etching was made, he had fairly abandoned the one branch of art for the other, and from that time forth may be considered as having found, at thirty-two, his true vocation, and as needing nothing to make him the greatest original engraver of his time except employment and sympathy, or, in default of these, so much robustness of nature as would enable him to work cheerfully on in despite of neglect and poverty.

What were his first attempts at engraving is of little moment. The print alluded to above is entitled "L'Arche du Pont Notre Dame," and is as well known as any of Méryon's works, none of which are common. It shows in the immediate foreground the heavy abutments and dark archway of a bridge, through which as through a frame are seen the *Pont-au Change* and the towers of the *Palais de Justice*. We have thought it well to ascertain what prints of the master can be found and examined in New York, at least, by those who are willing to take exactly as much trouble as it will involve to visit the museums of the future. The print under consideration can be seen at "Goupil's," in Fifth Avenue, and at Mr. Wunderlich's rooms in Broadway. The copy of a part of it, contained in the second edition of Mr. Hamerton's book, loses much from the combined effects of copying and cutting down, and is not to be cited as an example for study. In this year, 1853, were etched—first, the print named above; second, "Le Stryge" (the vampire), one of the grotesque stone demons who sit upon a lofty gallery of the Cathedral and contemplate Paris, taken by Méryon as the spirit of lust, a point which Mr. Hamerton seems to miss; third, "La Galerie Notre Dame," a splendid piece, a view of the interior of the Gothic arcade, high up on the towers of the church, with the distant buildings along the Seine and beyond,

* The *Nation*, Vol. xxiv., p. 17.

seen between the columns; fourth, "Le Pont Neuf"; fifth, "Le Petit Pont, en 1850," which, though not dated, seems to be of this year (1853); and sixth, a print which was used long afterward in the *Fine Arts Quarterly*, "Rue des Toiles, Bourges." These etchings were printed by Méryon himself, or by Delâtre, who had not yet left Paris for London, and offered for sale, without any announcement of a series of views of Paris, in which, however, all but the last were destined to be included. Of the above-named prints several are to be seen in New York; the second, third, fifth, and last at Wunderlich's; and the third at Keppel's, in Broadway, opposite the Park. To describe and distinguish the "states" would take more space than we can give. All are worthy of study, and all are rare enough to be looked for eagerly. Of all Méryon's coppers only a half-dozen exist; the greater number, and nearly all the fine ones, were destroyed by the artist himself.

In the next year, 1854, were engraved about twelve plates of the Paris set, some of them full-sized views, and others quaint little *culs de lampe* and head-pieces. Of the larger views several are to be seen in New York; the "Pompe Notre Dame" at Sabin's, in Nassau Street, in an early unpublished state; and at Wunderlich's, in the published state, with title; the "Pont au Change" and the "Eglise St. Étienne du Mont" at Wunderlich's. The little bits are either much more scarce or are considered less desirable by the New York dealers, for they are seldom seen. If some future Loan Exhibition includes a worthy show of modern prints, it would probably be possible to make a nearly complete collection of Méryon's work, and that would be the occasion for careful criticism.

In 1855 the artist did less. Discouragement must have begun to limit and confine his power of work, never, it would seem, very great. The sale of his etchings was confined to a few personal friends and the not numerous buyers whom they could influence. Of the many dealers of Paris none would buy the etchings, and no patronage or reward reached him from the Government. In 1856 he etched one or two portraits, and the splendid San Francisco, which was an order from two French bankers resident in that city, and was a composition made up from photographic views. The plate of this exists, and copies can always be had. Soon after this time his discouragement and weak health, together, began to break down his reason. In 1858 he was taken to Charenton; but it seems that a short residence there was so beneficial that he was at work again in 1859, and in that and the following years he worked for bread. He copied drawings, he executed portraits, he made illustrations for various books, and began to reproduce in etching the sketches of New Zealand and other South-Sea subjects, made fifteen years before. After he had produced a half-dozen of these last, he designed a cover to contain them; an odd title, enclosed in a fantastic border: "Diverses Pièces Gravées; Collecte, Gain, Butin de Course et de Chasse: Faits au mouillage et à la Mer, pendant le Voyage à la Nouvelle Zélande accompli de MDCCCXLII. à XLVI. sur le Navire *Rhin*, sous les ordres de Mr. le Capitaine de Vaisseau (mort Contre-Amiral en 1852), A. Bérard, commandant la Station à Akaroa, Presqu'île de Banks. 1866." These South Sea pieces are interesting but far from adequate specimens of Méryon's art. In 1864 was etched one print with the old feeling for picturesque Paris: "Bain-Froid Chévrier, dit de l'École," a view of the *Pont Neuf*, with the quays and the statue of Henri IV. beyond, and the floating-bath on the right. This was exhibited at the Salon of 1865, and the same year there appeared in the publication of the old *Société des Aqua-Fortistes* another etching of the same character, "Le Ministère de la Marine." This print, with its fantastical figures, on earth and in the air, is to be seen at several of the shops. With health, and a measure of pecuniary success, the old task might have been resumed, and a series of architectural etchings produced which would have been unequalled and unapproached, but it was too late. After another year of desultory and nearly fruitless effort Méryon became once again an inmate of Charenton, where he died early in 1868.

Time must elapse before an adequate analysis and judgment of the whole body of his work will be possible. The extraordinary praise awarded to it by the French critics, their reiterated ascription to Méryon of the first place among modern etchers, the rank of "maître incontesté" claimed for him by the very same men who have made famous not only the French etchers but Haden and Edwards and other Englishmen—all this is to be weighed, and the force of such competent criticism fully admitted, but it is not to be accepted without consideration. There are awkward, ungainly, unskilful passages in Méryon's work. As a landscape draughtsman he was not highly accomplished; the studies of pure landscape can never satisfy one who knows the best landscapes of Rembrandt or Haden. The chief, the unequalled thing in Méryon's etchings is their unity, their perfect artistical harmony—a charm which grows on the student with every day of familiarity with these wonderful designs. Compared with this rarest of virtues, all the defects of these prints are as nothing. Imperfect draughtsmanship, exaggerated depth of shadow, insufficient technical skill, disappear from the beholder's mind after a moment has elapsed, and nothing remains evident but the perfect beauty of the designs. More skilful work is common; equally artistic work is almost wholly unknown to our time. The exact rank of these etchings in the whole hierarchy of art it is hard to fix, and we do not try here to assert it. They are certain to hold one of the highest ranks for ever.

The Leisure-Hour Series

FOR THE

SUMMER OF 1878.

"The admirable Leisure-Hour series."—*Nation.*

"To any one who wants a book that will prove both entertaining and profitable, as good literature always is, and does not know precisely what to ask for, we say select one of 'The Leisure Hour Series.'"—*Boston Advertiser.*

Ready Saturday.

No. 96. *HATHERCOURT.* By Mrs. MOLESWORTH (Ennis Graham), author of 'The Cuckoo Clock.'

Just Published.

No. 95. *MAID ELLICE.* By THEO. GIFT, author of 'Pretty Miss Bellew.'

The Publishers have the satisfaction of stating that the books published in and engaged for the Leisure-Hour Series now comprise

One Hundred Volumes.

The latest volumes are as follows:

No. 93. *THE HONORABLE MISS FERRARD.* By MAY LAFFAN.

No. 94. *LANDOLIN.* By BERTHOLD AUERBACH.

No. 95. *MAID ELLICE.* By THEO. GIFT, author of 'Pretty Miss Bellew.' (*Ready.*)

No. 96. *HATHERCOURT.* By Mrs. MOLESWORTH (Ennis Graham), author of 'The Cuckoo Clock.' (*Ready Saturday.*)

No. 97. *PLAY-DAY POEMS.* Collected and Edited by ROSSITER JOHNSON. The best of the humorous poetry published since Parton's collection in 1856, and also many of the old favorites. (*Shortly.*)

No. 98. *GADDING AND SPORTING IN THE TYROL.* By W. A. BAILLIE GROHMAN. A remarkably entertaining volume of out-of-the-way life and adventure. (*Shortly.*)

No. 99. *PLAYS FOR PRIVATE ACTING.* Translated from the French and Italian by members of the Bellevue Dramatic Club of Newport. Selected principally from the enormously successful Théâtre de Campagne. (*Shortly.*)

No. 100. *A CENTURY OF AMERICAN LITERATURE.* Edited by HENRY A. BEERS, Professor in Yale College. (*Shortly.*)

New Library Bindings.

Sets of the works of Mrs. ALEXANDER, AUERBACH, HARDY, RICHTER, TURGENIEFF, and WINTHROP may hereafter be obtained in library bindings, extra cloth, gilt back, without extra charge. Single volumes from these authors, in library style, $1 10.

HENRY HOLT & CO.,
25 Bond Street, New York.

MRS. BRASSEY'S

Around the World in the Yacht "Sunbeam."

With Chart and Illustrations.

The history of this leisurely and luxurious cruise of the Brassey family and a few friends, in their own Yacht, is given in such easy and familiar style as to make the reader feel almost one of the party.

The London *Spectator* says

"It is altogether unlike all other books of travel. . . . We can but faintly indicate what the reader may look for in this unrivalled book."

The London *Times* says

"There was variety enough in the voyage, and Mrs. Brassey has made the very most of it. . . . She tells you just what you care to hear, changing the subject before it has begun to bore you."

HENRY HOLT & CO., NEW YORK.

The Nation.

NEW YORK, THURSDAY, JUNE 27, 1878.

The Week.

CONGRESS adjourned at 7 o'clock on Thursday morning. Its last hours were marked by the usual reckless legislation, indecent haste, and disorder. The House, either not able or not content to pass the Senate bill in relation to greenbacks, passed that portion of it which makes them receivable for customs dues after October 1. When this reached the Senate, Mr. Voorhees succeeded in getting it read once, when objections were made to its further reading under the rules, and so the measure fell dead for the session. Another measure designed to make capital for its originator was a pension-grab bill, introduced by Mr. Haskell, of Kansas, which would have cost the Treasury upwards of $30,000,000. It passed the House by 161 to 62, but was smothered in the Senate. The same fate overtook a Post-Route Bill, identical with the Senate's, but with the jobs cut out. Mr. Thurman's bill for auditing the Pacific Railroad accounts was made law, and the Fisheries Award was voted as a part of the Sundry Civil Appropriation Bill. The Omnibus Bill was enrolled under such pressure that an urgent appropriation in regard to the Government property at Hot Springs, Arkansas, was omitted. Of the Enrolling Committee, only Mr. Rainey, the colored member from South Carolina, was able to perform its duties, and he labored with praiseworthy diligence and endurance.

The adjournment of Congress was followed by an advance in United States bonds in London as well as in New York, owing to the prospect that the country will have a respite for a few months at least from discreditable legislation, and that no more available securities can be had for the employment of money that would be idle until autumn, and that cannot be lent on call in other ways above 2 to 2½ per cent. The bill to cut off the entire coin revenue of the United States Treasury by making import duties payable in legal-tender notes fortunately failed to become a law. There is cause for satisfaction in the fact that small savings are going to a large extent into the United States 4 per cents, for in proportion as these bonds are widely distributed there will be more general resistance to the repudiationists. It is not at all satisfactory, however, that the price of silver has fallen during the week to 52¾*d.* per ounce in London, and that at the close of the week the new silver dollar, in which United States bonds are payable, principal and interest, possessed a bullion value of less than 89 cents gold ($0.8894).

Among the smaller but meaner offences of the late Congress, for which Republicans, especially in the Senate, were as much to blame as the Democrats, was the refusal to vote $8,000 for the expenses of the Commission sent by President Hayes to Louisiana, the money having been previously advanced by a bank. Everybody must admit that the President, having to decide which of two claimants was the real government of the State, could not do it without enquiry on the spot; and as he could not make this enquiry himself, he deputed a body of very well qualified agents to do it, who served without pay. The result of their labors was that the Legislature abandoned Packard and went over to Nicholls, which we believe to have been one of the most fortunate things that has ever happened; but it has made many Republicans furious, and they show it in what is at best a bit of petty spite. We believe the members of the Commission stand and have always stood ready to pay their own expenses, and one of them has sent in his check for his share; but Mr. Sherman has refused to receive it, on the ground that Congress will probably yet vote the amount, and if not, the President will pay it out of his own pocket.

The Potter Committee has occupied itself with the testimony of Mr. and Mrs. T. H. Jenks, of Louisiana, a couple of adventurers whose mode of living is well expressed in the husband's statement concerning his wife, that she was "kind of prominent among the politicians there, and took some interest in politics; she knew all the leading politicians down there." Mr. Jenks was one of the witnesses whom Mr. Sherman desired to produce to prove intimidation, and his testimony was to the effect that the Republicans of East Feliciana were thoroughly intimidated into not voting, that Anderson took pay of the Democrats for signing the returns, and wanted to disavow a protest he had signed. He denied all knowledge of the Sherman letter till January last. Mrs. Jenks is perhaps also to be considered Mr. Sherman's witness. Her story, recited with calculated dramatic effect and with the playful impudence of a female lobbyist, is as follows: That Weber had told her that Anderson wanted guarantees for adhering to the cause, and that they had written a letter to Secretary Sherman demanding some; that Weber entrusted her with it to deliver; that, not finding Mr. Sherman in the hotel-parlor, she "quite unconsciously" bit open the letter, mastered the contents, and concluded to suppress it; that she then, in a room occupied by other persons not named, including some of the "visiting statesmen," "dictated" a suppositious reply, which was signed with the Secretary's name; that this being enclosed in an envelope she delivered it to Weber at his hotel, and congratulated herself that by thus fooling him and Anderson she had "maintained the dignity of the party." She would not admit that she actually wrote the letter, nor tell who did, and she coquettishly defied the Committee to make her. Ex-Marshal Pitkin testified in contradiction of Anderson on sundry points, but of greater interest was his statement that he had informed Senator Conkling of the nature of Anderson's papers, at a time when he (Pitkin) was angry with the Administration on account of his dismissal; and his admission that Republican witnesses were brought to New Orleans in shoals by his deputies at the expense of the Government, to testify before the Returning Board, while the Democrats had to pay for their own witnesses. He did, however, only what he was required to do by law in deference to the superior orders of the Chief U. S. Supervisor of Elections.

It may be said of all the oral evidence taken as yet in the Louisiana investigation that it is untrustworthy. Anderson was not credible on oath; neither is "Captain" Jenks nor his interesting wife, Mrs. Agnes D. Jenks, nor Congressman Darrall. Neither will the estimable Kellogg be, when he comes to be examined, nor Packard, nor Pinchback, nor any of them. Nobody of any party seriously believes or has believed or would believe a word they say. When Jenks contradicts Anderson, but admits that he has long been his intimate friend, it makes one laugh. And so when Mrs. Jenks says she wrote the so-called Sherman letter, we are still in as much doubt as ever whether any such letter is or was ever in existence. No rational person spends a minute trying to reconcile their stories. If they had produced no documents the time spent on them would have been wholly wasted. What the investigation is doing is not fastening guilt on any person not hitherto suspected, or revealing any flaw in the President's title, but letting the world know what kind of people they were who had charge of the State government and worked the political machine from 1868 to last year. To say that their manners and morals, and the stories they tell of each other, read like a little chapter of jail-yard gossip, and that every one of them ought to be in the penitentiary, is putting the case mildly. It is no exaggeration to say that it was an awful thing to have left the government of a civilized community in such hands so long, and lamentable and alarming that the scamps should have been able to palm themselves off so long on good people at the North as suffering friends of the black man.

Another little circumstance, but a very important one, the futile character of the investigation must not lead us to forget. What has kept up the trouble and dissatisfaction about the President's title, and given color to the attacks on it, is the fact that his friends, the Visiting Statesmen, who went down to Florida and Louisiana to see that the count was fair, were bound to act judicially, but did not do so. They were bound to see that whoever got the Presidency he got it in a manner that would satisfy the whole people; and for this purpose they ought to have avoided the position of prompters or advocates of the Returning Boards, and ought to have acted in harmony and conjunction with the representatives of the Democrats. They did none of these things, but "worked" night and day to get the Presidency for their own man. After having got it, they ought to have as religiously refused any reward for their exertions as if they had awarded it on the judicial bench, and Mr. Hayes ought to have religiously refrained from giving them anything; instead of which every man of them took anything he could get, thus creating the suspicion that when they were watching the count which discredited hands were making they were really looking after their own fortunes. It is this which has kept the question alive, and filled the country with strife and misgiving, and it was neither moral nor decent nor judicious. It is very disagreeable also to find Mr. Sherman's perceptions so blunt that he thinks he can justify himself by showing that there was violence at the election in East Feliciana. He might almost as well try to set himself right after having taken a large present from a plaintiff in whose favor he had given judgment on the bench, by offering to bring one hundred witnesses to show that the defendant was a bad fellow. The assertion, therefore, that his character is a sufficient answer to the charges against him is mere gabble. It would have been if Wells, Anderson & Co., when they were throwing out votes, and when he was writing a glowing eulogy on them, were not really giving him the Secretaryship of the Treasury.

One of the gloomiest of the Pessimists tries to meet our ridicule of the alarm about civil war by producing "an editor out in Indiana" who is furious because Congress has refused to impugn the President's title. But we never said that there were no editors ready for civil war. On the contrary we have never doubted that if all the wars projected, promoted, or predicted by this martial body of men had really been waged, the civilized world would now be a waste place. Moreover, if they were more numerous, and found a leader worthy of them, they would probably enter on a career of conquest which would give Jenghis Khan, by comparison, the air of a philanthropist. "Heureusement," as Marshal Bugeaud said of the British infantry, "il n'y en a pas beaucoup." A muscular and wiry sheriff in each county is sufficient to protect mankind against their ruthless ambition. The real danger of bloodshed just now lies in a different direction. The relations between Gail Hamilton on the one side and Mr. Carl Schurz and the Rev. James Freeman Clarke on the other are now, as every one must have observed, exceedingly strained; the situation around Constantinople presents nothing like them. Nothing but extreme prudence on the part of these gentlemen can prevent a collision at any moment, and should such a thing occur, we should be plunged in a crisis the like of which has not been seen since Mrs. Julia Ward Howe "declared war against Bismarck" in 1870. Moreover, there would be too much reason to fear that Matilda Fletcher and Judge Hilton, hearing the sound of the guns, would rush into hostilities also, and then we confess our Government would be in real peril.

Mr. Schurz has drawn up a circular with regard to campaign assessments which has, it is said, been adopted by the President as a guide for all the executive departments and Government bureaus throughout the country. In this the employee is first reminded that he receives his salary not as a member of a political party, but for "certain services rendered"; that this salary "belongs" to him, and, unless taxed by law, is "in no sense subject to any assessment for any object whatever," the only return expected being a faithful performance of his duties. And here the Secretary calls his attention to the provision of the Revised Statutes that executive officers and employees of the Government

"are prohibited from requesting, giving to, or receiving from any other officer or employee of the Government any money or property or other thing of value for political purposes; and any such officer or employee who shall offend against the provisions of this section shall be at once discharged from the service of the United States, and he shall also be deemed guilty of a misdemeanor, and on conviction thereof shall be fined a sum not exceeding $500."

In the second place, he is informed that he is as free as any other citizen to spend his "spare money" in any legitimate way he pleases, and as his "political principles" or "public spirit" may suggest, provided the law is not violated; and, third, that his "contributing or not contributing" will not affect in any manner his "official standing or prospects" in the Interior Department. This is as strong as the most ardent civil-service reformer could desire, and we have no doubt that in Mr. Schurz's department it will be acted upon to the letter. In some of the others we fear that the carrying of the fall elections will seem to the Secretaries more important than "doctrinaire" views about conducting the Government on "business principles."

Nothing more amusing in the way of stump-oratory has been heard for a long while than Judge West's latest speech to the Ohio Republicans. The judge was their candidate for the governorship last year, and filled them and the whole country with consternation and secured his own defeat at the polls by coming out as a blatant Communist and sympathizer with the strikers. He solemnly denied that he had ever owned any bank stock or Government bonds, evidently wishing it to be understood that he considered a man who had put his savings in bank stock or Government bonds a disreputable person, and he went so far as to demand the legal regulation of the wages of railroad employees, and, if we remember rightly, of mill and mining operatives. In fact, as well as one could make out, there was hardly any scheme of social reform conceived by a tramp by his evening fire, when full of stolen chicken and whiskey, that this worthy jurist would not have backed up. He now says, with a touch of impudent humor, that "last year some of us were for Paul, some for Silas, some for Cæsar, but mighty few for Christ." He then—the sorry wag that he is—blackguards the Democrats for binding the hands of the Executive power of the nation in its police force, thereby inviting a repetition of the revolutionary scenes that we witnessed last year, "which in God's name," says he, "may we never see again." "Here's richness," as Mr. Squeers justly remarked. He also reprehended the Ohio Democrats for demanding that "a Socialistic organization, productive and distributive, should be established by the national Government," and was very severe upon all who encourage "turbulent spirits." What should be done with politicians like the judge it would be impossible to say without a commission of enquiry. Like the tramps and Communists, they constitute a problem in themselves.

The Iowa Republican platform "demands" that every qualified elector, not in Iowa only but in all parts of the Union, shall vote "undisturbed by force and unawed by fear" at the place appointed by law—once but not more than once—and that every person elected to an office shall be freely inducted into it, and effectively supported in the discharge of its duties; but declares that in five Southern States this desirable state of things does not exist. It also affirms that the Republican party stands pledged, through the recent amendments to the Constitution of the United States, to "the *complete* protection of all citizens in *all* their *civil*, *political*, *personal*, and *property* rights," which seems to indicate that in the opinion of the Iowa Republicans the United States courts have concurrent jurisdiction with the State courts, and that any cause, civil or criminal, can be tried in them, and that the distinction created in the Constitution,

previous to the adoption of the late amendments, between the powers bestowed on the Union and those reserved by the States, has by these amendments been completely obliterated, the recent decisions of the Supreme Court to the contrary notwithstanding. Now, when we consider that this platform was drawn by native Americans, and not by Frenchmen, and by educated Americans, and not by rude Crackers or Pikes, and was produced in one of the most intelligent States in the Union, it must be pronounced an amazing document and one well calculated to set people thinking. We think it would be well worth the while of some person of means who is interested in reform to offer $1,000 as a contribution to the campaign fund of the Republican party in any State which is dissatisfied with the President's "policy," or with the present condition of affairs at the South, on condition that the Convention will state clearly and exactly in its platform what it would like to have done at the South, either in the form of legislation or administration. If the malcontents or "stalwarts," as they are called, would draw up a paper containing, not "wind of doctrine," but a programme capable of enactment by Congress and execution by the President, it would clear the brains of thousands and put new life into politics.

After chastising the Democrats, and giving the President a sharp hit for his comparison of the North and South to "Greeks," the platform eulogizes the soldiers, but passes the sailors over in ominous silence; condemns "lawlessness in whatever form" and "the organized raid on the Treasury" to secure payment of rebel war-claims; demands a tariff for revenue; praises the financial administration of the Republican party; denounces attempts to assail the President's title, and ascribes the abandonment of the Potter attempt on it to "the firm attitude of the Republicans"; calls loudly for "good men" in office; approves of "personal temperance," of rigid economy, and of honesty and efficiency. There is, however, not one word in the whole platform against lying or unchastity.

There has been a good deal of commotion during the past fortnight in "municipal circles" over the indictment of fifteen aldermen of this city for permitting the erection of "obstructions" in the streets. This is an offence prohibited by the charter, and the indictment found against the aldermen is based on an ordinance or vote passed by them allowing the erection of a news-stand at the corner of two of our "leading thoroughfares." Judge Barrett has now quashed the indictment on the ground chiefly that inasmuch as a news-stand is not necessarily an "obstruction" or nuisance, the mere passage of a vote authorizing the erection of one may not be in any way illegal, and partly that the Recorder misdirected the Grand Jury as to the law. It cannot be said that this last attempt to improve the government is encouraging. There is no more patent and notorious fact than that the streets of New York are full of illegal obstructions of all kinds; yet the first test case that is brought is so wretchedly mismanaged that the indictment is quashed at the outset. Judge Barrett has, *à propos* of this, some very judicious remarks in his opinion, on the subject of bringing criminal process into contempt by resorting to it on trivial occasions.

We have more news from Europe about the prospects of the International Silver Conference. M. Victor Bonnet, the well-known French economist, has an article in the *Revue des Deux Mondes*, in which he makes fun in a most offensive way of the greatest financier on this planet, Senator John P. Jones of Nevada, and goes on to protest against France taking any part in the Conference, as no good can come of it, the Latin Union having already repudiated the double standard in principle. "In truth," says he, "the invitation is very credulous or very presumptuous. Credulous if one supposes that upon a question so long debated among ourselves, and which is in these days subjected to experiments, light is to come to us all of a sudden from beyond the Atlantic; or presumptuous if it be thought that the example of the United States will suffice to drag in other nations and pledge them to do the contrary of what they wish to do." M. Bonnet has evidently not read Mr. Halstead's "sixteen silver articles a day," or heard the stirring notes of the Medill trumpet, and is probably not aware that Mr. Groesbeck has pronounced the adoption of the double standard a perfectly simple matter. The best thing remains to be told, however. The *Economist* reports that "in well-informed circles in London" it is said that the American envoy has urged on the notice of the British Government the magnitude of the vote by which Congress went back to the double standard in support of the proposal that England shall change her whole monetary system. We have no doubt the "well-informed circles" smiled a good deal over this. Even here, in New York, the news that multitudes of Congressmen favor a financial measure only causes alarm and anxiety. It is hardly likely to cause any emotion in London so respectable as fear. A nation which laughs at John P. Jones is not likely to have reverence enough to listen in a proper spirit to the majority of the House of Representatives.

The Italians have at last achieved a surplus after wandering in the wilderness for sixteen years. The revenue this year exceeds the expenditure by $2,000,000, and it is proposed to make nearly $5,000,000 reduction in the taxes. The Government rentes have accordingly risen eight per cent. on the quotations of last year, fifteen per cent. on those of 1873, and twenty-three per cent. on those of 1870. In other words, the Italian bondholder has now become "bloated" to an extraordinary degree, and it must seem to many of our financiers as if some plan of cheating him would now surely engage the attention of Italian statesmen. Why should the bondholder make twenty-three per cent. on his investment when the wages of the poor man and the soldier's pension remain as low as ever?

The full text of the preliminary agreement between Russia and England has been published, and it shows the substantial accuracy of the version which first appeared in the London *Globe*. It foreshadows the division of Bulgaria which is now said to have been finally agreed on at the Congress—that is, a semi-independent Bulgaria proper north of the Balkans; and a Rumelia, with a Christian governor and an administration like that of the British colonies, south of the Balkans, the governor to be named with the acquiescence of the Powers for a term of five or ten years. The Memorandum substantially, though not formally, concedes the withdrawal of the Turkish troops from the latter as well as the former, with simple privilege of re-entry in case of insurrection or invasion. The scheme as it thus stood was so very like that provided by the Treaty of San Stefano, and so completely disposed of the Turkish Empire in Europe, that it seems to have filled the Tories with consternation. Acting on this hint, Lord Beaconsfield has been making desperate, and it is reported successful, efforts to have the Turks allowed to hold and fortify the Balkan passes, and his organs are giving out that this is a crushing blow for Russia. But if the Music Hall people can be imposed on in this way they are simpler in their liquor than they were supposed to be. If Sofia, as is reported, is to form part of the northern principality, the passes will not be worth holding, as they can be turned at any moment. But even if Sofia is retained in Rumelia, with a growing Christian province south of the mountains, and an independent Servia on their flank, and a hostile Bulgaria and Rumania on their front, the Turkish occupation of the passes will be a mere sham, like the garrisoning of Belgrade, and they would probably be evacuated as soon as another war broke out. Russia gets Batum and Bessarabia, and, in fact, yields in nothing but in details in which she was undoubtedly always ready to yield. She is to occupy Rumelia and Bulgaria for six or nine months longer. But Lord Beaconsfield seems to have been waving his arms and shouting a good deal, Blaine-fashion, in the Congress. The chances of Greece for an extension of her front er improve.

THE CAUSES OF CONGRESSIONAL FAILURE.

THE Congress which has just gone home has retired amidst the maledictions of the Republican press and the very faint apologies of the Democratic press. According to the former, it was the worst Congress that has ever met, and the latter has really nothing to say for it that is worth saying. In the world outside politics—the business world, for instance—it has been regarded as a severe national affliction, sent for some wise but inscrutable purpose, and its adjournment has been hailed as a great relief. If we apply to its performances the very conclusive test of asking in what respect the country would have suffered if it had never met, we find that beyond question its meeting was at least useless, and that we should probably have been far better off than we are now if it had sat for one week only, and spent this in passing the appropriation bills. But then this is an old story. We make bold to say that the adjournment of every Congress since 1868 has been throughout the country a subject of great congratulation, and that that of 1868 would have been no exception to the rule if Andrew Johnson had not been considered by a large number of good people a dangerous person who needed to be watched by the legislature, and if it had not given the finishing touches to the process of Reconstruction. Since then legislation and attempts at legislation have been a weariness to the country and a great obstruction to business, mitigated solely by the reductions made in the internal-revenue taxation. Not that legislation is not needed and that great changes in the modes of administration as well as in the body of the law are not plainly called for, but no Congress that meets now shows either much interest in these changes, or any capacity for carrying them out. In fact a kind of paralysis seems to have overtaken Congress. It has not even energy and force enough to work mischief. It threatens mischief, and prepares it and puts it in bills, and talks over it, but is unable to execute it. Six thousand bills were introduced in this last, and only four hundred passed. Of all the dreadful things which were anticipated from the majority during the past winter—an assault on the President's title, the dissolution of the army, the payment of Southern claims, the issue of unlimited paper money, and the repudiation of the national debt—not one has been accomplished, though every one of them has been attempted in a feeble sort of way. The good, also, which many people half expected it to achieve—the provision of a better mode of electing the President, the reform of the tariff and of the civil service, and the restoration of a sound currency—has not been forthcoming, though efforts after it have not been wanting. The only thing, in fact, in which real power to legislate has been displayed, has been the remonetization of silver; but even this, probably, could never have been carried out if it had been preceded by the proper amount of deliberation and enquiry. The bill was passed, not because the legislators were well informed as to its probable effects, but because very few of them cared what its effects would be.

Paralysis of the legislative power in a community as energetic, self-reliant, and self-helpful, and possessing already as good a body of law as this one does, is not as mischievous and alarming as paralysis of the executive power, for this would mean a rapid approach to anarchy; but it does mean a total cessation for the time being of progress and improvement, and a very great stimulus to popular weariness and indifference to questions of government. The causes of it just now are worth serious attention, and the following may be set down as the principal:

I. The disappearance of parties since the war; meaning by parties political organizations seeking the adoption of a definable policy on certain questions of absorbing or very great public interest. The loss of control over the South by the Federal Government—we do not give that name to the support of the carpet-bag governments by small bodies of troops—has removed the last real division of opinion on a question of policy between Democrats and Republicans, and there is now no test by which they can be distinguished. It would be impossible, for instance, to say to which party General Butler belongs by examining his course with regard to any leading question of the day. That there is a certain theoretical difference between Democrats and Republicans might, perhaps, be proved by a comparison of some of the platforms, but this difference is not operative in practice, owing to the complete denial by the politicians on both sides of any controlling force in the platform. It binds to nothing, and gives no indication of the course the so-called members of the party will follow in Congress.

II. The confusion of mind and helplessness caused by the loss of party organization among the ordinary run of members of Congress. Party means leadership—that is, the direction from above, by one or more of the prominent men of the party, under the general guidance of the party principles and platform, of the course to be followed on all questions of moment. In the absence of this the average Congressman tries to find out as well as he can what effect his vote will have on his prospects in his own district, and his success in ascertaining this depends, of course, a good deal on his own perspicacity and ability. The result is apt to be a kind of *débandade* in which every man looks after his own safety, and in which the merits of the question are the last thing thought of. We believe it is no exaggeration to say that not over ten per cent. of the members of Congress take the trouble to inform themselves about the probable effect of any measure; they inform themselves simply about some other person's feelings or wishes about it. It may seem at first sight as if this made no great difference after all, but the fact is that no one can long resist the demoralization that comes of drawing money for doing sham work; pretending, for instance, to deliberate, rapidly converts the best man into something of a charlatan.

III. The diminishing control of constituencies over the choice of candidates, and consequently over the quality of their representatives. Public opinion about a legislator's fitness is declining rather than growing in power, and that of the caucus growing rather than declining, and the caucus principle of distribution and rotation has little or nothing to do with possible or needful legislation. If Mr. Conkling, for instance, were to give an honest lecture in explanation of the process by which he controls the Republican party in this State, he would hardly have a word to say touching the questions by which the popular mind is now agitated. He would have to say that his candidates for Congress and the State Legislature were not supposed or expected to trouble their heads about these things. The powerlessness of the public against his machinery was well illustrated by the total failure of the revolt against him last fall. The general result is that members of Congress go to Washington to engage in strange work, for which nothing has prepared them, and the conscientious performance of which might nevertheless ruin them. It probably would amuse Conkling, for instance, if he were told that he had secured Fenton's appointment on the Silver Commission because he thought him a good man to discuss it with foreigners; it would amuse him also to hear a man's election to Congress urged because he had studied certain subjects. To him and all his kind a reflective and well-informed man is "a doctrinaire." As long as the electing process is in this condition it is useless to find fault with Congressional shortcomings, no matter which party is in the majority, and the electing process will continue in this condition as long as the election of a better class of men is not the prime interest of the public—an interest so strong as to dominate all others. Profound interest such as is felt in Iowa, for instance, about the government of the Southern States, however laudable it may be, is a serious hindrance to good government at home. There is not political virtue enough in any Northern State for itself and the Southern States besides. It is no less true in politics than in private life, that one's concern about other people's morals may become so deep as to cause serious detriment to one's own; and that the contemplation of Southern wickedness has done much to exhaust Northern political morality we think no thoughtful and observant person can deny.

THE CRIME AGAINST THE SUFFRAGE IN WASHINGTON.

THE manner in which the present Congress has dealt with the government of the city of Washington is an interesting illustration of the way in which—small though the progress may seem

at times—practical common sense gradually gets the better of "high priori" theories of government. When the Republican party found itself in possession of the city, and charged with its renovation and adaptation to the new order of things at the close of the war, these "high priori" theories may be said to have had complete control of the government. The ballot had been exalted into a kind of talisman or fetish, the mere possession of which elevated a man instantly, morally and intellectually. It was supposed that the mere bestowal of it on the freedmen would give them at once the political qualities and capacities which the foremost races of the world had only acquired through a thousand years of painful toil and bitter experience. Accordingly, the city was rapidly filled with newly-emancipated and very ignorant freedmen, who flocked into it from Virginia and Maryland in search of work, or of the excitement of urban life, and they were at once converted into municipal voters who, though hardly knowing what municipal government was, were charged with the power of appropriating the property of the residents in the form of taxation. The situation of Washington, in fact, very much resembled that of this city during the last twenty-five years, for here, too, there has been a vast accumulation of poverty and ignorance attracted by the masses of wealth concentrated at this point, and by the power and privilege of sharing in the division of it without the owner's consent, and, indeed, in defiance of him. There is probably no sweeter experience in the world than that of a penniless laborer in a city like this, when he learns that by casting his vote in the right way he can strip the rich merchant or shipowner of a portion of his gains and convert it into easy work for the poor man under the superintendence of a kindly "boss" from among his own friends.

The government of Washington, then, was very much like that municipal Utopia described by the excellent governor of this State in his last annual message, in which there are "three co-ordinate departments, each separate and independent within its own sphere (to wit, the legislative, executive, and judicial)"; and in which the legislative is composed of two houses, the aldermen and common council, and in which primaries are frequent and well attended, and repeated elections secure "responsibility to the people." But, owing to causes with which we in New York are familiar, evil crept into this Arcadia. Why repeat the tale? Good men ceased to attend to their political duties, and allowed bad men to absorb the functions of government. The result was the same in the two cities. The "three co-ordinate departments, each separate and independent within its own sphere," gradually became less co-ordinate and separate and independent and abstract, until at length they assumed in New York the form of a Boss named Tweed, and in Washington that of a Boss named Shepherd. But though Tweed and Shepherd were bad men, they did not attack the suffrage. We voted in New York under Tweed, and the Washingtonians voted under Shepherd. We may not always have liked the ticket put up, and sometimes we may have resented the alteration of election returns necessary for the election of candidates who had not received a majority of votes. But neither Boss ever attacked the suffrage. Every one voted as usual, whether he knew what he was voting for or not.

It was when Shepherd had finished his work, and secured a magnificent future for Washington by saddling the city with a debt it could not pay, that the first assault was made upon the suffrage. By the Constitution Congress is given absolute authority over the affairs of the District of Columbia, and as a temporary expedient a commission was created, consisting of three well-known citizens, to manage the affairs of the city until a permanent form of government should be devised. Such was the opportunity that caste needed to establish itself in a free city. The commissioners managed Washington well. We should be loath to attribute to them any sinister motives; but they managed it better than it had been managed before. As absolute rulers have done before, they pandered to the people's love of ease and security. They reduced the debt; they collected and disbursed the revenues of the city honestly; they prevented jobs in contracts, and rendered capital less timid and protected labor. In the enjoyment of these material advantages the people forgot about the primaries, overlooked the principles involved, and soon ceased even to regret the loss of the right to vote The very foundations of universal suffrage were in this way sapped, and when the present Congress met to discuss a permanent form of government it was found that the House of Representatives took a far deeper interest in the right of the Washingtonians to suffrage than they did themselves. The House felt that a principle was at stake, and that people who did not want to vote must be made to vote, and accordingly inserted a clause in the bill providing for suffrage. Shocking as it must seem to any free man, the Washingtonians, instead of being pleased with this, professed great alarm, and protested that they did not want any more suffrage, and the Senate struck out the clause providing for it. The House basely accepted the Senate's amendment, and the result is that a bill has passed both houses and been signed by the President putting the entire government of a city of 150,000 inhabitants in the hands of an appointed commission. It should not be overlooked, either, that it is expressly provided that one of the commissioners shall be selected from the only class in the republic which is wholly removed from the influence of popular feelings and opinions and dominated by the spirit of caste —the officers of the army. Under this bill not a vestige is left of popular municipal government: aldermen, common councilmen, mayors, boards of works, school boards, police boards, primaries, conventions, all are swept away, and the entire government is handed over to three men, appointed by a foreign authority, responsible not to their fellow-citizens, but to the President and Senate.

The feeble attempt of the House to put the unfortunate property-holders back under the yoke of universal suffrage and its Boss was not really sincerely made. It was simply intended to save "the record" of the majority in the eyes of their own constituents, many of whom would sooner have ten distant cities ruined than see one breach made in the rule that the majority must govern directly and under all circumstances. But if there is a word of truth in what both Republican and Democratic politicians have been saying in opposition to the constitutional amendments in this State, the creation of the new government of Washington is "a crime against the suffrage" such as has not hitherto been attempted or suggested. In this city, where universal suffrage has produced a system of government which may be called communism tempered by indictment, we have "robbed the poor man of his vote" also, but in a much milder and more carefully-designed way, by cutting down the number of elected officials to a minimum, and putting the power so taken away into the hands of appointed boards, with complete control over the finances.

VICTOR HUGO'S 'PAPE.'

PARIS, June 14.

THE last volumes of Victor Hugo are all of the kind which makes bookbinders very unhappy. They are heavy, thick, ponderous. The 'Contemplations' makes you think of the volumes which the monks threw at each other's heads in Boileau's 'Lutrin.' How different it is in its outside appearance from the small volume of the 'Châtiments' which appeared in Belgium during the author's exile! There is something gigantic in these 'Contemplations' as there is in the 'Légende des Siècles.' When I found on my table the 'Art d'être grandpère' I could not help sighing, Is it so difficult to be a grandfather? and Is there so much in the smile of old age on infancy? Victor Hugo has of late years been affected with a terrible fecundity. He is like those old olive-trees I have seen in Sicily, which are still called the *Saraceni*; they bear no fruit for two or three years, then they cover themselves with a great load which almost breaks their boughs; it is what the Sicilians call the *carica*. The *carica* of Hugo is perpetual; he always emits smoke or fire like an active volcano. He is like an unconscious force; he cannot rest.

It was some satisfaction to me when I received his new volume, 'The Pope,'* to find that it was light, that it had those slender forms which seem to promise easy and agreeable reading. I said to myself: Well! the old poet has been merciful to the old priest. He has felt that

* 'Le Pape. Par Victor Hugo.' Paris: Calmann Lévy; New York: F. W. Christern. 1878.

this is perhaps not the time to throw stones at the Papacy. He is, after all, too much of a poet not to feel that Pio Nono was not a vulgar figure, one that can be despised and treated with contempt. In our materialistic world, and among all our engines, the spiritual forces are still visible to the poet, whether they are the forces of religion or the forces of philosophy. Victor Hugo made a great speech a few days ago on the centenary of Voltaire. "A hundred years ago there died a man named Voltaire. He died immortal (*Il mourut immortel.*)" This antithesis, which can only be well felt in French, is in itself an assertion of spiritualism. It also required a great faith in ideas to consent to celebrate the centenary of Voltaire in a vulgar circus, and to place the statue of the defender of Calas where clowns are accustomed to play. The whip of the stable became the whip of satire; Victor Hugo did not feel the absurdity of a ceremony which had very little in common with the coronation of Voltaire at the Théâtre-Français (a ceremony which has been so admirably engraved by Moreau le jeune); he never had much sense of the ridiculous; the pleasantries in the comical parts of his dramas are ponderous and often pitiful. The sphere in which Victor Hugo's genius moves well is the sphere of what I must call the sublime, for want of any other name. But if you read the 'Treatise on the Sublime' by Longinus, and the additions by our Boileau, you will see that the sublime is essentially idealistic. It gives forms and very vivid forms to ideas, as the Greeks used to give the finest forms to their gods; but this translation, if I may say so, of ideas, of forms, into symbols and traditions could hardly find a more astonishing and more sublime expression than in the Catholic Church. Rome and its daily life, the pomp of its churches and all its religious life, which speaks of time, of eternity, of the vanity of human history—what finer subject could be found by a real poet?

Victor Hugo was never insensible to the grandeur of the Papacy. Remember the famous passages in "Hernani" when young King Charles is waiting for the result of the imperial election; speaking before the tomb of Charlemagne, Charles says:

> "Ah! c'est un beau spectacle à ravir la pensée,
> Que l'Europe, ainsi faite, et comme il l'a laissée!
> Un édifice, avec deux hommes au sommet,
> Deux chefs élus aux quels tout roi né se soumet.
> . . . . . .
> Electeurs de drap d'or, cardinaux d'écarlate,
> Double sénat sacré, dont la terre s'émeut,
> Ne sont là qu'en parade, et Dieu veut ce qu'il veut.
> . . . . . .
> Le pape et l'empereur sont tout. Rien n'est sur terre
> Que par eux et pour eux . . . .
> L'un est la vérité, l'autre la force. Ils ont
> Leur raison en eux-mêmes, et sont parce qu'ils sont.
> Quand ils sortent, tous deux égaux, du sanctuaire,
> L'un dans sa pourpre, et l'autre avec son blanc suaire,
> L'univers éblouï contemple avec terreur
> Ces deux moitiés de Dieu, le pape et l'empereur."

What verses! When they are recited with the manner and the voice of Worms, who now plays the part at the Théâtre-Français, it really seems as if you heard the ambitious youth who was to become Charles the Fifth. "Le pape et l'empereur sont tout!" Why? Because they represent one the truth, the other force. Fancy for a moment the marriage of the spiritual forces and of the material forces of the world, and the miserable divorce which is felt through all history would cease; nations would be good and strong. Hugo has always felt overpowered by this strange and, in so many eyes, miraculous personification of an eternal truth in one old man, called the Pope. He has, so far, never insulted the Church in all his vagaries; in his 'Misérables' he has given a touching part to his bishop. I have deeply regretted the tone of a letter which he wrote some time ago on the occasion of the Voltaire centenary to Bishop Dupanloup. The Bishop of Orleans, as was his perfect right, had protested against the doctrines of Voltaire. Victor Hugo answered him in a manner quite unworthy of him, even affecting to call him Monsieur instead of giving him the courtesy title habitual in France of Monseigneur.

I opened 'The Pope' with some fear, afraid, as I was, to find that it was a pamphlet in verse. The opening of the poem is odd, but you will see how convenient for the poet. The Pope is in the Vatican, in his bed, and says:

> "Ah! je m'endors!—Enfin!"

This is the first scene. Now, I will bring you at once to the last page of the poem; we are again in the Vatican, but it is now morning, and the Pope wakes up and says:

> "Quel rêve affreux je viens de faire!"

All the other scenes, in fact the whole book is this "rêve affreux," and I have myself thought it *affreux* at times. You will readily understand that such a plan gives much facility to the poet; nobody has ever maintained that there was much logic in dreams, that the various acts of a nightmare need to be tied together by reason. The dream admits of every possible incident, and if the poet opens a drawer and finds some forgotten verses, why should they not find a place in the dream, though it is a Papal dream? The beginning of the dream is an abdication. The Pope renounces his temporal power; he discovers that

> "Le sceptre est vain, le trône est noir, la pourpre est vile."

He is afraid of the splendor of the Vatican:

> "Je ne sais pas pourquoi j'habite ce palais;
> Je ne sais pas pourquoi je porte un diadème;
> On m'appelle Seigneur des Seigneurs, Chef suprême,
> Pontife souverain, Roi par le ciel choisi;
> O peuples, écoutez, j'ai découvert ceci,
> Je suis un pauvre."

The Pope becomes a beggar, a monk; he walks the earth, going from place to place, not knowing in the morning where he will sleep at night; he wanders like Jesus, the "va-nu-pieds divin." This poem ends thus:

> "Je prends la terre aux rois, je vends aux Romains Rome,
> Et je rentre chez Dieu, c'est-à-dire chez l'Homme.
> Laissez-moi passer, peuple. Adieu, Rome."

Such is the doctrine of the whole book. In the "Synode d'Orient" there is a long apotheosis of poverty, in that apocalyptic style which is becoming the last manner of the poet; a Pelion upon Ossa of epithets, of adverbs, of words, and phrases. The Pope, meeting the Patriarch of the East, uses such language as this:

> "Le jour où dans le ciel que d'autres cieux pondèrent,
> Les formidables vents démusclés grondèrent."

It is all in this style: God is "cet être inconcevable-là." The Pope speaks as an Iconoclast of the "petit bon Dieu rose avec des yeux d'émail," of the "Jésus de carton," of the "Eternel de cire," of the

> "—bonshommes de bois au fond d'un corridor,
> Brodés d'or, cousus d'or, chaussés d'or, coiffés d'or;
> Nous avons des sainte-Jeans et des saintes-Maries
> Que nous emmaillotons dans des verroteries!
> Nous dépensons Golconde à vêtir le néant."

What! said I to myself, when I read these lines, is this the poet who wrote in "Hernani," when the pilgrim enters the castle of Don Ruy Gomez:

> "Où vas-tu, bon pèlerin?
> HERNANI.— Seigneur,
> Je vais à Saragosse.
> DON RUY GOMEZ.— Un vœu? Fait en l'honneur
> D'un saint? De Notre-Dame?
> HERNANI.— Oui, duc, de Notre-Dame.
> DON RUY GOMEZ.—Del Pilar?
> HERNANI.— Del Pilar.
>
> DON RUY GOMEZ.— Il faut n'avoir point d'âme
> Pour ne point acquitter les vœux qu'on fait aux saints.
> Mais le tien accompli, n'as-tu d'autres desseins?
> Voir le pilier, c'est là tout ce que tu désires?
>
> HERNANI.—Oui, je veux voir brûler les flambeaux et les cires,
> Voir Notre-Dame au fond du sombre corridor,
> Luire en sa châsse ardente, avec sa chappe d'or,
> Et puis m'en retourner."

This is poetry, if ever there was any poetry!—the candor, the simplicity, the depth of sentiment, all is here united. And who, even in this materialistic world of ours, has not his Pilar, the place far concealed from the profane eyes of the world, where the eyes get moist, where our ideas cease to flow, as it were, from the brain, but from the heart before some cherished symbol? Call it by whatever name you like, give it the form you like, there is the place where the real man throws off his load of conventionalities and becomes the real son of Adam. What I object to in so many passages of 'The Pope' is conventionalism, obedience to the ruling ideas of the day. The poet has nothing in common with the politician. What place would you assign to Tennyson in the House of Commons, or to Longfellow in Congress? The poet is the man who consoles us for politics, as the priest consoles us for the sins and vulgarities of the world.

The "divine" is never quite absent from Hugo: here and there are verses which are like electric flashes in a dark night. But how vulgar is this, for instance, in the 'Pape aux foules'! The people describes its sufferings; the "Misérables" show their wounds, their wrinkles, their tears, and thus ends the piece. One man asks the Pope:

> "Qu'est-ce que tu fais là vieillard?
> LE PAPE.— Je thésaurise."

I can imagine all the possible accusations against the Papacy; I can understand the Gallicans, and Bossuet, and Luther, and Calvin, and Théodore de Bèze when they accuse the Papacy of cruelty, of intolerance,

of ambition, of pride; speak of the Borgias and of the scepticisms of Leo X.; but to accuse the Papacy of "avarice" is simply ridiculous.

I cannot attempt to analyze the poems of "L'Infaillibilité," or "En voyant passer des brebis tondues," or "Pensif devant le destin." "On construit une église" has a fine sentiment; the Archbishop describes all the splendors of the new cathedral, the Pope adds quietly:

"Et mettez-y des lits pour les pauvres l'hiver."

"En voyant une nourrice" is completely out of place, and has nothing to do with the Pope; but are we not making a dream? The same might be said of the "Champ de bataille" and of the "Guerre Civile," which has quite a Communistic flavor:

"Toi, paysan, tu veux tuer cet ouvrier!
. . . . . .
Arrêtez, Arrêtez, Fraternité!"

We all know in what times fraternity becomes a cry in France!

You will find the true Hugo in "En voyant un petit enfant":

"Tout ce que les meilleurs font sur terre ou défont,
Ne vaut pas .le sourire ignorant et suprême
De l'enfant qui regarde et s'étonne et nous aime."

This is true—this is the eternal man, the immortal son of Adam; and here I will rest. I have come out of this book, as I do always from Hugo, with a sensation of heaviness and fatigue; I feel as I do after a day spent among the glaciers and the nevés of the Alps. How solemn are these mountains, but how terrible! Let me return to the plains, let me return to the "Prière pour tous."

Correspondence.

A CASE OF PLAGIARISM.

To the Editor of The Nation:

Sir: In the index which accompanies the May number of *Scribner's Magazine* a poem is accompanied by the curious remark: "Plagiarized from S. Dobell." I would like to call your attention to another article which, it seems to me, might have been described by the same epithet:

Scribner's Monthly, Vol. xv., page 76. Art. "Countess Potocka," by C. C. Buel.

"Within the decade of years preceding the outbreak of the French Revolution, the French ambassador was one day taking his customary morning walk through the streets of Pera. Near the grave of Count Bonneval, a French adventurer of the time of Louis XIV., he came upon a group of frolicking children. The extraordinary beauty of one of them, a little girl 12 or 13 years of age, excited the Frenchman's admiration. . . . 'Here,' he thought, 'is a jewel for my palace!' He called the child to him. She responded cheerfully, and stood before his excellency with the haughty self-possession of a born princess. . . . The mother let flow a whole reservoir of tears. She might be a poor bakerwoman, she said, but she had a good heart for all that, and came of an exceedingly good family. Her ancestor—and here she courtesied profoundly—was, indeed, no other than the celebrated Byzantine emperor, Manuel Kommenos. How could his excellency think for a moment that she, the mother, would sell her princely baker-daughter! . . . The marquis spared no expense to transform his beautiful Greek ward into a Parisian. . . . She was surrounded with servants and governesses, and, thanks to her ambition and spirit, soon acquired such accomplishments as French, music, etiquette, and dancing. At fifteen she could maintain herself . . . with the ladies who frequented the embassy. The sly beauty was not slow to note the impression her youthful personality made on the marquis. Her sweet disposition . . . won the love of the entire household, while . . . she literally commanded the palace, from the marquis down. . . . The marquis saw—nothing at all. He, too, lived in the seventh heaven. It sufficed for his unlimited pleasure that at the festival which the count gave in their honor, the beauty of Sophie threw a grateful shadow over all the other ladies," etc.

Ueber Land und Meer, Vol. xxxv., page 54. Art. "Gräfin Potocka," by N. von Gerbel.

"Kurz vor Ausbruch der ersten französischen Revolution, machte der französische Gesandte in Konstantinopel einen Gang durch die Strassen von Pera. Unweit des Grabes des französischen Abenteurers's Grafen Bonneval (der zu Ludwig's XIV. abwechslnd Christ und Muselmann gewesen) bemerkte er in einer munteren Kinderschaar ein Mädchen von 11 bis 12 Jahren, von einer auffälligen Schönheit. 'Das wäre etwas für dein Haus!' sagte sich der Franzose, und liess das Mädchen herantreten. Das Mädchen trat ganz munter, aber mit dem Anstande einer geborener Prinzessin, vor die Excellenz. . . . Die liebende Mutter fing an heftig zu lamentiren. Obwohl sie nur eine Bäckersfrau, habe sie doch ein Herz, und sei von ausgezeichnet guter Familie. Ihr Stammvater war natürlich kein anderer als der berühmte byzantinische Kaiser Manuel Komnenus. Wie könnte der Franzose nur denken, dass sie, die Mutter, ihr fürstliches Bäckermädchen verkaufen würde! . . . Der Marquis . . . scheute keine Mühe und keine Kosten um aus seinem Schützling eine vollkommene Französin zu machen. Er umgab die kleine Sophie mit Bonnen und Gouvernanten, mit Sprach- und Musiclehrern, mit Hof- und Tanzmeistern. Die Kleine lernte mit einem nicht zu ermüdenden Eifer, und als sie 15 Jahre alt geworden war, nahm sie es mit jeder Pariserin auf . . . In kurzer Zeit hatte die verschmitzte Fanariotin den Eindruck ihrer jugendlichen Persönlichkeit wahrgenommen Sie . . . das ganze Gesandschaftshotel, vom Marquis an, förmlich commandirte. Sie . . . erwarb sich . . . die Liebe des ganzen Hauses. . . . Er sah—gar nichts. Es gereichte ihm zu besonderem Vergnügen, dass auf den Festen welche der Graf ihm zu Ehren gab die Griechin alle Damen verdunkelte. . . . Der Marquis und der Graf schwelgten beide im siebenten Himmel," etc.

X.

Notes.

FORDS, HOWARD & HULBERT announce a 'Biographical Memoir of William Cullen Bryant,' from the pen of Gen. James Grant Wilson. It will be incorporated in a "memorial edition" of Mr. Bryant's 'Library of Poetry and Song.'——The second volume of 'Bryant's Popular History of the United States' is now in the binder's hands, and will be the first book to bear the imprint of Charles Scribner's Sons. The third volume will appear in a few months.——'American Colleges: their Students and their Work,' by C. F. Thwing; 'Almost an Englishman,' a novel; and two volumes of poetry, 'The Ring of Amethyst,' by Alice Wellington Rollins, and 'The Exile,' by Francis Fontaine, are announced by G. P. Putnam's Sons.——D. Appleton & Co. have issued a thin pamphlet descriptive of 'The Scenery of the Pacific Railways and Colorado,' with a map and 71 striking woodcut illustrations by J. D. Woodward.——Brown University is fortunate in having secured the services of Dr. Augustus Spring Packard, jr., for the chair of Natural History. Prof. Packard is a graduate of Bowdoin College, and, from the variety and popular character of his published writings, perhaps our best-known American entomologist. His departure from Salem, Mass., following on Prof. Morse's and Prof. Putnam's, is a serious loss to that scientific centre, and implies an inadequate endowment of the Peabody Academy of Sciences.——The first bestowal of degrees by the Johns Hopkins University took place on June 13. Four candidates were admitted to the degree of Ph. D. and M. A.——For the coming year the University of Michigan announces some important changes in its plan of work. These relate to the choice of studies, admission of students not candidates for a degree, and requirements for graduation and for the higher degrees.——'The Ten-Year Book of the Cornell University' (1868-1878) is a handsome product of the University Press, and contains lists (1) of the officers, with brief biographies of those deceased; (2) of graduates by classes and degrees; (3) of licentiates; (4) of matriculates, with notes of occupation, address, decease, etc.; an index of residences, and a summary of occupations. In view of the manual-labor feature of this university, it is interesting to observe that, at the utmost, ten per cent. of the graduates earn their living with their hands.——The Harvard Library *Bulletin* No. 8 announces that a sufficient subscription to Scudder's 'Catalogue of Scientific Serials' has been secured, and that the work will be immediately put to press. The *Bulletin* contains the first part of a calendar of the Arthur Lee MSS. in the library (1774-1789), and continuations of the index of the Sumner collection and of the Michelangelo bibliography.——The July *Bulletin* of the Library Company of Philadelphia forms No. 1 of a new series. Typographically, it is much inferior to those issued by Eastern libraries of the same rank.——A chronological list of the works of the late Earl Russell (1819-1875) is printed in the London *Bookseller* for June 3.——A convenient map of the African Lake Region in the *Geographical Magazine* for June may be recommended to Mr. Stanley's readers.——In the *Zeitschrift*, No. 74, of the Berlin Geographical Society, a beautiful rain-map of Europe accompanies an article on the subject by Dr. Otto Krümmel. It lends meteorological support to Russia's pretensions to make the Carpathians and the Balkans her new boundaries.——Mr. Henry Blackburn sends us his 'Grosvenor Notes,' or illustrated catalogue of the summer exhibition at the Grosvenor Gallery (Chatto & Windus). It differs from our own Academy catalogue in the greater skill and effectiveness of the sketches (which are, however, far from being of even quality), and in the latitude allowed the artist in describing and almost praising his own work.——Mr. F. W. Christern has received Renan's 'Caliban,' of which our Paris correspondent gave an account last week, and the first ten *livraisons* of M. V. Duruy's 'Histoire des Romains.' This work, begun more than thirty years ago, is now put forth again, revised, enlarged, and illustrated with a profuseness of maps and woodcuts which only a house of the resources of Hachette could afford. The designs are all of a serious order ("rien ne sera donné à la fantaisie ni à l'imagination"), and are especially rich in coins, medals, cameos, and other archæological objects, for the most part inedited. The work will fill six or seven volumes of 800 pages each, at 25 francs the volume.——In the Berlin *Archäologische Zeitung* G. Hoffmann calls attention to a mummy, the face of which was covered with a gold mask, found on the Euphrates some thirty years ago, as furnishing an analogy to the similarly employed masks found at Mycenæ.

—"M." writes us from Cambridge:

"It is with much pleasure that those persons who are interested in the constitutional history of the United States look forward to a second volume from the pen of Dr. von Holst. While this volume is in the hands of the translators it may not be a useless task to call attention to some defects in the first volume—defects which cannot be overlooked in a book destined to hold a permanent place in our literature. The translators have not always been too careful either in the choice or the arrangement of words. On page 381, for instance, we find the expression, 'men had *fought shy*,' etc. ('evaded' is a good word, certainly); on page 347 we

get a hint as to 'the *right bower* of the Southern politicians'; and on page 405 we find that 'the North had a *trump card, which it did not fail to play.*' Again, the word 'entail' is used in all senses other than the right one. It is true, furthermore, that Browning and Herbert Spencer have placed the adverb between the parts of the infinitive; still, such use must continue to be regarded as a solecism. The publishers, too, deserve a word, for in the first volume it is as pleasant as it is unusual to find a page free from typographical errors. By taking a little more care the translators can make the work in all respects what it should be."

—*Harper's* for July opens with an agreeable paper, by Mr. A. C. Redwood, on that part of tide-water Virginia known as "Northern Neck," or the peninsula lying between the Potomac and Rappahannock Rivers. The ancestral home of the Lees is there, and other families not inferior in local rank have left traces of themselves, some of which can be and are here delineated with the graver. Virginia, too, is the scene of "Porte-Crayon's" not overdrawn description of "Old-time Militia Musters"; but the militia system, in its decay, presented much the same phases everywhere. Dr. Abel Stevens contributes "Anecdotes of Voltaire among the Swiss," as a sort of complement to the last chapter of Morley's study of the great Frenchman whose centenary has just been celebrated. In the main he relies on Pastor Gaberel's 'Voltaire et les Génevois,' and he succeeds in giving the salient features of that wonderful career at Ferney, so inexplicable in some ways, so little edifying at times, but on the whole of such immense importance to the progress of the human mind. "Hospital Life in New York" and the fourth paper on "Old Flemish Masters" (Van Dyck) add a varied interest to this number, whose illustrations show the healthy influence of competition from the side of *Scribner's*.

—In *Lippincott's* we have found specially readable Mr. L. W. Bacon's "Real Prisoner of Chillon," which takes away from Bonivard what Byron's muse invested him with, and still leaves him an interesting and to some extent admirable character; a timely article, by Mr. Henry Stone, on the Census of 1880; "An Atelier des Dames," by Margaret B. Wright, whose narrative would have borne lengthening; and "Popular Marriage Customs of Sicily," by Giuseppe Pitrè, than whom no better authority could be listened to. One of these amusing customs is the ceremony known as *stima*, or formal appraisal in detail of the bride's trousseau, which is sometimes announced openly and sometimes secretly to the accountant, but is always final, "and generally in favor of the fiancée, for the value of the trousseau goes to increase the dower." Odd, too, is the small account made of the civil marriage which precedes the religious, for the evening after it "the groom goes about his business as though he were not yet married." Then there are the various substitutes for the slipper thrown after the departing couple. In one place the bride has orange-leaves tossed in her face by an intimate of her own sex, who exclaims, "Contentment and sons!" The author of the entertaining paper called "A Levantine Picnic," namely, to Ephesus, conceals himself behind initials and no date, but we hazard the guess that he is Captain Strong, then in command of the *Canandaigua*, and that the visit to Retimo, in the island of Crete, was made in the spring of 1867. The insurrection was then in full force, as it is at this moment again, and in his official capacity "sympathies had no play," as Captain Strong justly observes. But, to his credit be it said, the "red-hot consul" whom he met at Canéa seemed to find him more sympathetic than the rest of his officers, and that alone detracted from the recorded satisfaction with which this consul saw the *Canandaigua* sail out of the harbor on its way to Smyrna and the Levantine picnic.

—The refusal of Congress to carry out the stipulations of the Convention of Saratoga is probably the most serious blemish upon the good faith of our Government during the Revolutionary War; it has hardly been defended by any historian except Mr. Bancroft. The subject has been freshly examined by Mr. Charles Deane, in a paper read before the American Antiquarian Society of Worcester last October, nearly upon the hundredth anniversary of the surrender, and he arrives at the conclusion that the acts of Congress "are not marked by the highest exhibition of good policy or good faith." In his careful narration of the events, it appears that the terms of the capitulation were themselves more liberal than Gen. Gates need have granted, and that from the first leading members of Congress felt apprehensive that Great Britain would not carry them out in good faith—apprehensions shared by Washington, and supported, if not justified, by attempts on the part of Burgoyne to get the port of embarkation changed. Add to this that it was highly for the interest of this country that the troops should not return to England, where they—at least the British troops—could take the place of others that could be sent here. The various pretexts under which the embarkation was delayed were not at all to the credit of the Government; and the final demand, that the British Government should ratify the Convention before the troops should be allowed to sail, was unreasonable, inasmuch as a convention of this sort did not require ratification; and, moreover, its formal ratification would have been a tacit acknowledgment of the independence of the United States. After all, there is no doubt that there was a real feeling of distrust on the part of our statesmen (Richard Henry Lee appears to have taken the leading part in the measures), which led them to insist that the conditions of the surrender should be definitely agreed to by the British Government; and this is the only excuse—by no means a justification—of the policy pursued.

—A correspondent who has taken the trouble to traverse the West, beyond the Mississippi, estimating the advantages and the disadvantages of the different parts of that country as homes for those who ought to "go West" while there is a West to go to—that is, while there is good land to be had for the taking—sends us the following summary of his observations, which we print without prejudice and without endorsement:

"In Texas I found some of my old acquaintances. They were doing well as a general thing. Their daughters were nice girls, though a little 'loud' and rather forward; their boys given to shooting, fishing, loafing around generally, and on the whole becoming very much like their neighbors, who were mainly of the poor-white kind—ignorant, immoral, vicious fellows. So I decided against Texas; for what is prosperity worth if it brings with it the ruin of the young? In Arkansas and Kansas I found much the same state of things—less in degree in the latter State; still, few persons would suspect that the people of Kansas, the younger people, were of New England or New York stock. They do not seem to like work, but are given to gregarious meetings, hunting, merry-making, and loafing, and not given to intellectual pursuits as a general thing. The necessaries of life are easily obtained; as to the refinements of life, they are not much prized. Cooking and the niceties of housekeeping are unknown arts in all the West and Southwest below the northern lines of Iowa and Nebraska. This I assert and will stand by it. It will always be so, until both the women and the men are better educated, more carefully taught, and, to use a homely phrase, brought up.

"The mass of the people in Minnesota, particularly northern Minnesota, and in northern Dakota, in the famous Red River valley, seem very superior people, quick, bright, energetic, intelligent, and busy; not loafing, little idling; seemingly well educated. Even the foreigners appear unlike those of their own nationality I found in Kansas and Texas, for they are bright, quick, and apparently industrious. All these differences, I think, are climatic; the people must have plenty of clothing; they have cold winters, and have little to do in that season, except to study and stay at home. The lack of forests prevents hunting and idling; there is little temptation for loafing around; they cultivate their intellects. The crops are sure, and give wealth; little of their gains is wasted in getting them to market. There are more and better schools in Minnesota than are to be found in the lower States; they seem to care more for them. Altogether there is no doubt in my mind that the extreme Northwest is the best part of our country to emigrate to, everything considered."

—The death of Charles James Mathews takes from the English stage its best comedian. The memory of the elder Mathews has so almost entirely faded away that it is impossible to make any comparison between the acting of the father and that of the son, though the resemblances and differences must have been marked enough to make the parallel an interesting one. Except his father there was no one to compare him with; his school of acting was peculiarly a family school. Americans had an excellent opportunity of judging of his merits, as he made three separate visits to this country—in 1839, 1858, and 1871. A good proof of the excellence of his acting was that although his first appearance here was (owing to a variety of causes which are hardly worth a posthumous examination) nearly a failure, he so won his way that his last visit was a great stage triumph. Perhaps, however, more striking evidence was furnished by his remarkable success in France, where, notwithstanding the difficulties of the language and the thousand other obstacles, he made an extraordinary hit in "L'Anglais Timide," a version of a capital farce now seldom acted—"Cool as a Cucumber." To any one who knows what the French stage is, and how little resemblance there was until a very recent date between the traditions of that and the English theatre, Mr. Mathews's success in France must seem hardly short of miraculous. France, it should be remembered, is not a country in which, as with us, the public is accustomed to having managers impress actors and singers of all nations, and in which consequently an actor of whatever race, if sufficiently distinguished at home, may be sure of at least a hearing. The French stage, it is true, draws on some few foreign countries for its actors, but we believe most of those who have succeeded on it have usually relinquished their connection with everything not French at an early age and adopted the country of their profession. Such a career on it as Fechter's

here, for instance, would be quite out of the question. The marked success of an English actor, therefore, on the French as well as on the English stage, may safely be attributed to the inherent merits of his performance. There was, however, something in Mr. Mathews's acting which must have prepossessed French audiences above all others in his favor. He had a delicacy and refinement which the present generation of theatre-goers are not likely to see equalled, though there is now a generation of actors vieing with one another in trying to be delicate and refined. His range, it must be confessed, was very limited, his parts being chiefly those of the lightest comedy, in which the development of absurdities of situation had much more to do with the effect than anything in the character or action properly so called. He had no tragic power, and not even what most English comedians possess—pathos. He never lost himself either, so far as we remember his acting, in his part. All his "business" was inimitable, and his acting had one virtue which that of so many actors lacks—there were no gaps in it. It was a continuous performance from the rising of the curtain to its fall, in which every word, motion, gesture, and act had some connection with the central idea of the part. It was a natural consequence of this professional devotion to dramatic unity that he had a horror of that bane of the modern stage—"gags"—the introduction of casual remarks for the amusement of the audience. It is said that of late years he objected to playing *Dazzle*, on the ground that it had been so stuffed with "gags" that the original part had been lost.

—M. Emile Augier has just published his drama of "Les Fourchambault," which is at present in the enjoyment of high success at the Théâtre Français, and forms, obviously, the most important contribution to the French stage—in other words, to the contemporary stage—during the present year. If to see a play from one of the best French hands acted as such things are acted at the Maison de Molière is one of the greatest possible pleasures, we may perhaps say that in the case of this pleasure being inaccessible by reason of remoteness, a fair substitute for the entertainment may be found in reading the published drama. "Les Fourchambault," at any rate, reads extremely well, and forms a worthy supplement to that collective edition of the author's works which has been issued during the past year, in seven substantial volumes, by Calmann Lévy. In these seven volumes, by the way, M. Emile Augier makes a very honorable show; the modern theatre has few stronger pieces than "L'Aventurière" and "Le Mariage d'Olympe," "Les Lionnes Pauvres" and "Maître Guérin," just as it has nothing more charming than "Philiberte." Alexander Dumas the younger, alone, can contest the supremacy on their common line of the author of these masterly dramas. The two writers have many points of contact. The list of their works is of about equal length; both are members of the Academy; both are would-be moralists; both attempt the social, it may even be said the didactic, rather than the romantic or the simply entertaining, drama. In Paris there is scarcely any event so important as the appearance of a new play by one of these gentlemen, unless it be the production of a piece by the other. M. Emile Augier, on his social side, is preoccupied with the sanctity of the family, as they say in France; he "goes in," as they say in England, for the importance of the domestic affections. This is his most frequent thesis. He does not wage war quite so unremittingly as his brilliant rival upon misplaced gallantry and the encroachments of mercenary wiles; but the most earnest effort of his muse may be said to be to keep the family well together. In "Les Fourchambault," thanks to a variety of causes, it is in terrible danger of falling apart; but cohesion is ultimately restored—the manner in which it is restored forming the subject of the play. In French plays these results are sometimes brought about very oddly. Here, for instance, the good example is set to the household of M. Fourchambault by a lady who has been M. Fourchambault's mistress and by her son, who is also that of M. Fourchambault. This is a curious example of the assumption, so frequent in French novels and plays, that to take a high attitude one must have done something very improper. Upon the didactic properties of these productions English readers are always certain to make their own reflections; they think it strange to see so much pleading of causes which, among themselves, are not in the way of being lost. They reflect, too, doubtless, upon some of their other properties—their finish and shapeliness, their neat, artistic, scientific form. Only, if on one side they feel no need of learning the lesson, on the other, too often, they seem unable to apply it.

—*L'Art* has never been, in its short term of existence, more diligent in adding to artistic bibliography than in the last quarterly volume, the twelfth since the beginning. The by-ways of professional research have been carefully explored by patient investigators, and "inedited" documents produced to explain the career of such masters as Filippo Lippi, Franz Hals, Callot, Guardi, Rubens, Rosalba Carriera, and Leone Leoni, the sculptor who has left a whole gallery of images of Charles V. and his family. Of contemporaries, the volume contains analytic notices of Viollet-le-Duc, of Courbet, of Brion, and of Léon Belly. The brilliancy of the illustrations in this greatest of periodicals somewhat eclipses the excellence, at once historical and critical, of its text, which forms as it runs a serial biographic dictionary, elsewhere unmatched. The gentle but persistent malice of *L'Art* towards its older colleague, the *Gazette des Beaux-Arts*, seems to have diminished to a rather humble willingness to use material formerly employed by its rival; at any rate, it now introduces one of the most charming etchings of Jacquemart's ever published in the *Gazette*, the lovely "Infanta Isabella," after Simon de Vos. It is true that this plagiary is made apropos of an auction sale of the painting, and with a veiled apology to somebody—certainly not to the original publisher. In the productions of its own etchers, *L'Art* assuredly shows no diminution of excellence, and no necessity of relying on borrowed skill. There is, for example, a large aqua-fortis (plate 10 by 13 inches) called "Une Mauvaise Plaisanterie," representing a court violinist suddenly overthrown in a crowded audience by the hasty withdrawal of his chair at the hands of a fair joker. It is quite surprising how M. Lalauze has here suggested, by mere trick of the etching-needle, the blaze of color, the play of changeable tissues, and the broad beaming vulgarity of glossy floors, altogether making up one of the modern popular kaleidoscope pictures of the "Roman School." In severer workmanship, just after this plate, is inserted an etching of one of the great Velasquez full-length subjects of the Museo del Prado, the "Menippus," described by Beulé as "one of those beggars who have of old formed the glory of Spain, bold, cynical, ready for anything, draped in a tattered cloak, red of nose and caustic of lip." Lhuillier's etching has the brushwork of Velasquez in its breadth, its simplicity, its mystical method wrapped up in frankness. The portrait of the Parisian etcher, Bracquemond, by Rajon, is a study in another style, showing the incisiveness and intricate detail, the blond serenity of light, of Holbein, along with his jeweller-like superficiality, which seems to play upon surface without developing structure. The largest plate in the volume, needing for its accommodation the full folio page, is the "Delivering of Andromeda," by Rubens, one of the treasures of Madrid. Here the etcher, Milius, enamored of the rich contrast between the dark armor of Perseus and the fruity flesh of Andromeda, seems positively to work with the juices and glazes of the palette rather than with the dry-point and the acids of the plate. The variety and great perfection of these and other etchings in the present instalment of *L'Art* are a powerful argument for the claims of aqua-fortis as a method. A series of line-engravings, taken from however great a variety of paintings, will look like nothing on earth but line-engravings. A uniform web of strokes, a contracted range of processes, gives a family likeness and an identity of color to plates from Flemish work, Bolognese work, Venetian work, Dutch work. It is for etching, with its inspired haste, its immediate transfer of the impression of eye and brain, to change from style to style, and fulfil for the most widely-separated mannerists the office of interpreter. For the public who do not see the original masterpieces, the intelligible critic, and the only adequate and eloquent critic, is the etcher. Another method, however, employed by *L'Art* with unsurpassable tact and liveliness, is the photo-engraving process, by which is repeated, absolutely without loss, the artist's sketch for the reader's eye; in this kind, the seven large facsimiles of Millet's drawings, the repetitions of Brion's expressive types and of Belly's poetic orientalisms, make the originals, in every artistic sense, the property of the subscriber. *L'Art* is now preparing very full pictorial reports of the Paris Exposition, a feature which will constitute the specialty of the coming volume. The price to subscribers has been reduced by the American publisher, Mr. J. W. Bouton, from $36 to $32 per annum.

—A careful study of the history and remains of the Phœnicians in France is made by the Abbé Barges, Professor of Hebrew in the Sorbonne, in his 'Les Colonies Phéniciennes sur le littoral de la Celtoligurie.' Marseilles has furnished what is, next to the Moabite stone and the Sidonian inscription of Eshmunazar, the most important relic of the Phœnician alphabet and language; indeed, M. Barges, with some pride, insists that it is a more important monument than that from Sidon, and thinks it probable that the remaining quarter of the stone will be discovered whenever the old house is torn down in whose foundation it was found. With good reason our author is convinced that the Phœnicians occupied the coast long before the Phocæan invasion, and many of the

names he traces to Phœnician sources. Massalia, the older form of Massilia and Marseilles, however, he makes of Celtic origin, and does not seem to think the Semitic derivation from *Mazzâl*, a dwelling, a settlement, suggested by so good a Phœnician scholar as Schröder, even worth mentioning, if he has ever heard of it. It will be a surprise to not a few well-informed scholars to learn how many and valuable Phœnician monuments have been found in Marseilles. Several altars of Baal and several steles of Baal-Hammon and of Tanith, with figures of these divinities in relief, are given in plates scattered through the volume. One of Baal-Hammon represents the divinity standing in a niche, with a very sun-like face, while above, near the top of the stone, in a circle by itself, is the same round head surrounded by rays, sufficiently explaining how the Greeks identified him with Apollo, and rendering it quite superfluous to suggest, as M. Barges does, a resemblance of sound between the names of Apollo and Baal-Hammon. The column also explains what were the *Hammânim* destroyed by the pious kings of Judah. While reading this volume we hear the news of the discovery of another Phœnician (!) monument in America, this time in the city of Boston. Seeing that the ancient Athens has produced several valuable Phœnician monuments, it seems reasonable that the modern one should do as much. It certainly should not fall behind Brazil, which afforded our last Phœnician inscription.

NEVILE'S HORSES AND RIDING.*

THE interest felt in this country in things pertaining to saddle-work is largely a matter of tradition, but it is a vital interest nevertheless, and an enthusiasm for horsemanship is by no means confined to those who are able to indulge in its practice. Just as the traditional instinct which leads boys to look with delight upon the idea of killing something with a weapon is an inheritance from the time when the pursuit of game was the pursuit of food, so does the instinct of horsemanship trace back to the horse-riding race from which we are so largely descended. We have little more than the tradition left, and it is undoubtedly true that Americans get far more delight, in the aggregate, from thinking about riding than from riding itself. Climate, close occupation, want of means, and want of company, all tend to restrict the number of those who keep saddle-horses and who ride regularly. The supply, keeping pace with the demand, has reduced itself to such narrow limits that it is a matter of real difficulty to buy a thoroughly good saddle-horse in any American city.

Although there is little call for saddle-horses themselves, there is a considerable public which is interested in books about saddle-horses. We do our cross-country work in the library, but we do a good deal of it, and those who in this way keep pace with the literature of the art will welcome with real satisfaction the book under consideration. Indeed, its claim upon our attention is justified by the single outline sketch, entitled "The Right Sort of Horse to Buy." This is not much more than an outline of a horse, saddled and bridled and ready to mount; but of all the pictures of saddle-horses that we have seen it is by far the best—perfect in all that it shows and charming in all it suggests.

Mr. Nevile gives as the reason for writing his book "a genuine fondness for horses, combined with a recollection of the falls I have had, the good runs I have lost, and the disappointments I have met with from want of the knowledge contained in its pages." His qualifications for his work are based mainly upon a shrewd judgment, much careful observation, and an inborn talent for directness of statement. He has obviously written with little regard to what others have written before him, and he sometimes runs counter to the accepted belief, and fails always to convince us that he is wise in so doing. Any defect of this sort is much more than compensated for by his originality. Incidentally, many of his sentences are revelations as to what may be done with words of a single syllable. Concerning most of the books about horsemanship, he refers to Macaulay's remark about officers and gentlemen, and says: "There are good horsemen and there are good authors, but as a rule the horsemen are not authors, and the authors are not horsemen."

The instructions given for the choosing of a horse are valuable. For example: "A horse's back ribs should be large—that is, his body should look as big near the hind legs as near the fore legs. A horse which looks light in the stomach when he is fat in his limbs will not be so enduring as a horse which looks thick in the middle at all times." Speaking of the top view of a horse, such as the view of the wheelers from a high coach-box: "The horse's body should be the same shape as a hen's egg, with the broad end towards the tail. The back ribs will then be the broadest part of him, which they ought to be." . . . "The ears should be near together and curved slightly inwards."

The following quotations give a good idea of the character of the book, and are worth making for their own sake:

"The top of a horse's neck where the mane grows should be thick and hard, and the mane itself thin and light."

"If you are doubtful as to a horse's shoulder, don't go and look at another horse's shoulder, and particularly not one of a horse belonging to the same owner as the first, for if he is not a good judge of a shoulder, he is just as likely to buy two horses with indifferent shoulders as one. . . . Now, there are three ways of finding out what a horse's shoulder is like. First, looking at him when he is standing still; secondly, watching him while in motion; and thirdly, riding him yourself and *feeling* his action. Of these plans all should be used; but the third is better than the second, and the second better than the first.

"The upper bone of the leg, from the knee to the horse's body, is called the radius; and between this bone and the scapula or shoulder is a shorter bone called the humerus. The humerus is slanting as well as the scapula, but in the contrary direction; that is, the bottom of the scapula and the top of the humerus are the forwardest. Now it must be borne in mind that while the scapula is better placed the more it slants, and the less upright it is, the humerus, on the other hand, is better placed the *less* it slants and the *more upright* it is.

"I would here say that as the only reason why a good shoulder is better for riding is because the horse will have better and safer action with a good shoulder; therefore if you are certain that a horse's action is good there is no need to go any further."

"Now, to judge of a horse's shape, draw two imaginary lines from this corner [where the rear edge of the flap meets the body of the saddle], one to the lowest part of the horse's breast and the other to the furthest part of his hind quarters. These two lines with an ordinary saddle ought to be, but rarely are, nearly of equal length. Generally the line drawn from this corner to the hind quarter is much longer than the line drawn to the breast; and the more difference there is the worse the horse's action will be as regards safety on uneven ground. This is as good a method of forming an opinion of a horse at a glance as I know: Ride the horse along the road until you come somewhere where there is a foot-path or piece of grass raised six or eight inches above the road. Now ride the horse quietly a few yards along the raised edge of the foot-path at a walk, and then, letting his head remain quite loose, turn him slightly so that he steps off the foot-path slant-ways on to the road. If his shoulders are good he will step off without any difficulty, and if you had your eyes shut you would not be able to tell when he did so. If his shoulders are bad he will either stumble or drop heavily on to the foot he first puts on the road, so that he gives you a disagreeable shock up your backbone. . . . When a horse's shoulders are good he can step down a foot, or nearly so, and reach the ground with one foot before he takes the weight off his other foot."

"A good horse's value increases very much for each inch that he measures over fifteen hands, or five feet, up to sixteen hands and an inch, or five feet five. . . . Horses above sixteen-one are of no greater value than horses of that height or an inch less. . . . As a rule, a man will have more pleasure in possessing a good small horse than a moderate horse of greater size. Therefore, settle what is the *most* money you can give and what is the *least* size you can do with, and then get the best you can of that size and at that price." "As a rough-and-ready rule, if a horse, well formed and in fair hunting condition, is weighed, he will be found able to carry about nineteen per cent. of his own weight [across country is meant]. The better bred a horse is, the better he will carry any weight that he *can* carry; and the less blood there is in a horse's breeding, the greater weight they can carry *at their own pace*. . . . As a rule, the harder the rider, and the more open the country, the better bred the horse ought to be. Fences stop hounds more than they do horses, and the smaller the enclosures and the larger the fences, the easier it is for a horse that can jump to keep pace with the hounds, and the less speedy and, therefore, the less well bred is it necessary for the hunter to be."

On the subjects of road-riding, cross-country-riding, and leaping, Mr. Nevile is particularly satisfactory:

"Now, what is the first requisite to enable you to ride a horse with pleasure and safety? The first requisite is, I take it, that you should be quite certain that you can stop him if you want to stop him. The second requisite is that you should always be able to make him go on when you want him to go on. I have given the first the precedence for this reason, that if you can't make a horse go on when you want, you only suffer inconvenience as a rule; whereas, when you can't stop a horse when you want, your safety may be endangered." "One of the best ways of teaching a horse not to do anything you don't want him to do is to arrange matters so that it is difficult if not impracticable for him to do what you don't want him to do. Now, it is impossible for a horse to move forward when there is a brick wall immediately in front of his head, and therefore, when you want to cure him of moving forward as you are getting up, you should turn him with his head to a wall. A horse mounted a few times in this manner will acquire the habit of standing still while he is being mounted, even with his head loose. In mounting on the road, stand him with his head in the opposite direction from that toward which you intend him to go. If he then moves forward, he will find that he has to turn round and go back again, and will learn from experience to await directions."

* 'Horses and Riding. By George Nevile, Esq., M.A. With numerous illustrations by the author.' Second edition. London: Longmans, Green & Co.; New York: Scribner, Welford & Armstrong. 1877. Pp. 211.

"It is difficult to define or classify a good rider; but in order to give my readers an idea of what I mean, I will divide men who can ride into two classes, a good rider and a good horseman. . . . A good rider can ride a horse when he has got one, while a good horseman can make a good hunter out of a horse that knows nothing about it. . . . As a rule, what is called a hard rider is not a very good horseman. . . . Again, being able to ride anything, which some people think is a test of a good rider, is little or no test of a good horseman. . . . If any one wishes to form an opinion as to how good a rider or horseman he is, let him try the following experiment: Let him take the handiest horse in his stable, and take it alone to a moderately-sized hedge and ditch. Then let him put half a crown between each leg and the saddle wherever he thinks best, and tie his reins with a bit of pack-thread to the breastplate, so that they will not fly over the horse's head when he jumps, and then let him see if he can take his horse up to the hedge and jump him over it with his hands in his pockets without dropping the half-crowns. If he cannot do this, or if his horse will not allow him to do this, both he and his horse have still something to learn. My readers must not think that if they cannot do this they are not good riders. Very many good riders could not do it. I only give this as a specimen of what a good horseman can teach himself and his horse to do."

"People often ride a young horse at a fence, holding him tight by the head for fear he should spin round, and spurring him for fear he should stop, and as often as not striking him just as he is taking off, for fear he should not jump high enough. Now, a young horse dislikes all three of these things excessively, and if he has at all a tender mouth, all three of them hurt him in different places at once. No wonder, then, that he acquires the habit of going as hard as he can pelt at a fence to get over with as little punishment to himself as possible, and soon acquires the habit of doing this even if he is neither spurred nor whipped."

The chapter on leaping is full of good sense. Its instructions are quite different in many respects from those to which we are accustomed. The fundamental principle is that a horse should be taught to leap or to do anything else quite as a matter of course, and that no difference of opinion between him and his rider should be emphasized and impressed on his memory. A horse will sometimes refuse a fence and then jump it on being taken to it a second time; "but if he refuses it the second time you ought not to ride him at it a third time." If the fence is too large, he may be taken to a smaller one and kept at it with only a gentle kicking of the heels and allowed to take it in his own way. If he still refuses, he should be taken away. If he jumps it, he should be allowed to go his own pace for a bit and then pulled up gently. "He should not be encouraged or petted as though he had done something wonderful," but should be made to think that you wanted to get into the next field and that he had to jump the fence to get there. "For this reason it is highly wrong to strike your horse after he has got over the fence, and it is decidedly foolish to turn him around and make him jump back again. A horse soon learns that you want him to get into the next field; but if you strike him when he has got there, he does not know what you want him to do, and if you turn him round and jump him back, he does not know where you want him to go." This, of course, applies to the education of young horses. To a well-trained and spirited fencer the mere act of leaping is a sufficient reward, and the same leap will be taken over and over again with delight.

The following point we have not seen suggested elsewhere. "When a horse jumps a small fence or ditch he lights on his fore legs and picks them up again before his hind feet come to the ground. . . . If a horse comes down on his fore feet after a large jump there is danger of his not getting his fore feet out of the road of his hind ones and thus getting a fall." A horse which has his head held when he jumps is more likely to fall from this cause than when he goes with his head loose.

We have sufficiently indicated above Mr. Nevile's manner of treating some of the more interesting parts of his subject. He is equally sensible and suggestive as to the more prosaic details of saddlery, stabling, feeding and shoeing, and unsoundness.

ADAMS'S GREAT CAMPAIGNS.*

THE preface to this large and handsome book informs us that its subject-matter "has been compiled from a long series of printed and manuscript works left by the late Major Charles Adams." It is a book to which the reviewer desires to do full justice, and yet the task is unusually difficult. Many hours of attentive examination leave but uncertain impressions upon the mind. It is plain that the author was a man of extensive knowledge of military history, of untiring industry in the collection of material, and of laborious thought; and yet it seems to us extremely doubtful whether his book will be of much service. If the great mass had been worked over by the editor with the same skill which he has shown in "introducing new matter necessary for continuity," the result might have been very different.

There are three classes of readers who may like to know what manner of book this is. These are the general reader, the amateur military student, and the thorough professional student of the art of war. The general reader must not touch it. He could hardly find a page which he would have the patience to read through. If he has had enough of Marengo and Austerlitz and Friedland and Waterloo, and fancies he would find in Gravelotte a "fresh field and pasture new," and turns to the chapter entitled, "Campaign of 1870–1871—Gravelotte," he will find that though this is the running title of more than one hundred pages, the battle itself is described in half a page—that is to say, it is not described at all. The great battle of Königgrätz is described at greater length, but the description only occupies five pages of the one hundred and thirty-six of which the running title is "Campaign in Bohemia—1866—Königgrätz." The amateur military student will be better off; but if he opens these pages with his mind full of pleasant memories of Napier and Hozier and Kinglake, and of lives of Marlborough and Wellington and Grant, his surprise and disappointment will be great. He will speedily discover that he has entered upon no primrose path; that he must advance painfully and slowly, with his faculties awake and his attention concentrated, and even so we think he may go further without faring worse. The third class to which we have referred must pronounce for themselves upon the merit of this book. They are not numerous, and the writer is not one of them, but even to them a finger-post is useful, and such we may hope to furnish.

The book treats of campaigns in Italy, North and South Germany, Poland, Saxony, France, Belgium, and Bohemia, from 1796 to 1870, and especially of the operations connected with the battles of Montenotte, Marengo, Ulm, Austerlitz, Jena, Friedland, Dresden, Montmirail, Waterloo, Novara, Magenta, Königgrätz, Custozza, and Gravelotte. The author's attention is mostly occupied with strategy. He has comparatively little to say about tactics, and next to nothing of logistics. He is satisfactorily full in his statements of the geography and topography of the regions which are the scenes of the operations that he describes, and of the courses of political events which led to the collisions above mentioned. He has also much to say about the national characteristics of the peoples who furnish the armies which took part in those collisions, and of the composition, organization, force, and efficiency of those armies. But, upon the whole, it seems to us that the motto of the book might well be "materiam superabat opus" reversed.

We are surprised to find in a book published since the entry of the Prussians into Paris that in 1866 Austria was "the one Power most interested in all that pertained to military progress in Prussia." We are confused by reading how a general reached a place after we have read what he did after getting there, as in the case of General Beyer's movements before and after reaching Cassel, in the campaign of 1866. In the same campaign there was a Crown Prince in each army, the Crown Prince of Prussia and the Austrian Crown Prince; and each is mentioned simply as "the Crown Prince," and it is not always easy to tell which is meant. So the two Frankfurts are not distinguished; but perhaps this should not be censured, as the context will resolve the doubt for every one who has something more than a smattering of geography. And here, by the way, it may fairly be said that many of the obscurities which make this book disappointing might not be obscurities to a reader who was already really familiar with the territory and the events described. It is not so easy to excuse the mention of "the unavoidable consequences of the battle of Borny," when no battle of Borny has been mentioned and the index does not contain the name. Nor can we understand the process by which MacMahon's army of, "in all, about 120,000 men," after gathering in, "in addition, some 12,000 of the cavalry reserve and one division of Canrobert's corps," still amounted to only about 120,000 men (p. 551). The value of the book as a book of reference is impaired by the omission from the maps of the names of places which have possessed at times considerable military importance. We look in vain upon them for Langensalza, Göttingen, Riesa, Pirna, Pardubitz, and the names of many places in France at which there was fighting in the campaign of 1870. There are no lines upon the maps to mark the boundaries of Galicia, Silesia, Moravia, and Bohemia.

The style of a work like this is a matter of secondary importance. Major Adams's composition shows plain marks of carelessness. He says that the absence of certain intelligence was "compensated for by the loss

* 'Great Campaigns: A Succinct Account of the Principal Military Operations which have taken place in Europe from 1796 to 1870. Edited from the Lectures and Writings of the late Major C. Adams, Professor of Military History at the Royal Military and Staff Colleges. By Captain C. Cooper King, R. M. Artillery, Instructor of Tactics Royal Military College.' Edinburgh and London: William Blackwood & Sons; New York: Scribner, Welford & Armstrong. 1877.

of 40,000 soldiers"; "it was clear that the plan had crossed"; "the companies were to be strengthened and brought up to that of the Prussian army, 1,000 strong"; "Bazaine had only taken over supreme command thirty-six hours before." In the third of these examples, 1,000 is probably an error for 100; but with that correction made, the sentence is very defective. Here should be mentioned the author's partiality for the word "genial," and the singular use he makes of it. He speaks of "want of geniality in the conception of the Austrian plan"; "the want of a genial appreciation of the military situation"; "the imperishable doctrines which the genial spirit of Clausewitz bequeathed." This is good German, but not English.

The chapter upon the operations for the reduction of Metz is one of the best in the book, so far as we have observed, and we advise the intending purchaser to begin with that. It gratifies our national pride to learn that an English military writer is willing to find anything good in American warfare. Major Adams acknowledges the merit of the practice developed in our war of secession of covering our lines, whenever we halted in presence of the enemy, with hastily-constructed earthworks. The author's remarks upon the general course of events in Europe; his estimate of Bismarck and of Louis Napoleon; his statement of the elements, other than physical, from which the fighting power of infantry is extracted; his criticism of the Austrian system of appointing competent officers for the inspiration of incompetent generals who owe their positions to hereditary influence; his comments upon the unwisdom of having a commander-in-chief who is simply a tactician, as in the case of Benedek, and of following the custom of throwing the shield, as he says Austria invariably has, over unfortunate generals, and of never disclosing, perhaps barely investigating, the causes of their mishaps; and his wise remarks upon the prevalent errors as to the theory of the concentration of force, in the course of which he says it is probably worse to over-concentrate than to disseminate, may all be read with pleasure, and most of them with profit, and they combine, with many other sensible utterances, to give a real value to the book. The patient reader who gives due attention to all such matter will gain something, and he who goes further and studies thoroughly the author's criticisms of what was done, and his statements of what might have been done, in the campaigns which he describes, will gain much from the use of this book, which, however, as we began with saying, is not to be taken lightly in hand.

Life and Letters of James Hinton. Edited by Ellice Hopkins. With an Introduction by Sir W. W. Gull. (London: C. Kegan Paul & Co. 1878.)—No reader of any one of Mr. Hinton's thoughtful and suggestive books, we are inclined to believe, could be otherwise than curious as to its author's personality; and the lady to whom we owe the graceful and genial memoir which we are about to notice will be allowed, by all who are thus curious, to have executed her task most ably.

Mr. James Hinton, who was born at Reading in 1822, was son of the Rev. Howard Hinton, a Baptist minister well reputed in his generation. On the paternal side, he was descended from the Taylors of Ongar; the Rev. Howard Hinton and the estimable author of 'The Natural History of Enthusiasm' both having been grandsons of Josiah Taylor, the engraver. The mental culture of Mr. Hinton, as a boy, seems to have been looked after somewhat negligently. When only sixteen, on his father's removing to London, he already ceased to attend school. His thirst for knowledge was, however, insatiable, and, as in his youth, so throughout his career. At the age of twenty he was entered at St. Bartholomew's Hospital, and began the study of medicine. After taking his diploma he spent several years, when not at sea, in China, Sierra Leone, Jamaica, and New Orleans. On his return to England, in 1850, his attention was specially directed to aural surgery by his success in curing the deafness of his mother. An introduction to Mr. Toynbee, the leading English aurist of the day, soon followed; and, on his death, he succeeded to his practice, having previously acted as his assistant, besides filling the post of aural surgeon to Guy's Hospital. A few years of steady application to his profession sufficed to place him in easy circumstances. In 1875 he emigrated to St. Michael, one of the Azores, where he had purchased an estate, and there, at Ponta Delgada, died suddenly, from inflammation of the brain, on the 16th of December, in the same year.

The details of his life and his numerous letters constitute an impressive picture of a man remarkable alike for intellectual vigor, activity, and independence, for rigid and lofty self-sacrifice, and for the most disinterested philanthropy. Almost from his boyhood, and to the very last, his thoughts were well-nigh engrossed by the radical problems of mind and matter, and by the incidence of a right appreciation of them on the welfare of humanity. During a period of five years, while he was engaged in active practice as an aurist, he resolutely abstained from using his pen, except in connection with his special profession. Had wealth been his aim, it was obviously within his easy reach. A moderate competency achieved, however, he hastened to withdraw from the world, with purpose to devote himself exclusively to the pursuit of philosophy. Much as he published, vastly more, only in a condition available by no one but himself, lay by him in manuscript, waiting to be modified by his riper reflection, and to be digested into the system which, as his friends well knew, had long been completed in his conception. But he had overtasked his physical strength, considerable as that was; and he must now be estimated as a thinker from that which, if he had lived and worked a few years more, would probably have seemed only rudimentary and tentative in comparison with his ultimate and matured conclusions.

Among the fundamentals of Mr. Hinton's philosophy a marked feature presents itself in his rejection of the atom, for which, with Faraday and other eminent modern scientists, he substituted a centre of force; herein following Boscovitch. Almost of necessity, he who sets out with this hypothesis must discard the sharp distinction which is ordinarily taken between what are popularly denominated matter and mind. That, in consequence of ignoring this distinction, mind is materialized, is not, however, an inevitable logical inference. On the contrary, matter may thereby be spiritualized, if we may be allowed the expression; and so it was in all the speculations of Mr. Hinton. It is, he contended, from our unreflecting deference to the dictates of authority, rather than from observing without prepossession for ourselves, and reasoning consequentially on what we observe, that we see in nature a counterpart of our own deadness, the offspring of sloth and wilful blindness. Moreover, he maintained that the physical, rightly apprehended, is the phenomenon of an actual. But on these and kindred views we shall not dwell; it being enough to note here that they involve nothing which fails to harmonize entirely with the deductions of the most advanced science.

Distinctly, yet not obtrusively, the philosophy of Mr. Hinton is found to permeate nearly all that he lived to publish. But, even if his philosophy be declined, his works will be shorn of nothing of their practical utility. Among these works we would particularly name 'The Place of the Physician,' 'Man and his Dwelling-Place,' 'Life in Nature,' 'Thoughts on Health and some of its Conditions,' and 'The Mystery of Pain.' Nor must we omit to mention 'Others' Needs,' a little lay sermon which he put forth anonymously in the form of a tract. No one, we are sure, could read it attentively without being induced to wish for further acquaintance with the thoughts of its writer.

The volume of which we now take leave exhibits an interesting consecutive record of the steps by which a man of exceptionally vigorous natural parts, alert and even fervid emotion, and intrepid devotion to the search of truth, strove—and triumphantly—to emancipate himself from a host of traditional and conventional prescriptions. Woman, with her manifold potentialities, will also be seen there to have a large measure of far-reaching consideration assigned her. The general impression which the memoir leaves, if saddening, is at the same time one which instructs. Mr. Hinton, even had his days been prolonged, might not have elaborated a system destined to be rated by others at the value set upon it by its originator. Yet, as it is, he has left behind him a plentiful store of striking hints and original suggestions which cannot fail of beneficial influence on our contemporaries, and, mediately or immediately, on our children as well.

Les Antiquités de la Troade et l'histoire primitive des contrées grecques. Par François Lenormant. (Part I. Paris. 1876.)—François Lenormant made his début as an archæologist at a very early age, and has since almost constantly been before the public. Of his more recent works his 'Manuel d'histoire ancienne de l'Orient,' 'Études accadiennes,' 'La langue primitive des Chaldéens et les idiomes touraniens,' and the book before us, are the most important. He is a very diligent but easy-going critic. He is inclined to accept as true what great authorities announce with sufficient positiveness as a new discovery. He examines the latest results with serious but good-natured inquisitiveness, applies the test of a criticism entirely free from captiousness, modifies his own former conclusions with the readiness of a disciple, and communicates the latest acquisitions with an obvious fondness for both learning and book-making. He elucidates the conceptions of others, adds observations of his own, and expatiates on the subject, always in a pleasant way. He enters perhaps too easily upon insecure paths through the

mazes of antiquity, but he follows sound guides; and if at the end of his search he finds not truth, but conjectures, the results are still interesting. In the study before us he moves on a firmer ground than is his favorite field of primitive Chaldea, and the conclusions which he propounds reflect the views of a large number of competent enquirers.

Dr. Schliemann's discoveries in the Troad M. Lenormant speaks of with high praise, but he stanchly refuses to acknowledge the identity of the sites and things discovered at the hill of Hissarlik with those sung in the 'Iliad.' Even if localities at Hissarlik fully corresponded to the Homeric description, they would prove that the bard or bards of the epic, centuries after the events immortalized, thus localized the Troy of vague traditions; but the question would remain, whether they did it with right judgment. The claims of neither Hissarlik nor Bunarbashi to the distinction of representing the city of Priam admit as yet of a final decision. But Hissarlik, in its various layers unearthed by Schliemann, presents the remains of several places built one on the ruins of the other, of which the uppermost was the Ilium of the Macedonian and Roman periods, the next the Ilium of the Æolian colonies, who thought they had established themselves on the site of the city destroyed by the Greeks, and one much lower, at the depth of sixteen metres, the primitive town, belonging to a remote period of indigenous civilization. This latter, however, does not reflect the stage of culture depicted in the 'Iliad'; its remains evidently betray a much ruder state of development. The people that inhabited it may be said to have lived in a period of transition from the age of stone to that of metals, a number of centuries before the fall of the Homeric Troy, which M. Lenormant, believing in the historical basis of the 'Iliad,' is inclined to assume with Clinton to have taken place in the last third of the twelfth century B.C.

M. Lenormant, however, does not doubt that Schliemann has discovered "the ruins of a town which, at an exceedingly remote age, was the capital of those Dardanians or Teucrians whose power is attested by monumental texts of Pharaonic Egypt ruled by the nineteenth and twentieth dynasties." The hieratic papyrus Sallier enumerates among the confederates who came to the aid of the Khetas on the Orontes, in the fifth year of Rameses II., a chief of the *Dardani* (Dardanians), who figures together with the chiefs of *Leka* (Lycians), *Masa* (Mysians), and *Akerit* (Carians), all peoples enumerated in the 'Iliad' among the defenders of Troy. Inscriptions at Medinet Abu, which immortalize the deeds of Rameses III., mention among his adversaries, allies of the Libyans, "the *Pelesta* of the middle of the sea—Pelasgians of Crete, ancestors of the Philistines—*Te'kkri*, Teucrians, the *Daanau*, Peloponnesian Danai, the *Tursha* or Tyrrhenians," etc., and the Teucrians appear among the naval combatants of the enemies of the Pharao. These Teucrians, like their allies the Lycians, Danai, Tyrrhenians, were of the Pelasgic race, to which M. Lenormant also assigns, without any qualification, not only the Phrygians and Carians, but also the Lydians and Philistines, rejecting the Semitic Lud of Genesis, and ignoring the purely Semitic character of all Philistine history. The Pelasgo-Hellenic character of the language of the primitive inhabitants of the Troad he believes to have been established by the deciphering of an inscription—in characters resembling the Cypriote alphabet—repeatedly found among the remains in baked clay dug up by Schliemann at Hissarlik. This inscription the late Prof. Haug, a high authority, read thus: *ta-a-o* or *ta-i-o Si-go-o*, corresponding to θεῶ or θείῳ Σιγῶ, to the god, or to the divine, Sigus; which explains the name of the Sigæan promontory, near Troy, as consecrated to a divinity formerly unknown to Hellenists. The same name is presumed to be contained also in another inscription, and possibly also in the *πύλαι Σκαιαί* of the 'Iliad.'

Altogether, the remains unearthed by Schliemann prove that the primitive town to which they belonged had not yet come in contact with either Egyptians, Phœnicians, or Assyrians, all of whom had extended their influence and civilization to the confines of the Pelasgic peoples of Asia Minor long before the Trojan war of Greek tradition. About the spread of Phœnician colonies and Phœnician culture over the islands of the Ægean and many coasts of the Hellenic mainland—while the coasts of Asia Minor remained almost exclusively under the sway of the "Eastern Pelasgians"—our book contains interesting particulars, which will, however, not appear new to those familiar with the author's former productions. Repetition, especially if rendered excusable by amplification or modification, is not among the things which he avoids. Of the very illustrations of the book before us—and they form a valuable part of it—one is twice given in it (p. 38 and p. 80). The work is in every way executed so as to be generally attractive, and is therefore free from displays of erudition, which may explain the absence of references to the many authors introduced as authorities. That among these the name of Ebers does not occur, especially in connection with such topics as the abovementioned origin of the Philistines and the Caphtor of Scriptures, on which that German scholar has written so learnedly, is rather surprising. Those topics are, however, sweepingly dealt with altogether.

Pensées of Joubert. Selected and translated, with the original French appended. By Henry Attwell. (London and New York: Macmillan & Co.)—Many readers will remember the graceful sketch of Joubert in Mr. Matthew Arnold's 'Essays in Criticism,' and the claim for urbanity, sweet reasonableness, the academic quality, and other cognate virtues made by the English critic on behalf of his French precursor. The impression of most of such readers will perhaps have been that Joubert was a singularly ingenious and delicate writer—a literary man of exquisite taste—but that he was not quite the high authority which Mr. Matthew Arnold appeared to deem him. The latter writer, however, has hitherto remained the chief source of information for English readers about the author of these carefully-elaborated 'Pensées.' To-day Mr. Attwell publishes a version in our own less pensive tongue of the maxims and reflections which are Joubert's chief title to distinction. Assuming that it was wise to attempt to translate them, the work has been very neatly and happily performed. The translator has evidently weighed his English equivalents patiently, and has rarely contented himself with a vague or a rough rendering. At the same time that he has been literal, he has succeeded in making Joubert's superior epigrams appear natural and free, and as he has reprinted the French originals at the end of his pretty volume, we are able to measure his fidelity as we go.

We question to a certain extent, however, whether the task was worth performing, and whether Joubert's aphorisms may not be said to do a certain violence, at the best, to English ways of thinking and expressing things. English, as compared with French, is a very unepigrammatic tongue, and it was to the resources of his native language for epigram that Joubert constantly appealed. How abundant these are is proved by the degree to which the writing of maxims and aphorisms has always flourished in France. It is a favorite amusement of what may be called amateur thinkers; where an English mind relieves itself in a copy of verses, a thoughtful French person, of either sex, is very likely to commit to paper a dozen or two of more or less pregnant and studiously concise prose reflections. Of course Joubert was not what we have called an amateur; he was rather a professional producer of maxims. "If ever," he says, "a man was tormented by the accursed ambition of putting a whole book into a page, a whole page into a phrase, and that phrase into a word, I am that man." The skill with which he compresses a great deal of suggestion into a very few words is often most noticeable. He is extremely serious; if he is not so serious as Pascal, he strikes us as much more serious than La Rochefoucauld; but it must be said that his aphorisms also strike us as being sometimes much more fanciful than substantial.

This, however, is inevitable in all makers of *pensées*, and Joubert made a great many on many different subjects, though what Mr. Attwell has published is but a selection. A real *pensée*, like a real lyric, should be born of a particular occasion or of a strong emotion. But a great many of those of Joubert are real. "There is in the soul a taste for the good" (*un gout qui aime le bien*), says Joubert, "just as there is in the soul an appetite for enjoyment." "One may err once—nay, a hundred times—without being double-minded (*sans avoir l'esprit faux*); there can never be mental duplicity where there is sincerity." "We may convince others by our arguments; we can only persuade them by their own." "The simple-hearted and sincere never do more than half deceive themselves." "The punishment of bad princes is to be thought worse than they really are." These are specimens of Joubert's happy hits, as we may say—things in which the neatness and what the French call the *justesse* are equal. The thought which follows the last quoted, by the way, runs in the original, "Toute autorité légitime doit aimer son étendue et ses limites"; or, as we should put it, "All legitimate authority should take satisfaction in its limits as well as in its extent." Mr. Attwell's rendering—"Every legitimate authority should *respect* its extent and its limits"—makes the idea more trivial than need have been. Sometimes, on the other hand, Joubert strikes us rather as playing with words than as really thinking thoughts; as, for instance, "It is good and beautiful that thoughts irradiate; but they should rarely glitter. It is best that they shine." For the most part, however, his *pensées* highly repay thinking over again. This is especially the case with the thoughts upon literary subjects, many of which are exceed-

ingly sagacious and penetrating. As we said at the beginning, if Joubert's reflections have, in the translator's hands, lost their verbal foreignness, they have often kept a certain foreignness of essence; but this volume would still be welcome, if on no other grounds than for the pages containing the original *pensées*.

A Commentary on the Law of Evidence in Civil Issues. By Francis Wharton, LL.D. In two volumes. (Philadelphia: Kay & Brother.)—Dr. Wharton is well known among lawyers as an industrious compiler of treatises on a variety of legal topics. His work on Evidence is, like his other books, compiled on the plan followed by most English and American legal book-makers—that is, of collecting all the decisions that are to be found in the volumes of reports, and stringing them together with a running comment, in which the law they are supposed to lay down is stated in a more or less coherent and consecutive manner. The collection of cases is often a monument of painstaking research. In these two volumes, for instance, there are collected some 17,000 cases, and the labor involved in writing anything at all about this mass of decisions may be shown from a very simple calculation. Allowing five pages of the original volume of reports to a case (and this is certainly a small allowance as an average), we find that to know what these 17,000 cases really are the author must have read 85,000 pages—pages, too, of not over-easy reading. Allowing six hours of steady reading to the day, and supposing twenty pages to be got through in an hour (taking it for granted, of course, that the reader makes *précis* of the decisions as he goes along), it would take two good years of work merely to find out what the cases on which the book is based really contained. Two years more to digest them thoroughly, extract the principles of decision from them, and so on, would hardly be more than a fair allowance. Not that this amount of labor is generally expended on legal treatises, or that we infer that Dr. Wharton has expended it. Owing to the peculiarity of our system of law, which makes judicial decisions and statutes alone of binding authority, the author knows that to find a market it is not absolutely necessary to do much more than to get all the cases together, so that the practising lawyer may feel in getting up his authorities that he is reasonably sure of finding the decisions he wants collated under particular heads, titles, and sub-titles.

We do not by any means wish to imply that Dr. Wharton has confined himself to a mere collection of cases. His aim is always more ambitious, and we infer from the philosophical discussion as to the nature of evidence in his "Preliminary Considerations" that he has honestly attempted to produce a treatise of lasting value. There are certain defects in Dr. Wharton's mind, however, which seriously interfere with his ability to carry out his intention, and the first of these is that he is not clear. Now, clearness is what is most needed in writing upon the law of evidence, and is the quality in which all the greatest writers on the subject, from Bentham to Sir James Stephen, have excelled. It is particularly necessary with regard to this branch of the law, for in this more than in any other there is a continual warfare between the natural and the actual legal system. Owing principally to our institution of trial by jury, certain classes of facts have from time immemorial been excluded from consideration, in the trial of cases in Anglo-Saxon countries, which in every other system of law, and in the formation of our private judgments, are admitted as a matter of course. Matters of opinion, facts as to character, hearsay, and matters similar to but not specifically connected with the matters in issue, are every day excluded from the consideration of juries in our court-rooms, though they are matters which, were the issue not in court, every juryman would inevitably take into account in making up his mind. This is not the case with any other branch of the law, and it makes the rules of evidence the most technical and the most difficult to follow with which a lawyer has to deal. They constitute the larger part of what now is left of the mystery which once surrounded our system of law and made the operation of its rules a hundred years ago absolutely unintelligible to laymen. Under the influence of Bentham and the spirit of reform which he represented, many of the irrational peculiarities of the law of evidence have been swept away. Whether further steps are needed is, perhaps, an open question; but there is no question that in legal writing about evidence nowadays the first requisite is a clear conception, first, of the true *rationale* of judicial evidence: second, of the precise character of the technical rules under our system; and third, of the modification of these rules actually accomplished in the interest of reform. Of the first two of these we think Dr. Wharton has ideas altogether vague. We cannot make out, for instance, what he understands to be the rule about "hearsay" or "res gestæ," nor how far either of them is in accordance with true principles. His language is the echo of his predecessors in the same field, and shows little or no originality. Those who are in search of an analysis of the law of evidence at once philosophical and technical must turn to Sir James Stephen's Digest, founded on his Indian Code (New York: Macmillan & Co.; St. Louis: Soule, Thomas & Wentworth), the most remarkable work on the subject which has appeared within the last half-century.

Old Homes Made New; being a Collection of Plans, Exterior and Interior Views, illustrating the alteration and remodelling of several suburban Residences. With Explanatory Text. By William M. Woollett, F.A.I.A. Author of "Villas and Cottages." (New York: A. J. Bicknell & Co. 1878.)—This book contains drawings and descriptions illustrating the alterations made to some half-dozen dwelling-houses by the author, who is an architect in Albany. These are fair examples of a class of work which has been very common all through the Eastern and Middle States for the past ten years, and not unknown before. The owners of old-fashioned farm-houses have been uneasy until they could give them an "architectural" and pretentious character; and a more worthy feeling has led them to require more convenient and agreeable interiors—so that, between the two, the old houses have had to undergo complete renovation. Mr. Woollett is quite right in saying that the buildings called into existence during the last thirty years "are not such as we desire to preserve." And yet the altering to-day of a house built in 1848 is apt to involve one change for the worse. The old house was generally simple, few in its parts, a four-cornered box with a gambrel roof and veranda; the modified exterior is too apt to be broken up into a score of gables and towers, ins and outs—

> "All up and down and here and there,
> With Lord-knows-what of round and square
> Stuck on at random everywhere."

This rage for picturesqueness has been carried to a sad extreme; the demand for little turrets and irregular projections and dormer-windows bursting out in unexpected places, like fungi, is not to be resisted; and if we take Mr. Woollett's designs as the occasion for these brief strictures, it is not that they are worse than others (for we find much to like in them), but because they do represent the tendency we deplore. This tendency is seen the most strongly in the last design in the book, plates 21 and 22, residence at Ridgefield, Conn., and it must be said that the old house seems in the photographic representation of it very much more interesting and more satisfactory, as a suburban family residence, than the new one. The design which is the most agreeable in exterior effect is the one shown in plates 8, 9, and 10; and this also exhibits a very ingenious and successful development of the original commonplace arrangement of rooms into an unusually pleasant one. Plates 11 and 12 are views of the interior of the same house. It is not to be denied that the uneasy and fidgetty style of design now in vogue, and finding its most common expression in the absurd furniture absurdly called "Eastlake," is to be found in these interiors, which would assuredly have been lovelier if more simple. But there are evidences of thought and care, and the effects produced have not involved any considerable expenditure of money. The worst faults, after all, are the faults of popular taste, the merits are the designer's own. His independence, and willingness to arrange rooms, stairs, and chimneys as shall be convenient and seemly, and not always in the common way, and the unaffected simplicity of the descriptive text, are all worthy of notice.

Einfluss des englischen Quäkerthums auf die deutsche Cultur und auf das englisch-russische Project einer Weltkirche. Von Bruno Bauer. (Berlin, 1878. New York: L. W. Schmidt. 1878. Pp. 235.)—When Herr Teufelsdröckh declared so many years ago that the most remarkable incident in modern history was not the battle of Waterloo, Peterloo, or any other battle, but George Fox's making to himself a suit of leather, he could hardly have anticipated that a brother professor, acting upon the hint, would one day trace the spiritual seed of the inspired shoemaker in Madame Krüdener and the Emperor Alexander, and connect in a train of historical sequences events seemingly so unlike as the founding of Philadelphia and the conference of Old-Catholics at Bonn. This the veteran biblical critic, Bruno Bauer, has attempted in a brochure of rather less than two hundred pages, in which, with the ingenuity characteristic of his countrymen, he undertakes to show that the yearning for ecclesiastical unity which in so many ways has found expression during the past few years is the legitimate working out of a tendency which found its first conspicuous representatives in George Fox and William

Penn. At the outset the author intimates that the coupling upon his title-page of English Quakerism with the projected union of the English and Greek churches will rather surprise his readers; and this surprise, we are quite sure, will not be lessened as they open the volume and see in what novel and unexpected companionship some familiar names are placed. Beginning with a few paragraphs setting forth the sharp contrasts between Lutheranism and Calvinism, the author asserts that the great movement by which the dead Lutheran orthodoxy of the seventeenth century was quickened with new life came from the West, and was due to the Quakers, then fresh from the victory they had won over the Puritan churches of the new world. The battle had been fought in Boston, and Mary Dyer was its heroine. Two years later the charter granted by Charles II. to Rhode Island established the precedent of which Penn availed himself for securing legal countenance to his unique colonial experiment, and Philadelphia at once became a shining star not less for the eastern than for the western hemisphere. The point of contact between Quakerism and the East was supplied in the personal intercourse of Penn with Peter the Great, when the latter was in England. The Russian in his way was not less a religious reformer than the Englishman, although his temper inclined him at times to somewhat more summary methods. The author holds that Penn made a deep impression on the Czar, and declares that there is no risk in the assumption that the prince who aimed to make Russia a great European power, recognizing religious liberty, must have found in Penn a cognate spirit, and have seen in the settlement on the banks of the Delaware the type of the polity which he was himself aiming to set up. In Peter's brain notions of autocratic rule and of spiritual liberty were intermingled. But before the latter could be clothed with new shape in the dreams of Alexander I., a long modifying process was required; and to the tracing of this process the principal portion of this essay is devoted. The medium by which the English original was translated into the dialect of the princes and nations of the continent was furnished in the Pietists and Moravians, which gives occasion for a somewhat extended and interesting account of Spener, Edelmann, and Zinzendorf. This pietistic tendency is further traced through Kant and Jacobi to Schleiermacher; and at this point the author makes an easy transition to Frau von Krüdener and the Holy Alliance. But for the majority of his readers the especial value of Herr Bauer's book will be found in the chapters in which he unfolds the distinct part which Russia has played in the ecclesiastical life of Europe since the memorable interview between Alexander and Bishop Eylert at Potsdam. His account of the various proposals and negotiations to which the yearning for ecclesiastical unity has given rise is minute and interesting; and whatever we may think of his attempt to connect this movement with the teachings of William Penn, all must admit that he has made a useful contribution to recent religious history. Nothing has escaped his inquisitive survey, even the founding of the Greek church in this city claiming attention as one of the signs of the times. Those, however, who have fondly dreamed of a possible union between the Anglican and Russian communions will derive but little comfort from his caustic dissection of the abortive experiments that have thus far been made.

La Satire en France au Moyen Age. Par C. Lenient. (Paris: Hachette & Cie.; New York: F. W. Christern.)—This new and corrected edition of a work crowned by the French Academy on its first appearance will be welcomed by all students of mediæval literature, for, although limited to French satire, it contains the manifestations of a spirit common in a certain degree to the rest of Europe. The author disclaims for his work the character of pure erudition; he has endeavored to make a readable but not superficial book. He has succeeded, we think, admirably, and the reader is carried on from chapter to chapter by the clear and skilful narration of a multitude of interesting facts, evincing the writer's thorough acquaintance with his subject. M. Lenient sees in the whole domain a vast trilogy, of which, as he says, each century is an act and each act has its principal hero: In the thirteenth century *Renart;* in the fourteenth, the Devil; in the fifteenth, Death. These three figures represent the transformation of French satire. The starting point is the twelfth century, when, with the universities and communes, the secular and *bourgeois* spirit awakened; the limit of the work is the sixteenth century, the age of the Renaissance and Reformation. The period between these limits the author examines in a thorough manner; nothing escapes him that reveals, however slightly, the spirit of free thought and opposition to established institutions. He gives the broadest definition to the word satire, and follows his subject into many obscure corners of literature and art. We see unfolded before us a picture of popular mediæval thought, manifested not only in prose and poetry, in romance and drama, but in architecture and painting, in the ceremonies and festivals of the populace.

With so vast a subject the author is sometimes forced to treat meagrely some of the details, and, as it seems to us, he does not emphasize sufficiently the satire directed against Rome, both in the vernacular and in the curious Latin poems of the vagrant scholars. This may arise from the fact that M. Lenient lays the greatest stress on the opposition between the *bourgeoisie* and the nobility; but one of the most important factors in the Renaissance and Reformation was the secular spirit, which owed no small degree of its development to the satire directed against the practices of the Romish Church.

M. Lenient deserves great credit for his mode of treating many difficult portions of his subject, notably the *fabliaux* and similar compositions, and for his clear account of the interminable romances of 'Renart' and of the 'Roman de la Rose.' The new edition has experienced some changes. A few things have been omitted which recent investigation has proved incorrect, and notice has been taken of the latest works in this field. For affording even scholars a clear view of the whole territory M. Lenient's book is invaluable, while the general reader can peruse it with pleasure as well as with profit.

Biographies of Francis Lewis and Morgan Lewis. By their granddaughter, Julia Delafield. (New York: Anson D. F. Randolph & Co. 2 vols. 12mo.)—Francis Lewis was a Welshman who emigrated to this country early in the last century, full of animosity against England as the traditionary enemy of his native country. He led an adventurous life, became rich, and was one of the most influential citizens of New York at the outbreak of the Revolution, representing that colony in Congress, and enjoying the honor of signing his name to the Declaration of Independence. The details of his life are meagre, and only fifty-six pages are devoted to his memoir. The rest of the first volume and the whole of the second is occupied with the life of his son, Morgan Lewis, who served in the Revolutionary War with the rank of colonel, was afterwards Governor of New York, and in the war of 1812 was quartermaster-general, and afterwards held command as major-general. Like his father, he had a long and honorable career, and one well worthy of commemoration. A book which, like this, refreshes in the minds of the present generation the memory of a half-forgotten man who did good service to an earlier generation is always welcome.

There are a considerable number of letters of General Lewis written during his command on Lake Ontario, but the book is chiefly devoted to personal and family reminiscences. Points of genealogy are worked out with considerable detail; especially the Livingston family, with which General Lewis was connected by his marriage with a sister of Chancellor Livingston, receives a large share of attention. One is especially interested here in following the history of a family of great proprietors; the Livingston manor was perhaps the most typically feudal estate in the North. The extent of the family possessions may be illustrated by the fact that when Chancellor Livingston succeeded, by the law of primogeniture, to the whole of his father's estate, he gave each of his three brothers thirty thousand acres of land and each of his six sisters twenty thousand; and he was only of a younger branch, his cousin being the lord of the manor. It is an interesting fact that this family of feudal proprietors—perhaps from the traditions of their descent from Scotch Covenanters—attached themselves to the Republican party of the day rather than the Federalist, as their aristocratic standing might have seemed to make probable. The family appears throughout as ardent patriots, and in one year the whole income of their estate of Clermont was paid into the public treasury.

LEISURE-HOUR SERIES.

JUST READY.

HATHERCOURT.

By Mrs. Molesworth (Ennis Graham), author of 'The Cuckoo Clock.'

16mo, $1.

"We are delighted to welcome this pleasant writer, in her own name, from the mysterious ranks of the *nom de plumes*. . . . This is the great charm of an interesting story in which not even the most fastidious can complain of the least vulgarity. We question if we have ever read a story so perfectly refined and yet without a touch of either prudery or tameness. It is developed with both skill and delicacy, and the interest never flags. All [of the characters] are drawn with a wonderfully equal and sustained power; . . . every one of them is life-like—there is not a lay figure among them."—*Spectator, London.*

MAID ELLICE.

Owing to blunders of a new proof-reader, 'MAID ELLICE' is full of errors, largely of italics where no italics belong.

The Publishers have suppressed the small remainder of the first edition, and will exchange copies of the perfect edition, when ready, for any of the imperfect ones which may be presented.

MRS. BRASSEY'S

Around the World in the Yacht Sunbeam.

The London *Spectator* says:

"We can but faintly indicate what the reader may look for in this unrivalled book. It is altogether unlike all other books of travel."

The *Evening Post* says:

"The book is one of rare interest."
